6.	Publication consultation (Regulation 19): 9 June 2023 – 24 July 2023	22
7.	List of Appendices	23

1. Introduction

- 1.1 The Statement of Consultation details how the London Borough of Richmond upon Thames has complied with the consultation requirements prescribed in the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) and the Council's Statement of Community Involvement (adopted 2019) in the preparation of the new Local Plan.
- 1.2 Richmond's Local Plan sets out policies and site allocations that will guide development in the borough over the next 15 years. The new Local Plan will replace the current Local Plan and the Twickenham Area Action Plan.
- 1.3 This Local Plan Consultation Statement details the consultation that was undertaken at each stage of the document's preparation. It accompanies the Local Plan Publication (Regulation 19) consultation. It will be updated to include a summary and details of the representations received during the Publication (Regulation 19) consultation when the Council submits the Plan to the Secretary of State for independent Examination in Public.

2. Overview of consultation

- 2.1 The Local Plan was subject to three stages of public consultation in line with the Town and Country Planning (Local Planning) (England) Regulations 2012:

Stage	Dates	Number of representations	Full details can be found
Direction of Travel Consultation (additional stage of consultation, not prescribed by legislation)	24 February 2020 – 5 April 2020	89 responses	Appendix 2
Pre-publication consultation (Regulation 18)	10 December 2021 - 31 January 2022	311 responses	Appendix 3
Publication consultation (Regulation 19)	9 June 2023 – 24 July 2023	To be published	To be published

2.2 The table below summarises the consultation that has been undertaken in relation to the Council's Statement of Community Involvement and the relevant paragraphs / appendices where the methods are discussed or documents can be found:

Proposed methods ¹	Direction of Travel Consultation		Pre-publication consultation		Publication consultation	
	Engage	Feedback	Engage	Feedback	Engage	Feedback
Local Plan consultee database (letters/emails)	✓ Para 4.4 App 2A	-	✓ Para 5.6 App 3A -	-	To be published	-
Notification letters to owners / occupiers	-	-	✓ Para 5.6	-	To be published	-
Web pages & digital communications	✓ Para 4.6 App 2B	✓ Para 4.8 App 2F	✓ Para 5.6 App 3B -	✓ Para 5.7 App 3F	To be published	To be published
Printed media – local press, leaflets and newsletters	✓ Para 4.6 App 2C, App 2E	-	✓ Para 5.6 App 3E	-	To be published	-
Social media	✓ Para 4.6 App 2D	-	✓ Para 5.6 App 3E	-	To be published	-

Libraries	✓ Para 4.6	-	✓ Para 5.6	-	To be published	-

2.3 Each stage of the consultation is discussed in more detail in the following sections.

2.4 A separate Duty to Co-operate Statement (June 2023) has been published to cover the engagement that has taken place with adjoining Boroughs and prescribed duty to co-operate bodies, as well as the context for sub regional and London wide joint working, to inform the stages of preparing the Local Plan, in line with the requirements of the NPPF.

¹ The SCI Table 1 sets out the potential methods of engagement that may be employed for planning policy consultations to reflect the principles for how the Council engages.

3. Background Research

- 3.1 The initial research phase of the Local Plan review began in the winter of 2019, following approval in July 2019 of an updated [Local Development Scheme for 2019 – 2022](#) which set out commencing the preparation of the next Richmond Local Plan. Although the Richmond Local Plan had only been adopted in July 2018, commencing a new Local Plan was agreed in the context of changes in national and regional policy and guidance, including a revised National Planning Policy Framework (NPPF) (2019) and an emerging new London Plan (final version to be published early 2020).
- 3.2 It was recognised that the Direction of Travel would need to address the main priorities for the borough, and set out the scale of the challenge and opportunities, set out in the report to the Environment, Sustainability, Culture and Sports Committee on 3 February 2020 which agreed the Direction of Travel for public consultation <https://cabnet.richmond.gov.uk/ieDecisionDetails.aspx?AllId=38337>, as:
- a) **Responding to the climate emergency and taking action:** In summer 2019, the Council declared a climate emergency and committed to taking robust action to tackle the local and global threat of climate change. In January 2020, the Council adopted its Climate Emergency Strategy. The Council's direction of travel in relation to the climate emergency is therefore clear; planning has an important role to play in minimising environmental impacts by cutting carbon emissions, waste and pollution. The Local Plan will play a central role in the transition to a low-carbon society, with policies to shape new and existing developments in ways that reduce energy need and consumption as well as greenhouse gases. This necessitates a new vision for the future of the borough and a new strategy for how this will be achieved. The Council already has progressive policies in place that deal with climate change mitigation and adaptation. The direction of travel is therefore to build upon these existing policies, and set out a clear pathway to achieving net zero carbon standards for all developments. The Council's Direction of Travel Consultation is seeking views as to what more can be done as part of the Local Plan to promote high quality sustainable development, and on the approach to encouraging a circular economy to ensure resources are kept in use for as long as possible.
- b) **Delivering new homes and an affordable borough for all:** The borough will have to accommodate housing growth and provide additional choice in the market, with the new London Plan setting a substantially higher housing target for the borough. The Council will need to undertake further research to assess future housing needs, and identify priorities for the type and size of new dwellings. The strategic direction of travel recognises there will need to be a clear strategy to bring sufficient land forward and consider where there is capacity for change, as well as explore new ways to increase housing delivery. Affordability in the borough remains an acute issue, and delivery of new genuinely affordable housing is low, due to the shortage of land and high values and costs. The Council's housing research will include an assessment of affordable housing needs. The strategic direction of travel maintains the strong approach to securing affordable housing contributions, and explores if there are new ways to deliver affordable housing.

- c) **Shaping and supporting our town and local centres as they adapt to changes in the way we shop:** The borough's centres have been performing well, but the retail sector is undergoing significant structural changes. The Council will undertake research to assess future needs. The strategic direction of travel recognises that the research may suggest a different approach is needed for managing our town and local centres.
- d) **Increasing jobs and helping business to grow:** Richmond is an enterprising borough, which has been relatively resilient to the economic pressures of recent years. However, there are some economic challenges, particularly as a result of limited land availability for employment purposes. The Council has already sought to protect existing employment sites and strengthened its policies as part of the last Local Plan review. The strategic direction of travel sets out that this approach will continue. The new London Plan also continues a protective approach, while suggesting intensification should be explored. It is recognised that the way people work and sectors are changing, and the Council will need to undertake further research to identify the range and type of premises needed in the future.
- e) **Protecting what is special and improving our areas**
- **Heritage:** The borough's exceptional historic environment is central to its character. Many parts of the borough are covered by conservation areas, including the majority of Richmond and Twickenham centres. The Council's strategic direction of travel is clear that the borough's historic environment will be preserved, and where possible enhanced. Therefore, the focus is on building on our existing policies to ensure they fully reflect national guidance and policy. In addition, the policies will seek to ensure that new developments will be of good and, if possible, exceptional design in order to make a positive contribution to the historic environment. The Council will also actively identify opportunities for development where these can result in improvements to the character and appearance of existing conservation areas.
 - **Culture:** The borough has a rich patchwork of cultural assets, ranging from the Royal Botanic Gardens Kew (a UNESCO World Heritage Site) and Hampton Court Palace, to smaller attractions and facilities. The strategic direction of travel continues to support the sustainable growth of the visitor economy.
 - **Green infrastructure and protecting our open land:** Richmond borough, the only London Borough that is intersected by the River Thames, is characterised by extensive areas of open land, designated as Green Belt and Metropolitan Open Land, as well as the borough's rivers and their corridors, which link across borough boundaries and have a strategic function in southwest London, Greater London and beyond. Whilst there is pressure on these designated areas from development, the Council's strategic direction of travel is clear that there will be continued strong emphasis on protecting, and where possible, enhancing the parks, open spaces and green spaces. Therefore, inappropriate development and loss of designated open land will be strongly resisted.
- The Inspector who conducted the last examination into the Richmond Local Plan stated that a review of Green Belt and Metropolitan Open Land boundaries may be necessary to inform how the Council best accommodates growth and development needs. Whilst the Council is committed to carrying out such a review as part of this new Local Plan, this does not mean that land will be necessarily released for development. The Council is of the opinion that the majority of the designated land fulfils the purpose of the Green Belt

and Metropolitan Open Land policy requirements. It is therefore not anticipated to release designated land for development, with the exception of potentially a small number of sites or pockets of land, provided that they no longer meet the policy criteria for designation. The Council will take an open and transparent approach, based on a methodology to be consulted and agreed prior to undertaking such a review of designated open land. Any site-specific changes will be made clear in future consultations for anyone to comment.

- f) **Increasing biodiversity and the quality of our green spaces, and greening the borough:** The borough's biodiversity, particularly the valuable habitats, are becoming under increasing pressure due to a growing population and the increasing use of parks and open spaces for recreation and enjoyment by local communities. The Council's strategic direction of travel is clear that we need to combat the local decline of population sizes of wildlife in general, whilst also continuing to protect our existing designated sites of nature conservation importance, which provide valuable habitats for protected and unprotected species. In order to achieve this, the Council will review the existing designated sites of nature conservation importance, with the view of identifying potential new sites for designation. In addition, the Council will carry out further research in relation to the practicalities of requiring and implementing a requirement for biodiversity net gain for all development sites. The Council's strategic direction of travel is also clear that the borough will develop its own Urban Greening Factor to identify the appropriate amount of urban greening required in new developments, such as the planting of new trees, green roofs, green walls etc. The Mayor of London has developed such a model in his new London Plan which boroughs can adopt in their Local Plans; however, given Richmond borough is already one of the greenest London boroughs, the Council's direction of travel is to develop our own bespoke model, based on local specific circumstances and tailored to the borough's needs.
- g) **Improving design, delivering beautiful buildings and high-quality places:** The borough's unique and distinctive character is an asset, and changing needs bring pressure on the local character. The Government has launched national guidance to provide more substance to delivering 'good design'. The Council's strategic direction of travel sets out high expectations for delivering design quality, including through the use of design reviews. The Council will need to undertake research into areas where there are opportunities for growth and where tall buildings/high density development may be appropriate.
- h) **Reducing the need to travel and improving the choices for more sustainable travel:** Some parts of the borough suffer from poor connectivity and limited public transport services. The Council has a role to play in influencing travel choices, to move towards sustainable forms of travel as the preferred mode and reduce car dependence, to reflect these local priorities set out in the adopted Climate Emergency Strategy, adopted Local Implementation Plan and emerging Active Travel Strategy. The strategic direction of travel will continue to ensure the impact of new development is minimised, including in relation to congestion, air pollution and emissions, and improve connectivity to public transport and encourage active travel, exploring the potential to encourage car-free and car-lite developments.

- i) **Securing new social and community infrastructure to support a growing population:** Social and community infrastructure, including for education, health and recreation, is essential for local communities, yet sites in the borough can be at risk due to pressures for development. The strategic direction of travel continues to protect these uses, and ensure the needs arising from new development can be accommodated.
- j) **Creating safe, healthy and inclusive communities:** Planning plays an important role in influencing the environment, with opportunities to encourage healthy lifestyles. The borough is already a safe and healthy place, and the strategic direction of travel continues to promote healthy and inclusive communities as a cross cutting theme, exploring opportunities to strengthen the approach such as to restrict new takeaways close to schools and promote community cohesion.

4. Direction of Travel Consultation: 24 February 2020 – 5 April 2020

Purpose of consultation

- 4.1 The Direction of Travel Consultation was an additional early stage of consultation not prescribed in the Local Planning Regulations. This stage of consultation is undertaken within the context of paragraph 155 of the NPPF which states that *“Early and meaningful engagement and collaboration with neighbourhoods, local organisations and businesses is essential. A wide section of the community should be proactively engaged, so that Local Plans, as far as possible, reflect a collective vision and a set of agreed priorities for the sustainable development of the area, including those contained in any neighbourhood plans that have been made”*. The consultation provided the opportunity for early engagement with interested parties and enabled Duty to Co-operate bodies, key stakeholders, national and local organisations, developers, landowners and the local community to comment.
- 4.2 This consultation focused on the vision for growth and future development within the borough, specifically identifying the key challenges, opportunities and critical planning issues and how they could be included in a new Local Plan. As part of this consultation, a Call for Sites from the community was requested. Council will assess these sites for their suitability, availability and deliverability to assist in the delivery of the spatial strategy and strategic policies.
- 4.3 Comments were invited on the Council’s proposed approach and whether there are missed opportunities or issues which should be included as well as if there are other proposed development sites which should be included within the Local Plan.

- 4.4 The consultation was due to end on 22 March 2020. This was ahead of an expected pre-election period for the Mayoral and London Assembly elections, however those elections were postponed by Government on 13 March 2020 due to the coronavirus outbreak. The implications of the COVID-19 pandemic become apparent towards the end of the consultation period, with the Government on 16 March 2020 asking everyone to stop non-essential contact with others and to stop all unnecessary travel. The Council was required to close its libraries on 20 March, and from that date many shifted to home working. The Council therefore extended the consultation period to 5 April 2020, making the new deadline clear on the Council's website from 18 March, and accepted any requests for representations to be submitted late, in recognition of the exceptional circumstances.

Who was consulted

- 4.4 The whole of the Local Plan database was notified of the Direction of Travel consultation. The database includes statutory consultees, local residents associations and amenity groups, local residents, local businesses, landowners, developers and consultants. A full list of consultees can be seen in [Appendix 1](#).

Consultation activities

- 4.5 Documents available for comment at this stage included (all available on the Council website https://www.richmond.gov.uk/new_local_plan_direction_of_travel_engagement):
- A summary leaflet explaining the Council's approach towards and background information for the Local Plan review as well as the Direction of Travel document.
 - Two online questionnaires were created. One specifically for the Call for Sites and the other to prompt a response from each section. The majority of questions are non-compulsory allowing consultees to respond to the sections they are most passionate about.
 - Draft Sustainability Appraisal Scoping Report: The SA aims to ensure that environmental, social and economic considerations have been integrated into the preparation of the Local Plan. The consultation on the Scoping Report is aimed specifically at the three statutory consultees with environmental responsibilities in England - the Environment Agency, Natural England and Historic England, although other relevant stakeholders with a sustainability remit or a local interest were also able to review the report and submit representations.
- 4.6 Public consultation activities included:
- A letter or email was sent to the Local Plan database to notify 1,918 consultees of the consultation ([Appendix 2A](#)).

- Consultation details and documents were published on the Council's website and the Council's consultation portal (**Appendix 2B**) – also available online:
https://www.richmond.gov.uk/new_local_plan_direction_of_travel_engagement
- The consultation was advertised in a public notice in the Richmond & Twickenham Times on 7 February 2020 and 5 March 2020 (**Appendix 2C**).
- Posters on community notice boards within the borough
- The Council issued a press release on 24 February 2020 'Richmond residents and businesses invited to shape future of the borough' (**Appendix 2D**) and this was publicised on the Council's social media accounts such as Twitter. There was also a Councillor Comment Spot on 18 February 2020 by Chair of Environment, Sustainability, Culture and Sport Committee 'Setting out our priorities for the development of the borough' which was about the Direction of Travel consultation (**Appendix 2E**).
- Hard copies of the consultation documents were available to view, along with spare copies of the summary leaflet and questionnaires to take away, in the Council's main libraries (until closed on 20 March 2020) and the Civic Centre (until closed on 25 March 2020).

4.7 Following the Direction of Travel consultation, the Council envisaged further engagement opportunities to inform and shape the new Local Plan later in 2020, as well as Duty to Co-operate engagement. A series of the Council's Community Conversation events were scheduled between May and October 2020 and the new Local Plan would have been a matter for engagement, however as a result of the COVID-19 pandemic the events between May and July 2020 were postponed. Government has updated guidance in the PPG so that plan-making can continue, and to promote effective community engagement by means which are reasonably practicable - strongly encouraging local authorities to use online engagement methods to their full potential including digital consultations, social media and providing documents for inspection on a public website.

Consultation responses and main issues raised

4.8 The Council received 89 responses to the Direction of Travel consultation, including the Call for Sites and Sustainability Appraisal. A Consultation Report with a summary of all responses, and schedules of all responses (and appendices) received is available in **Appendix 2F** and on the Council's website at:
www.richmond.gov.uk/direction_of_travel The main issues raised included:

Theme/topic area	Summary of Issues
Scale of the challenge, opportunities and setting the Direction of	<ul style="list-style-type: none"> • Seemed to be mixed opinions on balancing priorities and whether everything could be achieved e.g., is borough overpopulated or is growth possible, more or less parking etc.

Travel	<ul style="list-style-type: none"> • General support for approaches towards town centres and on brownfield sites, as well as strong support for principle of protecting green and open spaces.
Responding to the climate emergency and taking action	<ul style="list-style-type: none"> • Supported on the whole • Transport and travel e.g. reducing use of cars, were focus of most solutions put forward. • Ensure Council is helping those low-income families make the adjustment to reducing impact on environment. • Many thought that all new builds should be zero carbon.
Delivering new homes and an affordable borough for all	<ul style="list-style-type: none"> • Mixed support for policy direction on housing (some thought housing target was too ambitious and borough already over-populated). • Strong support for affordable housing delivery. • Regarding dwellings, many supported provisions of mixed sizes, as well as assisting individual needs/circumstances.
Shaping and supporting our town and local centres as they adapt to changes in the way we shop	<ul style="list-style-type: none"> • In favour of policy direction, and clear that town centres are valued. • Encourage flexibility in change of use/land uses, particularly considering business. • Support for accessible shops and services, in terms of meeting local needs in walking distance and for those with differing circumstances. • Recognition of changing centres and need for research to inform next steps and approach taken.
Increasing jobs and helping business to grow	<ul style="list-style-type: none"> • Most were in favour of proposed policy approaches • Support for retention of employment/industrial job use • More locally distinctive policies to be adopted focusing less on developing residential on industrial sites
Protecting what is special and improving our areas (heritage, culture and open land)	<ul style="list-style-type: none"> • Fear that a review would automatically lead to a loss of Green Belt and Metropolitan Open Land • Support for protecting designated open spaces, as well as continuing and even increasing protection of heritage sites.
Increasing biodiversity and the quality of our green spaces, and greening the borough	<ul style="list-style-type: none"> • Backing for most policy directions • Protection of green space supported and even to go further in terms of enhancements and maintenance • Agreed with Local Urban Greening Factor and Biodiversity Net Gain Requirement
Improving design, delivering beautiful buildings and high-quality places	<ul style="list-style-type: none"> • General support for the future direction of how to improve design, deliver beautiful buildings and high-quality places. • Tall buildings not appropriate but awareness this will happen and is necessary, so about making them as good as possible.
Reducing the need to travel and improving the choices for more sustainable travel	<ul style="list-style-type: none"> • Mixed response regarding reduction of car ownership through car free development, but support for improving traffic flow. • Bus travel extremely important to a lot of residents, as well as cycling and the need to make cycling more appealing overall. • Reduction in town centre car parking not supported, but general support for redevelopment of parking to make a space more multi-use.
Securing new social and community infrastructure to support a growing population	<ul style="list-style-type: none"> • General acceptance of approach • Particularly supportive of upgrading existing facilities, but also recognised need for new facilities. • Divide regarding need for school places, but recognised need for Council to encourage residential development where there are sufficient vacancies in school.
Creating safe, healthy and inclusive communities	<ul style="list-style-type: none"> • General support for initiatives • Shouldn't be a focus just on fast food outlets regarding healthy living • Consider shift in emphasis of Local Plan policies to importance of outdoor space rather than urban and indoor facilities.

Call for sites	<ul style="list-style-type: none"> • Site allocation suggested at various locations in the borough. • Predominantly residential use but acknowledged importance of mixed-use development.
----------------	---

4.9 All responses were published and used to inform the preparation of the Pre-Publication version of the Local Plan. In addition, an [analysis of all responses received on the draft Sustainability Appraisal Scoping Report](#) set out how comments were taken into account in the [Revised SA Scoping Report](#) (July 2020).

Further informal engagement in 2021

4.10 As set out at paragraph 4.7, further informal engagement, particularly to continue to raise the profile of the emerging Local Plan and to feed into parts of the evidence base was continued at this stage. This included:

- A consultation by direct email was undertaken with key stakeholders (Natural England, Environment Agency, Historic England, Highways England, GLA and neighbouring authorities) on the Draft Methodology Paper for the Open Space Designations Review (8 to 21 March 2021) to ensure consensus on the approach. The 6 responses received informed the open land review and are set out in Table C4.1 of the [Green Belt, MOL, LGS and OOLTI Review overarching report 2021](#).
- A Richmond Partnership Conference in May 2021 on Unlocking the Potential: a new vision for our town centres and high streets, followed by a series of [Community Conversations](#) over Summer and Autumn 2021. Each Community Conversation included a presentation about the Local Plan, and a workshop to discuss ideas in breakout groups. A [summary of how a series of community conversations have informed the Draft Richmond Local Plan](#) was published (December 2021).
- A public consultation was undertaken to inform the Urban Design Study inviting comments on what is special about certain areas/places in the borough (17 May to 6 June 2021) <https://haveyoursay.citizenspace.com/richmonddecs/urban-21/> The consultation invited feedback on the places and place names, character area boundaries and descriptions, valued features and future strategies for the character areas. The feedback from the consultation fed back into the study to refine character area boundaries, places, valued features, negative qualities and design guidance. 412 responses were received and the analysis is set out in the [Urban Design Study](#) 2021 (Appendix F).
- Two workshops were held with school groups (Malden Oaks Pupil Referral Unit and Twickenham School) over summer/early Autumn 2021. This was to inform and engage young people about the Local Plan process, and included exercises the wider proprieties and implications need to be considered.

- 4.11 The Local Plan database were sent an update on Local Plan progress on 18 May 2021. This included notification that a Consultation Report on the Direction of Travel responses had been published. It provided an update that work on the Local Plan was continuing, although needing to consider the implications of the pandemic and the Government's proposed future reforms to plan-making. The notification updated that work on evidence base studies had commenced and included details of the consultation to inform the Urban Design Study as mentioned above.

5. Pre-publication consultation (Regulation 18): 10 December 2021 – 31 January 2022

Purpose of consultation

- 5.1 Public consultation on the Pre-publication version of the Local Plan was carried out in line with Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 between 10 December 2021 and 31 January 2022, as agreed by the Environment, Sustainability, Culture and Sports Committee at its meeting of 17 November 2021:
<https://cabnet.richmond.gov.uk/ieListDocuments.aspx?CId=799&MId=5131&Ver=4>.
- 5.2 The purpose of this consultation was to invite comment on the draft Plan and the strategic vision, objectives and spatial strategy, place-based strategies and site allocations, and thematic policies.

Who was consulted

- 5.3 The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) state that the local planning authority must notify interested parties and individuals, including the prescribed bodies defined in the Regulations, invite comment, and must take into consideration the representations made in response.
- 5.4 The whole of the Local Plan database was consulted, as well as any additional respondents to the Direction of Travel consultation (who were also added to the database). See Appendix 1.

Consultation activities

- 5.5 Documents available for comment at this stage included (all available on the Council website
<https://www.richmond.gov.uk/draft-local-plan-pre-publication-version>):
- Pre-Publication Local Plan: this document sets out a strategic vision, objectives and spatial strategy, with place-based strategies and thematic policies and guidance. It also indicates proposed changes to the Policies Map.

- Sustainability Appraisal of the Pre-Publication Local Plan: this set out how the economic, environmental and social effects that may arise from the Local Plan (for the place-based strategies, site allocations and policies) have been assessed and taken account of.
- Equalities Impact and Needs Analysis: this assesses the draft Local Plan against protected equalities characteristics. The assessment has been undertaken to ensure that any potential negative equalities consequences arising out of the draft Local Plan have been considered and, where possible, removed or minimised so that opportunities for promoting equality and diversity are maximised.
- Habitats Regulation Assessment: this establishes whether the draft Local Plan, alone, or in combination with other plans or projects, is likely to have a significant effect on an international / European nature conservation site, i.e. Special Protection Areas (SPA), Special Areas of Conservation (SAC) or Ramsar sites. If this is the case, then the impacts on the integrity of the site must be considered by an Appropriate Assessment. This document sets out the findings of the Screening Assessment as well as the Appropriate Assessment for the emerging Richmond Local Plan.
- Health Impact Assessment: this sets out the findings of the assessment of the health and wellbeing impacts of the draft policies and site allocations.
- Flood Risk and Development Sequential Test: this assesses the level of flood risk of each site allocated within the Pre-Publication Local Plan, to determine their suitability / compatibility for the proposed uses in terms of flood risk. Its aim is to steer new development towards areas at the lowest risk of flooding.
- In addition, a number of updated evidence base studies were made available including:
 - Urban Design Study 2021
 - Open Land Review (Green Belt, MOL, LGS and OOLTI) 2021
 - Local Housing Needs Assessment 2021 (stage 1)
 - Employment Land & Premises Needs Assessment 2021
 - Retail & Leisure Needs Study 2021 (phase 1)
 - Strategic Flood Risk Assessment (2020)
 - Nature Conservation Review (2021).

It was noted that further phases and additional studies were due to be undertaken in early 2022.

5.6 Consultation activities included:

- A letter or email was sent to the Local Plan database to notify consultees of the Local Plan pre-publication consultation (Appendix 3A).
- In addition, a letter or email was also sent in regard of some sites affected by changes to site-specific designations, where it was felt awareness should be raised:

- to the owners/occupiers of those sites where the MOL designations were proposed for removal (Parcels 48 and 49 along Hampton Court Road)
 - to the one site proposed as Local Green Space that is not in Council ownership
 - to those with land interests in the new site allocations (landowners/planning agents – using details from the Land Registry if not already known).
- Follow up notifications were also sent on 14 January 2022 to those who had received a letter or email, primarily to remind them of the upcoming consultation deadline, and on the MOL designations to provide further information for context in response to some queries raised by residents.
 - Consultation details and draft documents were published on the Council's website and the Council's consultation portal (**Appendix 3B**) – also available online <https://www.richmond.gov.uk/draft-local-plan-pre-publication-version>
 - A response form was available (**Appendix 3C**).
 - The public consultation was advertised in a public notice in the Richmond & Twickenham Times on 16 December 2021 (**Appendix 3D**).
 - The Council issued a press release on 16 December 2021 'Have your say on the new Local Plan to help shape the borough's development' (**Appendix 3E**) which was also referred to in social media posts including on the Council's twitter accounts etc.
 - Hard copies of the consultation documents were available in the Council's main libraries and the Civic Centre (from 17 December 2021; due to the ongoing Covid-19 pandemic the Civic Centre was open, but on an appointment-only basis).
 - Bespoke emails were sent to the Duty to Co-operate bodies considered as relevant to the Pre-Publication Local Plan during January 2022 including neighbouring boroughs, the GLA and other statutory consultees. The email summarised the strategic cross boundary issues specific to the organisation, building on discussions that had informed the adopted Local Plan, providing an update on the evidence base and the contents of the Plan set out in the place-based strategies, site allocations and draft policies. Virtual face to face meetings were offered, although it was left to the Duty to Co-operate Bodies if they wished to utilise email correspondence instead. Officer meetings were held with the GLA and TfL, the Environment Agency, and the adjoining neighbouring authorities of Spelthorne, Elmbridge, Kingston, and Hounslow. More detail is provided in the separate Duty to Co-operate Statement (June 2023).
 - Local Plan virtual events were held in January 2022 which comprised three workshops hosted over Zoom, and two lunchtime Q&A information sessions. These were advertised with a follow up press release on 5 January 2022 'Attend Local Plan virtual events

to have your say on the development of the borough'. A report on the virtual events was published ([Appendix 3G](#)).

Main issues raised / consultation responses

- 5.7 The Council received 311 responses to the pre-publication consultation. A [schedule of all the detailed comments](#) to the Regulation 18 consultation received was published on the Council's website in May 2022, along with [appendices](#). A summary of the main issues raised:

General/Introduction

- Some comments did not agree with the order of the Plan.
- Some comments raised issues that had not been covered in the strategic context and trends, such as on health inequalities or Heathrow.
- A few comments related to the supporting documents to the Plan – the Sustainability Appraisal, the Habitats Regulation Assessment, and the Sequential Test Report.
- Some comments collated against the general/introductory parts of the Plan raised broad issues, such as on infrastructure.

Vision and Strategic Objectives, Spatial Strategy, Place-Based Strategies and Site Allocations

- General support for the vision. Some support for the emphasis including on climate change and responding to change. Some suggestions for areas to improve and issues to address. A few over-development concerns. Some felt could be meaningless without measurable targets and could be bolder. The Mayor of London comment the themes and objectives align well with the London Plan 'Good Growth' policies.
- Some general support for the strategic objectives, or support for some of them but not all. While some support for particular emphasis, should acknowledge competing objectives and some suggestions the climate emergency should take priority. Some suggestions for detailed issues to address across most of the themes.
- There was broad support for the concept of 'living locally' (Policy 1), although some concerns about how it would be implemented, the need to address public transport and the need to provide for the transport needs of those less mobile (elderly, disabled etc). Comments highlighted the need for clarification, and to ensure a range of infrastructure and facilities.
- There was broad agreement with the spatial strategy (Policy 2), although some concerns about the challenges and high-rise/high density development, with some suggestions for specific issues to be raised.
- Many respondents agreed with the overall approach to the place-based strategies and Site Allocations. The Ham & Petersham Neighbourhood Forum support the vision that builds on the Neighbourhood Plan. Some respondents disagreed with the separation into 'places', and felt issues were inconsistent or not addressed. Some comments about the Urban Design Study and a couple of comments related to overdevelopment. There were individual comments on specific places/sites, and some new sites suggested on the basis of their similarity to existing Site Allocations.
- A comment the Site Allocation for **Hampton Square** is an implicit threat to build on the part of the site designated as OOLTI. Sainsbury's comment the Site Allocation for the **Carpark for Sainsburys, Uxbridge Road, Hampton** allocation for 100% affordable housing is not justified. A significant number of comments were received on the Site Allocation for **Teddington Police Station**, from Park Road Surgery and patients and individuals supporting its allocation, asking the Local Plan to require the Surgery to be relocated there; the Met Police also commented the Site Allocation was unreasonable and inflexible. Harlequins Rugby Football Club raised the Site Allocation for **The Stoop** should include land to the east and has potential to accommodate 7 stories or more. The RFU comment on the Site Allocation for **Twickenham Stadium** that the stadium's role as an entertainment venue should be

recognised. The Met Police comment on the Site Allocation for **Twickenham Police Station** as it will be retained for policing and should be removed from the Plan. The Whitton Community Association comment the Site Allocation for Whitton Comm Centre should reflect a wider opportunity to create a masterplan and consider the needs-based community spaces. St George Plc and Marks & Spencer comment on the Site Allocation for **Kew Retail Park** seeking clarification on acceptable amount of retail and suggest the building heights are not backed up by robust evidence base. A number of comments from various parties were received on the Site Allocations for **Twickenham Riverside, Kneller Hall, Ham Close, Richmond Station, Homebase East Sheen, Sainsburys Lower Richmond Road, Stag Brewery**, and **Barnes Hospital**. The Department for Education support the allocations for schools at the Stag Brewery and Barnes Hospital. A number of detailed comments were received across the Site Allocations – from agencies such as TfL and Thames Water, to local groups such as Habitats & Heritage, and from individuals. A number commented on sites or uses that had been omitted from the Site Allocations, suggesting sites that could contribute to delivery or the landowner suggesting their site – Richmond Cricket Club, building next to the BP garage on Lower Mortlake Road, former car garage east of land on Sandycombe Road, Hanworth Homebase, Molesey Telephone Exchange, car park at Richmond Station/above Richmond Station, Fulwell Bus Garage and Lidl, above Sainsburys Uxbridge Road, detailed assessment of all town centres, Land to West of Stain Hill West Reservoir Upper Sunbury Road, Hydes Field Upper Sunbury Road, Richmond Park Academy, Christ's School, Mortlake Station area, LGC site, Arlington Works, Greggs bakery and the sports ground at Teddington Lock.

Theme: Responding to the climate emergency and taking action

- Overall general support for the emphasis given to climate change and pollution from organisations (reflecting their ambitions) and individuals, although some comments raise how this interacts with other issues and requirements, such as fuel poverty and the biodiversity crises, and particularly around implementation including in historic buildings, Conservation Areas and applicability across wider sites and non-residential refurbishment and conversion.
- Detailed comments on tackling the climate emergency (Policy 3) raise specific issues – decentralised energy networks, water management and flood storage. Comment about new development being a main area of planning control, and whether energy efficiency programmes on existing stock could be advanced.
- General support for the measures to minimise greenhouse gas emissions and promote energy efficiency (Policy 4), including from the Mayor of London although should reflect the BeSeen energy monitoring guidance. However, a number of comments about the impact on costs and deliverability, going beyond London Plan standards for on-site carbon reduction and ahead of the Government's gradual transition, and particularly that the proposed carbon offset amount was too high, without flexibility and an evidence base to justify the approach.
- On energy infrastructure (Policy 5), comment about requirement developments to contribute to future networks.
- Some developer comments on the high sustainable construction standards (Policy 6), going beyond the London Plan, as onerous and costly, and about reliance on BREEAM. Specific comments on water stress and modular construction.
- On waste and the circular economy (Policy 7), the Mayor of London supports the policy approach to whole life-cycle carbon assessments, safeguarding of existing waste sites and noting the West London Waste Plan/London Plan policies to assess proposals; the waste apportionment over the lifetime of the Plan should be accounted for. The EA comment on Construction Environment Management Plan for using the river to transport construction waste, and on preventing waste management activities causing pollution and emissions. Comment safeguarding Arlington Works conflicts with the London Plan.
- On flood risk and sustainable drainage (Policy 8), specific issues raised relating to development including the setback of developments to the tidal river, Rewilding Arcadia project, approach to the islands, and risks of sewer flooding and storm surges and rising sea levels. The majority of comments are technical issues raised

by the EA including on the sequential test and the sequential approach to the layout of sites, the approach to flood defences and flood storage, and recommend use of the 'central' scenarios for climate change allowances in line with Government advice.

- On water resources and infrastructure (Policy 9), comments focused on water stress, water quality status, and wastewater networks. These raise issues of demand and supply planning including Water Resource Management Plans, the responsibilities for network connections and capacity, achieving good ecological status/potential requirements, connections between foul and surface water networks and impacts on combined sewage outfalls, guidance for bank protection works and for construction sites considering dewatering and run-off, and support for water efficiency measures.

Theme: Delivering new homes and an affordable borough for all

- Acknowledgement of the commitment to the borough's housing target, to exceed as a minimum. A need to roll forward the target beyond 10 years. The broad locations for housing delivery (Policy 10) were queried by some residents/groups including identifying the impacts on existing infrastructure, while some developers felt the numbers were too low and the details were not clear, and particularly that employment land could provide a role.
- The Mayor of London raises the approach to affordable housing (Policy 11) is likely to be an issue of general conformity with the London Plan, as the threshold approach to viability should be reflected in policy. There was largely support for the aims of delivering genuinely affordable housing, but concerns about clarity and delivery. A number of issues raised around implementation, including the lack of a Whole Plan Viability Assessment, approach to small sites and for public sector portfolio, almshouses, First Homes, listed buildings, and the tenure split.
- A number of comments queried that the need for specialist older' persons housing should reflect the London Plan benchmark (Policy 12). Some comments raised the need for other specific types of housing - particularly for people with multiple and complex physical and health needs, for older/less mobile to downsize, and students, and understanding impacts on infrastructure was raised. Query on the type of new housing the policy applies to and clarity on the application of legal agreements and higher standards.
- A few comments seeking clarity on the space standards particular around open space (Policy 13).
- No comments on the dealing with loss of housing (Policy 14).
- The Mayor of London comment there is no need to demonstrate parking is no longer needed on Infill and Backland Development (Policy 15). Two comments about protecting back garden land.
- On small sites (Policy 16) a few comments about the types of development and its impact. The policy was supported by the Mayor of London.

Theme: Shaping and supporting our town and local centres as they adapt to changes in the way we shop and respond to the pandemic

- Specific issues were raised around support for the borough centres (Policy 17), with some reference to Class E, approach to other uses such as beauty salons and fitness studios, public realm and public toilets, and that the evidence base was not up to date. The Mayor of London supports the approach towards diversifying and repurposing centres. A comment the policy should include reference to major retail and leisure development also being directed to Site Allocations. Some place-specific comments, including defining the limits outside the secondary frontage of East Sheen, supporting a diversification of uses at Kew Gardens Station, beauty salons and fitness studios meeting community need such as Sandycombe Road and smaller centres, and that restricting convenience goods at Kew Retail Park is not supported by evidence.
- Specific issues were raised in terms of development in centres (Policy 18) including reference to Class E, that more pro-active initiatives are needed in relation to empty premises, frontages only defined where they can be justified, dealing with out of centre development, not acknowledging trip generation of visitor attractions such as

Twickenham Stadium, and that the evidence base is missing or piecemeal with particular concern the character of Richmond Town will be harmed by an imbalance in floorspace. Ideas put forward for a broad consideration of cultural activities or uses and highlighting of local assets.

- General support for managing impacts (Policy 19) including consideration of the impact on residents, and on health and well-being, with suggestions to mention other specific uses in terms of overconcentration, although some noted the Government's flexibility and effect of Use Class E. The Mayor of London note the policy aligns with the London Plan on the Agent of Change principles. A comment opposing support for a night-time economy in Richmond Town, and a comment from McDonalds that the restrictive approach to hot food takeaways is not supported by evidence.
- On local shops and services (Policy 20) a comment supporting approach to pubs and a comment about business rates.

Theme: Increasing jobs and helping business to grow and bounce back following the pandemic

- Some support for the principles of supporting the local economy and identified sectors (Policies 21 and 22), although others raised the policy does not recognise other sectors – leisure and tourism, and the voluntary and community sector.
- Overall, some comments seeking flexibility and the recognition that some employment floorspace is not suitable for adaption/upgrade and/or not viable, including listed buildings, with some comments referring to the impact of pandemic (Policies 21 to 24). A comment the approach does not reflect the London Plan and should recognise some floorspace is no longer viable. The Mayor of London supports the focus of new office development in town centres, and the approach to industrial as supported by the London Plan.
- A number of comments agreed with the overall principles but were suggesting sector and/or site-specific conditions necessitated a different policy approach in these cases, including on Platts Eyot, Greggs Bakery, St Clare Business Park, Onslow Hall, LGC, Shurguard, and Arlington Works.
- General support for securing affordable, flexible and managed workspace (Policy 25), with some comments about the detailed implementation in terms of policy thresholds and targets, and viability.
- General support for the approach to visitor economy (Policy 26) and the particular references to RBG Kew and Ham House. Some comments about existing facilities, in terms of travel and whether in sustainable locations. Comments requested references to particular issues/places including to provide support for infrastructure for the Royal Parks, expanding this area around East Sheen/Stag Brewery and Richmond Park, and Twickenham Stadium for appropriate development which complements the sporting and entertainment use.
- Support for the approach to telecommunications and digital infrastructure (Policy 27), with some comments on the details of assessments particularly the visual impact.

Theme: Protecting what is special and improving our areas (heritage and culture)

- Some support for the policy approach to local character and design quality (Policy 28) or specific aspects it addresses such as shopfronts, lighting. Historic England consider the Plan provides a strong basis for conservation and enhancement of the historic environment. A number of comments on specific issues – seeking reference to enhancing where appropriate, following Secured by Design and early engagement with the Met Police on major development, the protection of the Royal Parks, Conservation Areas as well as the Urban Design Study places and character areas, healthy places and the requirements of health organisations, gated developments, banners, and digital advertising.
- Some support for the policy approach to designated heritage assets (Policy 29). Specific details raised – wording around change of use, dealing with substantial harm, threat of climate change and the balance with sustainability and other needs,

and issuing enforcement notices. Comment policy not compliant with the NPPF, and too specific wording around reinstatement of historic features.

- Specific issues raised on non-designated heritage assets (Policy 30) – no reference to historic industrial sites and watercourses, issuing enforcement notices, and historic walls. Comment the policy not consistent with the NPPF and should refer to significance and a balanced judgement.
- General support for the approach to Local Views and Vistas (Policy 31), and the importance of CGI and 3D modelling to assess visual impacts. Historic England and the Mayor of London seeking detailed wording. Interest in the forthcoming Local Views SPD and some comments on specific views – importance in the Royal Parks and opportunities in the River Crane corridor, and threats from outside the borough. Comment the policy is too prescriptive and should be redrafted in line with the London Plan.
- Support for the policy on Royal Botanic Gardens, Kew World Heritage Site (Policy 32) with detailed comments from Historic England, RBG Kew and the Mayor of London on specific aspects, including RGB Kew seeking a degree of balance in dealing with the management of the WHS.
- On archaeology (Policy 33), comment on allowing time for field investigations.

Theme: Increasing biodiversity and the quality of our green and blue spaces, and greening the borough

- Overall general support for protecting and recognising the value of green and blue spaces, with emphasis on the multi-functional network and the acknowledgement of pressures, including by the Royal Parks, FORCE, the PLA, the EA and Habitats & Heritage. The Royal Parks suggest a stand-alone policy due to the importance of the Parks.
- There are broad supportive comments and some detailed issues raised on blue and green infrastructure (Policy 34) – including dark corridors used by bats and other species, green corridors, wildlife corridors, impact of artificial lighting, invasive species and dogs, larger sites and their connectivity, significance of the Crane Valley, the public open space hierarchy, attenuating flooding by naturalising the River Crane below the Mereway Weir, and naturalising riverbanks, inappropriate tree planting and barriers to enhancements.
- Some support for the protection of open land designations (Policy 35) including by the Mayor of London. Detailed comments relate to cycle storage and accessibility for disabled persons, exceptional circumstances, visual impacts of developments on sites in proximity, flood storage areas, and the policy wording should match the London Plan and NPPF. The Local Green Space (LGS) sites proposed are supported generally by Habitats & Heritage, with specific support for Udney Park Playing Fields to be retained as LGS. Additional designations as new sites/removals are suggested – Teddington Library Gardens as an additional LGS; Mortlake playing fields should be designated as LGS; Putney Town Rowing Club should be an additional MOL; David Lloyd Club should be removed from MOL; Petersham Nurseries should be removed from MOL; RFU eastern edge should be removed from MOL; Hampton Water Treatment Works should be removed from the Green Belt; removal of and the MOL assessments for Fulwell Golf Club and Longford E & Schools contain inaccuracies; retitle the MOL assessments for Little Green and Thames Old Deer Park and queries the details of the Old Deer Park MOL assessment; the former Thames Water Operational land adjacent to west of Sunnyside Reservoir, Lower Hampton Road should not be in the Green Belt.
- Comments on Other Open Land of Townscape Importance (OOLTI) (Policy 36) related to the nature conservation criterion, re-provision and defining openness, quantum and timing. Support for the Ellerman Avenue becoming OOLTI.
- General support for the approach to public open space (Policy 37), including by Sport England noting the evidence base is being kept up to date, and by the Mayor of London for play and informal recreation. Support for improving underutilised spaces and securing wider community needs through community use agreements. Detailed comments relate to active environments, impacts of excessive wear-and-tear, increasing green space, biodiversity, and encouraging the Council to take

responsibility for maintenance. Site-specific comments relate to the Royal Parks, Udney Park Playing Fields, Heathfield Recreation Ground.

- Comments on urban greening (Policy 38) only relate to the benefits of urban greenspace, and the details around the policy implementation including relating only to major development, no evidence to justify the restrictive 70% requirement, and the ways it can be supported.
- General support for the policy approach to biodiversity (Policy 39) including the 20% BNG beyond Government requirements, although comments also raise whether this is feasible and viable without evidence. A number of comments related to dark corridors and/or dark spaces, with suggestions for areas for restrictions of light pollution. Detailed issues raised include biodiversity potential as a baseline, measurable BNG and DEFRA metric 3.0 the mitigation hierarchy, offsite contributions, submitting data to GiGL, riverside areas, reducing deficiencies in access to nature, integrated nest boxes, buildings-based species, management by site owners, and geodiversity. A number of site-specific comments were raised (analysed against Appendix 4) in support of proposed designations/upgrading including Udney Park, Fulwell and Twickenham Golf Courses, Twickenham Junction Rough, Portlane Brook and Meadow, Richmond Park and Associated Areas, Bushy Park and Home Park, Longford River in Richmond, and all the candidate Sites of Importance for Nature Conservation (SINCs). Some comments specified that parts of the sites should not be included. Comment objecting to upgrade of Hampton Water Treatment Works and Reservoirs. Some comments on Barn Elms.
- Detailed comments on rivers and river corridors (Policy 40), including water quality and undeveloped buffer zones, the multiple benefits of protecting river corridors, river-related industry and protection of slipways, securing public access, ambitions applicable to the River Crane, GLA's Green Grid, groundwater hydraulic flow systems, barriers to movement, drowning prevention, cross-borough working to gain benefit along the river, covered rivers, the overlap with Marine Planning, and site-specific conditions at Platts Eyot.
- Detailed comments on moorings and floating structures (Policy 41), in relation to riverside structures, enforcement action, limited powers regarding appearance of boats, approach to new or extensions to houseboats, moorings and piled bank protection methods causing shading.
- Comments on trees, woodland and landscape (Policy 42), a policy approach welcomed by the Woodland Trust, related to details on ancient and veteran trees, increasing canopy cover, source of stock, and protection of hedgerows.
- On floodlighting and other external artificial lighting (Policy 43), most of the comments raise concern about the impact of lighting on biodiversity and how the policy will be implemented, although Sport England consider the positive benefits of sports lighting. Specific issues raised – how harm can be demonstrated, a precautionary approach, existing baseline and temporary installations, need for lighting, newer forms of LED lighting, reducing light spill, and protection of dark corridors.

Theme: Improving design, delivering beautiful buildings and high-quality places

- Comments around the subjective nature of design, some raised it was not clear how proposed developments would be assessed including for smaller developments and who is involved (Policy 44). The virtual event feedback considered what was important to 'good design' including materiality, sense of connection and community, and sustainability.
- Comments were mixed about the tall and mid-rise building zones (Policy 45). Some felt the policy should not set maximums and is too prescriptive; the Hillingdon judgement was referred to as making it clear tall buildings can be found to be acceptable in areas that are not identified where they meet the London Plan. Some respondents felt the Urban Design Study was flawed, including the character assessments and sensitivity, and should not be used to reference acceptability of tall and mid-rise buildings, and while some agreed with the principles, they felt it lacked detail in the supporting evidence to underpin specific zones. Historic England support the policy and provides appropriate criteria to positively manage the conservation of the historic environment and consideration of local character, with

comments on where to improve including to avoid harm to vistas and views; the Royal Parks, RBG Kew and the National Trust also comment on assessing the impact on views and heritage assets. RBG Kew request further information and justification on heights for zones in proximity to Kew Gardens. The EA raise the biodiversity of setting tall buildings back from the river, and FORCE would like the criteria applied to the River Crane, recognising the impact of tall buildings on adjacent open spaces.

- A number of site-specific concerns were raised (analysed against Appendix 3) commenting on the scope for a higher number of storeys/wider scope (often the landowner) on Greggs, Kew Retail Park, LGC site, and The Stoop, or that there should be a lesser maximum height/scope of the zones (often residents) on Kew Retail Park, Stag Brewery, Richmond Station, North Sheen (Lower Richmond Road), Teddington (railway side), and The Stoop.
- Impact on neighbour amenity and overlooking from first floor terraces raised, as implied not normally acceptable yet the assessment is subjective and permitted in a specific case (Policy 46).

Theme: Reducing the need to travel and improving the choices for more sustainable travel

- General support for the policy approach to reducing the need to travel and improving choices for sustainable travel (Policy 47). A number of suggestions for improvements/issues to address, particularly to support cycling and walking, including: safeguarding existing transport infrastructure; bus operations can be made more efficient; mitigation informed by a multi-modal assessment; inclusive mobility; impact of traffic and associated air pollution on designated sites and priority habitats; taxis; coach parking; congestion and highway safety; standards for cycling proposals; the walking and cycling network; river corridor opportunities for active travel including River Crane and DNR; need to consider cross-borough active travel links.
- Highways England confirm policies and allocations will have no boundary issues related to the Strategic Road Network, but along with TfL consider exploration of borough-wide assessment and modelling would be useful in understanding impacts.
- TfL welcome the intention to adopt London Plan parking and cycling standards and encourage car-free development (Policy 48). A number of comments on specific areas relating to how the policy would be operated, including excessive paving, the approach to car clubs, car-free development, electric vehicle charging and parking, delivery and servicing, cycle parking and storage, Controlled Parking Zones and disabled parking spaces.

Theme: Securing new social and community infrastructure to support a growing population

- Providers raise comments on how policy requirements (Policy 49) apply to their service needs/estates, seeking flexibility for alternative uses such as residential, and from the Met Police seeking contributions to cover policing infrastructure.
- Education provision (Policy 50) raised in terms of identifying sites/admission priority including for the Stag Brewery.

Theme: Creating safe, healthy and inclusive communities

- General support for the policy approach to health and wellbeing (Policy 51). Some comments raised about the impacts of the ageing population including their ability to walk and cycle and how impacts are assessed. Some issues raised that are not covered in detail – community safety, housing standards, and public toilets, healthy food neighbourhoods and school super zones.
- On allotments (Policy 52) support for their retention but issues raised about investment, their statutory designation, and waiting lists.
- On local environmental impacts (Policy 53), detailed comments were mostly from the Port of London Authority, Thames Water and the Environment Agency, raising clarification around implementation including odour impact assessment, sensitive receptors, groundwater impacts, and waste sites.

- On basements and subterranean developments (Policy 54), detailed matters raised on demonstrating a scheme will not puncture/degrade a sealed/isolated aquifer or increase/exacerbate flood risk, and installation of a pumped device where there is a waste outlet from a basement.

Implementation, Delivery and Monitoring

- The impacts on particular infrastructure raised by The Royal Parks and the Clinical Commissioning Group (CCG).

5.8 All responses were published, analysed and used to inform the preparation of the Publication version of the Local Plan. A report of all representations received including a summary of the main issues raised, and the Officer’s responses is available in **Appendix 3G**.

6. Publication consultation (Regulation 19): 9 June 2023 – 24 July 2023

Purpose of consultation

- 6.1 Having reviewed and analysed all responses received and taking account of Duty to Co-operate and other engagement activities that have taken place, the policies and site allocations within the pre-publication version of the Local Plan were updated to create the Publication version.
- 6.2 Public consultation on the Publication Local Plan was carried out in line with Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012 between 9 June and 24 July 2023, as agreed by the Environment, Sustainability, Culture and Sports Committee at its meeting of 24 April 2023 and Full Council at its meeting of 27 April 2023 approved the draft of the Plan: <https://cabnet.richmond.gov.uk/ieListDocuments.aspx?CId=173&MIId=500000034>
- 6.3 The Publication Local Plan is the Council’s final version of the Local Plan and the final opportunity for consultees to comment. At this stage comments should relate to issues of legal and procedural compliance, the “soundness” of the Plan and the “Duty to Co-operate”.

Consultation details and responses

- 6.6 This Statement, published alongside the Local Plan Publication (Regulation 19) consultation, will be updated to include a summary and details of all the consultation and the representations received during the Publication (Regulation 19) consultation when the Council submits the Plan to the Secretary of State for independent Examination in Public.

7. List of Appendices

Appendix 1: List of consultees – version used for Regulation 19 Publication Consultation which incorporates previous respondents. Contact details have been removed.

Appendix 2: Direction of Travel consultation

2A: Letter to consultees. Sent by email or post depending on availability of email addresses.

2B: Copy of consultation details on the Council's website

https://www.richmond.gov.uk/new_local_plan_direction_of_travel_engagement

2C: Press notice in RTT 7 February 2020 / 5 March 2020

2D: Press release 24 February 2020 – also available online:

https://www.richmond.gov.uk/council/news/press_office/older_news/press_releases_february_2020/richmond_residents_and_businesses_invited_to_shape_future_of_the_borough

2E: Councillor Comment Spot on 18 February 2020 by Chair of Environment, Sustainability, Culture and Sport Committee 'Setting out our priorities for the development of the borough'

2F: Responses to Local Plan Direction of Travel consultation

Appendix 3: Pre-publication consultation

3A: Letter sent to consultees. Sent by email or post depending on availability of email addresses.

3B: Consultation details and draft documents were published on the Council's website and the Council's consultation portal

https://www.richmond.gov.uk/draft_local_plan_pre_publication_version

3C: Pre-publication consultation response form

3D: Public notice in the Richmond & Twickenham Times on 16 December 2021

3E: Press release on 16 December 2021 'Have your say on the new Local Plan to help shape the borough's development'

3F: Report of 'Pre-Publication' Draft Local Plan (Regulation 18) Consultation Responses including Responses to Local Plan pre-publication consultation and Officer comments

3G: Richmond Local Plan Engagement event [report](#) (2022)

Appendix 1: List of consultees – version used for Regulation 19 Publication Consultation which incorporates previous respondents. Contact details have been removed.

Dear Consultee,

**London Borough of Richmond upon Thames – Local Plan Direction of Travel
consultation and Call for Sites – 24 February to 22 March 2020**

We are developing a new Local Plan, which is the key planning document for the borough. It will set out policies and guidance to plan and manage future growth and development in the borough over a 15-year period. Once adopted, the Plan will supersede the existing Local Plan (2018) and the Twickenham Area Action Plan (2013). It will be the main document against which planning applications are assessed.

Why do we need a new Plan

While elements of the 2018 Local Plan are still relevant, the Council has declared a climate emergency last summer, and planning policies need to reflect and actively address this issue. The borough is also facing increased housing targets, and the population is changing, so there is a need to plan for new homes together with the necessary infrastructure to support growing communities. In addition, there have been changes to national planning policies and guidance that the Local Plan must reflect.

What is a Direction of Travel

The Direction of Travel document is the first stage in the engagement process with residents, business and other stakeholders on what our vision for growth and future development should be. The borough is facing a number of key challenges, opportunities and critical planning issues. This document sets out what we think they are, and how they could be included in a new Local Plan.

This is an additional stage of consultation that is not prescribed by legislation. We want to hear your views as to how the borough should accommodate growth and plan for new development. Please tell us if you agree, or if we have missed any opportunities or issues you think need to be addressed in the new Plan. We have included a number of questions throughout the Direction of Travel document, which we hope will help you in responding.

Alongside the Direction of Travel, there is a 'call for sites' consultation, the purpose of which is to identify what land may become available during the Local Plan period. In addition, the Council is also seeking comments on the revised Sustainability Appraisal Scoping Report.

Where to view the documents and how to respond by 22 March 2020

The documents can be viewed as follows:

- Read the consultation material online at:
www.richmond.gov.uk/new_local_plan_direction_of_travel_engagement
- View the consultation material at the Civic Centre, 44 York Street, Twickenham, TW1 3BZ and in the Borough's main libraries

Please contact us should you have problems accessing or printing the documents.

You can respond, to some or all of the questions, by:

- Completing the **online questionnaire** at
<https://haveyoursay.citizenspace.com/richmondecsl/local-plan-20>
- **email** to **LocalPlan@richmond.gov.uk** or
- **post** to Policy and Design, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ

We would prefer all comments to be made electronically. Please note that the **deadline for comments is Sunday 22 March 2020**, and responses will not be treated as confidential.

What happens next

There will be further engagement opportunities to inform and shape the new Local Plan later in 2020. Next year, there will be statutory consultations on draft versions of the Plan, and, following an independent examination in public, the Local Plan is anticipated to be adopted in 2024.

Update on legal challenges of Local Plan (2018)

Mr Paul Griffiths BSc (Hons) BArch IHBC, a Planning Inspector appointed by the Secretary of State, has issued his report with respect to (1) Other Open Land of Townscape Importance at St Michael's Convent, Ham Common; and (2) the Local Green Space designation at Udney Park Playing Fields, Teddington. The Council has published the Inspector's report on 12 February 2020, which is available on the Council's webpage www.richmond.gov.uk/local_plan_examination#legal

The Inspector concluded that the disputed section of the garden at St Michael's Convent should be included as Other Open Land of Townscape Importance, and that Udney Park Playing Fields does warrant the Local Green Space designation. The report on the outcomes of the redetermination and the adoption of the Plan in respect of the above two matters only will be considered at a meeting of Full Council on 3 March 2020.

You have received this notification as you have previously engaged with the Richmond Planning Policy and Design team or we have identified you as a stakeholder. The General Data Protection Regulation (GDPR) is a set of European Union (EU) regulations which came into force on 25 May 2018. The Council is committed to ensuring that personal data is processed in line with the GDPR data protection principles including keeping data secure, and that it will not be shared with any other organisation. The Council's Privacy Notice is published on the webpage www.richmond.gov.uk/data_protection. We hope that you or your organisation will continue to take an interest in, and contribute to, future planning policy and design policy. If you'd like to continue hearing from us, then you do not need to do anything to respond to this. If, however, you would prefer not to receive notifications regarding planning policy and design matters from us, then please notify us, preferably by email to LocalPlan@richmond.gov.uk.

Yours faithfully

Andrea Kitzberger-Smith
Planning Policy and Design Team Manager

New Local Plan Direction of Travel engagement

We are now starting to prepare a new Local Plan for Richmond borough which will replace the current Local Plan and Twickenham Area Action Plan. This page is for the first stage of early engagement seeking your views.

About the new Local Plan

The Local Plan is the key planning document for the borough. It sets out policies and guidance to shape our places, plan and manage growth and guide development across the borough over a 15-year period.

We will use the Local Plan to guide our decisions on the location, amount and type of development the borough needs to accommodate growth. It will also set out which places will be protected, and which places will change. Ultimately, the Local Plan is the main document against which planning applications are assessed.

In the last two years there have been changes to national planning policy and the new London Plan is in its final stages before adoption and will affect housing targets. The Council has adopted a Climate Emergency Strategy with a range of actions some of which have a direct bearing on Local Plan policies, as will other changes to the environment and economy.

About this consultation from Monday 24 February to Sunday 22 March 2020

The Direction of Travel document is the first stage in the engagement process with residents, business and other stakeholders on what our vision for growth and future development should be.

The borough is facing a number of key challenges, opportunities and critical planning issues. This document sets out what we think they are, and how they could be included in a new Local Plan.

This is an additional stage of consultation that is not prescribed by legislation. We want to hear your views on how the borough should accommodate growth and plan for new development. Please tell us if you agree, or if we have missed any opportunities or issues you think need to be addressed in the new Plan. We have included a number of questions throughout the Direction of Travel document, which we hope will help you in responding.

Alongside the Direction of Travel, there is a 'call for sites' consultation, to identify what land may become available during the Local Plan period. The Council is also seeking comments on the revised Sustainability Appraisal Scoping Report.

Direction of Travel Consultation

View the [Direction of Travel consultation](#). You can also read a [summary leaflet](#)  (pdf, 1.1 MB) first.

Paper documents are also available to view at all [borough libraries](#) and at the [Civic Centre in Twickenham](#).

You can respond, to some or all of the questions, by 22 March 2020:

Completing the [online questionnaire](#)

Email to LocalPlan@richmond.gov.uk or

Post to Policy and Design, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ

We would prefer all comments to be made electronically, ideally through the online questionnaire. Please note that the deadline for comments is Sunday 22 March 2020, and responses will not be treated as confidential.

Call for Sites

The Council is required by Government to issue a call for sites and broad locations for development as part of the preparation of the new Local Plan. This is to identify as many potential opportunities as possible, aimed at as wide an audience as possible so that those not normally involved in property development have the opportunity to contribute.

This is happening alongside the Direction of Travel consultation, so we will have a better understanding, at this early stage in preparing the Plan, what land may become available during the Local Plan period and an understanding of deliverability.

Please note that the 'call for sites' exercise does not mean the Council will have to allocate the suggested sites for development, but the Council will be able to assess from a potentially large number of sites their suitability, availability and deliverability.

You (individuals, landowners, developers, businesses, local groups) are invited to put forward sites for consideration. The information you need to submit is set out within the Direction of Travel Consultation (as detailed above), or these can be submitted separately by:

Completing [the online questionnaire](#)

Email: LocalPlan@richmond.gov.uk

Post: Policy and Design, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ

Draft Sustainability Appraisal Scoping Report

The purpose of Sustainability Appraisal is to consider the likely social, environmental and economic impacts of the emerging plan, it also incorporates the requirements of the Strategic Environmental Assessment (SEA). As part of the preparation of a new Local Plan, the Council has reviewed and updated its draft Sustainability Appraisal Scoping Report (February 2020), which identifies the scope and level of detail of the information to be included in the Sustainability Appraisal.

The Council is seeking views on the draft report from the three statutory consultees with environmental responsibilities in England (Historic England, Natural England, and the Environment Agency). Other relevant stakeholders with a sustainability remit or a local interest are also able to review the report and submit representations.

View draft revised of the [Sustainability Appraisal Scoping Report](#)  (pdf, 2.7 MB)

After the consultation

There will be further engagement opportunities to inform and shape the new Local Plan later in 2020. The timetable for the preparation of the new Local Plan, including the further statutory consultations and stages towards adoption in 2024, are set out in the [Local Development Scheme](#).

A summary of the responses will be made available following the consultation period. These responses will be fully considered and taken into account when preparing the Plan.

Public Notices

**LONDON BOROUGH OF RICHMOND UPON THAMES
DIRECTION OF TRAVEL AND CALL FOR SITES
FOR NEW RICHMOND LOCAL PLAN**

The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended)

Public Notice to invite comments on the Direction of Travel document for the new Local Plan, together with a call for sites consultation

Public consultation: 24 February to 22 March 2020

We are developing a new Local Plan, which is the key planning document for the borough. It will set out policies and guidance to plan and manage future growth and development in the borough over a 15-year period. Once adopted, the Plan will supersede the existing Local Plan (2018) and the Twickenham Area Action Plan (2013). It will be the main document against which planning applications are assessed.

Why do we need a new Plan?

While elements of the 2018 Local Plan are still relevant, the Council has declared a climate emergency last summer, and planning policies need to reflect and actively address this issue. The borough is also facing increased housing targets, set by the Mayor of London, and together with the rising population, there is a need to plan for new homes together with the necessary infrastructure to support growing communities. In addition, there have been changes to national planning policies and guidance that the Local Plan must reflect.

What is a Direction of Travel?

The Direction of Travel document is the first stage in the engagement process with residents, business and other stakeholders on what our vision for growth and future development should be. The borough is facing a number of key challenges, opportunities and critical planning issues. This

The document applies to the whole borough and has been prepared in accordance with the Planning and Compulsory Purchase Act 2004 (as amended) and Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended). Note the Area Action Plan (AAP) for Twickenham, which was adopted in 2013, will be superseded by this new Local Plan. However, the Ham and Petersham Neighbourhood Plan (2019) and the West London Waste Plan (2015) will remain as existing.

document sets out what we think they are, and how they could be included in a new Local Plan.

This is an additional stage of consultation that is not prescribed by legislation. We want to hear your views as to how the borough should accommodate growth and plan for new development. Please tell us if you agree, or if we have missed any opportunities or issues you think need to be addressed in the new Plan. We have included a number of questions throughout the Direction of Travel document, which we hope will help you in responding.

Alongside the Direction of Travel, there is a 'call for sites' consultation, the purpose of which is to identify what land may become available during the Local Plan period. In addition, the Council is also seeking comments on the revised Sustainability Appraisal Scoping Report.

Availability of consultation documents for inspection

- Read the consultation material online at: www.richmond.gov.uk/new_local_plan_direction_of_travel_engagement
- View the consultation material at the Civic Centre, 44 York Street, Twickenham, TW1 3BZ and in the Borough's main libraries

How to let us know your views

You can respond in the following ways by **22 March 2020**:

- By completing the **online questionnaire** at <https://haveyoursay.citizenspace.com/richmondccs/local-plan-20>
- By email to LocalPlan@richmond.gov.uk or
- By post to Planning Policy, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ

We would prefer all comments to be made electronically, ideally through the online questionnaire. Please note that the **deadline for comments is Sunday 22 March 2020**, and responses will not be treated as confidential.

What happens next?

There will be further engagement opportunities to inform and shape the new Local Plan later in 2020. Next year, there will be statutory consultations on draft versions of the Plan, and following an independent examination in public, the Local Plan is anticipated to be adopted in 2024.

Appendix 2D to the Statement of Consultation: Direction of Travel - Press release

Richmond residents and businesses invited to shape future of the borough

Release Date: 21 February 2020

Work has begun to prepare a new plan that outlines how future development will create the 'best for our borough'.

The Local Plan is the key planning document for the borough. It sets out the policies and guidance that shape our places, plan and manage growth and guide new development across the borough over a 15-year period.

The Council uses the Local Plan to guide decisions on the location, amount and type of development the borough needs to accommodate future growth. It also sets out which places will be protected and which places will change. Ultimately, the Local Plan is the main document against which planning applications are assessed.

The Council is in the very early stages of developing its new Plan. The views of residents, businesses, community groups and wider stakeholders are sought on the "Direction of Travel" for the new Local Plan. The Direction of Travel sets out the key challenges, opportunities and critical issues facing the borough.

Ten themes have been identified that will inform the new vision for growth in the borough. Responding to the climate emergency, the rising population and demands for new homes together with necessary infrastructure to support growth as well as delivering an affordable borough for all will be key priorities for the new Local Plan.

Over the next four weeks, from 24 February to 22 March, the Council is asking the local community, businesses and other stakeholders to help shape the new Local Plan by responding to the questions set out in the Direction of Travel. Views are sought on important areas such as town centre growth and changes in our high streets, ambitions around carbon emission reduction standards for new developments, encouraging the use of alternatives to the car, providing new affordable homes and much more.

Have your say

Cllr Martin Elengorn, Chair of the Environment, Sustainability, Culture and Sport Committee, said:

“In response to the accelerating pace of climate change and the rising population, we need to plan for our future.

“The Local Plan is effectively a blueprint for the borough’s future, covering everything, from where and how many new homes are needed so families can continue to live locally, to more schools and health provision to meet the needs of growing communities. It will also be key to shape the future of our high streets and town centres, in light of changes in shopping habits.

“Now is the time to help shape the future direction of growth and changes in the borough. The issues and challenges facing our borough will impact on the lives of everyone, whether you live or work here, so I hope that as many of you as possible will work with us. By planning for the future now, we can work towards a better borough for everyone.”

There will be further engagement opportunities to inform and shape the new Local Plan later in 2020. Next year, there will be statutory consultations on draft versions of the Plan, and following an independent examination in public, the Local Plan is anticipated to be adopted in 2024.

Appendix 2E to the Statement of Consultation: Direction of Travel - Councillor Comment Spot

Setting out our priorities for the development of the borough

Date: Tuesday 18 February 2019

Author: Councillor Martin Elengorn

Title: Chair of Environment, Sustainability, Culture and Sport Committee

It is less than two years since the Council adopted the present Local Plan, (a strategy that sets out the priorities for the development of the borough, it is used for making decisions on planning applications). But since it was adopted much has happened. The Council now has a Climate Emergency Strategy with a range of actions some of which have a direct bearing on Local Plan policies. There has also been a revision of the National Planning Policy Framework and an emerging new London Plan with, amongst other things, increased housing targets, within which the achievement of the desired proportion of affordable accommodation remains elusive. Another major issue is that, although our town centres have so far proved more resilient than most to changes in shopping habits, we need to consider whether greater policy flexibility is desirable.

So, we are working towards the next Local Plan and, as a first stage, we are carrying out a consultation based on a Direction of Travel document.

Among the most important contexts are Borough population projections which show considerable growth, particularly among the over 70s.

Projected population growth in Richmond

We also have to think about those commuting both out of and into the borough.

Commuter movement in and out of the borough

So, these are just a very few of the questions we will be asking:

Which areas of the borough could take most growth, for example based on proximity to town centres and stations?

How ambitious should we be in requiring zero carbon standards for all developments?

Should Richmond and Twickenham be the appropriate locations for the majority of any new retail floorspace?

Should Café culture and the night time economy be encouraged. Should we be more flexible about change of use from retail to eating out? If so, where?

Is there more scope for further community uses in centres, potentially even in key retail areas?

Would housing (including residential on upper floors) work if located next to other (potentially noisy or smelly) uses in centres?

Should the amount of designated key shopping frontages be reduced and/or should secondary shopping frontages (where some change of use is already allowed) also be reduced or de-designated altogether?

Should we continue to protect local top-up shopping facilities?

How long should shops be marketed before a change of use is allowed if the proposal is contrary to policy?

What priority should we give to employment uses over residential amenity, if at all?

Are there any sites that should be designated as 'Local Green Space'?

Should we develop our own borough-wide design guide?

Should the Council actively pursue alternative uses (such as for much needed affordable housing) on its existing car parks?

There are many questions on which we're seeking your views. Our consultation on the Direction of Travel for the next Local Plan will be launching shortly. So, watch this space for more information. Remember to [sign up for our new Climate Change newsletter](#), which will include more information about what we are doing and what you could do to reduce our borough's carbon footprint.

Updated: 18 February 2020

Local Plan Direction of Travel Consultation Responses

Planning

30 November 2020

About the consultation

The consultation was undertaken Monday 24 February to Sunday 22 March 2020.

The consultation on the [Direction of Travel](#) was accompanied by a [summary leaflet](#), and responses could be submitted through an online questionnaire, by email or post. There was also a Call for Sites (with a separate questionnaire) and statutory bodies were consulted on the Sustainability Appraisal Scoping Report which was also available for comment.

The consultation was extended to Sunday 5 April 2020 (as the Mayoral and London Assembly elections were postponed there was no purdah period, and due to the implications of COVID-19).

About the respondents

Comments were received from 88 respondents, some responded to more than one of the documents - comprising 71 on the Direction of Travel, 33 to the Call for Sites, and 4 to the Scoping Report. Respondents included a range of residents and amenity groups, landowners, organisations and statutory consultees. The list of all respondents (as received and not alphabetically ordered or in any other order of priority) is as follows:

Respondent reference no.	Name / Organisation	Responded to

Summary of main issues raised

Officers have produced a summary of the main issues raised for each question/area of comment as set out in this document, and an overall summary at the end of each section/topic. As responses could be made via an online questionnaire and/or by email, these have been collated and cross referenced as appropriate, reflecting the order of the questionnaire format on the Direction of Travel and then separately the responses to the Call for Sites. There are schedules of all comments in full and appendices with any supporting documents submitted which are published separately for each consultation:

- Schedule of Direction of Travel All Responses Received
- Schedule of Direction of Travel All Responses Received - Appendices
- Schedule of Call for Sites All Responses Received
- Schedule of Call for Sites All Responses Received - Appendices
- Schedule of Sustainability Appraisal All Responses Received.

Summary of main issues raised

Direction of Travel

Introduction

- The Mayor of London notes all development plan documents in London must be in general conformity with the London Plan, and publication of the final version of the new London Plan is anticipated in the summer when it will form part of Richmond's development plan. Welcomes the ten themes identified and the new challenges, changing priorities and key shifts intends to address. Welcomes early thinking and recognises important to address housing delivery and ensuring the demand for other land uses can be met.
- Some respondents supported the need for a new Plan, although others raised queries. A respondent felt the explanation of what a local plan is not clearly explained, referring to Government guidance to address housing needs, economic, social and environmental priorities. A respondent felt local residents views are regarded as not important. A respondent felt it was too generalised, and could not find the local plan. A respondent felt the document was not in an accessible format to share with the community, therefore interest to respond to the consultation was low. A respondent did not have time to give detailed replies to all the questions. RB Kingston suggested it was drafted in a positive user-friendly way. A respondent supported setting stretching standards and targets to push developers, although a respondent felt pursuing policies to show environmental awareness is a waste of resources. A respondent felt the plan needs to be flexible to accommodate changes, take a strategic 10 year view, with parts evolving as trends and legislation evolves i.e. concentrate on the parts that do require updating.
- Some respondents supported the climate emergency and sustainability, although a respondent felt the implementation date was too far away for an emergency; a respondent felt other priorities are more important. Some respondents supported the focus on population growth, but a respondent felt there is overpopulation. A respondent felt it did not mention how the level of traffic gridlock will be reduced, exacerbated by the closure to traffic of Hammersmith Bridge, and at black spots. A respondent felt air quality was not given the prominence it deserves. A respondent felt it is incorrect to state the borough is prosperous, safe and healthy, as in many areas there is relative deprivation and a marked variance in health outcomes. A respondent felt it did not address Disaster Management e.g. the major risk of flooding. A respondent suggested exploration of the Slough and Heathrow Travel to Work Area, as cause of congestion and pollution. A respondent felt parking facilities should not be removed, particularly from Twickenham Embankment, as shops, pubs, clubs and restaurants depend on customers being able to park nearby.
- A number of respondents (who made comments later on in the consultation period) commented on uncertainty due to Covid-19, and potential implications for residents, visitors, businesses and employees.
- Many respondents have made set out general introductory information, such as about their association/group or about a particular site if they are a landowner or developer.
- DP9 on behalf of London Square Developments supported the reasons why a new Local Plan is needed, suggesting the former Greggs Bakery site (see also Call for Sites) is not sustainably located for large-scale employment use and will deliver 116 new homes, noting the relevance of viability and this must be considered in preparing policies which seek to protect certain uses.
- Richmond Athletic Association set out they are continuing to investigate how they can improve the existing facilities at the ground to meet increasing demand from the local community and secure the future of rugby on the site, and are in the early stages of developing a revised masterplan (see also Call for Sites). Support for the vision and themes identified, suggesting the objective to protect and improve the borough's Heritage, Culture,

Green infrastructure and open land should also recognise the requirement to make best use of existing resources to ensure these can be enhanced to better meet residents' needs.

- Old Deer Park (ODP) Working Group question whether the adoption of the Climate Emergency Strategy necessitates a new strategic vision and a new place-making strategy, and whether the growth in population and anticipated housing target, and other Government changes, are justification for preparing a new Local Plan so soon after the adoption of the current Plan. Welcome the opportunity of putting forward issues relating to the care, conservation, development and management of the ODP for consideration, primarily relating to the failure of the Council and the Inspector to consider and respond to unresolved designations relating to ODP in the 2018 Local Plan and SPD. This position was also made by an individual, Prospect of Richmond and the Kew Society. Prospect of Richmond (and their comments supported by Friends of Richmond Green) also felt the approach seems to promote growth while putting at risk the quality of the environment, and with growth a balance is important e.g. in central Richmond the mix of retail, office and residential use. They acknowledge little evidence at this stage, but suggest evidence aware of don't believe supports proposals to dilute current planning policies. Their focus on the heart of Richmond (including Conservation Areas for Central Richmond, Richmond Green and the Riverside) as having valuable diversity, and it is essential the characteristics are maintained to sustain the character, quality and historic significance. The Kew Society also questioned whether the new vision would be a fundamental change to planning policy, and it should not be a question of either protection or something "you want" e.g. whether shortage of affordable housing could override designation of protected open lands that would be lost gone forever, and long evolved and tested planning policy and practice would be destroyed.
- Richmond Cycling Campaign welcome the increased focus on supporting non-car travel modes, and wider sustainability issues. Ask the plan must start from the assumption that the private car should not be designed into the borough, need a robust plan to make sure every person, everywhere, can make safe, low- or no- carbon transport decisions - to support a range of crucial policy imperatives including keeping people active, reducing borough carbon emissions, prioritisation of public transport, and maximising space available for people, and paint this vision in 20 years. Key challenge is the dependence on cars.

Does this document raise any specific equality impacts which would affect particular groups or communities of people in Richmond?

- A number of respondents said no, but a number of individuals mentioned their own specific issues, such as older people or related to how access to transport affects different groups. The comments raised by individual respondents were:
 - Parking standards – number of spaces could impact certain protected groups, some of whom are less likely to drive, and developments with poor public transport accessibility can have a negative impact on quality of life.
 - Communities on the west of the borough are more likely to be commuting to work in the Slough & Heathrow Travel To Work Area than those in the east, and question if there is a need for better public transport to those areas e.g. extend proposed West London Orbital Railway to Twickenham - drill down into these TTWA statistics.
 - Focus on climate change detracts resources from other more essential areas e.g. state of roads, empty shops, litter, crime.
 - Stakeholders referred to are not identified.
 - Anyone who understands scientific issues, also anyone suffering from any of the serious environmental issues specific to the borough e.g. rising anti-social behaviour in less affluent parts of the borough.

- Car drivers and pedestrians are disadvantaged while cyclists benefit above everyone else. A lack of equality in road and pavement use.
- Young and old have specific needs and should be given priority. Protecting air quality – reducing pollution, protecting green spaces, cultural centres and beautiful buildings, are vital for health and well-being of all.
- Reliance on cars/vehicles adversely affects less wealthy and socially excluded groups and causes lack of social cohesion.
- Needs of older people probably underrepresented e.g. in relation to housing needs.
- Traveller community – need to be considered as indicated in Housing section.
- Introduction is fair and reasonable.
- Many disadvantaged groups (BAME, Disabled) have fewer employment opportunities and less likely to get jobs in central London accessible by public transport - parking restrictions proposed likely to restrict their employment opportunities more.
- Make clear if document is available in other formats or languages.
- Essential built environment is adapted to frail and disabled e.g. public space more user-friendly for range of users e.g. people with buggies.
- Disappointed consultation about Mortlake Brewery site that the Council has failed to understand issues of ramming so many dwellings and school into area where movement is constrained between river and railway. Suggestions of extended catamaran service using Thames have been ignored.

Scale of the challenge, opportunities and setting the Direction of Travel

What challenges do you think Richmond borough faces now and in the future?

- The majority of respondents mentioned challenges that were already covered in the Direction of Travel consultation document, or felt the key challenges were articulated. These included references to the climate emergency, air quality, protecting/managing all green spaces, sustainable development, ageing population, encouraging appropriate development on brownfield and change of use, and affordable housing. Some referred to the need to change behaviours e.g. over cars.
- Some respondents commented that the rising population will add pressure to a range of services/facilities, a burden on the already congested area and local infrastructure. Some respondents felt the borough should not be a wealthy dormitory, but remain somewhere a range of people can live and work. Some referred to recognising the diversity of the borough, and protecting the character, special heritage and areas of historic interest. A number linked this with housing densities, not a one size fits all approach, the challenges of accommodating development, and the pressures to build on land including small pockets and Green Belt. A respondent felt the concept of hyper-local plans -and specific Village Plans where they remain useful - should be used and built upon. A respondent felt there must be a

strong approach on green space to direct developers to where the Plan supports development. Some respondents referred to the quality of new homes. Some specific sites mentioned – Stag Brewery, Udney Park Playing Fields.

- A number of respondents mentioned travel, traffic and parking issues. Richmond Cycling Campaign raised concerns if the borough fails to design and build sustainable transport options (reducing car dependency) we will live in an area blighted by more congestion, and resulting risks of pollution, road danger, severance and inactivity. Ham & Petersham Neighbourhood Forum referred to the Government's plan for decarbonising streets and achieving 'Vision Zero' road safety targets. A respondent raised how to cater for orbital traffic. Some referred to specific areas e.g. Ham, traffic between Kingston and Richmond, gridlock at critical junctions, 20mph, and issues e.g. commuter parking, more protected cycle lanes, support for Crossrail. Some referred to the electric economy, electric buses, electric charging points.
- A number of respondents mentioned declining/supporting centres, shops and businesses. A respondent felt there was a lack of street markets, which makes it more difficult to start up a business. A respondent said encourage low cost premises for pop up shops and micro businesses. A respondent felt business rates are too high and have driven out small business, charity shops compete with small shopkeepers, and a detrimental increase in fast food outlets, nail bars, hairdressers, tanning salons and empty shops. A respondent referred to less spending and online shopping trend. A respondent felt opportunities for employment decreasing due to loss of office space and pressure on industrial space, and firms relocating from the Slough and Heathrow Travel to Work Area to avoid curbs on car parking and congestion charging means jobs are now located in areas with poor public transport accessibility. Some respondents mentioned shortages of staff in health, care, hospitality etc. and a respondent mentioned ensuring students have business skills. A respondent mentioned supporting high speed internet.
- A number of respondents mentioned funding/investment/resources, the context of budget constraints. A respondent felt should focus on improving the quality of infrastructure for existing residents, not the climate emergency.
- Some respondents also referred to aviation and Heathrow. A respondent referred to poor air quality from aircraft and road traffic generated by the airport. A respondent referred to threat of a third runway.
- Some respondents mentioned Covid-19. A respondent felt the population forecasting, especially by age range, out of date and inaccurate, which is important as underpins the assumptions driving decisions and expenditure – suggest a pause and rethink/replan in a few years time. A respondent noted possibility of reoccurring and new pandemics. A respondent felt many shops might not reopen.
- Some individual respondents raised specific issues, including rough sleeping, crime and policing, water pollution, roadworks. A respondent said a serious rise in the use of class A drugs and the damaging effect on communities. A respondent felt more active policing of petty crime. A respondent felt the Council wasted money e.g. throwing out the plan for Twickenham Embankment, on cycle lanes/routes, and a shortage of money put into medical and social care.

How might our role in London change in the future?

- Some respondents identified the borough's green spaces and Arcadian landscapes as important, a green lung of London for recreation, attracting visitors e.g. Richmond Park, Richmond riverside, which must continue. A respondent noted the historic role as mediator between inner and outer London, and felt as this role will change more accessibility and management of the open spaces/landscapes is crucial.

- Some respondents commented on leadership. The Ham & Petersham Neighbourhood Forum response said by leading to address the challenges with visionary, evidence based policies and implementation – effective leadership with consultation to agree ways to achieve the necessary changes, representing quiet voices and hard to reach groups e.g. children. RB Kingston felt given the priority given to the climate emergency, the role would change in the approaches and actions to minimise environmental impact, in terms of cutting carbon emissions, waste and pollution - necessitating a new strategy vision and place making strategy, and clear and stringent policy for new developments. A respondent said be a role model for other Boroughs and the GLA. A respondent suggested action across London on key infrastructure e.g. coordinated approach to repair of Hammersmith Bridge, challenging rail operators who provide substandard services, to reduce homelessness and rough sleeping in combination with services related to drugs/alcohol. A respondent felt should become a world leader in ecology and ecology-technology hub for London. A respondent felt depends on future legislation affecting responsibility of Councils and Mayor of London, but would like to see a joined-up approach e.g. safe, connected pedestrian and cycle routes, Clean Air Zones including TfL controlled roads and London-wide mandatory car free/car lite developments regardless of PTAL - guiding principle apply to all developments is whether easily reachable without a car, as Government acknowledge public transport and active travel will be the natural first choice for daily activities, using cars less.
- Some respondents identified made positive comments on future opportunities. A respondent noted encourage NPL and start up businesses, encourage schools and St Mary's University. A respondent noted as working from/at home becomes more realistic for more people, could become a place where more SMEs flourish. A respondent felt public transport links need to be frequent and reliable. A respondent seeing a decline in retail businesses, encourage new retail in Richmond's centre to ensure its popularity continues.
- Some respondents felt it might not change, not at all etc.
- Some respondents raised concerns. A respondent said stop worrying about virtue signalling projects and focus on the basics. A respondent felt we are not relevant to the rest of London. A respondent felt likely to become less important. A respondent felt mounting pressure to build cheaper, smaller flats/houses and green spaces may come under pressure to be built upon. A respondent felt in danger of becoming a no go area for young families and poorer people. A respondent felt the Government may give the Mayor rent controls and may need to react to new Mayor's priorities. A respondent felt will become a dormitory town due to accelerating loss of office space. A respondent felt without major changes, will continue to attract wealthiest and make housing for middle and lower income workers difficult – expand social housing to address this, and implement new low emissions and private vehicle restrictions to lower carbon footprint. A respondent said yet to see information about plan to recover from disaster scenarios e.g. flooding, and formalise/extend the reliance on local people to respond to needs of elderly and infirm resulting from Covid-19 lockdown for future catastrophic situations.
- A respondent felt over the past 20 years moved from suburban to urban and likely to continue, used to be on fringe but boundary moved to M25 (or beyond) and dense urban belt inhabitants travel through to work in central London.

What do you think should be our priorities in the new vision?

- A number of respondents raised priorities that were already covered in the Direction of Travel consultation document, or felt the key priorities were articulated. These included references to climate change and sustainability, air quality, affordable housing, active travel, and the focus on brownfield sites and making efficient use of land, and specific groups both young and old people. A respondent referred to Government guidance to address housing needs, economic, social and environmental priorities.

- A number of respondents commented on sustainable travel - promoting walking, public transport and cycling, reducing car use and need to travel. Richmond Cycling Campaign raised embedding new transport hierarchy, and working in partnership with other authorities to deliver sustainable transport options e.g. liveable neighbourhoods bid. Ham & Petersham Neighbourhood Forum referred to the Government's plan for decarbonising streets, creating cohesive and inclusive self-sustainable communities and to achieve Vision Zero for safe active travel. A respondent felt need to incentivise travel by foot, bike and public transport for local journeys. A respondent suggested a rating system that takes account of active travel as well as public transport provision. Some respondents suggested reducing parking, a respondent suggested more parking. Some comments related to encouraging electric transport, quality of roads.
- A number of respondents commented about green infrastructure, including protecting heritage, open land and biodiversity, including no development on Green Belt, MOL. A respondent felt need to identify green chains and wildlife corridors better. A respondent suggested more re-wilding to protect wildlife, responsibility as a lung for London. A respondent felt Richmond should be a global leader, and lead London as the world's first National Park City. A respondent felt opportunities at certain locations for land currently designated as green and open land to be better utilised to meet growth needs and this can be achieved without causing any harm or detrimental impact upon the availability of meaningful green and open spaces.
- A number of respondents commented on the economy, helping business to grow, sustainable jobs. A respondent felt the existing protection of employment land will not allow to meet increasing housing delivery targets, and should consider brownfield employment land unviable for continued use for housing. A respondent felt the borough has responsibility to be one of leading boroughs for the new sustainable economy, accelerated post covid-19. A respondent felt people do not realise how much employment there is in the borough or that the Plan needs to protect land for employment purposes.
- Some comments related to character and design. The Ham & Petersham Neighbourhood Forum refer to the Mayor of London's Good Growth by Design. A respondent felt it was not important to have individual policies/strategies for different parts of the borough, like the Village Plans, as took resources and have not delivered, but want emphasis to be different in different places. A respondent suggested need a realistic expectations of residents for places of habitation to evolve, and acknowledge 'matching what exists' as the only architectural responses isn't the viable choice. A respondent suggested protecting character of Conservation Areas. A respondent raised maintaining and enhancing character, and not ugly 'bog-standard' designs.
- A respondent felt need to state clear objective to improve people's quality of life.
- The PLA consider the vision must include references to the boroughs various waterways, including the Thames, and the role can play in combating climate change.
- A respondent felt vision should outline the most appropriate locations for new homes within or in close proximity to the designated town centres and public transport, including land either within or adjacent to existing built up residential areas where infrastructure such as good road access already exists – in particular suggest Richmond town centre and its surrounding residential hinterland is an appropriate location for further infill development and limited intensification / extension of existing established residential areas.
- Some respondents commented on the balance, or order, of priorities. There were comments on taking action and meeting climate change targets. Friends of the River Crane Environment (FORCE) raise concern that, even though the Council has adopted a Climate Emergency Strategy, there is a fundamental imbalance - the emphasis is on construction and development in the borough, with less emphasis on the need to improve investment, management and operation of the borough's green assets, and on investment in

pedestrian/cycleways to reduce road traffic, to mitigate the climate emergency. A respondent felt ordering the climate emergency before housing is likely to cause conflict with the Government Inspector. A respondent felt the ten objectives were right but overly ambitious, and would like to know which three will be the focus and for investment – some seem out of reach, key priorities – tackle air pollution, address traffic congestions/lack of residents parking, reinvigorate High Streets and protect the Conservation Areas. Some respondents supported housing, but others suggested a reduction of population to solve the housing crisis, focus should be on looking after communities, and avoid sacrificing to greedy property developers who put nothing back into local communities.

- Other priorities mentioned included Heathrow, rough sleeping, infrastructure e.g. health, schools, policing, street cleaning, roadworks.
- Some respondent felts the approach to preparing a new vision and Local Plan might lead to the unravelling of many existing and sound planning policies and designations, and questions (such as if there are parts of the borough to accommodate growth or encourage intensification) suggests well tried and tested protective policies could be set aside in favour of short-term economic and other objectives.
- Some respondents raised the use of technology in engagement and solutions e.g. Fix My Street app, post Covid-19 and continuation of cash economy.

Have we covered all the key issues and overarching challenges facing the borough in the ten themes above or is there anything missing?

Of respondents who answered the question: 14 said yes, 14 said no and 4 said don't know [6 did not answer the question]

- Individual respondents identified different specific issues that were missing, there was not general support for a specific topic or issue. The areas raised by each respondent included:
 - there has not been enough co-operation with Kingston and Hounslow Councils as they need to meet some of our unmet housing requirements and both have 'opportunity areas' next to the borough; this needs to be set out by the Council in accordance with the NPPF. Benefits to extra density, such as better shops, more night life, cultural institutions, and opportunities for business – provide jobs for a percentage of new residents.
 - there should first be scientific investigation whether the borough is a net producer of CO2, if so then priority should be given to planting/maintaining more street trees.
 - the Council needs to build social housing, and all contracts/changes work across cross borders (unlike current bike hire contracts).
 - introduce a quality of life / happiness measure for the borough to see the impact on people's overall feeling of well being.
 - a willingness to change minds e.g. policies on vehicle use and pollution ignore the cost of scrapping old vehicles.
 - over population.
 - need for specialist housing for older people and every home to be a lifetime home.
 - no children approaching secondary school age in North Kew have automatic access to any secondary school in the borough.
 - new bridge crossing opportunities (refer to WSP bridge feasibility report).
 - the housing market for people needing housing benefit isn't based upon the borough boundary but Broad Market Rent Areas – taking into account BMRA much of the 'shortage' disappears. Need to deal explicitly with an ageing population.
 - Port of London Authority consider the theme on increasing biodiversity must refer to green and blue spaces, recognising the importance of the River Thames as a key asset.

- increase the wellbeing of residents through addressing significant disruptions (noise pollution, traffic, air traffic) and refer to specific guidelines from WHO. Tackle increase in crime.
- cross-referencing the Disaster Management Plan.
- making our Village High Streets thrive, support independent traders, as people will switch to smaller more ethically sourced products over life of Plan. Is the space re-allocation radical enough?
- Importance of preserving Conservation Areas.
- A number of respondents did not have anything further to add, or did not know the details, or referred to responses in their previous questions. A respondent felt the Direction of Travel focused on too many things, which dilute resources, and should focus on three that will transform residents' lives.

In addition to our existing approaches of directing larger scale development to the borough's town centres, and expecting the majority of development on brownfield sites, where should we direct new growth in the borough?

- Many respondents supported the approaches towards town centres and on brownfield sites.
- Areas to direct new growth to were: flats in areas within walking distance of the new Crossrail 2 stations, near stations, atop car parks at retail parks or in place of retail parks, areas with high PTAL, Ham, reordering redundant retail spaces, inefficient supermarkets and out of town shops with large amounts of surface parking and low storeys e.g. Sainsburys at North Sheen, Sainsburys St Clares, Hampton and Tesco Twickenham (rebuild as multi storey with food retail on ground floor), underused sites with redevelopment potential or where opportunities for housing densification or intensification and or mixed use incorporating housing is possible, car parks around Twickenham Station (like Wembley, retaining parking and developing over), over Richmond Station (like at Twickenham Station). A response noted to await the suggestions to the Call for Sites. A respondent suggested need for a brief for sites such as Sainsburys at Hampton St Clares, Homebase in Hanworth, surface car parks at Twickenham Stadium, Kew Retail Park etc.
- The Mayor of London response also noted the approach directing office development to town centres (*see Increasing jobs and helping business to grow*). A respondent noted Covid-19 will further switch food distribution to on-line, so "superstores" will continue to decline.
- A number of responses linked the issue to public transport accessibility. Richmond Cycling Campaign stress all new developments should be car free, if PTAL is too low then the solution is to improve PTAL, and suggestion of an Active Travel Availability Level would compensate for a lower PTAL e.g. Stag Brewery – enough road space if prioritise active travel and public transport. The Ham & Petersham Neighbourhood Forum suggested major development should be in locations that with high PTAL and enabled to reduce car dependency. A respondent suggested small-zone CPZs should be introduced borough-wide to discourage commuter parking and unnecessary short trips within borough by car and prevent displacement parking by residents in new car-free/car-lite developments, and felt new housing should cater for those who cannot or do not want to live with a car and reduce car trips e.g. car club parking only, sustainable transport hubs.
- Some respondents felt there was nowhere else, or could not advise, with individuals commenting that it would alter the character of the borough and the focus should be on existing businesses and the quality of existing residents' lives, and brownfield sites should be exhausted first. A respondent felt existing policies did not direct development and decisions should be made on a case by case basis, particularly with the uncertainty caused by Brexit on economic, social and demographic conditions. A respondent felt growth plans should be deferred as a minimum by 5 years. A respondent suggested more car parking for shoppers/pubs/restaurant users and for large developments more electric charging points,

as well as more places for young adults and more sports facilities. A respondent felt there is no excuse for building on green sites and making the climate emergency worse. A respondent felt opportunities to build housing on brownfield sites has been lost (e.g. Wickes, new school and Lidl in East Twickenham) and sites that could have met the needs of ageing population (e.g. Brewery Lane, over Twickenham Station, Richmond Police Station). A respondent felt the borough needs to play its part to clean up the environment e.g. how hydrogen fuels will be delivered. A respondent felt the “majority” is not enough and encourages speculative planning.

Should we continue to protect our green and open spaces from inappropriate development, or are there parts of the borough that could assist in accommodating growth?

Of respondents who answered the question: 29 considered that we should continue to protect our green and open spaces from inappropriate development, 3 considered that there are there parts of the borough that could assist in accommodating growth [6 did not answer the question]

- Many responses strongly supported the principle of protecting green and open spaces, as a valuable resource for residents and visitors and future generations. A respondent noted the wording of the question implied these spaces could assist in accommodating growth, and other parts of the borough must be identified. Richmond Cycling Campaign would like to see green spaces supporting active travel, there are opportunities to improve walking and cycling routes around and through the green spaces. The Department for Education referred to their comments on protecting open space and playing fields in line with the NPPF. A respondent noted inaccessible green land is valued for wildlife and biodiversity, and due to the climate emergency should be given the highest protection. A respondent supported protecting green space even if not regarded as high quality, as important to prevent unconstrained sprawl, although if relatively low quality and otherwise suitable for development, e.g. good transport links, could be released. A respondent felt we should have a 'grown up' conversation about Metropolitan Open Land and Conservation Area designation. A respondent linked green space provision to reducing demand on public health services e.g. Mortlake Brewery loss of community sports field and for pupils no green field playing area. A respondent noted London is the world's first National Park City. A respondent felt protecting the spaces is so important due to the climate emergency and vital for physical and mental health as demonstrated by the Covid-19 crisis. A respondent felt 'inappropriate' is too low a threshold which encourages challenges in planning, and should be 'all', as need stronger disincentives for speculative building, noting compulsory purchase order legislation is sufficient for genuine public need for building on green space e.g. infill in hospital grounds.
- Parts of the borough that could assist in accommodating growth mentioned were: large out of town retail centres and supermarkets, Fulwell Bus Station (redevelop with air-rights above, and land to increase the linkage between Fulwell Golf Course and Strawberry Hill Golf Course), Udney Park, Twickenham Embankment (restore lost car parking), Teddington High Street Telephone Exchange, Teddington Police Station, and areas by proposed new Crossrail 2 stations. A respondent felt if Ham/Petersham was better served by public transport there might be areas where increases in density and use of small plots would be viable.
- A respondent felt we don't need more people and quality of life has been dropping over the last years. A respondent perceived central Richmond, East Sheen, Mortlake, Kew and Barnes has not borne the brunt of housing (or affordable) development in recent years and development should be spread evenly over the borough.

Which areas of the borough do you think are capable of taking more growth than others, for example based on their proximity to town centres and stations?

- Areas mentioned: atop car parks at retail parks or in place of retail parks, at large food supermarkets and DIY superstores, at and near town centres and stations, extend Richmond Station like Twickenham Station, House of Fraser in Richmond, Ham, Whitton, and West Hampton.
- Areas mentioned as not capable of taking more growth: central Richmond, around Richmond Park, Ham and Petersham, East Twickenham.
- A respondent noted the frequency of services at stations is important. Some respondents referred to Crossrail 2. A respondent said town centres need more attention paid to the effects on wellbeing and service provision. A respondent suggested House of Fraser in Richmond for extra care housing for older people as close to facilities and would boost demand in local shops, cafes etc. A respondent suggested a catamaran service on the Thames, with space required for car parking allocated to innovative industries (e.g. vegetable growing in underground tunnels in Waterloo). A respondent suggested “Big Box” retail is becoming irrelevant and will disappear by 2030.
- Some respondents suggested none, and others referred to their responses to the previous questions.

Which areas of the borough may be suitable for more infill development and intensification?

- The following were mentioned: town centres (including Twickenham and Richmond), main road corridors, Richmond, empty shops, Mortlake Riverside, sites within 800m of train stations and town centres and Richmond Station.
- A respondent commented how large sites for infill and intensification can be allowed without building on gardens, in areas constrained by roads, railways and the river. A respondent felt there may be a need for a full land-use opportunity survey to identify underutilised land. A respondent commented on the need for a plan approached response, with the exception of ‘key’ Conservation Areas. A respondent felt the Council was the impediment to schemes coming forward and should identify sites and consult on what could be reasonably accommodated.
- Some respondents did not suggest any areas, some suggested none, or not in their area, and others referred to their responses to the previous questions.

Are there parts of the borough that could be transformed through larger scale development and encouraging intensification (for example redevelopment of existing single dwellings to blocks of flats)?

- The following areas were mentioned: parts of Richmond and Twickenham town centres, main road corridors, Richmond Station, Council owned buildings and car parks e.g. Whitton Community Centre and Old Deer car park, over railway stations, Ham, Ham Close, Whitton and West Hampton, Council housing estates, “Big Box” retail.
- A respondent felt with the number of empty shops in Richmond town centre may be reaching the point at which move towards mixed housing/retail is plausible.
- A respondent suggested where ownership is fragmented using compulsory purchase powers.
- A respondent felt this suggests the Council would be open to inappropriate development, in an urban rather than suburban setting – a short term view potentially destroying special “green” characteristics of the borough.
- A respondent noted most redevelopment would need to involve more than one dwelling to create an acceptable outcome, and that the majority of single dwellings in large plots have heritage value. A respondent felt the challenge is the impact on the character of an area, subdivision of large houses into flats increases density without an impact on appearance,

and an alternative form of intensification is home sharing / intergenerational living where couples/single people provide accommodation in their homes to others, sometimes in exchange for support/company/transport.

- Some respondents did not suggest any areas or suggested there might be parts of the borough but did not identify them. A respondent felt we do not need more people, due to pressures on parking, school places. A respondent said not in East Twickenham. Some respondents referred to their responses in the previous questions. A respondent felt this would be for the worse, opposing flats. A respondent questioned whether it is desirable. A respondent felt high rise developments in the 1940/50s e.g. at Roehampton led to isolation and vandalism, and developments should be no more than 4 storeys with green areas and proper management. A respondent noted the Covid-19 pandemic should teach us that intensification is to be shunned.

Would you like to see individual policies and strategies for each of the different parts of the borough (such as Twickenham, Kew, Barnes, Hampton and Hampton Hill etc.) and if yes, how could they vary? Of respondents who answered the question: 19 said yes, 3 said no and 9 said don't know [7 did not answer the question]

- Some respondents felt we already had an area based approaches, whereas some respondents thought there was a current 'one-size-fits-all' policy.
- Many respondents indicated some support for area based approaches. A respondent felt it was better to have a coordinated approach. A respondent was in favour of decentralisation, but also a borough identity. Some respondents noted these are useful for areas anticipated to undergo significant change and the need to base on the revised population growth (or shrinkage). A respondent noted the pros and cons of the approach. A respondent raised a need to remove the view that certain areas are entitled to protection where others are less valuable so can be built on intensely, as creates pockets of poor areas; should not have areas of privilege.
- Many respondents referred to the existing Village Plans. A respondent felt policies can vary based on those. A respondent felt area based strategies essential if those are discontinued. Others noted an area based approach can build on them.
- The Ham & Petersham Neighbourhood Forum response felt having developed area specific policies as a valuable way of identifying issues and objectives in a local area, and noted the need to cooperate across local areas and boroughs. A respondent also noted in reality people use services, travel and move home across the borough. A respondent said it is impossible to draw precise boundaries.
- Regarding how strategies could vary, most respondents noted how areas vary in their characteristics, historic interest and geography, and there would be differences and opportunities. Noting areas have distinct personalities which local people know well, and differences should be preserved. Respondents felt some areas are closer to being metropolitan centres e.g. Richmond, Twickenham and other places are more suburban commuter towns e.g. Teddington, Whitton – a suggestion to protect the quietness of Whitton and Hampton Hill as a part of their fundamental character. A respondent noted these should not just be about where housing is built, e.g. ask about protected cycle path routes. A respondent noted the different needs e.g. Richmond's flourishing traffic-free riverbank could never work in Twickenham with its working riverside. A respondent noted e.g. Hampton Hill and Ham more problems with crime and anti-social behaviour, Twickenham impacted by proximity of Rugby Ground and St Mary's. A respondent felt required for East Twickenham as an untapped opportunity, to develop the high street and make it practical for pedestrians and a better place to live, and to reinforce conservation area protection and develop heritage assets. A respondent felt they should focus on keeping communities and individual business thriving. A respondent felt these should be tailored to

retain the heritage of each area, such as defend the abundance of green spaces such as Barnes Common, The Wetlands, Leg of Mutton, Barnes Green with its pond, the Tow Path, and protect Mortlake as a historic site.

- A respondent commented on the lack of investment in Twickenham (roads, shop fronts, litter, lack of doctors appointments) and yet more people being crammed into the area, conversely Richmond centre not showing signs of wear, clean streets, so clearly investment is being made, and asked why this is. A respondent referred to the need to protect all green spaces. Other issues mentioned include the PLA consider the need for a specific policy on river corridors, need for a boroughwide approach to fly tipping.

Can you suggest any other ways we could accommodate future growth and new development, ensuring support for sustainable communities?

- Other ways suggested were: if service roads behind shopping parades/town centres adopted then converting maisonettes above shops into flats, opportunity areas and sites in the Ham & Petersham Neighbourhood Plan, building above offices in business parks, large shops, council owned buildings like community centres, building Council houses, footbridges (support second stage WSP report), developing office space into housing.
- Some respondents referred to changes due to the Covid-19 pandemic. A respondent noted office space will come through businesses closing. Some noted the increase of home working will continue. A respondent noted decline in historic manufacturing and will rely on technological innovation and specialist manufacturing alongside financial services elsewhere. Some respondents noted we should concentrate on developing green spaces and carbon free developments, leading a green economic revolution.
- Some respondents did not suggest any other ways. Some respondents answered no, there should be no more people, houses and stop talking about growth. A respondent referred to protecting local high street independent traders, business rates relief. A respondent referred to reducing business rates, improving road and pavement surfaces and more car-parking. A respondent referred to promoting walking, public transport and cycling, and stopping use of cars. A respondent suggested changing Broad Market Rent Areas. A respondent felt need to cooperate with Hounslow and Kingston Councils regarding office space and employment priorities. A respondent questioned on what premise growth planning is taking place e.g. anticipated increase in secondary school places at Mortlake shown to be wrong, and suggested research with universities to establish if competitive. Some respondents referred to their responses in the previous questions.

Overall officer comment on responses to 'Scale of the challenge, opportunities and setting the Direction of Travel'

The majority of responses mentioned the challenges and opportunities that the Council had set out in the Direction of Travel, with the most comments on the key areas like climate change, active travel, green infrastructure and the built environment. Some commented on the balance of priorities, whether these all could be achieved, with different views in both directions e.g. whether the borough is overpopulated or growth is an opportunity, whether there should be more or less parking. There was general support for the approaches towards town centres and on brownfield sites, with some support for developing area based approaches, and strong support for the principle of protecting green and open spaces. Many respondents raised particular priorities, issues or sites that are important to them, and some of these ideas and issues, including those that were not mentioned in the Direction of Travel, are beyond the remit of planning policy e.g. in relation to Heathrow, finance. Some responses did pick up the potential changes arising from the Covid-19 pandemic.

Responding to the climate emergency and taking action

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 18 said yes, 6 said no and 5 don't know [9 did not answer the question].

- Welcome and majority support for the recognition of the climate emergency
- Three people felt that there is no climate emergency in the UK
- Transport is the main source of greenhouse gas emissions and restricting car use is the best way to tackle it
- Others said stop demonising the car
- A quicker response to the emergency is required
- Not strong enough in protecting Biodiversity and Green Space.
- There appears to be a non-existent inspection regime for ensuring that things like green walls and roofs are correctly installed and maintained.
- The policies lack any proposals for managing and enhancing open spaces
- Concern over flood risk assessments and basement developments

How can we promote high quality sustainable development as part of a new Local Plan?

- Use the borough's waterways as part of the transportation of construction materials and waste to/from development sites.
- The cost of low carbon energy sources is too high.
- Insist on zero carbon for all developments, not just large scale.

How can we continue to set out a pathway to zero carbon?

- Planning and building refurbishments should meet strict criteria and be ENFORCED.
- Don't bother, it's impossible to achieve.
- Should plan to remove CO2 from the atmosphere.
- Discourage car travel/diesel vehicles: look to electric transportation
- Better roads that allow traffic to get through more quickly.
- Free public transport for all.
- Fight Heathrow expansion and build sustainably.
- More battery charging points provided quickly.
- Encourage the development and expansion of decentralised energy networks
- Encourage greater use of alternative energy.
- Several respondents set out various technical solutions (many were akin to those in the Sustainable Construction Checklist)

How ambitious shall we be in requiring zero carbon standards for all developments?

- Totally/ 100%/very ambitious
- Council should be using money to help existing residents become more energy efficient.

- Set out a clear path to zero carbon standards for all developments, subject to viability and effectively monitor their implementation.
- New builds will need to be treated differently to older property
- There were three dissenting voices who thought the ambition was a mistake.

Are there other planning means to mitigate and adapt to climate change that you want us to pursue?

- The globe is entering into a dangerous climate cooling phase.
- Stop concreting of front gardens & allow rainwater to escape/ removing tarmac verges and replacing them with grass.
- Go to Zero Carbon as soon as possible for the Council and for all residents, businesses and premises
- No expansion of Heathrow
- Review the Pedestrian and Cycle Bridge Feasibility Study of October 2018 and commission the next stage report.

Are there any other climate change and/or sustainability issues that you would like the new Local Plan to address?

Of respondents who answered the question: 17 said yes, 3 said no and 3 said don't know [15 did not answer the question]

- Need a spoke of cycle routes leading out of the town centres into their catchment areas.
- Explicitly include the sustainability “proximity principle” into the local plan, thereby leading to less need to travel
- More, and compulsory recycling
- As transport is the largest emitter of greenhouse gases, the borough should encourage car-free/car-lite development and advocate and enable a shift in travel behaviours to more sustainable modes of transport: walking, cycling and clean public transport.
- Make working from home easier/have adequate broadband in place
- Acknowledge the value to the environment of back gardens / back lands both as habitats and as wildlife corridors
- Need to make the various railway tracks SINC, this will also help prevent the loss of habitats caused by Network Rail selling land adjacent to railway tracks to neighbouring homeowners.

General comments

- Some believe the policies in the current Local Plan adequately cover climate change and air quality issues
- Many suggested solutions were transport based e.g. low carbon and electric vehicles.
- SuDS was identified as a possible solution for flood risk and ground water flooding
- One respondent identified the development of Ham as likely to increase pollution and lead to loss of green space

Overall officer comment on responses to ‘Responding to the climate emergency and taking action’
There was, in the main support for the policy direction. The majority of the solutions put forward related to transport and travel. Several comments reflected the desire for more management of green spaces, monitoring, stronger environmental protections and more urgent implementation of the actions, i.e. before 2024.

Delivering new homes and an affordable borough for all

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 10 said yes, 9 said no and 6 don't know [13 did not answer the question].

- The Mayor of London response emphasises the need to aim to exceed the new London Plan housing target, including for small sites, and beyond 2029 the proposed target should be based on a combination of the GLA SHLAA and local up to date evidence. Welcomes the intention to undertake a Local Housing Needs Assessment (which should be based on the government's standard method) including to understand tenures, housing for the elderly and the needs for different sizes of dwellings. Notes the Mayor will lead a London-wide Gypsy and Traveller accommodation needs assessment.
- The Spelthorne Borough Council response notes housing is a strategic and cross boundary issue. Every effort should be made to meet local housing needs within the borough and support use of up to date evidence to inform options. Richmond should look to Greater London to assist in meeting needs if unable to do so alone. Spelthorne estimate will only just be able to meet their standard method housing need figure, which is the starting point for determining the number of homes needed. Further Duty to Cooperate discussions will be held. Another respondent also highlights the need to co-operate with neighbouring authorities to meet unmet demand, suggesting potential for joint developments in the Kingston and Hounslow opportunity areas.
- Some respondents support delivering new homes (and more affordable homes), against the London Plan target (and a potentially higher emerging target) and the Government's objectives, and broad support for the overall Direction of Travel on housing. Support for making efficient use of land, promoting the consolidation and intensification of large underutilised sites or those unviable for continued use, brownfield sites, including site allocations and undertaking a boroughwide Urban Design Study. However, some respondents concerned that the housing targets are too high and we do not need more homes or people, as the borough is overpopulated. A respondent felt the character and heritage is important and would not wish to see increase in density or height above existing. A respondent was not in support of using existing MOL/Green Belt for new homes. It was noted the commitment to undertake a local housing needs assessment. A respondent felt the section did not set out a policy direction other than meeting the housing targets.
- Many comments noted the implications of growth and additional housing on other needs, particularly social infrastructure such as education facilities, transport, and there should be a commitment to increasing the delivery of green spaces and playspace in terms of the quantum and quality. Specifically FORCE also note the pressure of increasing building heights on views and vistas from open spaces and dark river corridors in the borough, and their opposition to development compromising this and suggest the absence of visual intrusion to all users of open space should be recognised as a public benefit. A respondent felt expanding schools would be an efficient use of infrastructure, rather than new facilities.

- Some respondents referred to specific sites and areas, including the need to ensure housing sites did not displace parking, and for an evidence base to assess the balance in central Richmond between residential, retail and office use, for area based policies to allow buildings to return to their original use outside the core area. A respondent suggested the Harlequin's site and the Twickenham Centre Depot site can make a significant contribution; a respondent put forward the Greggs site (see also Call for Sites). A respondent referred to the London Plan Good Growth by Design, so housing delivery should be sensitive to the local context and accessibility, such as in Ham & Petersham. A respondent felt small sites are an essential component but important development respects existing style.
- Some respondents referred to specific types of housing. A respondent suggested the gap in the middle needs to be addressed, and suggested discounted market sales and alms houses should be explored. TfL Commercial Development welcome the potential of Build to Rent. Some supported providing housing for single persons. A respondent supported specialist housing for older people such as extra care, to encourage people to move from under occupying large family homes there is a need for well-located accessible units with communal facilities. A respondent supported building for a range of household types. A respondent referred to removing the CIL difference between C2 / C3 to prevent incentive to developers to deliver tenures not based on social need.
- Some respondents referred to other priorities such as walking, public transport and cycling, and should not provide parking spaces, that growth plans need to be revised in line with more aggressive climate change models, and use of the river and emergency planning.

What do you think are priorities for the type and size of new dwellings?

- Some respondents supported a range of flat and house sizes, it was noted this creates a mixed community. There was support for flats as a priority but at the opposite end there was support for building small and large houses. It was noted to await the results of the housing needs assessment to be informed of the trends.
- Some respondents supported affordable housing needs (social housing, for rent and homeownership), and the tenure mix secured needed to be enforced, while others felt the focus should be beyond the needs on the housing register.
- It was recognised that the type and size was linked to whether suitable for young people, families etc. A respondent noted overcrowding with families living in small flats. A respondent felt young adults are struggling to access the housing market and are not on the housing register, which may be showing demand for family housing is more pronounced than it actually is. Some respondents noted the need for extra care, accessible homes.
- A respondent noted larger dwellings have always been a part of Richmond's history. A respondent noted in densely built areas for new neighbours to welcome new small sites it's important they respect the existing scale and style.
- A respondent noted there should be no new luxury dwellings of any size.
- Some respondents reiterated their view opposing any new dwellings and referred to other priorities such as transport, zero carbon, pre-fab buildings.

Could other forms of housing assist with meeting local needs?

Of respondents who answered the question: 12 said yes, 3 said no and 6 said don't know [17 did not answer the question]

- Some respondents identified the need for more student housing as well as supported housing for the homeless.
- Other types of homes mentioned included social housing, shared housing, Council houses, empty shops or unused buildings near town centres, alms-houses for older people, community-led housing and self- and custom-build.

- It was also noted where new developments are not possible that residential areas on main roads should be redeveloped. A suggestion for higher density new transportation hubs.
- A suggestion was made for a new form of housing; co-working, which would provide bedrooms for young adults to rent, communal working/living space and a garden area.
- It was noted to await the results of the housing needs assessment, and a respondent referred to their response to earlier questions.

Would you support housing delivery from small sites, if it is of good design and contributes to local infrastructure?

Of respondents who answered the question: 19 said yes, 4 said no and 2 don't know [13 did not answer the question]

- A respondent supported provided tall buildings are not sited on small sites, there should be a maximum limit on height and density.

What other ways could help deliver more affordable housing, in the right locations, given land values and property prices in the borough, and recognise the wider community benefits it brings?

- Overall strong support for prioritising affordable housing (including for rent) due to high property values and the lack of affordability, to provide an inclusive community, and above other contributions.
- The Mayor of London response welcomes the intention to seek 50% affordable housing and sets out the Local Plan should reflect the Threshold Approach (as set out in the London Plan) to limit those circumstances where viability evidence is required, by providing an incentive for developers to achieve the minimum level of affordable housing thereby avoiding scrutiny of viability. If setting a threshold higher than 35% this should be based on viability evidence.
- A respondent also supported a robust approach to understanding viability evidence, and the need for a pragmatic approach given competing interests such as delivering social infrastructure.
- There was support for making efficient use of land. It was suggested there is particular scope for sites owned by the Council and Richmond Housing Partnership to review land use, such as additional infill, residential above, and converting existing roofspace to provide new units. A respondent recognised this was linked to finance, and a respondent suggested this needed a 10 year strategy.
- A respondent noted the Plan should distinguish between brownfield and greenfield sites as greenfield land has lower associated development costs.
- A respondent noted models where a discount is maintained in perpetuity such as restrictions on staircasing, enable more recycling of affordable housing. A respondent suggested the Council start building new council homes directly or set up a property company. A respondent suggested changing Broad Market Rent Areas may enable people to access more housing options. A respondent suggested co-working/living schemes can offer an affordable option. A respondent referred to the Community Led Homes toolkit. A respondent suggested CPO of empty properties. A respondent supported meanwhile housing. A respondent supported prefabricated building. A respondent referred to removing the CIL difference between C2 / C3 to prevent incentive to developers to deliver tenures not based on social need.
- Some respondents suggested particular development sites to deliver affordable units.
- Some respondents referred to other priorities such as parking, overcrowding.

Overall officer comment on responses to 'Delivering new homes and an affordable borough for all'
 On overall housing delivery, there was support for the approach set out in the Direction of Travel, however while some respondents support delivering new homes there are others who feel targets

are too high and the borough is overpopulated. The impact of housing growth on infrastructure and facilities was noted.

There was a range of views on the priorities for the type and size of new dwellings, suggesting support for a range to provide for mixed and balancing communities, to be informed by the outputs of the Local Housing Needs Assessment. Some suggestions for other forms of housing to assist with meeting local needs were mentioned, including shared houses, student housing, self and custom build.

There was strong support for increasing affordable housing delivery, and ways to understand viability. Overall there were some ideas for making more efficient use of land, and some specific suggestions for how to increase delivery of affordable homes, however some of these are beyond the remit of the Local Plan.

Shaping and supporting our town and local centres as they adapt to changes in the way we shop

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 15 said yes, 3 said no and 5 don't know [15 did not answer the question]

- Strong support for town and local centres and proposed policy direction. Support for self-sustaining borough where shops and services are available locally.
- Some support for more flexibility for change of use (including housing) in peripheral parts of centres provided that loss of retail would not change the character of the local centre.
- Encourage redevelopment of out of centre developments.
- Support for sustainable transport to get to town centres and for pedestrianisation.
- Some support for protecting ancillary retail space and servicing.
- Promote mixed use development, encourage other businesses in underutilised shops.
- Approach should take into account the pandemic and impact of lockdown.

Do you agree with the spatial strategy proposed? Should major development be encouraged equally amongst the five town centres? Or should for example, Richmond and Twickenham be the appropriate location for the majority of any new retail floorspace?

Of respondents who answered the question: 12 said yes, 5 said no and 5 don't know [16 did not answer the question]

- Overall, strong support for the spatial strategy proposed and focus on the five town centres. All five centres need a good range of shops and services. RB Kingston felt that major development should be allocated as per the role and function of the centre in the hierarchy.
- Some felt that the larger centres of Richmond and Twickenham should accommodate major/most development. Whitton and Teddington mentioned as not having capacity to

accommodate it. However, several respondents considered that development should be spread more evenly across centres.

- Too much retail space, greater flexibility needed. Support for housing on edge of centres.
- Take into account impact of pandemic.
- Businesses should be encouraged anywhere and parking made available, but encourage near stations.
- No mention of retail parks

Does the existing hierarchy categorise borough centres correctly? Are there too many local centres and parades in this defined centre hierarchy? Local centres, neighbourhood centres and parades are relatively well spread across the borough. However, should we reduce the number of centres in the hierarchy, and/or reduce the amount of/or completely remove designated frontages in some, taking into account their role in meeting local need?

Of respondents who answered the question: 14 said yes, 7 said no and 3 don't know [14 did not answer the question]

- Overall, strong support for the existing hierarchy.
- The Mayor of London commented that the strategic approach should reflect the town centre network in the Intend to Publish London Plan including the night-time economy classifications¹.
- Encourage growth of/ support for local centres. Contributes to reducing need to travel and supports sustainable transport choices (as advocated by RB Kingston). Smaller centres and parades, such as Ham Parade are also important and help to maintain community cohesion.
- Allow flexibility to change uses (including to housing) where centres in decline and in more peripheral locations. Redevelop parade in Ham Street.
- A respondent felt that more areas should be designated as key retail in smaller centres like Whitton.
- A respondent felt the market should dictate where businesses go.

If the evidence supports a more flexible approach to retail policies what other uses should be encouraged?

- The Mayor of London suggests the approach should reflect the changing retail environment and general decline in retailing in the capital. Specifically, that the types of uses identified in the ITP London Plan as being acceptable in town centres, including office development, residential, social infrastructure, cultural uses and leisure uses, should be considered acceptable in borough town centres.
- Approach should await outcome of research.
- Some wished to discourage relaxing retail planning policies and reducing the importance of shopping frontage policies. Ensure no loss of retail since last review.
- Protection for Post Offices and shared bank services.
- Review decommissioned and redundant sites in centres and larger shed sites.
- Other uses to be encouraged include:
 - strong support for community uses such as youth clubs, new libraries and health and wellbeing businesses/gyms, specifically reinstatement of police station in Ham. RB Kingston supported the co-location of facilities.
 - cultural and social uses such as art galleries, performance spaces and permanent market pitches, as well as facilitating enjoyment of the Thames and environs (advocated by the PLA);

¹ Twickenham and Teddington are identified as having important areas of night time economy which are of local significance and Richmond is a more substantial area of regional or sub-regional significance.

- café culture and drinking establishments (supported by the Environment Agency)
- service uses such as physiotherapy, osteopaths, spas, beauty shops – rather than residences; and
- offices, including flexible and bookable office/work space and shared workspace
- uses which can co-locate.
- Discourage retail parks
- Continued engagement with commercial agents requested.

Café culture could be encouraged and/or the night time economy. Are there some centres where this would be preferable? Should we be flexible in terms of mixed A1/ A3 uses? Existing policy currently restricts further entertainment uses such as cafes and restaurants, drinking establishments and takeaways for specific frontages in parts of centres where there are overconcentrations of such uses– should it continue to do so? Are those areas still appropriate and should other areas be considered? If so, which ones?

- Many respondents felt there were too many cafes. Some did support café culture (the Environment Agency), especially if they could function as part of shared workspace.
- Concerns were raised that the relaxation of planning and licensing controls could lead to an increase in the negative impacts of the restaurant and bar sector including anti-social behaviour, smells and noise, particularly in relation to nearby residential property.

The borough could potentially lose around a third of its office stock as a result of the government's introduction of permitted development rights allowing change of use from office to residential. Uptake has already affected the availability of office stock in the borough and impacted negatively on the local economy. Should policies identify parts of town and local centres where offices could be encouraged to contribute towards increasing office provision?

- Offices should be encouraged, including flexible and bookable office/work space and shared workspace. Provision of less formal meeting spaces for homeworkers.
- Encourage flexibility for change of use between office and residential in town centres but not predominantly residential areas.

Is there more scope for further community uses in centres, potentially even in key retail areas?

See in list above.

- Strong support for a range of community uses including cultural and art facilities, health-related services and libraries etc

Would housing, including residential on upper floors, work if located next to other (potentially noisy or smelly) uses in centres? Where might a relaxed policy to encourage more housing apply? Should it, for example, apply in designated frontages?

- Mostly support, including RB Kingston, for more housing on upper floors in town centres, particularly for lone/small households.
- Support for housing on edge of centres, in more peripheral locations.
- There were opposing views on whether housing should be acceptable in in designated frontages.
- Prepare evidence to help to assess the balance in central Richmond between residential, retail and office use.
- Develop specific policies to return buildings to their original all residential use especially in non-core areas such as Hill Rise/Richmond Hill.
- Agent of change principle raised. New developments should not lead to bars and clubs being forced to close – unless the noise they are making is already unreasonable / illegal.

- Issues such as noise and smells can be controlled by the planning process, engineering and acoustic segregation. Some may wish to accept disturbance to live in a central location.
- Housing and offices should be separate.
- A respondent felt more housing not supported as insufficient infrastructure available.

In terms of developing centre strategies and visions, what should they include? How should these relate to local and wider transport accessibility? Your views in relation to specific centres are welcomed.

Strategies and vision:

- Connectivity, viability, place making and architectural delight.
- Support for sports facilities and reinstatement of ice rink.
- Research needed before approach can be justified - retail policy relaxed and controls relating to night-time and evening economy reduced.
- Abolish business rates to rejuvenate centres
- Provide more business space to discourage commuting to Central London.
- Investment in Heathside including Council support for re-opening of public house.
- In relation to Whitton town centre: redevelop telephone exchange to extend centre and provide extra shops and offices.
- East Twickenham: policies to be in accordance with Village Plan where still relevant, taking into account historic assets. Budget to be provided for high street improvement.

Transport accessibility:

- Support for pedestrianisation of town centres – they should be people-focused rather than car-centric.
- Review public transport, ensure coordination between different modes. Encourage pedestrianisation and remove onstreet parking in appropriate places.
- Each centre should have good quality and safe cycle routes planned and adequate cycle storage near all stations.
- Several respondents felt car parking was needed.
- Reduce journeys to school by car.
- Specifically consider Ham & Petersham which is most inaccessible in terms of transport.
- Developing Ham will decrease open space and lead to dangerous and polluting increase in road traffic.

Should the amount of key shopping frontages be reduced and/or should secondary shopping frontages (where some change of use is already allowed) also be reduced or removed altogether? Do we need to protect shopping in just the core areas which correspond with designated key shopping frontages? In the past a compact retail core was thought to foster comparison shopping (i.e. for those goods that people tend to go to several shops to compare products and prices before buying them, such as electrical household items, clothes and shoes).

- Most respondents objected to relaxation of retail policies and loss of control over change of use. Need for some shopping is recognised, especially for the more vulnerable. Support for local centres, including their community value, and current spread of shopping, with several respondents feeling that it was necessary to increase the spread to reduce travel. RB Kingston felt that the amount of designated frontage should not be reduced unless justified by market signals.

- Some support for more flexibility also:
 - Less important to have a retail core because comparing products carried out online.
 - Less retail and more community and business space needed.
 - A strategic approach to reducing retail should be employed rather than just letting it wither.
 - The market should decide how much shopping is needed.
 - Reduction in retail needed specifically in Ham Street/Ashburnham Road
- Further research needed to support an appropriate approach. Policy should be reviewed, but not taking a pre-determined view that the number of shops should be decreased.
- Need for high quality shop fronts.
- Some closures relate to landlords' decisions.
- Concern that deliveries from online shopping are increasing road use and that rationalisation and coordination of deliveries is needed.
- Continued engagement with commercial agents sought.

Should the 'key shopping area' relating to the operation of permitted development rights continue to be both key and secondary frontages?

Of respondents who answered the question: 6 said yes, 2 said no and 10 don't know [20 did not answer the question]

No clear view on this technical matter.

Is it appropriate to continue to protect local top up shopping facilities?

Of respondents who answered the question: 20 said yes, 1 said no and 5 don't know [12 did not answer the question]

Should this protection only extend to food shops and/or some selected types of businesses?

- Overwhelmingly, respondents felt that food shops should be protected, a view supported by RB Kingston and the Environment Agency. Some felt that protection should apply to all local shops to support the community and to reduce the need to travel.
- A respondent felt the market should decide.

Should we continue to provide additional protection for shops selling essential goods and Post Offices generally?

- With one exception, all respondents felt additional protection was still required, as they were important for the community, especially the elderly, those with small children and the disabled.
- A respondent felt that protection could be extended to specifically cover banks.

Is 400 metres an appropriate proxy for easy walking distance?

- The majority of respondents felt that 400 metres was still an appropriate proxy for easy walking distance. However, some felt the distance was too long, and others too short. Other distances suggested ranged from 300 metres to 800 metres.

Do we need to continue to protect pubs as strongly? Some pubs that do not have a food offer are struggling to stay open, despite their potential value to the community.

Of respondents who answered the question: 14 said yes, 8 said no and 3 don't know [13 did not answer the question]

- The majority of respondents supported the continued protection of pubs, mainly due to their community value. Related to this, several respondents felt that policies should seek to

enhance this community value, acting as social hubs and potentially to encourage the food offer.

- A small number felt that pubs were no longer needed due to changes in drinking habits and should be converted, including to residential. That the local community should be given the chance first to support the pub.
- A couple of respondents referred to landlords trying to circumvent marketing requirements to gain permission for change of use from pubs.

Are the locally set thresholds for impact and sequential tests still appropriate?

Of respondents who answered the question: 4 said yes, 3 said no and 13 don't know [18 did not answer the question]

- Thresholds which are set should be backed by evidence.
[there were other comments which did not relate to the issue]

How long should shops and pubs be marketed before a change of use is allowed if the proposal is contrary to policy?

- Opinion was divided on this issue. However, many felt that the marketing period was too long.
- The marketing period should differ between land uses. For example, a respondent suggested that for pubs, the period could be 5 years whereas for shops, suggestions ranged from 2 months to 3 years.
- The community should be consulted on what is the appropriate marketing period for their areas.

Should a policy be developed for redevelopment of existing retail parks/stores in less central locations?

Of respondents who answered the question: 15 said yes, 4 said no and 4 said don't know [15 did not answer the question]

- The vast majority of respondents were in favour of redevelopment.
- Many considered such sites as encouraging car use and being wasteful of space and capable of delivering housing and other land uses including office. Support for mixed use schemes.
- A respondent felt the market should decide and no policy is necessary, whilst another felt that a policy is needed to ensure proposals are appropriate in terms of height of buildings and provision of green space and social infrastructure.
- CPRE considered such sites are viable and much more sustainable alternatives to Green Belt.

Overall officer comment on responses to 'Shaping and supporting our town and local centres as they adapt to changes in the way we shop'

Respondents were generally in favour of the policy direction proposed. As indicated by previous consultations, the borough's centres are clearly valued. There is support for more flexibility in change of use, with a wide range of potential land uses suggested including housing, but also clear support for accessible local shops and services. Support also for the spatial strategy and hierarchy of centres and principle of meeting local needs in walking distance of residents' homes. Retail parks recognised as providing scope for redevelopment and making a more efficient use of land.

Respondents recognised that this is a time of change for centres. The need for robust research is highlighted to inform the approach taken, in particular, to take account of the impact of the pandemic on shopping patterns.

Increasing jobs and helping business to grow

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 17 said yes, 1 said no and 2 don't know [18 did not answer the question]

- General support for retaining employment uses in the borough, including large housing schemes also providing workspaces, or making a contribution to off-site workspaces.
- Need to ensure Richmond continues to be a place of employment and encourage shift towards less commuting.
- More focus should be on live-work settings.

Should we continue to protect our industrial-type uses?

Of respondents who answered the question: 17 said yes, 1 said no and 2 don't know [18 did not answer the question]

- The Mayor welcomes Richmond's intention to conduct an up to date Employment Land Review and carry out an industrial land audit.
- Embed the guidance on industrial intensification and co-location in Policy E4 and E7 of the London Plan into the Local plan
- The PLA supports the intention of the policy directions to establish the Agent of Change principle into policy
- There is a danger of misreading the market about industry use not being in demand and replacing it with distribution.
- continue to protect business premises but add new small low-cost premises instead of or as well as retail units at the bottom of flats.
- the (national) direction of travel is away from manufacture

Should we take a proactive approach and encourage intensification, or adopt a more locally distinctive policy in this regard that focuses less on introduction of residential on industrial sites, but that encourages further industrial / employment uses?

- Most said that industrial / employment uses should be encouraged and given priority over residential uses on site
- It is essential that Richmond continues to be a place of employment not just a dormitory; more local jobs will help us improve the environment, cut commuting and pollution.
- Richmond should adopt a more locally distinctive policy that focuses less on introduction of residential on industrial sites.
- One respondent stated that it would be a start if you weren't trying to reduce industrial use by making the Embankment traffic-free. No existing businesses can survive without collections & deliveries. Local trades-people will lose work because they can't park vans.
- A respondent said "No", you should build flats above business premises -more efficient land use, employees and customers on site

Should we continue to specify flexible small-scale units suitable to meet local business needs?

Of respondents who answered the question: 17 said yes, 1 said no and 1 don't know [19 did not answer the question]

- Limited responses to this question, although general agreement in yes/no question (see above).
- Three respondents referred to the importance of small-scale units to the borough, with one respondent commenting that the Council should “stop forcing them out of business”, and another stating that the proximity to Heathrow may mean larger sites are often used for freight and may not employ many people/provide lower quality jobs.
- Small-scale units could be provided at the bottom of flats instead of retail.

What priority should we give to employment uses over residential amenity if at all? For example a business park may be underutilised due to neighbours’ objections to potential transport impacts.

- Depends on the individual circumstances, case specific
- Employment uses should be given priority
- None, they can both be built at the same site
- focus on restricting the really disturbing activities, rather than shutting the whole site.
- Only one respondent said residential amenity should be given outright priority while others said it was a balancing act.
- DP9 on behalf of London Square Developments suggest the former Greggs Bakery site (see also Call for Sites) is not suitable for continued employment use, raising potential for harm to amenity of surrounding residents.

What type of sites, buildings and facilities are most needed to support the borough’s office occupiers, in particular its small and micro businesses, as well as those working remotely from their usual place of work?

- Support for low rents and shared spaces with flexible rental periods mentioned by four respondents (example given of The Space in Teddington). It was noted that current provision is often expensive and lower cost space could be provided in public buildings such as libraries and town halls. Noted impact of loss of small business space above shops on supply of office space (example given of Whitton).
- Other spaces suggested by respondents included existing vacant buildings, spaces above shops, historic buildings and decommissioned places of worship
- Different respondents stated car parking was required and was not required.
- Good broadband provision needed to support home working.
- Respondent from the Ham and Petersham Association commented that local small offices are not all centred on small number of locations.
- Flexible office space is key. Lesson from CV-19 is that we don't all need to herd into Central London 5 days per week -more flexible local office space would make a big difference to carbon footprint and quality of life. (This response was under question above but seems more appropriate here)

Should we encourage and protect river-related business?

Of respondents who answered the question: 17 said yes, 0 said no and 2 don't know [19 did not answer the question]

- General support for river-related businesses providing employment and contributing to the borough’s character.
- One commented that there was a lack of support for river-related businesses in the past.
- PLA welcome continued protection of river-dependent facilities, which is supported by the emerging London Plan and the PLA’s Thames Vision.

General comments

- Mayor of London refers to policy E1 of Intend to Publish London Plan which directs new office development to the borough’s town centres and notes that Richmond town centre is identified as being suitable for both speculative and mixed-use office development and Twickenham identified for having potential for mixed-use office development. The existing small office capacities in East Sheen and Teddington should be protected. Richmond should clearly differentiate its approach towards industrial and office development.
- For one developer, delivery of housing was seen to outweigh the need to protect inappropriate sites for continued employment use.
- Richmond is an attractive location to large and small-scale businesses and the encouragement of small businesses, start-ups and the like is important.

Overall officer comment on responses to ‘Increasing jobs and helping business to grow’
 There was support for retention of employment/industrial and for Richmond to adopt a more locally distinctive policy that focuses less on introduction of residential on industrial sites. More local jobs will help us improve the environment. However, for one interested party the delivery of housing should be a key priority in the new vision for the Local Plan.
 It is worth noting for this section, of the respondents answering the yes/no questions, most were in favour of the proposed policy approaches.

Protecting what is special and improving our areas (heritage, culture and open land)

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 20 said yes, 2 said no, 2 said don’t know and 1 agreed and disagreed [12 did not answer the question]

- Prospect of Richmond responded that current policies offer adequate protection for heritage, culture and open space – concern that Direction of Travel seems to relax controls that already exist. Support Direction of Travel in encouraging visitors and tourist. Help residents to maintain heritage and culture of central Richmond, the Riverside and the Green, for own benefit and for wider community and visitors.
- Disagreement that Village Plans should be discontinued as they enabled local people to contribute to how their town develops and encouraged a broader approach to heritage than fragmented conservation areas. May lead to other areas preparing own neighbourhood plans like Ham and Petersham.
- Another resident was concerned about potential watering down of existing policies.
- FORCE strongly supports objectives in relation to rivers, surrounding banks and open spaces and welcomes recognition of opportunities to improve poorer quality areas. Support improvement of under-utilised open spaces for public benefit rather than redeveloping them.

- CVP and Colne Valley Regional Park referred to the recent Colne and Crane Valleys Green Infrastructure Strategy which the revised Local Plan should make reference to and be aligned to.
- Other respondents referred to promoting walking, public transport and cycling and stopping use of cars and vehicles in the borough and doing more to protect the Victorian/Edwardian street scene that are not BTM.
- Ham and Petersham Association referred to need to control risk of increased urbanisation of conservation areas.

Heritage

Are our current policies strong enough to ensure the ongoing protection of the borough's historic assets?

Of respondents who answered the question: 5 said yes, 9 said no and 9 said don't know [15 did not answer the question]

- Historic England commented that current policies can be strengthened more to link conservation aims with other policies, including mitigating climate change, improving access and enjoyment and tacking flood risk, to ensure that the historic environment is an integral aspect to the plan.
- Historic England advocates design-led approach to growth based on character and understanding of local areas that could be informed by existing evidence sources (Characterisation of London's Historic Environment (LUC), London's Local Character and Density (Allies and Morrison) and London's Image and Identity – Revisiting London's Cherished Views).
- The London Parks and Gardens Trust (LPGT) contributed to the 2018 Local Plan and feel that the current policies have not had long enough to be applied/tested, and should therefore be carried forward. All new residential development must be in easy reach of well-designed open spaces and take care to avoid unintended consequences of development.
- Mayor of London welcomes the borough's recognition of the importance of Kew WHS and refers to Intend to Publish London Plan requirement for Heritage Impact Assessments for developments with potential to impact WHS and its setting.
- Friends of the River Crane Environment refer to borough's heritage also being found in historic industrial sites and watercourses, which should also be protected.
- General comments relating to protection of the historic environment, including avoiding unnecessary signage, managing visitor numbers, promoting walking and cycling over vehicle use.
- A number of respondents questioned adequacy of Conservation Area, Listed Building and Building of Townscape Merit (BTM), Non-designated heritage asset status in protecting the borough's historic assets.

Do you agree that we should actively identify opportunities for development and/or redevelopment where these can result in improvements to the character and appearance of existing conservation areas?

Of respondents who answered the question: 4 said yes, 18 said no and 0 said don't know [16 did not answer the question]

- This was generally felt to be inappropriate, particularly without adequate evidence to support the approach.
- Only two respondents felt that a proactive approach to identifying opportunities for development in conservation areas would be appropriate.

Culture

Are there other opportunities through planning to enhance the cultural offer and widen participation?

- Sport England commented that the New Local Plan should protect sports facilities and encourage new provision where appropriate and promotes Active Design principles.
- Support for increasing access to theatres and resisting their loss (including by Theatres' Trust) and support for historic music venues.
- Various areas were mentioned as requiring promotion in terms of their cultural offer.
 - Richmond Athletic Ground should be mentioned specifically as an attraction, bearing in mind its cultural offer.
 - Central Richmond, The Green and River (increased provision for the visual arts and performing arts in conjunction with education in the arts)
 - Old Deer Park
 - Royal Botanic Gardens, Kew
 - Udney Park Playing Fields
 - Reappraisal of historic assets in Ham & Petersham.
- Research needed to identify areas in cultural deficit and make provision.
- PLA supports Thames Policy Area and ensuring development along the River is appropriate.
- Better to give financial assistance to groups.

Green infrastructure and protecting our open land

Do you agree that the MOL and Green Belt boundary review should also incorporate a review of designated Other Open Land of Townscape Importance?

Of respondents who answered the question: 14 said yes, 5 said no and 2 don't know [17 did not answer the question]

- The Mayor is pleased that it is Richmond's intention to provide strong protection against inappropriate development in these areas in accordance with Policies G2 and G3 of the Intend to Publish London Plan
- oppose any de-designation of Green Belt and any development of Metropolitan Open Land which diminished the overall value, or potential value, of the open space network of the borough and did not, as a minimum, offer a compensating increase elsewhere in the borough
- Apprehension over the considerable risk of the potential de-designation of many, much valued open spaces of the Borough as an unintended consequence of a simplistic search for growth
- Concern that housing targets appear to be regarded as a legitimate test for the existence of "exceptional circumstances" & to legitimise the challenging of Green Belt/MOL boundaries on any future occasion
- Several including Spelthorne BC support the borough's intention to carry out a borough-wide review of Green Belt and Metropolitan Open Land
- Upgrade all LBRUT OOLTI designations to MOL
- Releasing and developing protected land is neither necessary nor desirable.
- agree with the borough's suggestion that there are potentially pockets of land that could benefit from a thorough assessment against the relevant policy criteria for designation.
- Seek a review of the obstacles and severance factors which prevent the physical joining up of current, near-adjacent open spaces of various designations into larger spaces

Are there any sites that you would like to be identified for designation as 'Local Green Space'?

- Stag Brewery Playing Fields
- Udney Park Playing Fields, Langham Road open space, River towpaths and open space leading down to the Thames

- Heathfield Recreation ground and its future extension should have the highest level of protection you can give it
- Crane Park and the Shot Tower
- Two respondents suggested Cambridge Gardens and Warren Gardens
- Westerly Ware, Pensford Field, North Sheen Rec, Raleigh Road rec.
- Ham Library garden
- Several other sites were nominated for POS, Village Green and pocket park status.

General comments (heritage, Green infrastructure and protecting our open land)

- Mayor of London refers to protection of strategic and local views, with an effective management process, noting 3 – D modelling as a valuable tool.
- No justification in seeking to amend, let alone dilute, the existing policies for the protection of local character, heritage assets, views and vistas, the Royal Botanic Gardens Kew WHS, MOL, trees, woodlands and landscape, social and community infrastructure, Public Open Space, & Allotments.

Overall officer comment on responses to ‘Protecting what is special and improving our areas (heritage, culture and open land)’

There appeared to be a fear that a review would automatically lead to a loss of Green Belt and MOL. The majority supported the protection of designated open spaces.

Respondents were in favour of continuing, and in some cases increasing, the level of protection afforded to heritage assets in the Local Plan. A policy approach of identifying potential sites for development within conservation areas was generally felt to be inappropriate.

Increasing biodiversity and the quality of our green spaces, and greening the borough

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 20 said yes, 1 said no and 2 said don’t know [15 did not answer the question]

- The majority supported the proposed policy directions. A respondent felt no change was required to existing policies.
- Greater protection needed for grass playing fields, and for green verges and for their reinstatement.
- Only build on the Borough’s many brown field sites.
- FORCE said the Local Plan should recognise the contribution that improvement to the borough’s river channels and wetlands can make to tackling the climate emergency. The “if possible” get-out (p42) should be removed. They welcome a review “identifying potential

new SINCs for designation” (p43). They also support the proposal to customise the Urban Greening Factor model to LBRuT-specific criteria. (p44).

- Support for the Council’s “implementing a biodiversity net gain imperative” for all developments
- All development should make a positive contribution and all development proposals should carry a mandatory requirement to “enhance green spaces and green features” including elsewhere in the borough if such enhancement proves undeliverable on the site of the development
- Green areas which are not accessible by the public must be regarded as important as those which are.
- Concern that the recent OSNIs should be reviewed having only very recently been added and vigorously examined.

Do you agree with our overall policy directions for protecting and enhancing our biodiversity as well as recognising the contribution that green infrastructure and urban greening make to tackling climate change?

Of respondents who answered the question: 20 said yes, 2 said no and 1 don’t know [14 did not answer the question]

- Build on brownfield land and protect greenfield and MOL. Should be much stronger on protecting green space and playing fields so resources are not wasted defending the Local Plan.
- Urban greening to be included in new developments and local town centres with the use of green walls and equivalent of CityTree.
- Stop use of cars and vehicles across the borough to help biodiversity.
- The Crane Valley Partnership said that the Local Plan must recognise that the River Crane, the Lower Duke of Northumberland’s River, the Whitton Brook and the open spaces along the river corridors are extremely valuable green infrastructure assets that need to be protected and enhanced so they can fully play their part in helping to mitigate the impacts of climate change.
- Need to recognise railway lines as habitat corridors and make them SINCs.

Do you agree that we should develop our own Urban Greening Factor model rather than relying on the generic London-wide model?

Of respondents who answered the question: 13 said yes, 2 said no and 5 don’t know [18 did not answer the question]

- Most respondents supported a local Urban Greening Factor (UGF) model which relates to the specific issues in this Borough.
- One respondent disagreed.
- Roof gardens and green walls should be developed.

Do you agree with the introduction of the biodiversity net gain requirement, and if so, do you have any suggestions on how this can be secured?

Of respondents who answered the question: 17 said yes, 2 said no and 4 don’t know [15 did not answer the question]

- Need to ensure green roofs are not over relied upon (they can turn out to be low value sedum mats) and that any wildlife corridors are wide, robust and with little light penetration.
- Need up-to-date survey information on much of the borough’s woodland and open spaces.
- One respondent felt that LBRuT are not to be trusted to protect the borough’s green land and that policies should be stronger.

General comments

- The Green and the Riverside are key MOL assets and must be protected from development
- There is pressure to commercialise the Riverside and this must be resisted.
- Policies in the current Local Plan cover biodiversity issues adequately and if further amplification is required, it could be dealt with by subsidiary planning tools.
- Suggestion to use on street parking spaces for tree planting.

Overall officer comment on responses to ‘Increasing biodiversity and the quality of our green spaces, and greening the borough’

There was backing for most of the policy directions. Respondents supported the protection of green spaces and many sought additional protections, better maintenance and enhancements. In general respondents agreed on a Local Urban Greening Factor and the Biodiversity Net Gain requirement.

Improving design, delivering beautiful buildings and high-quality places

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 17 said yes, 4 said no and 1 don't know [16 did not answer the question]

- There is a general support of the policy directions which one respondent noting that they are looking forward to reviewing the detailed policy wording when available.
- A respondent stated that Council's heritage policies value Victorian and earlier neighbourhoods over interwar neighbourhoods. There was concern the removal of the Whitton and Heathfield Village Plan will reduce the ability to protect the area from inappropriate development. Similarly, another respondent felt uncomfortable with the Richmond Borough Design Guide and its emphasis on history versus quality and favouring classic looking façades with the idea they more beautiful than others.
- There is a recommendation for tighter policy regarding Tall Buildings to protect the character of some town centres such as Richmond and out of town areas such as Manor Road.
- Other responses advised that Council should be prioritising other matters and that plans for Twickenham Riverside are not beautiful

How should the Urban Design Study identify areas for change and locations where tall buildings and/ or high density development may be appropriate?

- There were numerous responses which identified that tall buildings were not appropriate in the borough.
- Reasons provided about the lack of appropriateness included; the creation of wind tunnels at street level, they make it less attractive as a walking route and dangerous for less able people and they reduce access to sunshine and reduce daylight. It was also noted that

conservation areas should be excluded, areas with Grade II listed buildings and where a view may be obscured from a tall building.

- There was also particular concern regarding tall buildings in central Richmond.
- A respondent stated that this study should also identify areas not suitable for tall buildings.
- Other respondent noted the most important factor when considering tall buildings recognised that where tall buildings fit the local character of the wider area and the related infrastructure (transport, schools and healthcare) will not be overloaded.
- Another respondent identified areas suitable for tall buildings is above large supermarkets such as on Rugby Road, Hampton and business park buildings and town centres such as Twickenham.

Should design review be embedded as one of the policy tools to inform determination of planning applications, and what other tools may be useful to assess the design quality of proposed schemes?

Of respondents who answered the question: 20 said yes, 0 said no and 2 don't know [15 did not answer the question]

- Overall, there was strong support for the use of design reviews. However, alongside this support, many respondents would like the design review to have greater transparency and include community engagement as well as seeking the views of local amenity societies.
- Community engagement was mentioned as an additional tool and to be used earlier in the planning process.
- Other respondents noted that other tools should include environmental (e.g. heating), as well as examining the longevity and safety of the building. One respondent stated that new buildings should try and blend in with the local architectural style if there is any nearby
- One respondent advised that they did not know what a design review was but noted that Council views that the design and layout is the responsibility of the developer and as a result agreeing to nonoptimal plans.
- Other comments recognised the need to have more 'verified' images as some of the CGG images are misleading and there is a need for greater biodiversity and the greening of our towns through green walling, planted roofs and balconies

Should we develop our own borough-wide design guide to assist delivering high quality design, and what are the local areas' qualities and opportunities?

- There was strong support for the development of our own borough wide design guide. Nearly all responses affirmed approach although some with caveats.
- Where support was contingent, support was reliant on Council taking in the views of local residents, where it could be updated outside the local plan process or is able to reflect the distinctiveness of each town that makes up the borough.
- One respondent advised that they did not know the answer and wished for Council to decide if there is a need.
- Other responses noted that existing supplementary documents including the Village Planning Guidance, Conservation Area Statements and Design Quality Supplementary Guidance already fulfil this design guide/ or could be updated to create a design guide.
- Others noted that there should be specific guidance for riverside developments, that it should ensure adequate space for biodiversity and the ability to adapt these guidance's for particular areas (including leveraging shopfront traditions from Richmond Rd)

Do you have any views as to how the design and development of homes could address different lifestyles, abilities and stages of life, including an ageing population?

- A respondent noted that there is a requirement under the Equalities Act to allow equal access for all which requires building to undergo changes including lifts.

- Many respondents noted the need for developments to accommodate the different demographics and different groups within the Borough. Specifically, there was strong support for adaptive homes particularly for the elderly as to age to in place.
- A few responses also identified the need for more homes to accommodate the increasing single population
- It was also identified by a few respondents that environmental and noise pollution issues will likely increase over time and that housing design needs to consider this issue
- It was also identified that balconies should be required in all developments so that residents can grow plants and food.

General comments

- A few respondents discussed the potential impacts this policy may have on Richmond and the importance of maintaining high standards for this area and understanding a buildings ability to adapt to new uses and to comply with building regulations.

Overall officer comment on responses to ‘Improving design, delivering beautiful buildings and high-quality places’

Overall the responses received showed that respondents generally supported the future direction of how to improve design, deliver beautiful buildings and high-quality places. While many respondents do not particularly supportive of tall buildings, others recognised that the Borough will have this of development and suggested methods and considerations to develop a satisfactory tall building. From the responses received, it is evident that the community wishes to participate in shaping their borough and how buildings are designed to maintain the distinctiveness of the Borough but also to ensure residents safety and help improve biodiversity.

Reducing the need to travel and improving the choices for more sustainable travel

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 18 said yes, 8 said no and 1 don’t know [11 did not answer the question]

- Mixed response in favour and opposed to this question. A number of respondents noted the importance of vehicle transport to businesses and some residents who rely on road transport, such as elderly and disabled people.
- A number noted the negative impact of high levels of traffic congestion and felt that policies should aim to improve traffic flow in the borough, including addressing amount of through-commuting by cars (which requires coordination with neighbouring boroughs).
- Richmond Bridge Residents Association referred to the particular difficulty of cycling over Richmond Bridge and would welcome a study to consider the option of making the pavement on one side a shared cycle/pedestrian path with separation curb.

- Ham and Petersham Association stated that until PTAL in this area is improved measures to disincentivise car use will fall more heavily on those reliant on cars which tend to be older, less mobile people and young families.
- A number of respondents disagreed with the principle of CPZs, feeling that this made people pay for the use of the public realm, and encouraged more driving around to find parking spaces.
- Otherwise, general support for reducing car-dependence and a move to more sustainable modes of travel, promoting walking, public transport and cycling in the borough, as well as focus on car-lite developments.
- One resident suggested there be more focus on cycling lanes in the borough, including for longer distance commuter cycling, as well as better provision for local journeys.
- General support for electric vehicle use, including providing additional charging points.
- Highways England support policies that seek to reduce parking provision and encourage car-free or car-lite developments in the borough as these are likely to reduce the impacts of developments on the strategic road network (SRN).
- Richmond Cycling Campaign welcomes the recognition of active and sustainable travel options in the Direction of Travel and requests more detail be included about how this could be delivered. Requested to be contacted prior to submission of plan for examination.

What measures need to be put in place if the Council is to support car-free and car-lite development in areas with currently lower levels of access to public transport?

- Responses were split between respondents stating that all new developments should be car-free with no parking for private cars, and others disagreeing with this approach. Of those who were supportive of car-free and car-lite development, it was felt that this type of development could benefit younger and older people who did not want to own a car as well as those on lower incomes, as most housing in Richmond borough already has car parking,
- Improvements to public transport was a frequent response to this question. Measures referred to tended to be focused on bus provision and included:
 - support for more bus lanes;
 - Lower fares;
 - Intelligent public transport routing;
 - increased bus frequency;
 - integration between bus and train timetables;
 - reduced road congestion caused by road works making bus times unreliable;
 - clean services;
 - introducing bus lanes where possible;
 - reintroduction of trolley buses (being quieter and smoother than buses and less polluting); and
 - prioritising of buses over private vehicles on roads, including where cars can be parked.
 - 100% EV buses by 2030.
- Cycling infrastructure improvements were frequently mentioned and included:
 - support for segregated cycle lanes and dedicated cycle routes;
 - Safe borough cycling network;
 - further traffic calming measures to increase safety;
 - more cycle parking facilities including secure parking near public transport.
- Improvements to benefit pedestrians were mentioned by a number of respondents, including better connectivity through new foot and cycle bridges, good accessibility to social and cultural facilities and banning cars from narrow roads in particular (such as Church Street) and town centres and good design to reduce conflict between pedestrians and cyclists.

- Electric vehicle charging was supported by a number of respondents, including more charging points for electric cars. A small number of respondents felt that lower emission cars should be encouraged rather than car lite/car free development.
- A respondent was concerned that cars would still be needed for larger purchases, and that if people did more online shopping it would negatively impact on town centres and employment levels.
- TfL Commercial Development strongly agree that car-free developments should be supported, and that development in locations with high existing or planned public transport accessibility should be optimised in link with the Intend to Publish London Plan policy H1.
- Ham and Petersham Association were supportive of improvements to public transport and providing electric vehicle charging points but wanted to avoid a reduction in space for cars and opposed the closing of Richmond Park to traffic.

What additional facilities does the borough need to support greater levels of walking and cycling?

- Encouragement of more young people to cycle to school through measures to improve safety - suggested cycling proficiency classes, 20 MPH speed limit (Cycling UK may be able to advise)
- Improve poor quality of some cycle paths across the borough.
- TfL suggested securing sufficient quantities of good-quality cycle parking will enable more people to cycle. Support Council's aim to go further than the London Plan cycle parking standards given high levels of cycling in the borough. Developer contributions could be used to improve routes in areas less permeable by cycle alongside strategic and local routes. TfL welcome recognition of importance of bus networks within the borough and will continue to work the Council to understand how this can be improved protected and funded.
- FORCE support improvements for cyclists and pedestrians, seeking a borough-wide review of severance factors preventing the physical joining up of near-adjacent spaces into larger spaces, for example land ownership. Suggest Council needs to work alongside other boroughs and agencies such as Crane Valley Partnership and Thames Landscape Strategy to consider active travel at a sub-regional level. Recommend adoption of the Colne and Colne Valley Green Infrastructure Strategy by the borough.
- Measures recommended by respondents to improve walking and cycling routes included:
 - Secure cycle parking near stations, in town centres and all new housing units;
 - Review of all existing cycle lanes including those on main roads;
 - Prioritise pedestrians and cyclists over vehicles, including traffic calming measures;
 - Identification and better maintenance of main walking routes to match standards on main roads;
 - More protected/segregated cycle lanes;
 - Filling potholes which can cause damage to bikes;
 - Cycle rental schemes;
 - Focus on improvements in lower cycling areas of the borough;
 - Improvements to Richmond Bridge for cycling;
 - Improve cycle paths in Richmond Park if vehicle use is to continue;
 - Improve crossing points to requirements of Equalities Act;
 - Maintain vegetation on bridges better to prevent encroachment on footpath;
 - Benches on walking routes;
 - A number of comments specifying improvements to cycling and walking routes in Heathfield and Whitton;
 - Dedicated safe cycling route from Ham to Richmond (24 hours);
 - Reduce parking spaces in town centres except for elderly and disabled;
 - Improve all pavements;
 - Prevention of cycling and scooter use on pavements (including prosecution);

- Separation of walkers and cyclists in some circumstances where there is overcrowding (e.g. towpath)
- Encouragement by parents and schools for children to walk more;
- Reduce pavement clutter;
- Safe crossings on main roads;
- Better bus/public transport services
- Port of London Authority considered that Local Plan should include requirement for developments in close proximity to the River Thames to maintain and improve existing access to the riverside, or provide new access to the riverside and Thames Path, in line with existing Local Plan policy LP 18 (River Corridors).
- Ham and Petersham Association commented on the importance of local facilities in reducing vehicle use.
- Support for Richmond Cycling Campaign’s objectives (including low traffic neighbourhoods, cycle hangars, pedestrian priority crossing points, safe cycle lanes and schemes to reduce and coordinate deliveries in town centres).

If the availability of parking in the borough’s town centres was less than it is now, would it encourage you to walk, cycle or use public transport more?

Of respondents who answered the question: 9 said yes, 14 said no and 3 don’t know [12 did not answer the question]

- Mayor of London supports borough intention to apply Intend to Publish London Plan residential parking standards, including those for areas with low PTALs, alongside exploring potential for increasing levels of public transport and cycling infrastructure and active travel. Borough should however note Secretary of State’s Directions on the Intend to Publish car parking standards.
- TfL referred to importance of restricting car parking in new developments (car lite and car free developments) in achieving wider sustainability goals.
- Richmond Bridge Residents Association agree some reduction in town centre parking might encourage more non-car trips, suggesting existing car park areas could be more intensively used. Don’t support changing parking standards in low PTAL areas of the borough, ahead of improvements in access to public transport and where parking is reduced, resident parking should be prioritised.
- Suggestion from Prospect of Richmond that only residents parking and cycles should be able to access Richmond town centre.
- Appropriate levels of parking should be assessed as part of planning applications and policies should be set locally (as opposed to London-wide by GLA and TfL).
- Richmond Cycling Campaign suggested study of parking on public land in the borough to inform potential release of land for other uses.
- In general, there was limited support for reducing current levels of town centre parking. Respondents commented that this would discourage town centre visits, and therefore spending would be done elsewhere.
- A number of respondents commented that they already used public transport to access town centres unless they required the car, for example for large purchases.
- A small number of respondents stated that reducing parking availability in town centres may encourage a shift to more sustainable forms of transport, but suggested this goal could also be achieved through changing parking charging structures to discourage long-term parking.

Should the Council actively pursue alternative uses (such as for much needed affordable housing, employment space and/or social and community infrastructure uses) on its existing car parks in town centres?

Of respondents who answered the question: 16 said yes, 11 said no and 2 don't know [9 did not answer the question]

- There was a mixed response in favour and against reducing the levels of town centre parking.
- General support for redevelopment of existing surface and multi-storey car parks to provide parking (possibly underground) alongside other uses including housing, to make more efficient use of space.

General comments

- Prospect of Richmond referred to likelihood that there will be a limited reduction in emissions from vehicles over the plan period. There will therefore be a need for planning to address growth in electric vehicle use – electric charging of cars at scale – and a modal shift to public transport. Residents and visitors with zero emission vehicles should not be inconvenienced by any reduction in visitor and resident car parking capacity.

Overall officer comment on responses to 'Reducing the need to travel and improving the choices for more sustainable travel'

There were very mixed views on whether borough should aim to reduce car ownership in the borough by seeking more car-free/car-lite development. This was strongly supported by some respondents, whilst others saw the benefit of car ownership for residents, particularly those who were less able to rely on other modes of transport such as the elderly, disabled and young families. There was support for improving traffic flow on congested roads, particularly linked to through-commuting, but not necessarily by reducing levels of car ownership.

Bus travel was highlighted many times as being very important to residents in the borough, reflecting the relatively low accessibility to railway stations. A number of measures were suggested to improve the experience of bus travel within the borough. Cycling was highlighted as being very important to respondents and a number of measures were suggested to improve facilities for cycling, as well as the number of people choosing cycling as a means of transport.

Whilst a reduction in town centre parking was not generally supported, there was general support for the principle of redeveloping car park sites to provide parking alongside other uses and make more efficient use of space.

Securing new social and community infrastructure to support a growing population

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 20 said yes, 2 said no and 3 don't know [13 did not answer the question]

- The majority of respondents supported the policy directions. Of those that elaborated on their answer, the focus was on improving existing community facilities and promoting walking, public transport and cycling to decrease car use across the borough.
- One respondent noted that the 'sequential test' process needs to be written down in order to ensure Council officers are not writing the test as they receive planning applications.

Is there a need for a particular type of community facility in your local area?

- Many respondents identified the need to upgrade/refurbish/ enhance existing facilities to protect their future use as well as the ability expand for other community uses such as nurseries, spaces for older people/ elderly and more recreation/ sport uses. Heathfield Recreation Ground was identified by two respondents as a site for refurbishment and another recognised the importance of ETNA as community facility.
- A respondent advised that Mortlake needs a health centre and another has stated an additional Public House would be an effect community facility.
- A respondent recommended that Council jeep the Playing Pitch up to date with regular stakeholder consultation to future proof these groups post COVID-19.
- Ellery Hall has been identified by respondents as a site which should be retained. Similarly, a respondent believes that Council takes too long to make a decision such as Ellery Hall and this indecision serves no one
- There were a few respondents which didn't believe their area required any other facilities/ was already well served.
- The protection and expansion of river related sports and recreation facilities was another recommendation from one respondent.
- Metropolitan Police Service have identified the need for a car pound in the Borough.
- The NHS Property Services have advised that currently assessing vacant or underused space across their portfolio to identify space that could be repurposed for the provision of clinical beds in light of COVID-19.

What is the best way to provide enough school places for our growing population?

- There were mixed responses regarding the best way to provide enough school places for our growing population. While some suggested investing in new schools, upgrading existing, others felt that there is an overprovision of school spaces.
- Many of the respondents who supported new schools recommended that catchment areas are used and to reserve the site through the Local Plan process.
- A respondent noted that the private provision of schools should be expanded by providing free school places for children.
- Other respondents thought Council could better utilise existing schools site either by upgrading them or allow development in areas where there is sufficient school places available
- DfE discussed the various legislation regarding school provision and recommended that the site allocation tool is useful policy to ensure and safeguard school sites. They also recommended that Council continually monitors the position with regards to pupil places and school delivery and ensuring the Infrastructure Delivery Plan is up to date.

Should we encourage more community uses in borough centres? Should they be encouraged as part of larger or mixed use developments?

Of respondents who answered the question: 19 said yes, 1 said no and 2 don't know [16 did not answer the question]

- There was strong support for more community uses in the borough

- The respondents mentioned that;
 - it should be encouraged everywhere,
 - should not be at the expense of retail, and
 - should be a community use for the whole community and not a subsection.

Should there be increased public access to school facilities?

Of respondents who answered the question: 17 said yes, 2 said no and 3 don't know [16 did not answer the question]

- Most respondents supported public access to school facilities including for evening classes and sporting facilities. Multiple responses noted that there is a need for a community access agreement with schools to ensure the facilities could continue to be used and to meet future demand. A one noted that this school include independent schools.
- Others noted that currently there is adequate access to school facilities. A respondent clarified that increased public use of school facilities could compromise security and safety of the children attend that school.
- Others only support the increased use if it doesn't generate more disruptions for nearby residents or if staff will be provided to allow public access after as schools themselves are unable to afford this expense.
- Less positive responses included the expenditure associated with increased public access and that it may unrealistic to gain more public access schools due to bureaucracy

General comments

- A respondent recommended that the K5 to Grey Court School should be extended.
- The Mayor of London supported the intended approach and themes regarding new social and community infrastructure, creating safe, healthy and inclusive communities as they are closely aligned with the Mayor's Good Growth Objective GG1, Building strong and inclusive communities.
- The Metropolitan Police Service (MPS) were pleased that the DoT referenced 'policing and other criminal justice or community safety facilities' as social infrastructure within the adopted Local Plan. As noted in their recent submission to the Richmond Planning Obligations SPD Consultation, the MPS are seeking to secure S106/CIL from development due to the impacts on crime.
- Department for Education noted that where additional need for school places which are generated by housing growth, the Infrastructure Delivery Statement should identify the anticipated CIL and Section 106 funding towards this infrastructure. They advised that Local authorities sometimes experienced challenges in funding schools via Section 106 planning obligations due to limitations on the pooling of developer contributions for the same item or type of infrastructure. However, the revised CIL Regulations remove this constraint, allowing unlimited pooling of developer contributions from planning obligations and the use of both Section 106 funding and CIL for the same item of infrastructure. They also request a reference within the Local Plan's policies or supporting text to explain that developer contributions may be secured retrospectively, when it has been necessary to forward fund infrastructure projects in advance of anticipated housing growth.

Overall officer comment on responses to 'Securing new social and community infrastructure to support a growing population'

Overall, there was a general acceptance of the approach taken to secure new social and community infrastructure. Respondents seem particularly supportive of upgrading existing facilities, although some recognised the need for new facilities. Maintaining existing access to schools/ increasing access for other uses by the public was generally accepted. There is a divide however, regarding the need for school places although it was evident that there is a view that Council will need to carefully

consider the demographics of the borough and encourage development where there are sufficient vacancies in schools.

Creating safe, healthy and inclusive communities

Do you agree with the proposed policy directions? If you disagree with any of the policy directions, please tell us more.

Of respondents who answered the question: 15 said yes, 4 said no and 3 don't know [16 did not answer the question]

- FORCE welcomes the inclusion of theme in the Direction of Travel, but believe that greater emphasis should be placed on the importance of borough's open and wild spaces in promoting physical and mental health, than aspects such as Healthy Streets, fast food outlets, sports and health facilities.
- Crane Valley Partnership want the Local Plan to recognise health benefits of convenient access to Borough-wide network of connected high quality open spaces.
- Need to understand underlying causes of variations in health of residents - including diet and lifestyle factors, quality of housing, mental health impacts of noise.
- Ensure Public Health is consultee on Local Plan.
- Two respondents referred to increasing walking, including recreational walking to improve health and stopping cars and vehicles across the borough.

Should it be easier to change use from other land uses to community uses?

Of respondents who answered the question: 9 said yes, 2 said no and 7 don't know [20 did not answer the question]

- Limited number of responses to this question, but general support depending on the need/circumstances. Change of use of buildings was supported, but not green space unless related to the functional use of the green space. Change of use to a school was considered to be controversial by one resident due to pollution impacts.
- A respondent felt that accommodating a community use should not be to the detriment of providing another facility (i.e. a retail unit) if it didn't provide much community value. Another felt change of use of an unused retail unit would be acceptable.

Should policy strongly resist more takeaways in areas in proximity to schools?

Of respondents who answered the question: 15 said yes, 2 said no and 2 don't know [19 did not answer the question]

- Majority support resisting more takeaways, particularly in areas with high levels of obesity. Consider further control of advertising.
- Free school meals suggested.
- SSA Planning representing KFC felt that the existing policy was not targeted enough, that unhealthy food could be purchased from a range of use classes not just takeaways.

- A respondent felt these restrictions are not appropriate in a democracy.

Do you have any other suggestions on how planning can promote or contribute to creating places and an environment that is conducive to weight loss and active lifestyles?

- Sport England advocate the protection of existing sports facilities and support new provision where needed.
- Department for Education comment that assessments for proposals affecting existing open space, sports and recreational buildings and land should comply with the NPPF. Advice offered on content of forthcoming evidence base.
- Several respondents felt that promotion of walking, cycling and public transport and restricting car use was key.
- Support for protection of open space, dual use of school facilities, outdoor gyms, play grounds and playing fields.
- A respondent felt that monies should not be spent on promoting healthy lifestyles, but rather on meeting basic care needs.
- A respondent felt that delivering adequate housing with sustainable access to jobs and facilities, including open space and recreation, is the key means by which planning can promote health.

Are there other opportunities through planning to promote healthy lifestyles?

- Responses reflect the view that planning on its own cannot result in healthy lifestyles. Education to enable individuals to make good lifestyle choices is considered very important.
- Suggestions made included:
 - Improve active travel and public transport and reduce car use.
 - Provide access to greenspaces, in addition to the Royal Parks and protect areas used for recreation.
 - Provide sporting facilities, specifically swimming pools and an ice rink
 - Encourage schools, employers and retailers to provide opportunities for good food choices.
 - Ensure new developments are permeable and link up
 - Restrict food and drink uses based on lack of viability in areas of deprivation.
- Support for Public Health England Guidance.

How can we ensure convenient and welcoming development with no disabling barriers, providing independent access without additional undue effort, separation or special treatment?

- Several respondents felt that the separation of walking and cycling, promotion of public transport and reduction in car use was important.
- Importance of good design.
- Liaison with the disadvantaged.
- The PLA commented that there must be continuing reference for riverside developments to provide riparian life-saving equipment where required.

General comments

- The Council should continue to oppose expansion of Heathrow and increase in flights.

Overall officer comment on responses to 'Creating safe, healthy and inclusive communities'

There was general support for the initiatives proposed however, many respondents acknowledged that planning alone cannot resolve many of these concerns discussed and that there shouldn't just be a focus on fast food outlets.

Could consider a shift in the emphasis of the Local Plan policies to the important role of open and green spaces, as opposed to focusing on more urban and indoor facilities (fast food outlets, sports and health facilities) in encouraging healthy lifestyles.

Call for Sites

Sites suggested and potential use (nature of site promoter)

- LGC Queens Road, Teddington for a mix of employment and residential uses (put forward on behalf of landowner LGC Teddington)
- Greggs Bakery, Twickenham for residential use (put forward by London Square Developments)
- Greggs Bakery was also submitted by other residents who either support a residential or wished to submit their objection to its inclusion to the Call for Sites list.
[For context: London Square Developments sent letters to residents in the area notifying them about the Council's Call for Sites and encouraging them to provide feedback on the type of development they would like to see on the site]
- Twickenham Bus Stand, Station Yard for residential use and the Fulwell Bus Garage for continued bus usage alongside residential use (put forward by TfL Commercial Development). CPRE also suggested the site around the Fulwell Bus Garage.
- Maintaining the current Site Allocation for Richmond Athletic Ground and amending to reflect redevelopment aspirations including enabling residential use (put forward by Richmond Athletic Association)
- Whitton Community Centre and car park for residential use (put forward by a resident)
- Anywhere there is a large supermarket and car park or business park locations could include carparks at Sainsburys or MacDonald's for retail, leisure, office, warehousing and housing (put forward by a resident)
- Old Deer Car Park, Richmond (and many other council car parks) for residential and office use (put forward by a resident). Similarly, CPRE suggested that the carpark for Sainsburys in Hampton to be converted to green space and a low-rise retail unit.
- Harlequin Football Club for a mixed residential, commercial, retail, community uses as well as the new sports stadium (linked with the and the adjacent Twickenham Central Depot site) (put forward by Harlequin Football Club)
- CPRE suggested other sites including Lower Teddington Road, Stanton Avenue, Homebase North Sheen, North Sheen near the station where there are garages and a surface car parks which could be better utilised for car free developments. They also identified Kew Retail Park and the Oldfield Road light industrial site for more intensified use including commercial and residential.
- Arlington Works, Twickenham for a mixed use of residential and commercial/industrial/office (put forward by landowner)
- Land at the back of 102 Sheen Road and adjacent to 2 Sheen Park, Richmond (put forward by a resident)
- The extended rear gardens of no's 271/273 Hanworth Road, Hampton for residential use (put forward by two residents)
- Green spaces for leisure (put forward by a resident)
- Kneller Hall, Kneller Road Twickenham referring to the current Site Allocation, for a mix of uses including residential (put forward by the Defence Infrastructure Organisation on behalf of the landowner the MoD)
- The existing Stag Brewery site allocation to be varied to reconsider the consolidation of the existing secondary schools in the area. To facilitate this a site allocation should be provided to Mortlake Station, Richmond Park Academy and Christs School (put forward by Mortlake Brewery Community Group)

- Bridge Farm Nursery, Hospital Bridge Road, Whitton for the relocation of the Bishop Perrin School or affordable housing for older people (put forward by a resident)
- St Margaret’s Business Centre for residential use (put forward by Sheen Lane Developments)
- Land to the west of Stain Hill West Reservoir, Hampton Water Treatment Works and Hydes Field, land north of Hampton Water Treatment Works, Upper Sunbury Road for residential or mixed use development (put forward by Thames Water)
- Former Thames Water operational land adjacent to West of Sunnyside Reservoir, Lower Hampton Road, Hampton for residential use (put forward by the landowner and another resident)
- The current Site Allocation SA 19 Richmond Station should be redrafted to ensure development will adequately recognise the architectural and historic interest of the site (put forward by a local resident) , given the failure of the Council and the Inspector to properly or adequately consider and respond to such issues put forward during the preparation of the 2018 Local Plan in respect of SA 19. CPRE also suggested this site as car parking at Richmond Station could be replaced with commercial and/or retail development
- The Mortlake with East Sheen Society has advised the need to review the existing Site Allocations including Stag Brewery as well removing SA25 Mortlake and Barnes Delivery Office. Furthermore, it was advised that comprehensive redevelopment still required, and that detailed planning is still required for SA27 Telephone Exchange and 172-176 Upper Richmond Road West. Mortlake Station, Richmond Park Academy and Christ’s School should also be included as Site Allocations.
- *[Also note other types of sites and specific sites were generally mentioned under ‘Scale of the challenge, opportunities and setting the Direction of Travel’.]*
- *[Also note Udney Park Playing Fields (mentioned by residents and local group) some respondents supported for Local Green Space designation and some respondents supported development, including in comments under ‘Scale of the challenge, opportunities and setting the Direction of Travel’ and ‘Protecting what is special and improving our areas’.]*

We would like to know whether there are any barriers to delivery, such as infrastructure constraints? And if yes, do these affect any particular or common types of development, such as small sites?

Of respondents who answered the question: 10 said yes, said 1 no and 3 don’t know [22 did not answer the question]

- Most respondents did not specify or know of any barriers to development.
- One respondent noted that the proposal would involve shared access with a high school which may result in safety concerns.
- Another identified that flooding may be a constraint as the site is located in Flood Zone 2 and that the site contained significant trees
- A respondent has stated that Council is claiming that site is Green Belt land
- A respondent has stated there is involvement of multiple land owners
- Another resident noted that the current use of the site would need to be relocated (however it could be relocated to the adjacent school site)
- There is a potential need to upgrade services including sewerage and electricity grids to accommodate growth.

General comments

- Historic England emphasis on considering the historic environment early in site assessments.
- A resident mentioned that Council should consider underground carparking to free up land for redevelopment.
- Most respondents advised that the land is available now or available subject to planning permission.

- There were references made by numerous respondents about car lite developments to help facilitate potential development.
- *[Also note DfE emphasis on clarifying requirements for the delivery of new schools through site allocations in response under ‘Securing new social and community infrastructure to support a growing population’]*

Overall officer comment on responses to ‘Call for Sites’

- There were various locations throughout the Borough which residents, landholders and business believe warrant a site allocation.
- Predominately it was suggested that these sites should be residential although some have suggested a mixed use on the site.
- The scale development proposed was mixed with some suggesting two new residential dwellings to hundreds of flats.
- It is evident that the Stag Brewery site while has received some support from the developers and community members, there is much community objection to the proposed development on site.

Other general comments (not related to specific consultation questions)

- TfL set out general context on their comments, made from their role as a transport operator and highway authority, and referred to the advanced stage of the draft London Plan in responding to consultations.
- Details provided on the National Grid electricity transmission system, identifying the assets which pass through the borough – routes of two 275Kv underground cable.
- Spelthorne Borough Council note additional demand on local infrastructure and transport expected given scale of development planned, and welcome further engagement, along with Surrey County Council who recently produced transport modelling for Spelthorne’s Preferred Options Local Plan.
- The Marine Management Organisation (MMO) set out general details on their responsibilities for marine licensing, marine planning (including the draft South East Inshore marine plan), and minerals and waste plans and local aggregate assessments, which may need to be referred to in planning documents.
- The Old Deer Park (ODP) Working Group urge an update to the 2015 Policies Map to show amendments/additions to boundaries and site-specific Allocations adopted since then including adjustments to the boundaries of designated MOL and Public Open Space in ODP, potential adjustments to the boundary of the Historic Registered Park, the boundary of the area covered by the ODP SPD and the boundary of the ODP Conservation Area, to remedy significant and long-established anomalies. Also requests to review the substantially deficient/defective draft Pools-on-the-Park, Richmond Statement of Significance for SA 22.
- Friends of Richmond Green indicated they support the comments made by Prospect for Richmond.
- Udney Park Playing Fields Trust encouraged the Council to be bold, defend and uphold the Local Plan protection of UPPF. Urge the Council to resolve the future of UPPF as a long term sustainable self-funded community facility.
- Some statutory consultees made no comments – Natural England and Surrey County Council.

Consultation from 24 February until 5 April 2020

Introduction		
Comments about the Introduction		
14	Mayor of London	<p>As you are aware, all Development Plan Documents in London must be in general conformity with the London Plan under section 24 (1)(b) of the Planning and Compulsory Purchase Act 2004. The Mayor has afforded me delegated authority to make detailed comments which are set out below. Transport for London (TfL) has provided comments, which I endorse, and are attached at Annex 1. [See respondent number 15 for TfL comments]</p> <p>The Mayor is pleased to have the opportunity to comment on this early, non-statutory consultation to inform the development of Richmond's new Local Plan. This letter provides advice and sets out where Richmond should alter its proposed approach to be more in line with the Intend to Publish London Plan.</p> <p>The draft new London Plan</p> <p>As you know, the Mayor published his draft new London Plan for consultation on 1st December 2017. The Panel's report, including recommendations, was issued to the Mayor on the 8th October 2019 and the Intend to Publish London Plan was published on 17th December 2019. The Mayor has received the response from the Secretary of State to his Intend to Publish London Plan and is considering his response. In due time, my officers will be happy to discuss any implications for Richmond's Local Plan.</p> <p>Publication of the final version of the new London Plan is anticipated in the Summer, at which point it will form part of Richmond's Development Plan and contain the most up-to-date policies.</p> <p>Richmond's new Local Plan will be required to be in general conformity with the new London Plan. The Intend to Publish London Plan and its evidence base are material considerations in planning decisions.</p> <p>General</p> <p>The Mayor recognises that this is a non-statutory consultation and is a pre-cursor to the formal Regulation 18 draft of the Local Plan which is to follow. The ten themes identified early in the Direction of Travel document are welcome and give an indication of what the strategic priorities and ambitions are for the forthcoming Local Plan. It has only been two years since the adoption of Richmond's most recent Local Plan and since then there have been many new challenges, changing priorities and key shifts in the evolving planning landscape which Richmond intends to address. The Mayor welcomes Richmond's early thinking and work on a new Local Plan and recognises this is important to address housing delivery and ensuring the demand for other land uses can be met.</p>
19	DP9 Ltd on behalf of London Square Developments	<p>Comments on the Direction of Travel Document</p> <p>We consider the Local Plan Direction of Travel Consultation document to be an important and positive first stage in determining the borough's vision for growth and future development. It rightly identifies that much has changed since adoption of the latest Local Plan in 2018, particularly in terms of increased housing delivery targets. We provide our comments on the proposed direction of travel below, including opportunities to meet stated objectives.</p> <p>Why do we need a new Local Plan? – p.4</p> <p>Reason 1</p> <p>We support Richmond's actions to tackle the climate emergency and supports planning policy that will minimise carbon emissions, waste and pollution. Environmental impacts arising from pollution is particularly relevant to the subject Site. Its current industrial use has the potential to generate high levels of commercial vehicle traffic and therefore significant air quality impacts to surrounding residential uses. As part of the approach to tackling pollution, consideration must be given to protecting established residential communities from poor air quality.</p> <p>Reason 2</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>We support the provision of infrastructure that will ensure better connectivity and encourage sustainable modes of transport. As part of this approach, development must be directed to appropriate locations. In the case of the subject Site, it is not sustainably located for large-scale employment use, particularly in light of its poor access via residential roads.</p> <p>Reason 3 We support Richmond’s consideration of how it will meet the new increased housing targets proposed in the draft London Plan. We consider that the Site should be assessed for this purpose, particularly in light of the proposal which seek to deliver 116 new homes including circa 57 units of affordable housing (49% of units).</p> <p>Reason 4 We support Richmond’s approach to ensuring alignment with the latest national planning policies, guidance and legislation.</p> <p>What do we already know? – p. 6 The consideration of viability through the plan-making process, and whether policies will stop development coming forward, is supported. This is particularly relevant to the sites, such as the subject Site, where restrictive policies may halt otherwise appropriate development from coming forward. Viability and market signals must also be considered in the preparation of policies which seek to protect certain uses. In the case of the subject site, its employment use is protected by adopted policy despite it having been demonstrated that the redevelopment of the Site for similar employment generating uses would be an unviable prospect. Without this approach, sites around the borough are at risk of long-term vacancy. This approach also presents a missed opportunity to redevelop brownfield sites to meet housing need.</p>
22	Jimmy Wallace, Richmond Athletic Association	<p>To provide a brief background, RAA was incorporated in 1886 and is responsible for managing the Richmond Athletic Ground, which is located within the Old Deer Park, and has been used for hosting sporting activities ever since. The ground is home to two of the most recognised rugby clubs in the country (Richmond Rugby & London Scottish) and is used by hundreds of men, women, youth and mini rugby players for matches and training purposes throughout the season.</p> <p>In addition to the several thousand members of the two Rugby Clubs, RAA hosts a number of Rugby 7s tournaments such as the Lloyds Insurance 7s, Surveyors 7s, Law Society 7s, Middlesex 7s Festival and Summer Social. In addition, it has strong connections with the local business community and also provides facilities for the adjacent Falcons Boys School. Given the level of current usage and demand experienced by RAA, together with the condition and age of the existing facilities, it is evident that significant improvements are required if this vital facility for the local community is to continue to sustain itself and thrive. Whilst the facility is heavily used and makes a vital contribution to local health and well-being, it does not generate any surplus income that could be used to meaningfully invest in the provision of the significant enhancements that are needed to maintain this contribution. As such, it is clear that other funding solutions must be considered to deliver the required investment and uplift that the facilities require.</p> <p>In 2017, Richmond Rugby established a full-time Community Department which now provides rugby and sports coaching in over 20 primary and secondary schools, primarily in the state sector, in the borough of Richmond and further afield into west London. In addition, the Community Department formed a partnership the following year with HM Young Offenders Institution in Feltham to provide rugby coaching to juvenile offenders aged between 15 and 18, and this on-going programme was the first-ever outside sports project to be offered for this age group at the institution. More recently, the Community Department has been offered a sizeable grant from the Met Police to provide sports coaching as an after-school activity to 10-11 year olds in partnership with the MCC Foundation.</p> <p>With this in mind, the RAA is continuing to investigate how they can improve the existing facilities at the ground in order to meet the increasing demand from the local community and secure the future of rugby (and other sports and community uses) on the site. In recent years, discussions regarding potential redevelopment proposals have been undertaken with LBRuT along with meetings with local community groups and the feedback received has been positive. Accordingly, the RAA is currently in the early stages of developing a revised masterplan for the Athletic Ground involving improved facilities including enhanced sport facilities and proposals for better public access and enabling uses to fund the delivery of the proposed development. The RAA anticipates resuming pre-planning discussions with LBRuT, the Greater London Authority (GLA) and other key stakeholders in the short term.</p> <p>In the context of its redevelopment aspirations, the RAA has previously engaged in a number of LBRuT’s planning consultation exercises, including in relation to the adopted Local Plan, and more recently, consultation on the draft Planning Obligations SPD and draft Transport SPD.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>The consultation process provides a positive opportunity to continue to discuss and align the aspirations of the RAA, LBRuT and the local community in local plan making policies to assist in the delivery of improved sports facilities as well as enhanced public access to these facilities.</p> <p>We support the statement on p. 12 that the vision and new Local Plan will be written positively and the acknowledgement that the borough will need to change to accommodate future growth. Ten themes are then identified and will inform the emerging vision for growth. We are supportive of these themes as the starting point for the preparation of the vision. This includes an objective to protect and improve the borough’s Heritage, Culture, Green infrastructure and open land. We think this should also recognise the requirement to make best use of resources such as existing open land (e.g. playing fields) to ensure that these can be enhanced to better meet the needs of residents.</p> <p>See also general comments on the Vision as below.</p>
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	<p>1.1 The Old Deer Park Working Group (the Group) comprises representatives of The Richmond Society, The Kew Society, The Friends of Richmond Green, The Friends of Old Deer Park and The St Margaret’s Estate Residents Association. This submission represents the joint response from the Group.</p> <p>1.2 The Group was formed in 2012 in recognition of the particular ecological, historical and recreational importance of the Old Deer Park and has since then worked for encouraging and securing the preparation of a coherent strategy for the effective conservation, development and management of the Park. In June, 2012, the Group published its report: <i>The Old Deer Park, Richmond - Re-connecting the Town to its local park - Realising an under-recognised parkland asset – A framework for conservation and enhancement</i>. Since then, it has made a number of submissions to the Council on related issues. In this connection and importantly, the Group worked collaboratively with the Council and its consultants on the preparation of the <i>Old Deer Park Supplementary Planning Document</i> (as published in March, 2018). The Group has also worked, and continues to work, collaboratively with the Council on the planning and implementation of projects for the enhancement of the Park, including the recently completed, award-winning scheme for improvements at and adjacent to the Park Lane entrance to the Old Deer Park Car-park.</p> <p>1.3 The Old Deer Park Working Group notes that the present consultation follows the formal adoption of the <i>Richmond-upon-Thames Local Plan</i> in July, 2018, in which it is stated (at paragraph 1.1.1) that the Plan sets out the Council’s policies and guidance for the developments of the Borough for the next fifteen years (i.e. until July, 2033) and identifies where the main developments will take place, and how places within the Borough will change, or be protected from change, over that period. Importantly, too, the Council has only just published (on 12th March) a notification regarding boundary adjustments to the still yet to be published <i>Polices Map</i> attached to the present <i>Local Plan</i>.</p> <p>1.4 In this connection, the Group notes the statement in Appendix 3 of the consultation document that the Council anticipates the new <i>Local Plan</i> being adopted in 2024 at which point it will supersede the existing <i>Local Plan</i> of 2018.</p> <p>1.5 The Group notes that the Council’s has put forward four reasons for preparing a new <i>Local Plan</i> (<i>Local Plan Direction of Travel Consultation</i>, page 4) so soon after the adoption of the present <i>Local Plan</i>. Whilst the Group recognises the importance of the four cited reasons and that they should be reflected in adopted planning policy, it would question whether the Council having adopted a <i>Climate Emergency Strategy, 2020-2024</i> in January this year actually ‘necessitates a new strategic vision for the future of the Borough and a new-place-making strategy for how this will be achieved’, rather than simply building upon the existing <i>Local Plan</i> – only very recently adopted in its entirety.</p> <p>1.6 Similarly, the Group questions whether growth in population in the Borough and related matters justify the preparation of an entirely new <i>Local Plan</i> so soon after the adoption of the present <i>Plan</i>.</p> <p>1.7 Similarly too, the Group questions whether the anticipated housing target for the Borough set out in the still yet to be formally adopted draft <i>London Plan</i> of 2019 necessitates the preparation of an entirely new <i>Local Plan</i>.</p> <p>1.8 Finally, the Group seeks clarification of the significant changes which the Council alleges have been made by Central Government to planning legislation, policy and guidance since July, 2018 (and the anticipated changes), which are put forward as further justification for preparing an entirely new <i>Local Plan</i>.</p> <p>1.11 Without necessarily accepting or rejecting the factors that the Council has put forward in justifying the preparation of a wholly new <i>Local Plan</i>, the Group welcomes the opportunity of putting forward a number of issues relating to the care, conservation, development and management of the Old Deer Park for consideration in the preparation of a new <i>Local Plan</i> in response to the Council’s invitation. These primarily relate to the failure of the Council and the</p>

		<p>Inspector to properly or adequately consider and respond to significant and long unresolved designations relating to the Old Deer Park put forward by the Group in the consultations and submissions leading to the adoption of the <i>Richmond-upon-Thames Local Plan</i> in July, 2018 (and in the consultations leading to the adoption of the <i>Old Deer Park Supplementary Planning Document</i> in March, 2018. The preparation of a new <i>Local Plan</i> provides the opportunity to review and resolve these particular anomalies and omissions.</p>
24	Paul Velluet	<p>1.1 The comments below are submitted in an entirely independent capacity based on long familiarity with planning and development issues in the Borough and direct involvement as a Borough resident in the Council’s plan-making process and in the interpretation and application of the Council’s planning policies and guidance for over forty years. My professional experience as an architect - working in both private practice and the public sector specialising in building conservation and development in historic areas - has been complemented by serving in past years on the Council’s former Conservation Areas Advisory Committee, by serving for four years as Chairman of The Richmond Society and fifteen years as Chair of its Conservation, Development and Planning Sub- Committee, by serving for ten years as Regional Architect and Assistant Regional Director of English Heritage, London Region, and by serving on the RIBA’s Planning Group and Awards Group and on The Thames Landscape Strategy Panel of the former Royal Fine Art Commission.</p> <p>1.2 I note that the present consultation follows the formal adoption of the <i>Richmond- upon-Thames Local Plan</i> in July, 2018, in which it is stated (at paragraph 1.1.1) that the Plan sets out the Council’s policies and guidance for the developments of the Borough for the next fifteen years (i.e. until July, 2033) and identifies where the main developments will take place, and how places within the Borough will change, or be protected from change, over that period. Importantly, too, the Council has only just published (on 12th March) a notification regarding boundary adjustments to the still yet to be published <i>Policies Map</i> attached to the <i>Local Plan</i>.</p> <p>1.3 In this connection, I note the statement in Appendix 3 of the consultation document that the Council anticipates the new <i>Local Plan</i> being adopted in 2024 at which point it will supersede the existing <i>Local Plan</i> of 2018.</p> <p>1.4 I note that the Council’s has put forward four reasons for preparing a new <i>Local Plan</i> (<i>Local Plan Direction of Travel Consultation</i>, page 4) so soon after the adoption of the present <i>Local Plan</i>. Whilst I recognise the importance of the four cited reasons and that they should be reflected in adopted planning policy, I would question whether the Council - having only adopted a <i>Climate Emergency Strategy, 2020-2024</i> in January this year - actually ‘necessitates a new strategic vision for the future of the Borough and a new-place-making strategy for how this will be achieved’, rather than simply building upon the existing <i>Local Plan</i> – only very recently adopted in its entirety.</p> <p>1.5 Similarly, I would question whether growth in population in the Borough and related matters justify the preparation of an entirely new <i>Local Plan</i> so soon after the adoption of the present <i>Plan</i>.</p> <p>1.6 Similarly too, I would question whether the anticipated housing target for the Borough set out in the still yet to be formally adopted draft <i>London Plan</i> of 2019 necessitates the preparation of an entirely new <i>Local Plan</i>.</p> <p>1.7 Finally, I would value clarification of the significant changes which the Council alleges have been made by Central Government to planning legislation, policy and guidance since July, 2018 (and the anticipated changes), which are put forward as further justification for preparing an entirely new <i>Local Plan</i>.</p> <p>1.9 The posing of such questions, clearly suggests that the present Administration is open to being persuaded to set aside well tried and tested protective policies in favour of purely short-term economic and other objectives.</p> <p>1.10 Without necessarily accepting or rejecting the factors that the Council has put forward in justifying the preparation of a wholly new <i>Local Plan</i>, I welcome the opportunity of putting forward a number of issues relating to the future of Richmond Station for consideration in the preparation of a new <i>Local Plan</i> in response to the Council’s invitation. These primarily relate to the failure of the Council and the Inspector to properly or adequately consider and respond to significant and long unresolved issues which I put forward in the consultations and submissions leading to the adoption of the <i>Richmond-upon-Thames Local Plan</i> in July, 2018. The preparation of a new <i>Local Plan</i> provides the opportunity to review and resolve these particular anomalies and omissions.</p> <p>1.11 However, I remain apprehensive that the stated commitment to carrying out a review of existing Green Belt, Metropolitan Open Land and Other Open Land of Townscape Importance (‘to fully inform our spatial strategy and approach to growth and development in the Borough’) to which reference is made on page 39 of the consultation document, and reflected in Questions 11 to 17 of the questionnaire, raises the considerable risk the potential de-designation of many, much valued open spaces of the Borough as an unintended consequence of a simplistic search for growth.</p>

27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<p>1. The consultation cites four reasons for early revision to the Local Plan adopted in 2018:</p> <ol style="list-style-type: none"> a. Climate Change Emergency and Air Quality Action b. Population Growth c. New London Plan d. Changes to National Planning Policies <p>2. We do not believe the Local Plan Direction of Travel document provides sufficient evidence to demonstrate the current Local Plan is not fit for purpose today or over the next 10 years in meeting growth, social, economic and environmental objectives. It was only adopted in July, 2018, and in its entirety in March, 2020. The case has not been made that the direction of travel or the objectives themselves have changed sufficiently to warrant a new Local Plan.</p> <p>3. Circumstances and choices as to how best to meet the objectives change all the time. But we are not convinced that the recently adopted Local Plan 2018 is sufficiently deficient in dealing efficiently and effectively with the four cited topics to justify a new Local Plan. There are subsidiary tools, such as the preparation and adoption of Supplementary Planning Documents, that we believe could remedy the changing economic, social and environment challenges through the life of the existing Local Plan, whose term was predicted in only very recent years. There are ways of dealing with new legislation or new Government policy that may otherwise conflict with adopted Local Plan policies. The four cited topics are not new by any means and surely would have been anticipated when the Council was preparing the current Local Plan. We are concerned that no sooner is the proposed new Local Plan adopted in 2024 that another will then be deemed necessary and that the 15-year lifetime of such plans in reality is more like 5 years. This hardly provides stability for the implementation of planning policies and instead creates uncertainty and opportunism.</p> <p>4. Preparing a new Local Plan in order to keep up to date (the reason given for the new Local Plan) suggests that a new Local Plan could itself be out of date should the current corona virus epidemic continue for any length of time. We suggest that under the current circumstances consideration be given to the Direction of Travel process being deferred.</p> <p>5. For the avoidance of doubt we are not saying the four topics cited above are not important - they are, and we endorse the Council's concern that they be recognised in planning policy.</p> <p>6. We note that the proposed new plan focusses on growth, and we are not aware growth predictions for the Borough of Richmond-upon-Thames have changed significantly from those incorporated in the current Local Plan. The chart on page 7 of the Direction of Travel document projects the population of the borough increasing from around 202,000 in 2020 to 215,000 in 2030 or 6.4% over ten years. What is changing is awareness of the environmental issues facing us from global to local level and hence the need to focus increasingly on growth being sustainable and the possibility of limiting or even discouraging any growth. But the Direction of Travel document seems to be seeking increased flexibility to facilitate growth by loosening the constraints that the current Local Plan rightly provides to protect the environment. If anything, the Direction of Travel document seems to promote growth while putting at risk the quality of the environment. In our view the protection of the environment should be a key objective and not the poor cousin of growth and treated as one of several constraints to growth. The precautionary principle is essential under the circumstances.</p> <p>7. We refer to growth in the previous paragraph as overall growth reflected by population. But within the societal mix there are naturally some elements growing and others waning. It is important to maintain a balance. For example, in Central Richmond the mix of retail, office and residential use is an important balance that changes over time.</p> <p>8. We believe evidence is essential when formulating planning policy and we welcome the Council's references to the gathering of specific evidence that is needed. The Direction of Travel document is lite on evidence and that is not unexpected at the early stages of preparing a new Local Plan. What evidence we are aware of we do not believe supports proposals to dilute current planning policies. The absence of new evidence means we are not able to draw definitive conclusions on proposed new policies or significant revisions to existing policies and we ask that this be taken into account when considering our response.</p>

		<p>Response to the Specific Themes in the Direction of Travel document</p> <p>9. Our response here focusses on the heart of Richmond but we realise the Direction of Travel document covers other areas of the Borough necessitating consideration in the preparation of a new Local Plan. We believe it is essential when considering planning for Richmond that Richmond Green and the Riverside are included in the spatial scope. Together we refer to these as Richmond comprising the Conservation Areas for Central Richmond and Richmond Green and relevant parts of the Conservation Area for the Riverside. The use, character and value of the three components of Richmond are very different but it is this diversity, side by side in a relatively small area, that is so valuable. The whole is greater than the sum of the parts.</p> <p>10. We suggest the need is to ensure Central Richmond is attractive for residents, visitors, businesses and employees. The Riverside and the Green add value directly for residents and visitors and indirectly for businesses and employees. It is essential that the different characteristics of the three areas are maintained, not only to provide Richmond with a viable future which is differentiated from other competing towns but to sustain the character, quality and historic significance of the Riverside and the Green for future generations.</p> <p>11. As we write, the corona virus epidemic is entering a severe phase - necessitating a lock-down from which some businesses will not survive and others will be materially changed. Meanwhile, the impact on retail of internet shopping continues. The way of life for residents, visitors, businesses and employees will probably change significantly over the next few years and probably over the long term. The extent of change and its direction is impossible to predict reliably at this moment. The Direction of Travel document suggests policy options. We explained in our response to the introduction why we are concerned at attempting to prepare a new Local Plan at this time. In addition, the uncertainty and shortage of evidence by which to judge the options presents a particular difficulty for us in responding to the consultation. We are concerned that under these circumstances our comments can only be tentative but that this then leaves wide open scope for interpretation by the Council that we might not share. In saying this we are not intending disrespect of the Council in any way.</p> <p>12. Given the inevitable tentative nature of our response under the current circumstances, we should make it clear that we may wish to make changes to our responses.</p> <p>13. In one way or another all the themes in the Direction of Travel document are relevant for Richmond. We discuss each of them in turn. <i>[Responses are set out in the relevant sections in this table.]</i></p>
28	Alice Shackleton on behalf of The Kew Society	<p>1. The Kew Society ("TKS") represents some 800 residents of Kew. As an amenity society it is established for the public benefit and its objectives are to promote high standards of planning and architecture in Kew, to educate the public about the locality, to preserve and enhance the beauty of Kew and its village and to extend and preserve public amenities in the domain.</p> <p>2. The Council is setting in motion the process to create a new Local Plan, intended to be adopted in 2024.</p> <p>3. The Kew Society questions the need for a new Local Plan for the following reasons. The Council, in our view, has not yet made the case in this consultation document.</p> <p>4. The existing Local Plan was adopted only in July 2018 after extensive consultation and a public examination. This was a very detailed and rigorous process, in which the Inspector carrying out the public examination made few substantive amendments, an implied recognition of the quality in planning terms of the draft.</p> <p>5. The Local Plan must be in general conformity to the London Plan and the National Planning Policy Framework. Accordingly, it must be under constant review and is subject to alteration, just as the London Plan must conform to National Planning Policy Framework. This is a continuing process which is undertaken at local and London level. There is no requirement for a completely new Local Plan when changes in national or London planning policy, decisions of the courts or circumstances occur. Indeed, the Mayor of London's comments on the draft London Plan process and background set this out clearly on his website. <i>Alteration</i> meets such needs.</p> <p>6. The consultation document does not, in our view, justify the creation of an entirely new Local Plan, particularly so soon after the adoption of the July 2018 Local Plan, which was to cover the next 15 years. Clearly it is envisaged by the fact that the Local Plan is intended to cover 15 years that there will be necessary alterations – not an entirely new Local Plan. The consultation document does not explain why a new Local Plan is needed for the reasons given by the Council (Climate Emergency Strategy, projected growth in population, housing targets increased by the draft London Plan – but now at a more realistic level, changes to legislation). Why can the adopted Local Plan not deal with these?</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>7. The adopted Local Plan, supplemented and supported by SPDs, Conservation Area statements, Village Character areas, is the result of rigorous policy making and a wealth of expertise and long experience. We would welcome information on what the Council considers will be dealt with in a new Local Plan that could not be accommodated in this adopted Local Plan.</p> <p>8. The Council has decided on a new “vision” to inform the new Local Plan. It says “the new vision and new Local Plan will be written positively, and it will be about what you want to see rather than what you don’t” (p.12 Local Plan Direction of Travel Consultation document). What does this mean? It is not clear what it means, certainly in planning terms. If this is intended to be a fundamental change to how the Council sees the planning policy, then is this a direction of travel we would want to take?</p> <p>9. The adopted Local Plan (as all such plans) deals with protection as well as positive planning aspects of development as It must do if only to conform to strategic matters in national and London planning policy. It is not (or should not be) a question of <i>either</i> protection <i>or</i> something “you want”. Planning policy includes all aspects.</p> <p>10. The Council’s questionnaire contains questions that raise alarming possibilities : could “what you want” mean current important matters (such as shortage of affordable housing) be used to override designation of protected open lands ? These lands should, in our view, be held by the present owners as trustees for future generations. Once gone for current short-term needs and perceived needs, they are gone forever.</p> <p>11. How does this new “vision” relate to the Climate Emergency Strategy in planning terms, in ways that the adopted Local Plan does not? Again, “what you want” could well translate into something that destroys not only long evolved and tested planning policy and practice but also some protected open space which should be held for future persons.</p>
29	Richmond Cycling Campaign	<p>This is the group response from Richmond Cycling Campaign, the local branch of London Cycling Campaign, and it has been arrived at with feedback from members locally as well as from LCC head office.</p> <p>Summary In overall summary, we welcome both this consultation and this new plan. The increased focus on supporting non-car travel modes is welcome, as is the focus on wider sustainability issues.</p> <p>However, our general ‘ask’ is that these provisions are significantly strengthened in this and later revisions: if this is a plan to be used as a baseline for the next 10-20 years, it must start from the assumption that the private car should not be designed into our borough as the right way to move around, whether it is electric or not. Rather, we should ensure that the borough emerges from this exercise with a clear, robust plan to make sure that every person, everywhere in the borough, can honestly and safely make transport decisions which are low- or no-carbon, and which feel and are safe. Every time we mention or look at transport, new developments, visitors, etc., we should ask “how can people get there without a car?”</p> <p>We ask this not purely because of our general interest in walking and cycling, but because taking this approach supports a range of other crucial policy imperatives, including keeping people active, reducing borough carbon emissions, prioritisation of public transport, and maximising space available for people.</p> <p>P9: ‘what should the borough look like in 15-20 years’ time? In the next 20 years the borough should be a place where roads look people friendly rather than like car parks as people drive cars for exceptional journeys, if at all. A place where people move to and think “I don’t need a car”. A place where air quality in our town centres and schools is as good as the air in our parks. A place where children actively choose to cycle to school from year 4 or 5 in primary. A place where businesses and local Government have worked together to make our borough a beacon of community, supported by removing the barriers that many main roads form. A place where deliveries are by cargo bike or other emissions-free methods, and are consolidated and organised to maximise efficiency.</p> <p>P13: “What do you think? What challenges do we face? The key challenge that is faced in anything to do with transport is the utter dependence that many people feel they have on their cars. Our challenge will be creating a culture of walking and cycling for normal trips in the face of determined opposition that does not recognise the unfair dependence on car culture and how it dominates our entire streetscape.</p>
30	Jon Rowles on behalf of Friends of Heathfield	<p>The explanation of what a local plan is not clearly explained. We feel there is a better explanation here https://www.gov.uk/guidance/local-plans “Local plans are prepared by the Local Planning Authority (LPA), usually the Council or the national park authority for the area.</p>

Respondent reference no.	Name / Organisation	Detailed comments
	Recreation Ground and Environs	<i>The National Planning Policy Framework (NPPF) states that the planning system should be genuinely plan-led. Succinct and up-to-date plans should provide a positive vision for the future of each area and a framework for addressing housing needs and other economic, social and environmental priorities.</i> The workforce population chart; there needs to be an exploration of the Slough and Heathrow Travel to Work Area - as this is the cause of a great amount of congestion and pollution in our borough.
40	Jamie Edwards	I don't believe the so called 'Climate Emergency' is a topic Richmond should prioritise. The UK has the best green credentials in Europe and the UK only contributes 1% of Global Co2 emissions. There are other priorities in the Borough more important. School Funding. The roads are full of potholes and there is overpopulation, with no clear strategy about providing more GP appointments or infrastructure.
42	Jeremy Gill	It seems your chief aim is to point up at every opportunity how wrong the government are about just about everything and how useless they are to anyone but the people they care about, their business associates. We do know that and we don't need you to keep reminding us, we're not stupid. Nor do we need you to keep pursuing policies designed to show how environmentally aware you are. In my opinion your slavish devotion to setting grand targets and keeping to them to the detriment of other areas of responsibility is a waste of scant resources and robs the people of this borough of a local authority capable of thinking on its feet. When public opinion on these issues reaches a tipping point whatever government of the day will suddenly develop a desire to create policy capable of satisfying this change. You frittering away money and energy by attempting to tackle these issues in relative isolation.
44	Roger Cutler	Ensure that, in planning for growth, it is essential that you do not remove any parking facilities - particularly Twickenham Embankment. You will kill off local shops, pubs, clubs & restaurants in the centre of Twickenham who depend on the ability of their customers to park nearby. Otherwise shoppers will just go elsewhere. The killer of any high street is high council tax & lack of parking spaces.
45	Sally Beeson	I very much appreciate the Council's plans for a sustainable and green Borough and the pressures on it to build on every square inch, but I feel very strongly that local residents' views always seem to be regarded as not important, when a decision made from a non elected official who isn't local, takes precedence. Decisions taken locally by local people ought to outweigh any others, which is why I think local voters feel that their voices aren't heard anyway, so think well, why bother.
49	Margaret Edwards	It makes sense to have this plan
50	John O'Brien	It does not mention how we will reduce the level of traffic gridlock which is experienced every working day. This has been exacerbated by the closure to traffic of Hammersmith Bridge. There are at least a dozen traffic grid lock black spots in the borough and nothing is being done to deal with them.
51	Su Bonfanti	I support the need to revise the Local Plan to respond to policy changes and I especially support the intention to set stretching standards and targets that will push developers big and small not to settle for 'just good enough'. You need to do this now or it will be too late to tackle climate change, pollution and the piecemeal degradation of the built environment.
52	Winston W Taylor	It raises enough questions on its own . I dont have time to give detailed replies to the questions. It would take several thousand words. One initial comment on the document as a whole. Air quality is not mentioned in the list of issues until issue 10. I recognise that it appears in some of the discussions on other issues but I dont think it is given the prominence it deserves.
53	Richard Woolf on behalf of McDaniel Woolf Architects	I'm strongly in favour of your focus on population growth, which drives all other factors governing our built environment.
54	Paul Luton	Clearly if the council has declared a climate emergency dealing with carbon footprint is the main issue.
55	Jon Rowles	"The borough is prosperous, safe and healthy" This is incorrect -in many areas there is relative deprivation, which a marked variance in health outcomes. The council stating this 'rose-tinted view' makes it much harder for local groups to obtain grants to address the very real needs in some communities like Ham, Heathfield and Hampton North.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Thank you for consulting the Royal Borough of Kingston upon Thames on The London Borough of Richmond Upon Thames Local Plan Direction of Travel Consultation and giving it the opportunity to comment on it. The text explaining what a Local Plan is and why Richmond Borough Council wants to hear from its residents, businesses, stakeholders is drafted in a positive user-friendly way, and this would encourage consultees to respond to the consultation questions.
63	Carol Rawlings	It doesn't say anything specific. Too generalised. Questions and comments should come after reading the local plan. However, I can't find the local plan! A clear link is needed.

Respondent reference no.	Name / Organisation	Detailed comments
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	<p>We support the need to revise the Local Plan to respond to policy changes and especially to set stretching standards and targets that will push developers big and small not to settle for 'just good enough'.</p> <ul style="list-style-type: none"> · However given the implementation date for this new Local Plan is planned for 2024, we feel it contradicts the emergency aspect of Climate Change and therefore cannot be a substitute for emergency action (ie over the next 18 months) that is critical in the borough. There needs to be new, significant policies in place before 2024. · Also, since "The Government is constantly changing planning policy, guidance and legislation" we need a plan that can be flexible enough to accommodate these changes as they appear without the need to rewrite everything again from scratch which is not a good use of the borough's resources. The base of a Local Plan should be strategic and include a 10 yr view of what the borough should be aiming for (regardless changes in political party managing the borough!) with only specific parts of this plan evolving as trends and legislation evolves (e.g. protecting conservation areas and improving high streets won't change, we need to concentrate on the parts of the plan that do require updating). · We support the council's aim to share this plan with the community for feedback. However, if the council genuinely wishes to have representative and meaningful feedback from the Community it needs to reconsider how the document is written as it is not at all accessible in its current form (way too long for anyone to read, doesn't concentrate on the key points and main changes enough, etc.). It is not the right format to share with the community at all and we have therefore found that the interest to respond to this consultation was very low.
66	Robert Philip Cunliffe	Good, clear and well written
67	William Mortimer	The document raises the issue of climate change but nowhere explains what is being done about Disaster Management. I have raised this point before especially as flooding is a major risk (witness the wretched plight of the Midlands and North this year). I have sent you before a summary of the action I believe to be necessary and included therein are the physical entities needed in the SW13 area to enable the community to be protected.
68 (a)	Mark Jopling	Will need to change to reflect the long term impact of CV-19
68 (b)	Mark Jopling	Will need to reflect changes as a result on CV-19
Does this document raise any specific equality impacts which would affect particular groups or communities of people in Richmond?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>Parking Standards; the number of parking spaces at new developments could impact certain protected groups without careful management. Certain groups are less likely to drive – and developments with poor public transport accessibility can have a negative impact on their quality of life. We suggest that communities on the west of the borough are more likely to be commuting to work in the Slough & Heathrow TTWA than those in the east. Is there a need for better public transport to these areas? Should the proposed West London Orbital Railway be extended to Twickenham?</p>
31	Tim Catchpole on behalf of Mortlake with East Sheen Society (MESS)	No
39	Solomon Green	No
40	Jamie Edwards	Focusing on Climate change as a Top priority, detracts resources from other more essential areas that need huge improvement. Like the state of our roads. Empty shops. Litter. Crime etc.
41	Anthony Swan	Intro says "stakeholders". Unless these are identified thane cannot know if any area is being excluded. Maybe this level of detail comes later.
42	Jeremy Gill	Yes, anyone who understands scientific issues. Also anyone suffering from any of the serious environmental issues specific to the borough, such as the rising tide of anti-social behaviour in less affluent parts of the borough which the council are unwilling to acknowledge as they do not involve prestigious infrastructure projects.
43	Paul Hart Prieto	none
44	Roger Cutler	Car drivers & pedestrians are disadvantaged while cyclists benefit above everyone else. There is a lack of equality in road & pavement use.
54	Sally Beeson	<p>I think that the young and old have specific needs and should be given priority. Protecting our air quality - reducing pollution by over building and protecting our important green spaces, cultural centres and beautiful buildings, are vital for the health and well being of us all. Our Borough is stunning, let's keep it that way.</p>

Respondent reference no.	Name / Organisation	Detailed comments
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Reliance on cars and vehicles adversely affects less wealthy and socially excluded groups, and causes lack of social cohesion
49	Margaret Edwards	Currently the needs of older people are probably underrepresented for example in relation to housing needs
52	Winston W Taylor	Yes. The traveller community is mentioned. And they need to be considered as indicated in the Housing section.
53	Richard Woolf on behalf of McDaniel Woolf Architects	No. The introduction is fair and reasonable.
55	Jon Rowles	Many disadvantaged groups (BAME, Disabled) have fewer employment opportunities - and mean they are less likely to get jobs in central London which they can access by public transport. The parking restrictions proposed are likely to reduce their employment opportunities more than groups who don't have the disadvantage. A Large number of people in the west of the borough work in the Slough & Heathrow TTWA - and the council should drill down these TTWA statistics more.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	It would be helpful if it is made clear that this document is available in other formats to help people with impaired sight or whose mother tongue is not English Language to give them confidence that the invitation to comment on the consultation document is inclusive.
63	Carol Rawlings	Cannot comment until I have read the local plan in its entirety.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	The increasing numbers of older people makes it essential that the built environment is adapted to frail and disabled people. Meeting their needs is likely to make eg the public space more user-friendly for a range of users, eg people with buggies.
66	Robert Philip Cunliffe	No
67	William Mortimer	In particular you ask for strategic sites to be identified. I have been very disappointed in consultation about the Mortlake Brewery site that the Council has failed to understand the issues of ramming so many dwellings and a major school project into an area where movement is constrained between river and railway. If you are serious about getting people to use more public transport why have suggestions of an extended catamaran service using the historic Thames highway been ignored?
Scale of the challenge, opportunities and setting the Direction of Travel		
What challenges do you think Richmond borough faces now and in the future?		
29	Richmond Cycling Campaign	<p>We think the rising population in the borough will add pressure to a wide range of services. Specifically we are concerned that if the borough fails to immediately design and build sustainable transport options, we will live in an area blighted by even more congestion, along with the resulting risks of pollution, road danger, severance and inactivity.</p> <p>See also comments in section on Introduction (included below to assist reviewer)</p> <p><i>P13: "What do you think? What challenges do we face?"</i></p> <p><i>The key challenge that is faced in anything to do with transport is the utter dependence that many people feel they have on their cars. Our challenge will be creating a culture of walking and cycling for normal trips in the face of determined opposition that does not recognise the unfair dependence on car culture and how it dominates our entire streetscape.</i></p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<ol style="list-style-type: none"> (1) building quality new homes to meet the population growth (2) Ensuring the new development is sustainable and the principle of proximity is fully embedded into plan making (3) increasing local infrastructure to meet the needs of the additional population (4) addressing poor local air quality (5) ensuring that we don't add to the global environmental problems (6) Ensuring that the borough does not just work for the wealthy, and that we provide more routes out of poverty, and enable people to advance and build a secure future for themselves and their families.

Respondent reference no.	Name / Organisation	Detailed comments
28	Alice Shackleton on behalf of The Kew Society	The challenge of accommodating protection of protected open lands and heritage assets with satisfying perceived strategic needs relating to climate change, environmental protections, housing need and population and protection of business and facilitating new forms of business activity (with re-examination of high street).
31	Tim Catchpole on behalf of MESS	In addition to the challenges mentioned there are the issues of how best to provide more affordable housing and how best to cater for orbital traffic.
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	<ul style="list-style-type: none"> • Achieving local and national climate change targets and decarbonising streets² • Addressing declining / changing town centres and neighbourhood centres • Achieving housing targets with high-quality, contextual, well designed and affordable development • Achieving 'Vision Zero' road safety targets. <p>Reference ² Department of Transport, UK Government (2020) Available at: https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/867242/decarbonising-transport-setting-the-challenge.pdf (Accessed: 29 March 2020).</p>
39	Solomon Green	Business rates are too high and have driven out many small businesses. This trend has been aggravated by the concessions enjoyed by charity shops. It is noticeable that a number of these now buy in and sell new goods as well as donated items. Consequently as well as enjoying favorable rates and using volunteer shop assistants they compete directly with small shopkeepers, helping to drive more out of business. Hence the detrimental increase in fast food outlets, nail bars, hair dressers, tanning salons and empty shops in the borough.
40	Jamie Edwards	Infrastructure to support existing Council Tax payers. Not focusing on so called 'Climate Emergenies'. Improving the quality of existing infrastructure for existing residents should be the number 1 priority. Roads are too busy - Not because of cars per se, but over population and building hundreds of new homes, for example Twickenham station. With no parking spots for new residents who will flood already surrounding very busy residential streets.
41	Anthony Swan	Supporting older people. Sheltered accommodation as proposed in the Udney park site would be welcomed - along with modern doctors surgery. Sports facilities in Udney Park very important to local clubs. Recycling being done and organised clearly. High street is changing. Encourage low cost premises for pop up shops and micro businesses. Local schools to engage more with the business world so that students end up with the skills businesses need. More and protected cycle lanes. Share some pavements if necessary. The Borough is very full as regards housing. Council talk about low cost workers accommodation but little actually seems to happen . Support for cross rail so local access can be sure and speedy to central London. Boris is likely to stop Heathrow expansion because the country cannot afford that and High speed rail. Demand for electric cars must be supported by charging points. Clubs and things for Youth to do in evenings must be supported. Raise Policing to stop county lines, drugs and weapons on the streets. Open Kingston police station again. Too many dangerous blue lights heading from Twickenham/Teddington. Use convicted offenders in a useful way to improve environment, plant trees. Stop Thames Water polluting eg River Crane. Encourage new Twickenham Riverside to work well. More electric buses - or even hydrogen. Support high speed internet coms green boxes Road works. Bang heads so Thames Water does communicate with Electric and Gas to minimise hole digging. ... and lots more
42	Jeremy Gill	A serious rise in the use of class A drugs and the truly damaging effect this is having on communities.
44	Roger Cutler	Rough sleepers. Excess wastage of money by the council. Therewas a perfectly good plan in place for the development of Twickenham Embankment & it has been thrown out & the money wasted. Shortage of money put into medical & social care. Money wasted on cycle lanes/routes when most cyclists just cycle on the

Respondent reference no.	Name / Organisation	Detailed comments
		pavement endangering pedestrians. Lack of parking in the Borough causes more pollution as people drive in search & idle.
54	Sally Beeson	Pressure to build on every small spare piece of land, which brings more cars, creates pollution, noise, overcrowding of schools, doctors surgeries and amenities generally - a burden on our already congested area. The threat of a third runway still hangs over us all.
47	Trevor Rowntree	Over population. I think the issues we are facing are mostly caused by over population. There are too many people in this borough and not enough facilities.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Stopping reliance on cars and vehicles that is causing air pollution that's killing around 9,000 a year across London, helping cause climate change that will flood London, causing ill health through lack of exercise, and causing lack social of social cohesion.
49	Margaret Edwards	Congestion and pollution caused by car usage, climate change causing floods and droughts, government wish to make local authorities totally self financing, ageing of the population and shortage of people to provide services in health, care, hospitality and trades such as building, especially after Brexit and in light of high housing costs.
50	John O'Brien	More active policing of petty crime - car theft, burglary, fly tipping. Reducing the need to travel is OK but you have to address the terrible problems of traffic grid lock by proving critical junctions (e.g Upper Richmond Road turn left to A205 - change traffic light settings; Mill hill road junction with Rocks lane - widen road by 2 feet to allow 2 lanes) AND the 20 mph speed limit on Kew Road is pure folly.
51	Su Bonfanti	How to remain somewhere a range of people can live and work, not just a rich white person's dormitory.
52	Winston W Taylor	Climate change Affordable housing Air Quality Changing behaviours over cars Maintaining Green spaces Supporting High Streets
53	Richard Woolf on behalf of McDaniel Woolf Architects	Development densities, housing specifically. Management and conservation of woodland and open spaces. Switch to the electric economy and sustainable transport.
55	Jon Rowles	- The poor financial settlement from the Government which means Richmond residents are subsidising other local authorities. - Opportunities for employment are decreasing due to loss of office space. - Pressure on industrial space - as the Heathrow supply chain can outbid local firms - Poor air quality from aviation - both directly from aircraft and road traffic generated by the airport. - Firms relocating the Slough and Heathrow Travel to Work Area to 'beat' the Mayor of London's curbs on car parking and congestion charging means that many jobs are now located in areas with poor public transport - Recovering from the Corona pandemic - we could see many shops not reopening. - There is a lack of street markets in many towns due to opposition from traders and the imposition of rules where a market stall isn't allowed to compete with an existing shop. This makes it more difficult for people to start up a business.
56	Rob Kennedy, Environment Agency	There are challenges around housing, climate change and car parking and car usage in the borough.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	The key challenges which the London Borough of Richmond Upon Thames faces now and in the future are well articulated and clearly set out on pages 8, 9, 10, 11, and 12 of the consultation document.
62	Kathleen Massey	Protecting the special heritage of Richmond is key whilst there appears to be pressure on the council to build additional homes. It is important that areas of historic interest are not spoilt by inappropriate building eg around the historic houses and buildings of Petersham and Ham Common which need to be protected and

Respondent reference no.	Name / Organisation	Detailed comments
		<p>preserved.</p> <p>Ham is restricted by being based around a single busy road between Richmond and Kingston. Traffic issues need to be carefully considered to avoid gridlock in rush hour and delays for buses when Richmond park is closed. The rapid increase in commuter parking in recent years has added to the problem causing further traffic issues around Ham Common and in residential roads with increased weaving in and out of parked vehicles causing risks for pedestrians and problems for delivery vans, lorries and larger vehicles.</p>
63	Carol Rawlings	Traffic problems throughout the borough and especially between Kingston and Richmond. Driving through the park is bad for wildlife; along the Richmond Road through Petersham is impossible when the park is closed and produces high levels of pollution. Unless private vehicles are restricted (e.g. to local residents) or banned, it is difficult to see how to improve this. Perhaps encourage bus travel with free passes for residents?
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	<p>We support the vision for the borough, in particular maintaining it as somewhere people can live and work, not just a wealthy dormitory. We acknowledge the need to accommodate the necessary growth in housing and employment infrastructure.</p> <p>While a borough-wide plan is important, the diversity of the borough must be recognised.</p> <p>Local communities put significant effort into responding to the previous administration's development of Village Plans. Rather than being ignored, the concept of hyper-local plans -and specific Village Plans where they remain useful - should be used and built upon, either in their current form or re-badged if needed to achieve political acceptability.</p>
66	Robert Philip Cunliffe	COVID-19 This poses immediate and clear challenges to the current Population Forecasting, most especially the age range forecasting. At best they are out of date, at worst they are wildly inaccurate. There needs to be a plan in place to assess and propose an alternative structure of the graphs. This is important as it underpins many of the assumptions driving the decisions and the expenditure. It may even suggest that a "pause" and a rethink / replan in a years time may be far more useful, far more targetted correctly, and far more likely to be affordable.
67	William Mortimer	<p>Top of my list is to preserve the character of the historic areas in the Borough. The one-size-fits-all approach from the Mayor of London in terms of housing density and proportion of 'Affordable Housing' to date is disgraceful. A few Councillors are reported to have visited the Mortlake area on a Saturday morning to assess traffic conditions pertaining to the Brewery site for themselves. How wrong they were to assume this time is typical of traffic flows in the working week. A study funded by Love Mortlake was not even taken into account at the public hearing. Councillors need to remember that their purpose is to serve the public and to give due importance to the alternative plan for the Brewery site submitted by Love Mortlake. It shows the Council's estimation of demand for a secondary school for 1200 pupils is inaccurate.</p> <p>I think it fair to conclude that the high-handed expectations of the London Mayor and the Council's determination to go ahead with Developer's plans for Mortlake Brewery, ignoring both actual traffic load and genuine senior schooling requirements, to be a travesty of justice for local people. Based on the judgement exhibited on this very important planning activity how can the ordinary citizen have confidence in the quality of the Local Plan?</p>
68 (a)	Mark Jopling	I support that climate change, biodiversity and green space features so strongly. There must be a really strong Plan that makes investing on urban green space not just "highly speculative" (ie) unlikely to succeed but worth the risk, rather the Council should take a firm stance on using all devices possible to divert developers to where the Plan supports development.
68 (b)	Mark Jopling	Protect all green space and encourage appropriate development on brown-field and change of use
69	Geoff Bond on behalf of Ham and Petersham Association	How do we make sure key elements of the borough that make it special are not lost for ever. Key here are two things; the small pockets of green space that provide key parts of green corridors and local sites of nature importance, secondly, the conservation areas and their unique characters need to be carefully protected. Lose either of the these two things and the area will change for the worse for ever.
70	Melissa Compton-Edwards	<p>Climate Emergency (including flooding risks, heatwaves and water shortages);</p> <p>Population growth, leading to pressure to build on greenbelt land to meet housing targets, increased traffic congestion and resulting greenhouse gas emissions and air pollution;</p> <p>Collapse of high-street outlets due to economic crises, cost of living purse-tightening by households, and online shopping trend;</p> <p>Possibility of reoccurring and new pandemics;</p> <p>Cost of supporting an ageing population and staff shortages in social care provision etc;</p> <p>Council budgetary constraints;</p>

Respondent reference no.	Name / Organisation	Detailed comments
		Challenge of persuading residents to make the behaviour changes that will be necessary to tackle the Climate Emergency and air pollution public health crisis. As the Richmond Cycling Campaign notes: "The key challenge that is faced in anything to do with transport is the utter dependence that many people feel they have on their cars. Our challenge will be creating a culture of walking and cycling for normal trips in the face of determined opposition that does not recognise the unfair dependence on car culture and how it dominates our entire streetscape."
How might our role in London change in the future?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Over the past twenty years we have moved from being very suburban area to one that is becoming more urban and this change is likely to continue. We used to be on the fringe of London, but effectively the boundary of what is functionally 'London' has moved to the M25 (if not beyond). This means that we have a dense urban belt, who's inhabitants have to travel through our borough if they work in central London.
31	Tim Catchpole on behalf of MESS	Hopefully it might not change.
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	By leading to address the challenges above with visionary, evidence based policies and implementation. Combining effective leadership with a non-confrontational, evidence led consultation process, to agree ways to achieve the necessary changes. The process fully represents residents including the quiet voices and hard to reach groups such as children.
39	Solomon Green	Hopefully not at all since the borough is one of the great lungs of the capital and a huge magnet for visitors.
40	Jamie Edwards	Stop worrying about virtue signalling projects (which seems to be a Group think phenomenon across Boroughs).... and focus on the basics.
41	Anthony Swan	Our role has been described as a green lung of London. In the future continue and improve on this. Encourage NPL and start up businesses. Encourage the schools especially at A level. Encourage St Marys ie Surrey Uni.
42	Jeremy Gill	We don't seem terribly relevant to the rest of London - because we aren't.
44	Roger Cutler	Likely to become less & less important.
54	Sally Beeson	I think you will have mounting pressure to build cheaper, smaller flats/houses and our precious green spaces may come under huge pressure to be built upon.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Be a role model for other Boroughs and the GLA
49	Margaret Edwards	Not clear to me but perhaps action across London on key infrastructure, for example coordinated approach to repair of Hammersmith Bridge, challenging rail operators who provide substandard services, cross London plans to reduce homelessness and rough sleeping in combination with services related to drugs/alcohol.
50	John O'Brien	In danger of becoming a no go area for young families and poorer people.
51	Su Bonfanti	As working from/at home becomes more realistic for more people, Richmond could become a place where even more SMEs flourish.
52	Winston W Taylor	The current Mayor's abortive reelection campaign stressed Housing and rent control as his main issues. The Mayor does not yet have the power to impose rent controls but the Council will need to plan for it in case the Government give him the power. We may need to adjust Housing targets - if Mayor Khan is reelected. Otherwise, react to new Mayor's priorities.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Richmond has the historic role as mediator between inner and greater London. It is fortunate, through historic legacy, in possessing some of the greatest open spaces and Arcadian Landscapes in the Capital. This role will change, more accessibility and management of these spaces is crucial.
55	Jon Rowles	- We will be less on the fringe of London due to a large amount of housebuilding taking place in the home counties just outside the formal administrative boundary of London - There is a danger we will become a dormitory town due to the accelerating loss of office space
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Given the Council's declaration of a climate emergency and its commitment to taking robust action to tackle the local and global threat of climate change, the role of the borough in the future in London would change in both the approaches and actions it takes to minimise the borough's environmental impact, in terms of cutting carbon emissions, waste and pollution. This would necessitate adoption of a new strategic vision for the future of the borough as well as a new place making strategy

Respondent reference no.	Name / Organisation	Detailed comments
		for how to achieve this. The Council would have to set out clear and stringent environmental planning policy in its Local Plan which new developments will be required to meet.
62	Kathleen Massey	Richmond is a centre for 'open air' tourism, with Richmond Park and the popular areas of Richmond riverside. The open areas must continue to be well maintained to remain attractive to visitors. Public transport links need to be frequent and reliable. We are seeing a decline of the retail businesses in Richmond to our detriment. New retail outlets in Richmond's centre need to be encouraged to ensure its popularity as a shopping centre continues.
63	Carol Rawlings	Without major changes, Richmond will continue to attract the wealthiest people and make housing for middle and lower income bracket workers even more difficult. We should expand social housing to address this and we could implement new low emissions and private vehicle restrictions which would lower our carbon footprint.
67	William Mortimer	Our area is blessed with green space and provides a lung for the city as well as recreational activity. The presence of trees is calming and so they are also a resource to ease the fears of older residence as they feel more and more overtaken by the march of technology. Preserving our recreational areas is vital. I have yet to see any information about the plan to recover from disaster scenarios and both the experience of flooding in the Midlands this winter and the reliance on local people to respond to needs of the elderly and infirm resulting from Covid-19 lock down needs to be formalized - and extended as necessary - for future catastrophic situations where the standard provisions of all public services (not just the NHS) are overwhelmed.
68 (a)	Mark Jopling	How can Richmond, home of Sir David Attenborough, become a world leader in ecological standards, biodiversity protection and innovation?
68 (b)	Mark Jopling	Richmond should lead the new economy - ecology and ecology-technology hub for London
69	Geoff Bond on behalf of Ham and Petersham Association	We need to perform a key role as a green area with a lower level of emissions and more green space.
70	Melissa Compton-Edwards	Depends very much on the Government's approach in terms of how future national legislation affects the responsibilities of London Councils and also which Mayor is elected in 2021. I'd like to see a more joined-up approach to planning across London's Councils. We desperately need safe protected, connected pedestrian and cycle routes throughout London, Clean Air Zones which include @TfL-controlled roads and London-wide mandatory car-free/car-lite new developments, regardless of PTAL rating. If a site is too polluted to be safe for a new development and/or the PTAL rating is too low, then air pollution reduction and/or improved sustainable transport provision should be required before the development is permitted to go ahead. The guiding principle the Council should apply to all developments, whether retail, a visitor attraction, a school or a new housing development, should be "is this easily reachable without a car?". As Secretary of State for Transport, Grant Shapps, has acknowledged in the foreword to the DfT's Decarbonising Transport consultation on developing a plan for a net zero transport system, "public transport and active travel will be the natural first choice for our daily activities" and that "we will use our cars less and be able to rely on a convenient, cost-effective and coherent public transport network". We also need to be able to travel safely and easily by walking and cycling and planning policy must enable this.
What do you think should be our priorities in the new vision?		
19	DP9 Ltd on behalf of London Square Developments	How do we develop a new vision for the new Local Plan? – p. 12 We support the focus of development on brownfield sites as well as consideration of additional means to accommodate growth beyond existing approaches. It is our consideration that the existing approach to protection of employment land will not allow Richmond to meet its increasing housing delivery targets. Brownfield employment land that is unviable for continued use, including the subject Site, should be considered for this purpose.
20	Gary Backler, Friends of the River Crane Environment.	This response to the London Borough of Richmond upon Thames Local Plan Direction of Travel consultation has been prepared by Friends of the River Crane Environment. FORCE is a registered charity, set up in 2003 and with over 600 members, most of whom reside in LBRuT. More information on FORCE can be found at www.force.org.uk The Objects of the Charity are to protect and enhance the corridors of the River Crane and Duke of Northumberland's River for the benefit of wildlife and local people. This response is prepared in relation to these Objects. FORCE will continue to engage with LB Richmond in the development of this important policy document and we anticipate that our views and opinions will evolve as we see more details and discuss these with the appropriate officers.

Respondent reference no.	Name / Organisation	Detailed comments
		Overall, FORCE is concerned that, even though one of the principal drivers for this consultation is the fact that LBRuT has adopted a Climate Emergency Strategy, the emphasis of the Direction of Travel is very much on construction and development in the borough. The document repeatedly emphasises the “needs to accommodate future growth” and “there is not an option to do nothing” (p9, p12). The Plan puts much less emphasis on the need to improve investment, management and operation of the borough’s green assets, and on investment in pedestrian/cycleways to divert and reduce road traffic to mitigate the climate emergency. This is despite the explicit recognition that the borough provides “a green lung for southwest London” (p9). This fundamental imbalance in emphasis needs to be redressed in the new Local Plan.
22	Jimmy Wallace, Richmond Athletic Association	<p>The vision will also be based on an objective to reduce the need to travel and improve the choices for more sustainable travel whilst also including the objective to deliver the new homes the borough needs. We think the vision should firmly outline that the most appropriate locations for new homes are both within and adjoining the existing main town centres such as Richmond and this will ensure that the best use can be made of sustainable forms of transport for new homes. The vision and spatial strategy should be clear that new housing should be targeted towards existing brownfield and underutilised sites that are either within or in close proximity to the designated town centres and public transport. This should include land either within or adjacent to existing built up residential areas where infrastructure such as good road access already exists.</p> <p>It should also be made clear that this could include opportunities to provide for infill residential development where opportunities arise close to existing residential concentrations where essential infrastructure such as good access may already exist. In particular, we suggest that Richmond town centre and its surrounding residential hinterland is an appropriate location for further infill development and limited intensification / extension of existing established residential areas.</p> <p>Whilst the broad spatial strategy of protecting green and open spaces from inappropriate development is recognised, and as we will elaborate upon further later in this letter, we believe there are opportunities at certain locations for land currently designated as green and open land to be better utilised to meet the borough’s specific growth needs and that this can be achieved without causing any harm or detrimental impact upon the availability of meaningful green and open spaces.</p>
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	<p>1.9 The Group would very much appreciate detailed clarification of the specifically planning grounds for the Council’s decision to prepare a new <i>Vision</i> and an entirely new <i>Local Plan</i>. Given the simplistic statement that ‘the new vision and new <i>Local Plan</i> will be written positively, and it (sic) will be about what you want to see rather than what you don’t’ (<i>Local Plan Direction of Travel Consultation</i>, page 12), the Group fears that such an approach might well lead to the unintended consequence of unravelling many existing and entirely sound planning policies and designations which have taken years to evolve. This risk is explicitly reflected in two of the questions posed on page 13 of the consultation document and at Questions 12 and 15 in the questionnaire:</p> <p>‘Should we continue to protect our green and open spaces from inappropriate development, or are there parts of the Borough that could assist in accommodating growth?’ And</p> <p>‘Are there parts of the Borough that could be transformed through larger scale development and encouraging intensification (for example redevelopment of existing single dwellings to blocks of flats)?’</p> <p>1.10 The posing of such questions, clearly suggests that the present Administration is open to being persuaded to set aside well tried and tested protective policies in favour of purely short-term economic and other objectives.</p>
24	Paul Velluet	<p>I would very much appreciate detailed clarification of the specifically planning grounds for the Council’s decision to prepare a new <i>Vision</i> and <i>Local Plan</i>. Given the simplistic statement that ‘the new vision and new <i>Local Plan</i> will be written positively, and it (sic) will be about what you want to see rather than what you don’t’ (<i>Local Plan Direction of Travel Consultation</i>, page 12), I fear that such an approach might well lead to the unintended consequence of unravelling many existing and entirely sound planning policies and designations which have taken years to evolve. This risk is explicitly reflected in two of the questions posed on page 13 of the consultation document and at Questions 12 and 15 in the questionnaire.</p> <p>‘Should we continue to protect our green and open spaces from inappropriate development, or are there parts of the Borough that could assist in accommodating growth?’ And</p> <p>‘Are there parts of the Borough that could be transformed through larger scale development and encouraging intensification (for example redevelopment of existing single dwellings to blocks of flats)?’</p>
25	Phoebe Quayle	See comments on the vision as below.

Respondent reference no.	Name / Organisation	Detailed comments
29	Richmond Cycling Campaign	We believe the council should focus on sustainability, and the embedding of its new transport hierarchy in all its work. As part of London, the borough should also focus on how delivering sustainable transport options requires partnership with other authorities. (The recent Liveable Neighbourhoods bid with Kingston is a good example of this.)
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The Government wants LPAs to address; housing needs, economic, social and environmental priorities.” We feel you should follow this framework.
31	Tim Catchpole on behalf of MESS	Action v climate change and the provision of more affordable housing.
32	Mark Jopling on behalf of UPPFT	Overall the Trust welcomes the "Direction of Travel" consultation document, which gives such high priority to climate change and green infrastructure. Richmond, as a green and affluent Borough, has responsibility to be one of the leading Boroughs for the new sustainable economy, accelerated by the aftermath of CV-19, that will emerge in this new decade. As the home of Sir David Attenborough, the most influential ecologist of this Century, Richmond should be a global leader in building a sustainable community that protects biodiversity and green space. Richmond can lead London, the worlds first National Park City. Be bold.
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	<ul style="list-style-type: none"> • Meeting climate change targets, and decarbonising streets (transport is the highest source of carbon emissions at 27%³). • Creating successful, attractive and vibrant, people and family friendly town centres and neighbourhood centres and cohesive, inclusive self-sustainable communities (20 minute neighbourhoods ⁴ & ⁵) • Implementing 'Good Growth by Design'⁶ development and protecting heritage and green spaces. • Implementing changes through policy, design, education, procurement and enforcement to achieve Vision Zero to make the borough attractive and safe for sustainable and active travelling. <p>References: ³ London Borough of Richmond upon Thames Climate Change and Sustainability Strategy (2019) Available at: https://www.richmond.gov.uk/media/17648/climate_change_and_sustainability_strategy_2019_2024.pdf (Accessed: 29 March 2020). ⁴ Victoria State Government (2020) 20-minute neighbourhoods. Available at: https://www.planning.vic.gov.au/policy-and-strategy/planning-for-melbourne/plan-melbourne/20-minute-neighbourhoods (Accessed: 29 March 2020) ⁵ Sustrans (2019) Sustrans Manifesto for UK Government. Available at: https://www.sustrans.org.uk/media/5211/sustransmanifestoukgovernment.pdf (Accessed 29 March 2020). ⁶ The Mayor of London (2019) <i>London Plan</i> Available at: https://www.london.gov.uk/what-we-do/regeneration/advice-and-guidance/about-good-growth-design (Accessed 29 March 2020).</p>
39	Solomon Green	Protecting Heritage and open land. Current population should ensure that Culture will remain and develop without the need for any Council interference, except for the protection offered by strict planning regulations. Delivering more affordable homes. Helping business to grow.
40	Jamie Edwards	Basic infrastructure. Quality of Roads. Street cleaning. Quality of open spaces for families. More doctors appointments. More dental appointments. More Police on our streets.
41	Anthony Swan	Environment, especially Economy, Schools, Transport, Policing, Older people, Hospitals. There comes a time with housing where you have to say we are full up. Don't just rely on charities to give every rough sleeper a choice to sleep under cover.
42	Jeremy Gill	Stop wasting time and energy on attention seeking grandiose visions and instead concentrate on what we pay you for, which is to look after our communities in meaningful ways, like protecting our people from anti-social behavior.
44	Roger Cutler	More parking. Using the previous administration's plan for Twickenham Embankment rather than waste more money. Provide more medical & social care as a priority with the money saved. House rough sleepers. Eradicate drug use in the schools.

Respondent reference no.	Name / Organisation	Detailed comments
54	Sally Beeson	Trying to keep our borough as safe, green and beautiful as it can be without sacrificing it to greedy property developers who put nothing back into our local communities.
46 (a)	Joan Gibson	Biodiversity and reducing to a minus fig our emissions
47	Trevor Rowntree	Reduction of population to solve the housing crisis in this area.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
49	Margaret Edwards	Sustainable development, increase in affordable housing, improving air quality (possibly controls on wood burners, incentives to move away from diesel powered vehicles), challenging extension of Heathrow and increase in flights, incentivising travel by foot, bike and public transport (especially for journeys to school and local commutes)
50	John O'Brien	Encourage greater citizen involvement using new technology to the full e.g. the app Fix My Street allows everybody to bring problems to the attention of the council including specific location and a picture if relevant. Council should have a policy of updating these issues and logging when they have been addressed/fixed.
51	Su Bonfanti	I very much support the need to accommodate the necessary growth in housing and employment infrastructure. I think many people don't realise how much employment there is in the borough or that the Local Plan needs to protect land for employment purposes. I don't think it's important to have individual policies/strategies for different parts of borough. This has been done once in recent years by a previous administration, to produce Village Plans. And frankly, for East Twickenham, I think the process took a lot of resource, including in the community, and has delivered next to nothing. But clearly I would want the emphasis to be different in different places depending on the current state of play.
52	Winston W Taylor	1. Climate change obviously 2. Housing 3. Air quality 4. Reducing parking
53	Richard Woolf on behalf of McDaniel Woolf Architects	A realistic expectation of residents need to develop an evolve their places of habitation and an acknowledgement that ' matching what exists ' as the only architectural response isn't the viable choice for the 21st Century .
54	Paul Luton	Action on climate change should inform all aspects.
55	Jon Rowles	Need to think about the ordering of priorities - as Climate Emergency becoming before housing is likely to cause conflict with the Government Inspector. - Need to identify green chains and wildlife corridors better - need to state clearly your objective is to improve people's quality of life (this is mentioned time and again in Government Documents of Sustainable Development).
58	Michael Atkins, Port of London Authority	The PLA considers that the vision for the new Local Plan must include reference to the boroughs various waterways, including the River Thames, and the role that these can play in combating climate change through increased use and enjoyment of these areas.
59	Paul Massey	Protection of OOLTI and heritage sites
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Richmond's priorities in the new vision are clearly set out in the 10 themes listed on page 12 of the consultation document.
62	Kathleen Massey	Preservation of our historic locations and buildings. Richmond Park to be maintained to the highest standard. Traffic issues throughout the borough should be much better managed and road works properly coordinated to avoid the regular disruption they cause, especially on the single road through Ham that links Richmond to Kingston.
63	Carol Rawlings	1. More re-wilding to protect wild life throughout the borough and reduce pollution and our carbon footprint. We have a responsibility as a lung for London. 2. Reduce vehicle use to a minimum and encourage electric transport.
64	Johanna Eschbach on behalf of Richmond	The 10 objectives of the Council seem right but overly ambitious (can we really deliver all of this in a meaningful way?). We would like to know what top 3 objectives will be the focus and where the focus of the investment will be. Some of these objectives – although very noble – seem a bit out of reach: “an affordable borough for

Respondent reference no.	Name / Organisation	Detailed comments
	Bridge Residents Association	all", "reducing the need to travel" or very unspecific "respond to climate emergency". By looking at a bit of everything, there's a doubt we can deliver anything in an ambitious way. Key priorities as per feedback from our members: 1. Tackle air pollution 2. Address traffic congestion and lack of parking for residents 3. Reinvigorate high streets and protect the Conservation areas
66	Robert Philip Cunliffe	Young people, Law and Order, sustainable jobs
67	William Mortimer	Preparing for a society which is more and more influenced by the rise of the Internet and robotic solutions in manufacturing, service industries and also charitable bodies providing local care solutions. Ways are needed to keep the whole spectrum of local people physically and mentally stimulated as well as safe from scammers. A well-balanced society relies on maintaining physical and mental health as well as benefiting from the undoubted positives of a linked up technological world. Our economic recovery will depend on a capability to continue to deliver the local government services and to prime independent businesses to get the economy going again when the virus has been defeated. To give a critical example today, banks must be required to provide vestigial cash services for disabled or elderly people without any educational or vocational experience of digital banking. It is vital to the well-being of elderly and infirm citizens that they be able to continue life in a cash economy. Government centrally and locally has not been supportive of efforts made by local people to require the banks to maintain a service. As a result the predicted isolation of a whole raft of our society is to be seen. The current provisions for people put out of work by the Covid-19 virus is huge and we must anticipate a period of time in which the government will be obliged to reduce National Debt.
68 (a)	Mark Jopling	Climate change, biodiversity, green space. There is no Planet B.
68 (b)	Mark Jopling	World-leading green sustainable society, if not here where else ?
69	Geoff Bond on behalf of Ham and Petersham Association	Protecting green spaces and the character of conservation areas
70	Melissa Compton-Edwards	- Ensuring that Green Belt and MOL sites are NOT allocated for development. - Ensuring that all development is low-carbon and car-free/car-lite and that PTAL rating is NOT used as an excuse to permit developments with private car-parking. - Developing a rating(s) system that takes account of active travel provision as well as public transport provision. -Ensuring that development is NOT permitted in areas with illegal levels of air pollution. - Maintaining and enhancing the character of the borough (which includes not approving ugly 'bog-standard' 'could be anywhere' brick lump designs like I very much fear the design for the secondary school will be on the Mortlake Brewery site). I share the Richmond Cycling Campaign's view that LBRUT's new vision should focus on sustainability, and the embedding of its new transport hierarchy in all its work. As part of London, the borough should also focus on how delivering sustainable transport options requires partnership with other authorities.
Have we covered all the key issues and overarching challenges facing the borough in the ten themes above or is there anything missing?		
Of respondents who answered the question: 14 said yes, 14 said no and 4 said don't know [6 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	We do not feel there has been enough co-operation with Kingston Upon Thames and Hounslow Councils – as they need to meet some of our unmet housing requirements – and we note they both have 'opportunity areas' next to our borough. The NPPF 35a States local plans have to be... "Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development." We feel the council need to set out what, if any, unmet needs neighbouring councils have agreed to meet. There are benefits of extra density, such as better shops, more night life, cultural institutions and better opportunities for businesses. Need to provide jobs for a percentage of the new residents – otherwise there will be extra strain on public transport and roads.

Respondent reference no.	Name / Organisation	Detailed comments
31	Tim Catchpole on behalf of MESS	Nothing missing.
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	As above.
39	Solomon Green	Before this Borough gets too excited by the wildly exaggerated "climate crisis", a thorough scientific investigation should be undertaken as to whether this borough is a net producer of CO2. If it is then priority should be given to planting even more street trees. and nursing them for the first few years. Too many die in the first five years after planting because they are not properly maintained.
40	Jamie Edwards	You should introduce a quality of life / happiness measure for the borough so we can see the impact of your efforts on people's overall feeling of well being. You're also focusing on doing too many things. Having 10 areas of focus will dilute resources, brain power and funding. Pick 3 that will really transform residents lives, and focus on those 3 relentlessly.
41	Anthony Swan	Don't know if anything missed without knowing the detail
42	Jeremy Gill	Willingness to change your minds about anything. For instance, your policies about vehicle use and pollution ignore the massive energy cost of scrapping old vehicles before they are worn out and manufacturing new ones. The damage has already been done - they were built. The least damaging thing to do with old vehicles is to use them until they fall apart. This energy cost is borne by the whole world, not just Richmond.
44	Roger Cutler	Everything I mention in question 8.
46 (a)	Joan Gibson	Council needs to build social housing. All contracts and changes need to work cross borders (unlike the current bike hire contracts).
47	Trevor Rowntree	Over population
49	Margaret Edwards	Given housing shortage and rising ageing population the needs for specialist housing for older people and every home to be a lifetime home in new housing developments seem to have been omitted.
50	John O'Brien	I've done that above. I also note that no children approaching secondary school age in North Kew have automatic access to any of the Secondary schools in the borough - surely Christ's is the obvious one.
52	Winston W Taylor	None - at the moment.
53	Richard Woolf on behalf of McDaniel Woolf Architects	New bridge crossing opportunities. Please refer to your WSP Report of October 2018. <i>[A copy of the WSP Report was provided, which is available at https://www.richmond.gov.uk/media/16409/thames_bridge_feasibility_summary.pdf]</i>
55	Jon Rowles	- The housing market for people needing Housing Benefit isn't based upon the Borough boundary but the Broad Market Rent Areas (BMRA) and this needs to be explained in the Local Plan with the boundaries shown. The Government expects people to be mobile and find housing within the BMRA - but this document seems to be taking a different approach. If you take into account BMRA much of the 'shortage' disappears. Need to deal more explicitly with an ageing population
58	Michael Atkins, Port of London Authority	From the ten themes that have been identified that will inform the new vision for growth in the borough the PLA consider that the them on increasing biodiversity must refer to green and blue spaces rather than just green, to recognise the importance of blue spaces in the borough including the River Thames, particularly as the London Borough of Richmond Upon Thames is the only borough that spans across both sides of the Thames and serves as a key asset for the borough.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Nothing is missing.
63	Carol Rawlings	These questions should come after the local plan. I can't find a link to the plan so can't actually read it.
64	Johanna Eschbach on behalf of Richmond	What is missing: - Increasing the wellbeing of residents through addressing significant disruptions (noise pollution, traffic, air traffic, etc.). To define this further, the Council should

Respondent reference no.	Name / Organisation	Detailed comments
	Bridge Residents Association	refer to specific guidance and guidelines from the WHO. This is critical for physical and mental health of residents - Tackling an increasing level of crime
66	Robert Philip Cunliffe	already included in my responses above
67	William Mortimer	Until the Local Plan provides cross-referencing to the Disaster Management Plan the effort is incomplete. The flooding experience in the Midlands this winter could equally well happen here and hence the Local Plan must fit with the Environmental Agency Plan, the provisions of the Lifeboat Service, the Port of London Authority, police and military.
68 (a)	Mark Jopling	Real focus on making our Village High Streets thrive . Support independent traders, there will be a change in consumer behaviour over the life of this local plan, many people, especially in affluent Boroughs will switch to smaller more ethically sourced products and produce. Big box retail is in decline, Smaller supermarkets will survive, the 2 new Lidl's fill a gap in the local market.
68 (b)	Mark Jopling	Is the space re-allocation radical enough ?
69	Geoff Bond on behalf of Ham and Petersham Association	The importance of preserving conservation areas, OOLTIs and OSNIs
(11) In addition to our existing approaches of directing larger scale development to the borough's town centres, and expecting the majority of development on brownfield sites, where should we direct new growth in the borough?		
14	Mayor of London	See also comments in Section "Increasing jobs and helping business to grow" relating to the location of office development.
29	Richmond Cycling Campaign	We can't comment directly on site choice, but we would stress that all new developments ought to be car free. If PTAL is too low for it to be considered car-free, then the solution for this is to improve PTAL, and not to simply dedicate expensive public space to car parking and driving. The suggestion has been made of an Active Travel Availability Level a good value of which would compensate for a lower PTAL. The Stag Brewery development is an excellent example of this - there's enough road space in the area for a development of this size only if we provide for and prioritise active travel and public transport.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	To areas close to the new Crossrail 2 scheme are suitable for flat building if they are within walking distance of the new stations The National Infrastructure Commission in their report Transport for a world city state on page 13 "Crossrail 2 will need to have buy-in from the GLA and London boroughs along the route as well as counties and boroughs outside of London which benefit from the new line. All parties will need to ensure the housing unlocked by Crossrail 2 is sustainable and meets the needs of Londoners and those in commuter regions around London." With four new Crossrail stations; how many housing units do their business case pencil in for LBRUT? [See Appendix for map]
31	Tim Catchpole on behalf of MESS	Near railway stations and atop car parks, notably at retail parks, or indeed in place of retail parks
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	Major development should be in locations that with high PTAL and enabled to reduce car dependency.
39	Solomon Green	Nowhere, because to do so would alter the whole character of the Borough. The problem should only be addressed when the existing brownfield sites have been exhausted. This should take at least fifteen years.
40	Jamie Edwards	You should focus on supporting existing business. And quality of existing residents lives. Not bringing in new retail / floor space, or bringing in more people.
41	Anthony Swan	If by growth you mean building then there are lots of places where NOT to build. Personally I don't know anywhere that would be a likely building target. The likely target of Teddington studios has not worked well has it... Just as major investments are being made at Pinewood etc.
42	Jeremy Gill	Since we have left Europe the economic, social and demographic conditions upon which any current plan can be predicated are liable to changes impossible to predict at this time. You're not very good at directing development, so don't. Instead of having a policy and slavishly following it, try making decisions on a case by case basis. You overstate the influence that policy has on development, which happens more by accident than you would be comfortable admitting. I recommend the council not try to direct development by having a policy. It will be rendered obsolete by events before you've even decided what it is.

Respondent reference no.	Name / Organisation	Detailed comments
44	Roger Cutler	More car parks for shoppers & pub & restaurant users. More & larger scale developments need more parking with more electric charging points for a greener car future. More places for young adults to spend time. Might stop all the anti-social behaviour. More sports facilities.
54	Sally Beeson	I agree that brownfield sites could be built upon as well as town centres. After that i totally reject the idea that more building would enhance any of our lives for the better.
46 (a)	Joan Gibson	You should have 100% of development on brown field sites. There is no excuse for building on green sites and making the climate emergency worse.
47	Trevor Rowntree	Development should be concentrated on facilities for the residents rather than any more housing developments.
49	Margaret Edwards	Several opportunities to develop housing on brownfield sites have been lost (Wickes site, site where new school and Lidl being built in East Twickenham), already plus development of standard family housing or flats on brownfield sites that could have met the needs of ageing population (Brewery Lane, and over Twickenham station, Richmond police station). Developments outside town centres only work if transport links are good.
50	John O'Brien	Ham
52	Winston W Taylor	We have if I remember correctly about 6 years of building land. Lets see what the suggestions are to the request for land for building.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Reordering of our redundant retail spaces.
55	Jon Rowles	Many of the supermarkets and out of town shops are hugely space inefficient with large amounts of surface parking and only one or two stories. Need to include brief for sites such as the large Sainsbury's in Hampton St Clares, Homebase in Hanworth, surface car parks at Twickenham Stadium, Kew Retail Park etc.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	New growth could be directed to underused sites with redevelopment potential or where opportunities for housing densification or intensification and or mixed use incorporating housing is possible (e.g. car parks sites), particularly within town and local centres or edges of these sites.
63	Carol Rawlings	I can't find the plan so can't comment.
66	Robert Philip Cunliffe	I would urge extreme caution on any "growth" plans - at best as a minimum defer by 5 years
67	William Mortimer	It is not possible for me to advise you where the 'brownfield' sites in the Borough are located but I do support the intention of the Council to safeguard the urban green spaces. IT is vitally important that the Borough plays its part in the efforts to clean up the environment by 2050 at the latest. We need to see how fuels like hydrogen are to be delivered so that the only waste product of a motor engine or a home heating boiler will be satisfied and the sooner the better.
68 (a)	Mark Jopling	"Majority" is not enough, it encourages the speculator to "take on" the Council. The speculator can afford the most expensive advisors and barristers to drain Council resources and smash the Local Plan. All development should be focused on existing areas that are not Green. There are many locations that could be sensitively developed, using Twickenham Station scheme and the Lidl/School as a benchmark The car parks around Twickenham stadium are used a few times a year. They could have significant developments over them, with parking retained. (Wembley Stadium has created a whole community around it as a benchmark) Sainsbury at North Sheen, Sainsbury St Clares, Hampton and Tesco Twickenham could be rebuilt as multi-storey developments with food retail on the ground floor. CV-19 will further switch food distribution to on-line, these "superstores" will continue to decline. The Twickenham Station scheme could be a benchmark, develop the space above Richmond station including the multi-storey car park, would be major source of new housing located by transport hub
68 (b)	Mark Jopling	Redevelop Richmond Station using the template from Twickenham Station, including the multi-storey car park. Big-box retail is dying and massively space inefficient. Remodel the large supermarkets and DIY sheds into multi-purpose developments: 1) Tesco Twickenham 2) Build over the vast RFU car parks - see Wembley Stadium surroundings for what is possible 3) Sainsbury and Homebase North Sheen 4) Sainsbury Hampton St Clares

Respondent reference no.	Name / Organisation	Detailed comments
69	Geoff Bond on behalf of Ham and Petersham Association	These these two focus areas are all you need.
70	Melissa Compton-Edwards	As suggested by CPRE London, surface and multi-storey car parks could be redeveloped to make more efficient use of space and discourage car trips. All new developments ought to be car-free or car-lite. If the PTAL is too low for the development to be considered car-free, then the solution for this is to improve PTAL, and not to simply dedicate expensive public space to car parking and driving. Small-zone CPZs should also be introduced borough-wide to discourage commuter parking and unnecessary short trips within borough by car and prevent displacement parking by residents in new car-free/car-lite developments. The suggestion has been made of an Active Travel Availability Level, a good value of which would compensate for a lower PTAL. Mortlake's Stag Brewery is an example of a development which should be a car-free development, or car-lite (where the only provision is for disabled parking, deliveries and car club parking). Since most housing in Richmond has car parking available, there is no need for new housing to cater for private car-parking. Many residents cannot or do not want to live with a car, particularly older and young people, and those on low incomes. New housing should cater for these people and, in doing so, also reduce car trips in the borough. New developments can have car club parking only and sustainable transport hubs with cycle parking, delivery hubs etc.
<p>(12) Should we continue to protect our green and open spaces from inappropriate development, or are there parts of the borough that could assist in accommodating growth? - If you think there are there parts of the borough that could assist in accommodating growth, please tell us more.</p> <p>Of respondents who answered the question: 29 considered that we should continue to protect our green and open spaces from inappropriate development 3 considered that there are there parts of the borough that could assist in accommodating growth [6 did not answer the question]</p>		
18	Phoebe Juggins, Department for Education	See also comments on the open space and playing fields.
28	Alice Shackleton on behalf of The Kew Society	This comment relates to the first option above [<i>Continue to protect our green and open spaces from inappropriate development</i>]: <ul style="list-style-type: none"> • An implication of the wording of this question is that our protected green and open spaces could become available to assist in accommodating growth? Why else, posit the question in this way? • Yes, we must continue to protect our green and open spaces from inappropriate development. • There may be other parts of the borough that could assist in accommodating growth – these must be identified
29	Richmond Cycling Campaign	As a general principle, we must protect these spaces. However, we'd also like to see our green spaces supporting active travel appropriately, and there are clear opportunities to improve walking and cycling routes around and through our green spaces.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The most obvious ones are the large out of town retail centres and large supermarkets. Fulwell Bus Station could also be redeveloped to produce and air-rights development above the bus depot. This could include some land set aside to increase the linkage between link Fulwell Golf Course and Strawberry Hill Golf Courses.
31	Tim Catchpole on behalf of MESS	We should certainly continue to protect our green and open spaces.
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	Green spaces should be protected as a valuable resource for residents and visitors.
40	Jamie Edwards	No. We don't need more people. Quality of life has been dropping in the borough over the last years. Cramming more people in won't help.
41	Anthony Swan	Udney Park
44	Roger Cutler	Twickenham Embankment. Restore the lost parking.

Respondent reference no.	Name / Organisation	Detailed comments
54	Sally Beeson	Telephone exchange on Teddington High Street Teddington Police Station
46 (a)	Joan Gibson	You appear to see inaccessible green land as inferior to green spaces with lots of visitors. So are justifying you can build on inaccessible green land. This is not true for wildlife and biodiversity - dark, undisturbed green land is much better in this instance and as this is all about climate emergency you should afford these sites the highest protection.
49	Margaret Edwards	If Ham/Petersham was better served by public transport there might be areas there where increases in density and use of small plots would be viable.
51	Su Bonfanti	I support keeping most green space protected even if some of it would not generally be regarded as high quality. Preventing unconstrained sprawl is as important as it ever was. However, I do think it is in principle possible to identify areas which are of relatively low quality and otherwise suitable for development, e.g. because they have good transport links, which could be released.
52	Winston W Taylor	My perception is that central Richmond, East Sheen, Mortlake, Kew and Barnes has not borne the brunt of housing development in recent years - and certainly not affordable housing. I am quite prepared to be shown that I am wrong about this but I think the policy should be to spread development including affordable housing evenly throughout the borough.
53	Richard Woolf on behalf of McDaniel Woolf Architects	We should have a 'grown up' conversation about Metropolitan Open Land within the borough and Conservation Area designation.
55	Jon Rowles	If areas are to be released they should be by the proposed new Crossrail 2 stations
67	William Mortimer	Please rephrase the second bullet point. It makes no sense. But in any case we must hang on to green space for the recreational use of our citizens or once again the mental health of the community will suffer. The Council should be putting funds in the direction of persuading old and young of every ethnic origin to use our green spaces more in an attempt to reduce future growing demand on public health services. As example, if the Council adhere's to its unsubstantiated claim that a senior school at Mortlake Brewery is necessary the community loses a sports field and the pupils have no obvious recourse to green field playing area for football, cricket, hockey and rounders.
68 (a)	Mark Jopling	This is 2020 - if we lose any more green space future generations will ask "what on Earth were you thinking of?" London is the World's first National Park City, it is essential to protect the green space we have left "Inappropriate" is too low a threshold, it encourages speculators to challenge the Council in Planning disputes, causing a huge drain of public resources. This should be "All". The CPO legislation is sufficient that if there is genuine important public need for building on green space it can still go ahead (eg infill building on hospital grounds).
68 (b)	Mark Jopling	Stronger disincentives for speculative attempts to smash the Local Plan by building on Green Space. Council must be very strong from the start of any attempts to build on protected space for excess profit margins that waste huge public resources fighting off speculators who can afford Londons most expensive consultants and Barristers.
70	Melissa Compton-Edwards	So, so important to protect our green and open spaces from inappropriate development in this time of Climate Emergency and mass extinction of wildlife. Once they are gone, we'll never get them back, and as the Covid-19 crisis is demonstrating, they are vital for our physical and mental health. I support Richmond Cycling Campaign's desire to see our green spaces supporting active travel appropriately, and there are clear opportunities to improve walking and cycling routes around and through our green spaces.
(13) Which areas of the borough do you think are capable of taking more growth than others, for example based on their proximity to town centres and stations? [Please note Questions 11 & 12 referred to by some respondents are those directly preceding this question.]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	It is not just a question of proximity to stations but also the frequency of services. When London Underground took over some National Rail Routes and created a metro style service, this prompted developers to build thousands of new flats along the route. This experience should also serve as a warning to the council – have you looked at the impact Cross Rail 2 will have on housebuilding and subsequent demand on public services such as school places and GP practices?
31	Tim Catchpole on behalf of MESS	As mentioned in answer to Q12 above, i.e. atop carpark at retail parks or indeed in place of retail parks. [Additional comment in response by email]: Retail parks (in addition to near town centres and stations)

Respondent reference no.	Name / Organisation	Detailed comments
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	As above.
39	Solomon Green	See answers to 11 and 12
40	Jamie Edwards	None.
41	Anthony Swan	No idea
42	Jeremy Gill	Our town centres need more attention paid to the effects on general well being and service provision during the current economic conditions, you could direct some energy into practical regeneration on specific areas in need and not borough-wide.
44	Roger Cutler	Richmond Station . Extend like Twickenham Station.
54	Sally Beeson	Yes, near to town centres and stations
46 (a)	Joan Gibson	All - see my list of possible sites
47	Trevor Rowntree	None
49	Margaret Edwards	In Richmond Town Centre I would predict that House of Fraser store will close - an ideal location for extra care housing for older people as all facilities close by and would boost demand in local shops, cafes etc. Could housing be built on top of Richmond station?
52	Winston W Taylor	See 12.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Ham , Whitton and West Hampton
55	Jon Rowles	Most railway stations are already over capacity - so this will point to developments having to take place by the new Crossrail 2 Stations
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	See our response to question 11.
62	Kathleen Massey	Not central Richmond nor around Richmond Park. Not Ham and Petersham
63	Carol Rawlings	Twickenham
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Not in East Twickenham
67	William Mortimer	My suggestion of a catamaran service on the Thames travelling right up to Richmond would have included landing points such as Barnes Bridge and Mortlake Brewery. This would provide an alternative to road traffic and then maybe the space required for cars to be parked could instead be allocated to innovative industries (e.g. the vegetable growing enterprise occupying unused portions of London underground tunnels in the Waterloo area.
68 (a)	Mark Jopling	See 11. Comprehensive redevelopment of large food supermarkets and DIY superstores. "Big Box" retail is becoming irrelevant and will almost disappear by 2030.
68 (b)	Mark Jopling	Per 11; Richmond Station and Big box retail.
Which areas of the borough may be suitable for more infill development and intensification?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Town Centres could accommodate a lot of development as there are often large service yards and back areas that are poorly utilised. However, it is important that adequate servicing space is retained.
31	Tim Catchpole on behalf of MESS	Main road corridors?

Respondent reference no.	Name / Organisation	Detailed comments
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	As above
39	Solomon Green	See answers to 11 and 12
40	Jamie Edwards	None.
41	Anthony Swan	No idea
42	Jeremy Gill	None
44	Roger Cutler	Richmond.
54	Sally Beeson	Empty shops
46 (a)	Joan Gibson	All - see my list of possible sites
47	Trevor Rowntree	None
49	Margaret Edwards	See 12 above
50	John O'Brien	Mortlake riverside
51	Su Bonfanti	East Twickenham, where I live, is so constrained by roads, railways and the river that only infill and minor intensification is really possible. The Ryde House/Lidl/School site is by far the largest here and that's nearing completion. What I don't have a clear grip on is just how infill and intensification can be allowed without becoming a 'building on gardens' free for all.
52	Winston W Taylor	Await suggestions but 12 above is also relevant here.
53	Richard Woolf on behalf of McDaniel Woolf Architects	We should consider a plan approached response. With the exception of our ' key ' Conservation Areas.
55	Jon Rowles	There is still a lot of underutilised land in Twickenham and Richmond town centres - there may be a need for a full land-use opportunity survey to take place.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Small opportunity sites, underdeveloped/under-utilized, sites within 800 metres of train stations and town centres, subject to constraints.
63	Carol Rawlings	None. Climate change should be the primary consideration. We need all the green space we have in the borough.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Not in East Twickenham
67	William Mortimer	Not an easy request of people who know only the locations adjacent to their homes. I have supported change at the Barnes Hospital site and the proposals of the Love Mortlake group at Mortlake Brewery. The sad thing is that the impediment to these schemes would appear to be the Council. Why not identify sites that the Council has in mind and then consult on what could be reasonably be accommodated?
68 (a)	Mark Jopling	Development over Richmond Station similar though larger to the current scheme over Twickenham station. Massive area of dead space if extended to include the multi-storey car park.
68 (b)	Mark Jopling	Per 11
Are there parts of the borough that could be transformed through larger scale development and encouraging intensification (for example redevelopment of existing single dwellings to blocks of flats)?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Parts of Twickenham and Richmond Town Centres. However, the block has often been fragmented ownership so the council may need to be more willing to use compulsory purchase powers.

Respondent reference no.	Name / Organisation	Detailed comments
28	Alice Shackleton on behalf of The Kew Society	This suggests that the Council would be open to development that would be inappropriate in the borough and more appropriate in an urban rather than suburban setting. Is this taking a short-term view? One that would potentially destroy special "green" characteristics of the borough and/or cause irreparable harm to its heritage assets for what may well be short-term aims. We would expect there to be very few if any areas of the borough now suitable for such development but would be open to considering suggestions.
31	Tim Catchpole on behalf of MESS	Main road corridors?
39	Solomon Green	See answers to 11 and 12
40	Jamie Edwards	NO! NO! NO! We don't need more people. You can't find parking in our own streets already. Getting school places is a nightmare already. We don't need more people.
41	Anthony Swan	No idea
42	Jeremy Gill	Only for the worse. Blocks of flats are a horrible way to live, believe me.
44	Roger Cutler	Richmond Station.
54	Sally Beeson	Maybe
46 (a)	Joan Gibson	Yes - all council owned buildings and car parks like Whitton Community centre and Old Deer carpark - see my list of possible sites.
47	Trevor Rowntree	No
49	Margaret Edwards	The challenge in this is the impact on the character of an area, where large blocks dwarf houses. The subdivision of large houses into flats is quite common in the borough and this increases density without an impact on appearance. An alternative form of intensification is the development of home sharing and intergenerational living where couple/single people provide accommodation in their homes to other, sometimes in exchange for support/company/transport.
50	John O'Brien	Build over railway stations
51	Su Bonfanti	The number of empty shops in Richmond Town Centre raise the question of whether we reaching the point at which a move towards mixed housing/retail, more like an 18th century high street, is plausible.
52	Winston W Taylor	Almost certainly. The question is whether it is desirable. My view is that every case depends on its merits.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Ham . Ham Close. Whitton and West Hampton... specifically.
55	Jon Rowles	Most redevelopment would need to involve more than one dwelling being redeveloped to create an acceptable outcome. The majority of the single dwellings sitting on a large plot of land have a lot of heritage value.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Parts of the borough that could be transformed are Council Housing Estates sites as they offer scope for larger scale regeneration/ redevelopment involving housing intensification.
63	Carol Rawlings	The covid 19 pandemic should teach us that intensification is to be shunned. Civilisation is fragile.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Not in East Twickenham
67	William Mortimer	Be careful when you speak of 'blocks of flats'. The developments of high-rise buildings in the 1940/1950, for example at Roehampton led to isolation and vandalism. The best such developments are no more than four storeys high and there are convenient, safe green areas for play and recreation. Such complexes still need a concierge function to ensure that they are properly maintained and secure.
68 (a)	Mark Jopling	See 11. Complete re-think of space dedicated to "Big Box" retail.
Would you like to see individual policies and strategies for each of the different parts of the borough (such as Twickenham, Kew, Barnes, Hampton and Hampton Hill etc)?		
Of respondents who answered the question: 19 said yes, 3 said no and 9 said don't know		

Respondent reference no.	Name / Organisation	Detailed comments
[7 did not answer the question]		
Would you like to see individual policies and strategies for each of the different parts of the borough (such as Twickenham, Kew, Barnes, Hampton and Hampton Hill etc)? - If yes, how could they vary?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	This is essential if the council discontinue village planning documents. <i>If yes, how could they vary?</i> Some areas are closer to being metropolitan centres such as Richmond and Twickenham, whilst other places are more suburban commuter towns such as Teddington and Whitton. The quietness of Whitton and Hampton Hill etc, is part of their fundamental character that should be protected.
28	Alice Shackleton on behalf of The Kew Society	As different areas vary in their characteristics, yes we would like to see individual strategies. These already exist, however, in the Village Plans with their Character Areas, as well as Conservation Areas. The question does rather suggest that the Council would be open to altering or losing the carefully developed protections in local planning policy for areas and heritage assets – why would this even be open to consideration? <i>[If yes how could they vary?]</i> Refer to existing Village Plans, Conservation Area statements and SPDs.
31	Tim Catchpole on behalf of MESS	Policies can vary based on the Village Plans produced by the Council in 2016
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	Having developed area specific policies for our community through Neighbourhood Planning, we see this as a valuable way of identifying particular issues and objectives in a local area. However, projects need to be coordinated across local areas and boroughs. We encourage inter-borough cooperation as has been achieved between HPNF and North Kingston Neighbourhood Forum (NKNF) and LBRuT and RBK in the development of the Liveable Neighbourhood bid.
40	Jamie Edwards	I live in Twickenham and the lack of investment in our area is clear. Roads are looking run down. Pot holes everywhere. Shop fronts shabby. Rubbish littering the streets. No Doctors appointments available - yet more people are being rammed into the area via new BIG SCALE residential developments (Over station). Conversely, I don't see Richmonds centre showing any signs of wear at all and the streets are always clean. Clearly investment is being made in Richmond then centre, but not Twickenham. Why is this?
41	Anthony Swan	Lots would be similar but there would be individual unique differences and opportunities. eg ask about where protected cycle paths might go. Instead of just wjere houses might be built.
42	Jeremy Gill	By being different, don't be so lazy. One size does not fit all.
44	Roger Cutler	They have very different needs and operate differently. One size never fits all. Richmond has a flourishing traffic-free riverbank. This could never work in Twickenham with its working riverside.
54	Sally Beeson	Each area has its own distinct personality which local people know well.
46 (a)	Joan Gibson	We need to remove the view that certain areas are entitled to protection where others are less valuable so can be built on intensely. This just creates pockets of poor areas which are unpleasant to live in. Time to stop thinking Richmond should have areas of privilege.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Dependent on the geography of each area / ward
49	Margaret Edwards	Pros and cons to this approach. I can see for example that Hampton Hill and Ham has more problems with crime and anti-social behaviour than neighbouring areas, that Twickenham is impacted by proximity of Rugby Ground and St Mary's (positive and negative) etc. so might justify area specific plans. However the risk of separate policies is that in reality people use services, travel and move home across the borough. For example Im sure that fly tipping is more of a problem in some areas than others but a borough wide approach would be needed to avoid problems simply being shifted.
51	Su Bonfanti	The key thing is to preserve differences in character, which includes accepting that some places are more 'ordinary' than others, e.g. East Twickenham is more village-y than Richmond, but it's also not got and in my view shouldn't aim for a Jo Malone or an Anthropologie.
52	Winston W Taylor	Not sure although I tend to Yes. I am in favour of decentralisation but am also in favour of a borough identity. Contradictory? Yes. But there must be a balance here.
53	Richard Woolf on behalf of McDaniel Woolf Architects	I think we already have area based strategies

Respondent reference no.	Name / Organisation	Detailed comments
54	Paul Luton	Better to have a coordinated approach. It is impossible to draw precise boundaries.
55	Jon Rowles	Some areas are more suburban such as Whitton, whilst Richmond is more metropolitan.
58	Michael Atkins, Port of London Authority	It may be useful to have specific policies for areas anticipated to undergo significant change through future growth. The PLA considers that there must continue to be specific policies with regard to the boroughs river corridors, currently included in policy LP 18 (River Corridors).
62	Kathleen Massey	By careful consideration of the areas of historic interest in each part of the borough
63	Carol Rawlings	Depending on the individual character of each part of the borough and the need to protect all its green spaces.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Individual policy and strategy required for East Twickenham which represents an untapped opportunity in the borough. - Need strategy to develop the high street and make it more practical for pedestrians and a better place to live for residents. - Need specific policies to reinforce conservation area protection and develop heritage assets of the street The borough needs to build on the Village Plans.
66	Robert Philip Cunliffe	Must be fact based on assessment of the revised population growth (or shrinkage)
67	William Mortimer	There would thereby be an appreciation of the geographical, demographic and historical attributes of each area and, instead of the current 'one-size-fits-all' policy the developments would be tailored so as to retain the heritage of each area. Remember that Hamstead's abundance of green areas was the result of lengthy and historic battles with land owners. The Heath now provides a recreational lung for surrounding communities. By the same good fortune Barnes has the virtue of its Common, The Wetlands, Leg of Mutton, the Green with its Pond and the verdant Tow Path for Londoners to enjoy. These must be defended for future generations. It is also why Mortlake must be given protection as an historic site. William the Conqueror marched from Hastings to Southwark and thence to Mortlake immediately following his success against Harold before turning south to Guildford to cement the invasion. The announcement in the Evening Standard following the unacceptable Council decisions on development of the site seems to think the history of the area started with the brewery. Either a lazy reporter or one who has been misled would you think? What ignorance of the site if this very impression has been underlying decisions by the Council or the Developer.
68 (a)	Mark Jopling	Focused on keeping communities and independent business thriving.
Can you suggest any other ways we could accommodate future growth and new development, ensuring support for sustainable communities?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Much of the existing growth hasn't been properly accommodated, so there is also a 'catch up' requirement. Future growth would be better accommodated if the service roads behind shopping parades / town centres were adopted. A large number of units are being created by converting maisonettes about shops into four or five single bedroom flats – but roads have not been adequately upgraded. Often badly lit, large numbers of potholes, and no proper bin storage. [See photo in Appendix] Result of lack of bin storage for new flats; squalor. Location: Bridge Way entrance to service road to Whitton High Street
31	Tim Catchpole on behalf of MESS	No
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	The HPNP ⁷ identifies 'Opportunity Areas' and sites. Reference: ⁷ The Ham and Petersham Neighbourhood Forum (2019), The Ham and Petersham Neighbourhood Plan Available at: https://www.richmond.gov.uk/media/16749/hpn_plan_2018_to_2033_january_2019.pdf (Accessed 29 March 2020).
39	Solomon Green	There are many ways but only if the Council is prepared to sacrifice some of the current Heritage, Culture and open land which makes the Borough so attractive to overseas tourists, visitors from other parts of Britain and residents of London.
40	Jamie Edwards	NO. No more people please.

Respondent reference no.	Name / Organisation	Detailed comments
41	Anthony Swan	Yes. But NOT building houses
42	Jeremy Gill	Yes, stop talking about growth. it's not going to happen in any way that you could meaningfully plan for. You do us all an injustice by stating so.
44	Roger Cutler	Only by reducing Business rates, improving road & pavement surfaces & putting in more car-parking.
46 (a)	Joan Gibson	By building above offices in business parks, car parks, large shops like Tesco Rugby Road, council owned buildings like community centres - the list is actually endless and can more than swamp the small amount of housing you need to build each year (and all on brown field sites which you can add greenery).
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
49	Margaret Edwards	see 15 above
50	John O'Brien	Build council houses
52	Winston W Taylor	Not enough time to think this through.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Footbridges are the way forward... please support the second stage WSP report.
55	Jon Rowles	- Need to consider the Broad Market Rent Areas, and what impact there would be if they changed. - Need to cooperate with Hounslow and Kingston Upon Thames Councils regarding office space and employment priorities.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	See our earlier responses.
61	Tom Minns	Developing office space into housing. This space will come through Covid 19 closing businesses and the increase of working from home that will carry on post crisis.
63	Carol Rawlings	Given the fragility of human life and civilisation, we should concentrate on developing green spaces and any development projects need to be carbon free.
67	William Mortimer	On what premise is growth planning taking place? The anticipated increase in demand for secondary school places has been shown to be wrong at Mortlake. As a result of corona virus we see the country will switch more and more to working from home via the Internet and 5G telephones. Manufacturing in our area which once thrived is now a vestige of former years. Our demography results from an inrush of highly educated and highly paid entrepreneurs operating in a worldwide market place. Making things in the UK will rely on technological innovation and specialist manufacturing more typical of the University Cities like Cambridge and this will happen alongside successful financial services offered in the City of London. If the Council fails to describe its own prescription for a growing 'New Age' vision for this Borough it is difficult to comment usefully on the question raised. Perhaps some research on this topic should already have taken place with the Universities in our area. Are they truly competitive? Is there a need that could be satisfied in co-operation with the Central London Universities?
68 (a)	Mark Jopling	Richmond to become a Borough the leads the green economic revolution,
68 (b)	Mark Jopling	Protect local High Street independent traders, Business Rate reliefs etc
Responding to the climate emergency and taking action		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 18 said yes, 6 said no and 5 don't know [9 did not answer the question]		
14	Mayor of London	The Mayor welcomes the elevation of the importance of tackling climate change across the borough, making it the very first key objective in the Direction of Travel document. This approach is in line with the Mayor's Good Growth Objective GG6 and his aim that London be a zero-carbon city by 2050. Further policies on addressing Climate Change can be found in Chapters 8 and 9 of the Intend to Publish London Plan.
15	Transport for London	See comments in General section.

Respondent reference no.	Name / Organisation	Detailed comments
		We welcome the Council's commitment to addressing the climate emergency and housing crisis and its recognition of the importance of transport in achieving this, as well as tackling other health and environmental challenges. We strongly support the Council prioritisation of the needs of sustainable travel users, which will help to discourage the use of private vehicles and improve air quality. This will also help achieve the borough's ambition of making walking, cycling and public transport the modes of choice when travelling to and from new developments.
20	Gary Backler, Friends of the River Crane Environment.	We are disappointed that this is couched entirely in terms of development, and those aspects of development that can be tailored to the climate emergency. A balanced response to the climate emergency would recognise an equally or more important role of managing and improving green spaces, river and riparian courses, wetlands and sustainable drainage systems. "Maintaining and enhancing the green infrastructure network" is just a single bullet well down a list of planning policies to "develop in a way that respects environmental limits" (pp15-16). The policies lack any proposals for enhancing open spaces that are of equivalent specificity and detail to those for green roofs and smart meters, for example. "What do we have to do?" (p17) is focused much more on how to "deliver high quality sustainable development" than on how to improve green infrastructure to promote the low-carbon society.
22	Jimmy Wallace, Richmond Athletic Association	We broadly welcome and support the proposed approach to developing appropriate planning policies to tackle the climate change emergency. On p.17 a series of 'policy directions' are discussed and to provide a co-ordinated approach with the borough's overall vision and spatial strategy, it would be worth ensuring that the specific climate change policies make it clear that direct most development and growth in the borough to the most sustainable locations in transport and access terms can assist in helping to tackle the climate emergency.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	Responding to the climate emergency and taking action 15. We broadly support the Council's Climate Change Emergency Strategy approved in January 2020 and the Council's Air Quality Action Plan and in particular actions to reduce the high levels of NOX and particulates in Central Richmond in view of the substantial harm to the health of residents, visitors and employees and particularly the vulnerable. 16. We note from the DfT's current consultation on Transport De-carbonisation that in 2016 Transport represented 26% of carbon emissions, energy supply 23%, Business 18% and residential 15%. We also refer below in the transport theme to carbon and air pollution in Central Richmond. 17. We support research into decentralised energy opportunities recognising that Central Richmond might be a candidate for early consideration. 18. Buildings around the Green, because of their age and listing, are difficult to insulate and install new technologies for heating and generating power. 19. We broadly support initiatives on the circular economy and note the negative impact on the environment in Central Richmond, the Riverside and the Green from refuse on the streets, the open spaces and in the river Thames itself. 20. We support recognition of the potential impact of climate change on tides and flooding and the potential impact on the Riverside. 21. We believe the policies in the current Local Plan covers climate change and air quality issues adequately and if further amplification is required we would suggest that it could dealt with by subsidiary planning tools.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	We broadly support them. However, the existing policies are often not carried out in practice because so many developers claim extenuating circumstance. There is also appears a non-existent inspection regime for ensuring that things like green walls and roofs are maintained. The council needs to have a policy on this put in conditions in planning applications for access to periodically inspect them. For example, the green wall at Twickenham School Sports Hall is much smaller than its supposed to be, and the green wall on the RFU energy centre on the MOL next to the Duke of Northumberland's River has no plants on its green wall.
35	Alice Roberts, CPRE London	The Local Plan must draw critical links to transport targets, and air quality and climate emergency action plans As transport is the largest emitter of Greenhouse Gas emissions the borough should encourage car-free/'lite' development as well as advocating a shift in travel behaviours to more sustainable modes of transport. The Local Plan should directly reference the borough's targets: <ul style="list-style-type: none"> • To reduce car trips from 41% of all trips to 25% of all trips • To increase the number of Richmond residents doing at least the 20 minutes of active travel they need to stay healthy each day, from 36% to 70% • For 72% of the population to be 400m from the strategic cycle network (have access to a safe and pleasant cycle network) • To reduce the number of people killed or seriously injured on Richmond's roads from around 70 per year to zero

Respondent reference no.	Name / Organisation	Detailed comments
		<ul style="list-style-type: none"> Additionally, to reduce car ownership, traffic volumes and air pollution, and to improve bus times, and for more people to be using public transport (targets in TfL's LIP3).
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	<p>Achieving high standards of sustainability and addressing climate change is supported in HPNP (section 8) Transport comprises the largest source of carbon emissions at 27% and 40% of trips are under 2 miles. New development should address this significant contributor to climate change:</p> <ul style="list-style-type: none"> Be located near to good public transport and/or improve public transport. Enable new residents to travel sustainably and by active travel through the provision of attractive, direct and safe infrastructure for walking and cycling to local town centres and transport hubs as part of the development. Reduce car parking and increase convenient and secure bike parking and provision of cargo bike and car share schemes. <p>Residential energy use comprises 15% of carbon emissions³. The plans acknowledges higher standards in new development, but with most of housing stock existing and in conservation areas and/or heritage status, the plan should support for future proofing existing housing stock including that of heritage status. Reference: ³ London Borough of Richmond upon Thames Climate Change and Sustainability Strategy (2019) Available at: https://www.richmond.gov.uk/media/17738/climate_change_and_sustainability_strategy_2019_2024.pdf (Accessed: 29 March 2020).</p>
39	Solomon Green	There is no climate change emergency. CO2 is a greenhouse gas but only the third most potent out of at least twelve in our atmosphere. Out of 90 IPCC approved CMIP5 climate models, the forecasts of only one, a Russian model comes close to replicating the observed increase in global warming. All the others have produced forecasts that were way above acceptable margins of error. This part of the plan smacks of panic.
40	Jamie Edwards	There is no climate emergency in the UK. It's china, the US, Russia and India that produce all the pollution. We contribute 1% of Global Co2. You have other priorities
41	Anthony Swan	I have not read the Climate Emergency Strategy doc of 2020. I agree key Issues.
42	Jeremy Gill	You don't have direction. The above is just box-ticking. You covered your arses, well done.
46 (a)	Joan Gibson	I am concerned about the speed of response to the climate emergency. An emergency needs quick / immediate action. The timetable for this addendum suggests you will not take action until 2024 at the earliest. A quicker response is needed with adoption in 2020.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	We should: promote walking, public transport and cycling, and stop use of cars and vehicles across the Borough.
55	Jon Rowles	Jumps straight into zero carbon - need more of an introduction and how to avoid past mistakes such as diesel cars better due to less CO2 despite the increase in other pollutants.
61	Tom Minns	Cars are not necessarily the work of satan that you present them as.
63	Carol Rawlings	Development of Ham goes against the policy directions as it is far from any town centre.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We support zero carbon standards for all development not just large schemes; we are conscious that much development in Richmond is technically not large scale, but it may still have significant impact locally, e.g. the redevelopment of Ryde House in East Twickenham for a supermarket and school. In assessing any significant development, its wider impact on the borough's carbon footprint, both directly and indirectly - through traffic generation for example - must be considered. - We are concerned that current practice on Flood Risk Assessments is inadequate: they are entirely tick box documents which always conclude that a new development, even with a basement, will not increase flood risk to other properties. Water has to go somewhere, and cumulative small scale developments seem likely to undermine the overall direction. Is it possible to provide more information on practical proven solutions, eg for small scale sustainable urban drainage, and to insist on them for all proposals? 4 We support the council's focus on concrete action to improve air quality, and contributing to the global effort to address climate change, but are unsure whether the current policies will lead to sufficient action.
66	Robert Philip Cunliffe	Directions yes, however the ambition of speed of achieving them is FAR to slow
67	William Mortimer	Within the limitations described in earlier answers

Respondent reference no.	Name / Organisation	Detailed comments
68 (b)	Mark Jopling	Yes though not strong enough in presumption of protecting Biodiversity and Green Space. Richmond can best honour Sir David Attenborough by committing to leading London on green Policy, as part of "National Park City"
How can we promote high quality sustainable development as part of a new Local Plan?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to show homeowners and developers how it can be done more economically as an intrinsic part of the design rather than a last-minute add-on. Smaller developers and homeowners are less likely to have the ability to cost control and can be at the mercy of architects creating an expensive bespoke scheme – and this often results in the environmental aspects being sacrificed. When allowing new housing to be built you must ensure that you can provide the school places locally – otherwise there is a massive environmental impact of having to accommodate the pupils in an out of area school. This recently occurred with Turing House School development in Whitton, but where most of the pupils will come from a catchment area based in Teddington. A key principle in sustainable development is proximity, and this needs to be made clearer in the new local plan.
28	Alice Shackleton on behalf of The Kew Society	This is already dealt with in the adopted Local Plan and appropriate SPDs and insofar as the draft London Plan would create new or more rigorous requirements, the adopted Local Plan can be altered to conform.
31	Tim Catchpole on behalf of MESS	Ensure less hard surfacing and protect soft ground for soakaways.
39	Solomon Green	Employ experts (from) both sides of any argument to analyse and criticise all suggestions, so as to lessen the chance of getting it wrong.
40	Jamie Edwards	It's a false flag. A vanity project. There are other priorities.
41	Anthony Swan	Thermal and Energy criteria could be defined and enforced by Planning and Building Control
42	Jeremy Gill	You can't. It will either happen or it won't. What you need to is manage it as it happens.
43	Paul Hart Prieto	One challenge for the resident is that the cost of low carbon energy sources is too high. One example is the need to change a heating system on a residential property. to install a new Gas boiler costs 3 to 8 thousand pounds. for an Airsource Heat pump its 11 to 20 thousand pounds. Even with RHI returns over 7 years the initial and upfront cost makes low carbon heating (as the grid changes its mix) is still a barrier for the home owner. More could be done to incentivise as well as plans for communal based heating conversion for residents i.e. shared ground source heatpump on a street. certified richmond installer with an economy of scale on purchase of equipment etc.
44	Roger Cutler	More car-parking so people don't have to drive around searching for spaces. Many, many more battery charging oints for all the battery cars to come. Re-institute dredging to reduce flooding. Ensure no developments in flood areas such as the embankment in Twickenham. Use better planners & developers not the cheapest.
54	Sally Beeson	Use building companies which use methods which chime with the Council's views
46 (a)	Joan Gibson	I feel you are starting from the wrong assumption when you say LBRuT already requires high standards of sustainable design and construction. The reality is this is just not the case and you accept the minimum standards outlined in the NFFP and London Plan. See THS, and Lidl developments in the Twickenham area. Your interpretation of carbon neutral is incorrect. THS is being built on a green field site – fully supported by LBRuT planning. The development will increase carbon emissions, but LBRuT have accepted very little green roof, biomass boilers and BREAM Good rather than excellent. This will all result in a development which will increase carbon emissions. If you believe this is a working practice where you require higher standards of sustainable design and construction then any change to the Local Plan will fail due to your low expectations. So you need to change your view of what LB RuT delivers now and have a target of delivering more than zero carbon developments.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
49	Margaret Edwards	Introduction of area wide heat/hot water systems - not sure how this is done in practice but in blocks of flats this can maximise space in each flat and reduce costs and greenhouse gases. Similarly use of ground source heat pumps in new developments and solar power.
50	John O'Brien	Build council houses - you set the standard and then deliver it.

Respondent reference no.	Name / Organisation	Detailed comments
51	Su Bonfanti	I support the general policy direction. I support zero carbon standards for all development not just large schemes; I know that much development in Richmond is technically not large scale, but it may still have significant impact locally, e.g. the redevelopment of Ryde House in East Twickenham for a supermarket and school.
52	Winston W Taylor	Engagement with the industry
62	Richard Woolf on behalf of McDaniel Woolf Architects	Work with Transport for London and the Port of London Authority on our key resource , the river.
54	Paul Luton	Needs to be integrated with the transport section that has been hived off below.
55	Jon Rowles	As the plan is supposed to be medium-term - there needs to be a mechanism so that standards are improved over time.
58	Michael Atkins, Port of London Authority	Ensure that as part of the construction stage of developments, full consideration is given to the use of the boroughs waterways as part of the transportation of construction materials and waste to/from development sites, either directly or via the supply chain.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Adopt planning policy approaches requiring large scale developments to be zero carbon and setting out a clear path to zero carbon standards for all types of developments.
63	Carol Rawlings	Encourage and help residents and commercial businesses with the installation of heat pumps, solar panels and other sustainable sources of heating. Take a lead in this with regard to council properties. Encourage cycling and walking by separating them from each other and from vehicle transport.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	- By not encouraging car traffic to the area and creating car parking in busy roads! - Having a sustainable travel plan
67	William Mortimer	Without a study using the experience of industries and universities setting forth the basis for the growth plan it is simply pie-in-the-sky to be asking this of the individual citizen.
68 (a)	Mark Jopling	Stricter penalties and disincentives for trying to develop protected space
68 (b)	Mark Jopling	Be more creative with the existing developed footprint
How can we continue to set out a pathway to zero carbon?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Many houses in Richmond borough are installing air conditioning – thus thought needs to be given to how houses under the flight path can be cooled at night without having to resort to power hungry air conditioning School travel patterns have to be considered – may need extra developer contributions to secure sites for new schools otherwise we will lose more green space. Large event venues like Hampton Court Palace (which hosts flower shows and concerts) and Twickenham Stadium attract huge numbers of spectators who arrive by car. There is a need to reduce this – as they have a large CO2 footprint and can reduce local residents' quality of life if roads become gridlocked.
31	Tim Catchpole on behalf of MESS	Encourage greater use of alternative energy. Discourage car travel, particularly for shopping.
39	Solomon Green	Not to bother Carbon is one of the two most essential elements for all human and plant life..
40	Jamie Edwards	Impossible to achieve. The volume of Electricity required to go Carbon Zero in the UK by 2035 would require 26 Nuclear Power stations.It's a pipe dream.
41	Anthony Swan	Planning and building refurbishments should meet strict criteria and be ENFORED. Just like the eg Fire Regs
42	Jeremy Gill	Try turning a few lights off in your buildings that blaze away all night. Use less energy in other ways. You're setting out ways to use huge amounts of energy by doing away with things that are still good for purpose. A well constructed building that uses a lot of energy in the making is less wasteful than a poorly constructed low carbon structure that falls apart after forty years.
43	Paul Hart Prieto	Schemes to share new, low carbon heating across residential properties, replant larger woodlands in bushy park and richmond park, mandate all new builds have solar and wind, use waterways to generate heat and electric for the borough,

Respondent reference no.	Name / Organisation	Detailed comments
		<p>generate an economy of scale for residents with shared purchasing power of greener alternatives Autonomous "uber style" low carbon vehicles for the public to use. Hydrogen based public transport with intelligent routing based on demand etc.</p>
44	Roger Cutler	<p>Massively more battery charging points provided quickly. In the next 5-10 years the earth will cool anyway as it's orbit around the sun takes it further away. Better roads that allow traffic to get through more quickly. Widen roads & reduce cycle lanes. Cyclists don't use them. They cycle illegally, & dangerously, on the pavements. More car parking to get cars stationary so they don't pollute.</p>
45	Sally Beeson	<p>Fight Heathrow expansion and build sustainably Penalise parents who drive to local primary schools when their children only live ten minutes away by foot at most</p>
46 (a)	Joan Gibson	<p>Creating Carbon neutral developments is also not enough. If the world keeps emitting the same amount of CO2 as it currently does world temperatures will rise more than 1.5degrees. We have to plan to remove CO2 from the atmosphere. This is the target you should have. With the target to remove CO2 from the atmosphere new developments need to have: Rain water harvesting for toilets The highest level of lagging possible Double glazing Electric boilers, ovens and appliances to take advantage of expanding levels of "clean" electricity Lights that automatically turn off Appliance switches that shutdown so the appliance is not left on standby 30% tree canopy and lots of hedges / grass / flowers (all native species). Keep the lawn area to a minimum as it consumes a huge amount of carbon via lawn mowers, feeds etc. etc. All hard landscaping / paving to be porous so rainwater will drain away All rain water runoff to go into soakaways Shower and bath water collection for watering the garden Routes for wildlife Bird habitats / boxes Insect walls All boundary fencing made up of hedges Full green roofs Wind and solar power capture Cooling towers Car free designs and marketing Separate walking and cycling access Cycling hubs Secure cycle storage Heat sinks Ground / air heat pumps Build must have zero defects as this reduces efficiency of lagging etc. Future proofing must be built in to reduce the cost of maintenance – so easy access to such things as boilers, electricity supply, pipes etc. Signs for anti-idling Signs to encourage active travel Waste management during construction and when occupied –</p>

Respondent reference no.	Name / Organisation	Detailed comments
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
49	Margaret Edwards	Not sure that it is feasible to do local things re domestic heating and hot water in existing homes as too costly to subsidise and unlikely that people will swap. Council could circulate info re links to websites re efficient boilers etc in the Council Tax bills.
52	Winston W Taylor	Again engagement with the industry. They have to know what we expect
53	Richard Woolf on behalf of McDaniel Woolf Architects	Keep stressing the need for sustainable transportation.
54	Paul Luton	Requiring the highest available standards for all new developments and promoting the improvements to existing housing stock.
56	Rob Kennedy, Environment Agency	Ban diesel lorries and buses from the borough, look at electric versions of both.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Encourage the development and expansion of decentralised energy networks and the re-use or recycling of used materials for as long as possible. Effective community engagement which encourages everyone to play their role in reducing consumption and greenhouse gases. The need to deliver high quality sustainable development should be maintained as a high priority for the borough.
61	Tom Minns	Free public transport for all. It would reduce car usage considerably as it has done with the senior citizen freedom pass. It really is a mind changer
63	Carol Rawlings	As above plus tree planting, wild flower and meadow cultivation, discourage private transport. Make Richmond town centre car-free? Close Richmond Park to traffic apart from between Kingston and Richmond. New buildings must be zero carbon and old buildings adapted to make them as near zero carbon as possible. Grants for solar panels and heat pumps. Free disposal of gas boilers.
66	Robert Philip Cunliffe	engage Imperial College to advise
67	William Mortimer	Alternative energy evaluation Must include hydrogen, heat pumps using sub-subterranean energy and mini cold-reactor nuclear technology. These have all been mooted in the engineering journals for years as well as wave and wind power and yet we need to understand storage solutions of electrical power and delivery of hydrogen gas will be possible before considering the feasibility of convert home boilers or building suitable cars.
68 (a)	Mark Jopling	Improved adoption of electric transportation Dedicated cycle routes
68 (b)	Mark Jopling	More EV charging and car-sharing infrastructure More dedicated cycle routes
How ambitious shall we be in requiring zero carbon standards for all developments?		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	14. We support zero carbon initiatives for all developments. We note the Appeal Court's recent decision concerning the inadequate account of the Paris Agreement in the Airports National Policy Statement 2018, and we observe that development policy more widely may have to pay closer attention to national commitments on climate change.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	We recommend having a mechanism so that standards can be increased as they become more affordable / widespread.
28	Alice Shackleton on behalf of The Kew Society	This would require zero carbon for major and non-major developments. That is an aim to be welcomed but consideration must be given to the reality of economic viability of compliance, for, say, work done to period properties/homes.
31	Tim Catchpole on behalf of MESS	We should aim for zero carbon by 2030 not 2050.

Respondent reference no.	Name / Organisation	Detailed comments
39	Solomon Green	Not ambitious just mistaken.
40	Jamie Edwards	You shouldn't. Quite frankly we don't need new developments or people. You should be using money to help existing residents become more energy efficient. We don't always need to obsess about GROWTH. Improving productivity of existing assets will make a bigger difference.
41	Anthony Swan	Totally ambitious and supportive at planning stage.
42	Jeremy Gill	Not very. Get value for your energy spend.
43	Paul Hart Prieto	Zero or negative mandates on new build Pragmatic cost based mandates on existing builds and council support for improvements
44	Roger Cutler	100%
45	Sally Beeson	Totally please, as there always has been a compromise halfway down the line I'm sure!
46 (a)	Joan Gibson	This is not ambitious enough you should require a net reduction in carbon emissions for the area - this is achievable.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Very - else London will flood in my childrens' lifetimes
49	Margaret Edwards	It should be possible for developers to achieve this so stick with it as a requirement.
52	Winston W Taylor	This is non negotiable if we are to meet the challenging targets.
53	Richard Woolf on behalf of McDaniel Woolf Architects	You should temper best option solutions at the time , against the perfection of a zero carbon community.
54	Paul Luton	The council has declared an emergency so as far as possible.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Set out a clear path to zero carbon standards for all developments, subject to viability and effectively monitor their implementation.
61	Tom Minns	Keep it in mind but don't get single issue fixated. It will be more effective if you can take people with you rather than imposing restrictions which people will fight.
63	Carol Rawlings	All developments should be required to be zero carbon and should be inspected for this on completion and at set periods after they are in use. Failure to comply should result in the maximum penalties possible, including demolition.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	As ambitious as we can but still be realistic (give factual evidence why low zero carbon standards are possible)
66	Robert Philip Cunliffe	not "ambitious", but rather 100% "dedicated" to achieving zero carbon, or even better standards. Show some real leadership
67	William Mortimer	Be as ambitious as you possibly can be because the country will need elbow room to keep our farmers producing the food we need without having to ship in cargoes by air and sea at vast cost and at the mercy of overseas powers. We should all eat less and this too would improve health as a look at WWII diets and health will surely confirm.
68 (a)	Mark Jopling	New builds will need to be different to conversion of older property. Program to improve efficiency of the Victorian housing stock
68 (b)	Mark Jopling	very on new builds Separate scheme to insulate Victorian Housing stock
70	Melissa Compton-Edwards	Very ambitious.

Are there other planning means to mitigate and adapt to climate change that you want us to pursue?

Of respondents who answered the question:

Respondent reference no.	Name / Organisation	Detailed comments
17 said yes, 3 said no and 3 said don't know [15 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to deal with "soil sealing" and degradation. Please see this webpage for details of this issue and how it can be reduced https://www.recare-hub.eu/soil-threats/sealing Need to look at removing tarmac verges and replacing them with grass. maybe stipulate that a new tree has to be planted for each new housing unit – on or off site.
31	Tim Catchpole on behalf of MESS	See above
39	Solomon Green	Yes delay all action for another thirty years to confirm whether the globe is still continuing to warm or whether as the consensus of climate scientists were forecasting as late as the 1970s we were entering into a dangerous climate cooling phase.
40	Jamie Edwards	It's not the top priority
41	Anthony Swan	Solar energy. Turbines at Teddington Lock. Wind turbines.
43	Paul Hart Prieto	Autonomous "uber style" low carbon vehicles for the public to use. Hydrogen based public transport with intelligent routing based on demand Schemes to share new, low carbon heating across residential properties, replant larger woodlands in bushy park and richmond park, mandate all new builds have solar and wind, use waterways to generate heat and electric for the borough, generate an economy of scale for residents with shared purchasing power of greener alternatives etc.
44	Roger Cutler	Stop concreting of front gardens & re-allow rain water to escape.
45	Sally Beeson	I wish that Local Councils weren't overruled by unelected so called experts on local planning issues. The law needs to change to protect our environment from over building, building on protected green spaces and school playgrounds.
46 (a)	Joan Gibson	Further to this LBRuT can run a campaign to get current households to switch lights off, and appliances from standby. No cost to the household and it drastically reduces energy consumption so reducing our impact on the environment whilst saving us money.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Zero carbon as soon as possible for the Council and for all residents, businesses and premises in the Borough. Many benefits economically, for the climate, and socially.
49	Margaret Edwards	When we did major work on a property it was difficult to access information or support on recycling building materials - it was too time consuming to arrange for either us or our builder. I dont know what happens to the contents of most skips but I expect they end up in landfill. Given the amount of renovation underway in the borough this is an area where there needs to be information provided (perhaps at time of planning application etc) and perhaps an incentive to recycle.
50	John O'Brien	Greater use of and encouragement to use solar panels. Emerging technologies can allow tarmac road surfaces to generate power, allow footfall in public spaces to generate power, allow heat pumps to extract power from rivers and we have a big one in the borough. Offer free parking and other advantages to all fully electric vehicles.
52	Winston W Taylor	Not enough time to consider this. It would involve a lot of reading from previous consultations to answer this properly.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Review the WSP Pedestrian and Cycle Bridge Feasibility Study of October 2018 and commission the next stage report. [A copy of the WSP Report was provided, which is available at https://www.richmond.gov.uk/media/16409/thames_bridge_feasibility_summary.pdf]
58	Michael Atkins, Port of London Authority	There must continue to be full support within any future Local Plan for the encouragement of the use of the River Thames for passenger and freight transport through the protection of, improvement to, and provision of new relevant infrastructure including wharves, slipways and piers. In addition, the PLA considers that there must be support must be given to the potential use of existing piers and structures as part of the delivery of small scale

Respondent reference no.	Name / Organisation	Detailed comments
		freight and 'last mile' delivery as well as for the maximisation of use for passengers over the timescales of the Local Plan. This will help to achieve the Borough's sustainable travel goals with regard to improving air quality and decreasing road congestion for local communities.
61	Tom Minns	Expand assistance for apartment blocks to install EV points. They really are the low hanging fruit as you can encourage the move to full electric cars in large numbers.
62	Kathleen Massey	Not Answered
63	Carol Rawlings	No expansion of Heathrow airport. All public and private transport to become carbon neutral. Penalties for non-recycling (as Japan has had for decades). Use of transparent bags where possible so that inappropriate disposal of recyclable items can be easily identified. Food composting to be made obligatory (some flats still don't have the facility to do this).
66	Robert Philip Cunliffe	Engage with the wider Climate change movements to investigate how harnessing with other London boroughs can yield both cost savings and more efficient use of resources
67	William Mortimer	What I understand is that the Council does have a Disaster Management Plan and it is vital to see the Flood Risk elements of this to know whether there is a coherent approach enabling local communities to handle some of the obvious needs. I have previously provided a document suggesting the bare bones of a plan in event of flood or indeed any disaster that renders key local infrastructure useless and the immediate needs for evacuating people from the area. There are two key locations to support the infrastructure for such emergency management by a local team. These are, firstly, the third railway track over the river at Barnes Bridge. The river here was formerly the docking point for the River Police and hence is suitable for the inter-connection of supplies coming by water to the land-based teams working in the area. The second is the building formerly housing the manual signalling activity and point management for the railway lines from Waterloo to Richmond and the loop line via Hounslow . I will send you, upon request, the document I previously provided to LBRuT, which also suggests the sort of materials to be stored on Barnes Bridge in order to support the sustenance and evacuation of local people. The land owned by the railway company where the lines split at Vine Road may also be useful for other Council developments.
Are there any other climate change and/or sustainability issues that you would like the new Local Plan to address?		
29	Richmond Cycling Campaign	P14-17 talks about the climate emergency. We welcome many of the steps proposed here, especially the sustainable urban drainage programme, which has had such beautiful results elsewhere in the country. While transport is covered elsewhere in the paper, we think more needs to be made of it in this section. Transportation produces 1/3rd of emissions, yet is not covered in detail here. We would like to see commitments, in this context: <ol style="list-style-type: none"> 1. For everyone new home and office to have safe and secure bicycle parking for all residents and visitors 2. For every home, office or place of interest to be immediately accessible to local people by walking and cycling. This means the borough needs a dense 'mesh' of cyclable routes never more than 200m from each other. 3. A requirement on all deliveries in the area to be managed by consolidation hubs, ensuring that 'last mile' fulfilment is never by motor transport unless specific factors make this impossible. 4. Removal of all council subsidies for driving - whether this is parking, driving, or the wide range of other activities the council has to undertake because of the damage caused to our built environment by motor vehicles. Additionally, we'd also like this section to either include or potentially commission research to look at the carbon benefit of the different ways of moving transport choices to walking and cycling over driving.
30	Jon Rowles on behalf of Friends of Heathfield	Need to explicitly include the sustainability "proximity principle" into the local plan Loss of front gardens – new housing units could have legal agreements to stop gardens being lost to hard standing.

Respondent reference no.	Name / Organisation	Detailed comments
	Recreation Ground and Environs	Current guidelines for home extensions encourage traditional pitched roofs – however, could some of these be substituted for green / brown roofs in certain circumstances, such as the back portion. Environmental value of back gardens / back lands both as a habit and as a wildlife corridor is under appreciated. Need to record wildlife corridors and make the various railway tracks SINC's, this will also help prevent the loss of habitats caused by Network Rail selling land adjacent to railway tracks to neighbouring homeowners. Need a spoke of cycle routes leading out of the town centres into their catchment areas. In the past the focus of cycle lanes has been the longer-distance routes linking up towns rather than encouraging people to switch from the car for short journeys within their own town.
31	Tim Catchpole on behalf of MESS	See above
39	Solomon Green	Prepare for the possibility that, as more than 30,000 scientists (including some climate scientists) believe, the so-called consensus is wrong.
40	Jamie Edwards	NO> See above. Utterly mad to make this a top priority.
41	Anthony Swan	Educate and coordinate peoples understanding of what can be recycled, which bin to put it in and what to do with anything that "Can't" be recycled.
42	Jeremy Gill	No
43	Paul Hart Prieto	Look into ground water level management to reduce risk of ground water flooding.
44	Roger Cutler	More re-cycling & less in landfill.
47	Trevor Rowntree	I think that recycling should be compulsory and I am in favour of fines for households/business that do not recycle. Also fly tipping should be fully investigated and punished.
49	Margaret Edwards	All households that put out food and/or garden waste on regular basis should have free compost delivered twice a year. The system for collecting very small free bags of compost did not work - lots of people came by car assuming large bags and so not very sustainable.
51	Su Bonfanti	I am concerned that current practice on Flood Risk Assessments is inadequate: I've looked at a few applications for small scale local development and those are entirely tick box documents which always conclude that a new development, even with a basement, will not increase flood risk to other properties. Water has to go somewhere, and cumulative small scale developments seem likely to undermine the overall direction. Is it possible to provide more information on practical proven solutions, eg for small scale sustainable urban drainage, and to insist on them for all proposals?
52	Winston W Taylor	Again, not enough time.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Possible central combined heat and power plants.
55	Jon Rowles	Many of the new housing units may be zero carbon - but if facilities needed to support them are not close at hand this can create far more carbon - things like food shops, schools etc and all create a lot of journeys.
58	Michael Atkins, Port of London Authority	The PLA recently published its Air Quality Strategy (2018) and is currently developing an update to this in line with government guidance. This strategy, which includes a five year action plan, covering the period 2018 - 2022 must form part of the evidence base as part of the development of the Local Plan.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	None
63	Carol Rawlings	The development plan for Ham should be re-addressed as it would double private car use on very narrow roads, some with 90 degree bends which are already dangerous. It would also lead to pollution issues, and increased incidents of accidents. It would decrease the amount of open space as current green areas around blocks of flats would disappear and the character of Ham Village Green would become urbanised.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Yes: how will we decrease environmental pollution outside of restrictions on new developments? How can we include new rules on developments that are in progress and get them to adapt now? If we only have policies in place for 2024 then it means significant developments over the next 5 years will be developed permanently with low standards in terms of sustainability and addressing climate change. It's an urgent issue that we need to tackle now.
66	Robert Philip Cunliffe	Yes - rising sea levels are a fact, not an imaginary threat. Plans to accommodate a MUCH higher rate of rising than previously planned for need to be explicit NOW

Respondent reference no.	Name / Organisation	Detailed comments
67	William Mortimer	Experience of the current Covid-19 epidemic simply underlines the need for reliable broadband communications and the Disaster Management Plan needs to consider how services will be sustained inf the terrestrial infrastructure has been compromised. Satellite communication offers enormous potential but is limited in the amount of traffic it can handle. there needs to be careful consideration of the services to be accorded priority and the existing infrastructure to be used.
68 (b)	Mark Jopling	Major "offload" multi-modal transport hub just SW of M3 Jn 1. Park and ride for cars coming into Richmond and beyond into Central London from private cars to public transport via SW Trains and Crossrail 2 onto the Shepperton Line.
69	Geoff Bond on behalf of Ham and Petersham Association	Make working from home easier.
70	Melissa Compton-Edwards	<p>As transport is the largest emitter of greenhouse gases, the borough should encourage car-free/car-lite development and advocate and enable a shift in travel behaviours to more sustainable modes of transport: walking, cycling and clean public transport. As per CPRE London's suggestions, the Local Plan should directly reference the borough's transport, air quality and climate emergency action plan targets:</p> <ul style="list-style-type: none"> "- To reduce car trips from 41% of all trips to 25% of all trips - To increase the number of Richmond residents doing at least the 20 minutes of active travel they need to stay healthy each day, from 36% to 70% - For 72% of the population to be 400m from the strategic cycle network (have access to a safe and pleasant cycle network) - To reduce the number of people killed or seriously injured on Richmond's roads from around 70 per year to zero - Additionally to reduce car ownership, traffic volumes and air pollution and to improve bus times, and for more people to be using public transport (targets in TFL's LIP3)." <p>Agree with Richmond Cycling Campaign that while transport is covered elsewhere in the paper, more needs to be made of it in this section. Would like to see commitments, in this context:</p> <ul style="list-style-type: none"> - For everyone new home and office to have safe and secure bicycle parking for all residents and visitors - For every home, office or place of interest to be immediately accessible to local people by walking and cycling. This means the borough needs a dense 'mesh' of cyclable routes never more than 200m from each other. - A requirement on all deliveries in the area to be managed by consolidation hubs, ensuring that 'last mile' fulfilment is never by motor transport unless specific factors make this impossible. - Removal of all council subsidies for driving and parking - because of the damage caused to our built environment by motor vehicles. <p>Additionally, I'd also like this section to either include or potentially commission research to look at the carbon benefit of the different ways of moving transport choices to walking and cycling over driving.</p>
Delivering new homes and an affordable borough for all		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 10 said yes, 9 said no and 6 don't know [13 did not answer the question]		
Do you agree with the proposed policy directions? - If you disagree with any of the policy directions please tell us more here:		
14	Mayor of London	<p>Housing</p> <p>The Mayor welcomes that Richmond recognises the borough's new housing target for the delivery of 4,110 new homes between 2019 and 2029, as set out in the Intend to Publish London Plan in Table 4.1. The Mayor would like Richmond to aim to exceed this target in line with his spatial strategy through greater delivery of housing from small sites to take account of the shortfall in meeting identified housing need across London. The borough's minimum small sites target for this period is 2,340 homes.</p> <p>With regards to the delivery of small sites, the Panel Report specifically states that the small sites target in the London Plan can be taken to amount to a reliable source of windfall sites which contributes to anticipated supply and so provides the compelling evidence in this respect as required by paragraph 70 of the National Planning Policy Framework of 2019.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>While Richmond's Local Plan needs to consider the National Planning Policy Framework 2019, the Planning Practice Guidance (Paragraph: 013 Reference ID: 2a-013-20190220) is clear that where a spatial development strategy has been prepared by the Mayor, it is for the relevant strategic policy-making authority to distribute the total housing requirement which is then arrived at across the plan area. Richmond's housing target is set out in the London Plan.</p> <p>Beyond 2029, the Plan's proposed housing target should be based on a combination of the figures taken from the SHLAA 2017, local up-to-date evidence of identified capacity and the small sites target, which should be rolled forward in accordance with paragraph 4.1.12 of the Intend to Publish London Plan.</p> <p>The Mayor welcomes Richmond's intention to undertake a Local Housing Needs Assessment but this would be based on the government's standard method. To be clear, Richmond should conduct a Strategic Housing Market Assessment in accordance with paragraph 4.10.5 of the Intend to Publish London Plan so that the borough has an understanding of housing needs in its area including tenures, housing for the elderly and the needs for different sizes of dwellings among others.</p> <p>The Mayor is pleased that Richmond will consider the needs of Gypsies and Travellers in its housing need assessment. Richmond should note that the Mayor intends to lead a London-wide Gypsy and Traveller accommodation needs assessment. It should also note the Secretary of State's Direction on Intend to Publish London Plan Policy H14.</p>
17	Hannah Bridges, Spelthorne Borough Council	<p>In respect of housing, we recognise that this is a strategic and cross boundary issue. Officers acknowledge that like Spelthorne, Richmond is a constrained borough and we face many similar constraints, however every effort should be made to meet its Local Housing Need within the borough boundaries and no stone should be left unturned in determining an appropriate strategy to guide the new Local Plan. We are supportive of the use of up to date evidence to inform the potential options.</p> <p>Richmond should also look to the wider Greater London area to assist meet its housing needs if it is unable to do so alone.</p> <p>Spelthorne Local Plan Officers at Spelthorne are currently in the process of reviewing the representations received to the Preferred Options consultation. We are also undertaking further site assessment work to firm up the site allocations and aim to maximise supply. Whilst Spelthorne intends to meet its housing needs within its Borough Boundaries, our estimates show that we will only just be able to meet our standard method housing need figure. In addition, Planning Practice Guidance sets out that Local Housing Need is a minimum starting point in determining the number of homes needed in an area. If it transpires that Spelthorne is unable to meet its own needs within the Borough, we will need to work with Duty to Cooperate partners in order to explore all options to meet our local housing needs.</p> <p>Following the completion of our further site assessment work we will reflect on our housing position to determine the next steps for our Local Plan, which in turn will inform our Duty to Cooperate discussions with all neighbouring authorities moving forward.</p> <p>Spelthorne Borough Council looks forward to continuing its engagement with LB Richmond through its Local Plan process. Officers in the Strategic Planning team are available to discuss any of the comments above should this be useful.</p> <p>Please note that this response is at officer level and as such, Spelthorne Borough Council reserves the right to raise any further issues during the preparation of the LB Richmond Local Plan if Members of the Council wish to do so.</p>
18	Phoebe Juggins, Department for Education	<p>4. DfE notes that significant growth in housing stock is expected in London Borough of Richmond upon Thames ('LBRuT'); the draft London Plan (2019) sets a housing target of at least 811 homes per annum (an increase from the current adopted London Plan target of 315 homes per annum), albeit the London Plan is likely subject to modification prior to adoption and the target has yet to be finalised. This likely growth requirement will place pressure on social infrastructure such as education facilities. The Local Plan will need to be 'positively prepared' to meet the objectively assessed development needs and infrastructure requirements.</p>
19	DP9 Ltd on behalf of London Square Developments	<p>See also comments by respondent in section on the economy.</p>
20	Gary Backler, Friends of the River Crane Environment.	<p>FORCE notes the strength of the commitment that "The new Local Plan must include policies that maximise delivery of new housing." A similar level of commitment should be given to increasing the delivery of green spaces that will match the increases in the residential population that the increased housing will bring. This document is silent on the need to provide open space in step with the provision of increased residential housing. It is also silent on the need to provide space for children in the</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>new homes to play healthily and safely. We have already seen large-scale housing developments in the Crane valley with inadequate play facilities. These developments throw the burden of children’s play generated by the new developments onto existing public spaces, which have then become over-used and degraded.</p> <p>Both the quantum and quality of green spaces need to be increased in step with increased housing provision, to avoid increased wear, tear and degradation of existing green spaces, and to support the physical and mental health and wellbeing of the residents which the borough is seeking to accommodate. Moreover, the green spaces need to remain accessible to the public free of charges, in order to be genuinely inclusive and to address “equality impacts” of housing development in the borough (p8).</p> <p>FORCE notes the pressure to increase the height of residential buildings. We are committed to protecting the vista in the Borough’s open spaces: much of the mental health benefit of open space derives from the sense of tranquillity and escape from urban pressures that the open space provides. This tranquillity and escape is compromised by the visual intrusion of structures, including residential housing blocks that are visible from the open spaces, particularly during the winter months of leaf-drop. FORCE also believes that any “view premium” should be a public benefit, available, through the absence of visual intrusion, to all users of the open space, rather than a private benefit accruing to the property developer through the premium pricing of housing units that enjoy open-space or river views.</p> <p>Moreover, many of our open spaces provide “dark spaces” for wildlife, and form links in “dark corridors” which are a crucial element in the well-being and biodiversity of species in the Borough. These dark spaces risk being compromised by lighting and traffic from housing developments adjacent to them.</p> <p>Accordingly, FORCE will oppose any residential increase in the height of residential buildings that would be visible from the Borough’s open spaces, and in particular any residential development that compromised the vista and the darkness of the river corridors and open spaces in the Borough. We would expect the protection for these dark corridors to be a part of the plan.</p>
21	Lucy Wakelin, Transport for London Commercial Development	<p>Please note that our representations below are the views of the Transport for London Commercial Development (TfL CD) planning team in its capacity as a landowner in the borough only and are separate from any representations that may be made by TfL in its statutory role as the strategic transport authority for London. Our colleagues in TfL Spatial Planning have provided a separate response to this consultation in respect of TfL-wide operational and land-use planning / transport policy matters as part of their statutory duties.</p> <p>Delivering new homes and an affordable borough for all</p> <p>TfL CD broadly supports Richmond’s approach towards delivering new and affordable housing across the borough. TfL CD is committed to delivering 50% affordable housing (by habitable room) across its portfolio as instructed by the Mayor and look forward to working with the Council to achieve this on TfL owned sites. We also welcome the Councils acknowledgement of Build to Rent (BtR) as a new and innovative approach to development which can increase capacity and speed up housing delivery. TfL CD has a number of active BtR schemes across London looking to deliver significant residential-led development and we welcome the opportunity to explore the potential for this on TfL owned sites within Richmond.</p>
22	Jimmy Wallace, Richmond Athletic Association	<p>We broadly support the borough’s proposed approach to providing the homes that its residents require. We also welcome the borough’s intention to prepare a Local Plan that will be in accordance with the housing needs for Richmond as outlined in the emerging London Plan and also the acknowledgment of Government’s long term objective to deliver a higher housing target. We support the commitment to undertake a Local Housing Needs Assessment in 2020 / 2021 and the intention to meet a full range of housing needs and ‘to consider opportunities to make efficient use of every piece of land to maximise the delivery of new housing’. A series of policy directions for formulating the emerging housing policies are identified and we broadly support the suggested approach.</p>
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<p>We note the current London Plan target for the Borough is a minimum of 315 new homes per annum. The new London Plan is held up for adoption by a dispute between the London Mayor and Government on the target for new homes across London. The Borough outcome could be a minimum of 411 or as high as 811 new homes per year.</p> <p>We are not in support of existing Green Belt or MOL being used for new homes but we are not opposed in principle to adaptations or enhancements to existing buildings in parks and MOL.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>We note that Friars Lane Car-park, just off the Green, is identified by the current Local Plan as providing potential for housing. We would wish to comment should any proposal materialise (previous proposals have failed). We would wish to ensure that the Green is not expected to replace the lost car-parking capacity and that better use is made of other existing car-parks in Richmond in this eventuality.</p> <p>We would like to see Richmond car-parks (some under-utilised) reduce parking around the Green.</p> <p>We expect there to be increasing use of Central Richmond for residential use, especially above ground floor retail and other uses. Adaptation though may be difficult given the historic nature of many of the buildings. It may be worthwhile developing specific policies to return buildings to their original all residential use (with careful reference to historic photographs, etc.) especially in the non-core area such as Hill Rise/Richmond Hill where there is photographic evidence of how these buildings once looked as residences before shops were added in the 20th century. We urge there to be evidence prepared to help assess the balance in Central Richmond between residential, retail and office use.</p> <p>The character and heritage of the area concerned is important and we would not wish to see an increase in density of accommodation or any large-size development or increase above the height of existing buildings to provide new homes.</p> <p>We cannot be more precise without evidence of the number of homes needed and their allocation across the Borough.</p> <p>We believe the policies in the current Local Plan cover these issues adequately and if further amplification is required we would suggest that it could be dealt with by subsidiary planning tools.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>Need to analyse the amount of latent demand better, for example how many houses sharers would prefer to rent one-bedroom flats?</p> <p>The council should be looking to see if some joint developments can be done in the Kingston and Hounslow opportunity areas so that people on the housing register can be accommodated more quickly. NPPF states that neighbouring authorities need to co-operate and met unmet demand if possible.</p> <p>Need to explore 'Discount Market Sales' – where a discount is given against the market rate, and this discount is passed onto all subsequent purchasers. These schemes also result in a more favourable mortgage interest rates compared to shared ownership.</p> <p>The 'gap in the middle' needs to be addressed – currently only the very well off or those on benefits can access secure housing.</p> <p>More alms-houses could be built so that affordable retirement flats are available in perpetuity.</p>
32	Mark Jopling on behalf of UPPFT	See also comments below
34	DP9 Ltd on behalf of Harlequin Football Club Limited	<p>3. Housing Need</p> <p>3.1 The Local Plan Direction of Travel Consultation document identifies housing delivery and meeting the housing targets set out in the London Plan as one the key reasons why a new Local Plan is required.</p> <p>3.2 The Intend to Publish version of the London Plan (December 2019) provided Richmond with a new housing target which was substantially higher than the target set out in the adopted London Plan. The ten-year delivery target for the period from 2019/20 to 2028/29 is 6,440 new homes, which equates to 644 units per annum. The Direction of Travel Consultation document states that 315 new homes per annum will be delivered in the borough between 2015 and 2025, which highlights a major shortfall.</p> <p>3.3 To compound this particular issue, publication of the Local Plan Direction of Travel Consultation has been followed by a letter from the Secretary of State for Housing, Communities and Local Government to the Mayor of London, directing him to make changes to the new draft London Plan before it can be adopted. A relevant extract from the letter states:</p> <p><i>"I had expected you to set the framework for a step change in housing delivery, paving the way for further increases given the next London Plan will need to assess housing need by using the Local Housing Need methodology. This has not materialised, as you have not taken the tough choices necessary to bring enough land into the system to build the homes needed."</i></p> <p>3.4 Taking account of the above, one can expect that housing targets for individual boroughs will further increase in the short term. Through the new local plan process, it is therefore imperative that the Council seeks to promote the consolidation and intensification of large underutilised sites in the borough and targets the least constrained sites for higher density development. It is our strong view that redevelopment of the Harlequin's site and the Twickenham Central Depot site can make a significant contribution to achieving these targets, whilst at the same time easing the pressure on other more sensitive parts of the borough.</p> <p>3.5 As suggested in the Direction of Travel consultation document, we support the undertaking of a borough wide Urban Design Study as a tool to help identify redevelopment opportunity sites and quantify the appropriate scale of development on individual sites.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		[See respondent no. 34 in the Call for Sites Responses Schedule]
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	Housing delivery should follow London Plan Good Growth by Design 'This means new development should benefit everyone who lives here. As such, it should be sensitive to the local context. It should also be environmentally sustainable and physically accessible.' ⁶ This is particularly relevant in Ham and Petersham which has limited accessibility and low PTAL. Reference: ⁶ The Mayor of London (2019) <i>London Plan</i> Available at: https://www.london.gov.uk/what-we-do/regeneration/advice-and-guidance/about-good-growth-design (Accessed 29 March 2020).
40	Jamie Edwards	We don't need more people in the borough. London is overpopulated as it is. Getting on a train at Twickenham or Richmond in rush hour is nearly impossible. Why are we cramming more people into the borough?
41	Anthony Swan	Richmond borough will never be affordable. Reverse Thatcher policy and build / convert more Council houses for rent. Than rents can be selective and affordable. eg Nurses, new School teachers etc get cheap rate.
42	Jeremy Gill	Percentage of affordable homes in your target is too low. Also I do not agree with providing more homes for families. There is a lack of suitable housing for single person households who make up a far large percentage of the households in this country. Of the 27.6 million households in this country, 8 million are single person households. Families by their very nature benefit from the economies of scale inherent in multiple person households.
46 (a)	Joan Gibson	411 new homes a year is not a lot – considering you have Stagg Brewery, Twickenham Town centre and Kneller Hall sites on the books. I do think LBRuT is good at ensuring new housing delivers good room sizes, a good area to live in, with outdoor space and facilities for families. I support your objective of ensuring land is used efficiently and would like it extended to infrastructure i.e. it is much more efficient and environmentally friendly to expand schools rather than build completely new schools. Brown field sites are guaranteed and sports facilities already exist so you are not reducing biodiversity by creating carbon expensive grass mono-cultures for school sports.
47	Trevor Rowntree	I think the borough is over populated as it is and we cannot afford to build any new homes.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	We should promote walking, public transport and cycling, and stop use of cars and vehicles across the Borough. We should not provide parking spaces for new and renovated housing. We should heavily increase parking charges for residents and businesses.
49	Margaret Edwards	The need for specialist housing for older people, such as extra care has been ignored. Opportunities have been missed e.g. Brewery lane, Lidl developments in East Twick and on Wickes site, all ideal locations and all used for standard homes or shops. So called 'retirement housing' such as one on Twickenham Green have inaccessible bathrooms and no communal facilities. If people under occupying large homes can move to accessible well designed apartments then the former are freed up for families.
50	John O'Brien	Build council houses
52	Winston W Taylor	Broadly agree with the tenor of the document but I am not sure that this section sets out a real policy direction. The answers to the questions posed seem to me to give a policy direction. The paper does not give any direction - except to do what the Mayor of London says re Housing targets
55	Jon Rowles	The housing targets are too high and will result in a lot of inappropriate development.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We support the proposed policy directions. It is important for the borough and East Twickenham to offer a range of housing for a range of household types.. We support retaining 50% affordable target on all developments. Small sites are an essential component but especially important that development respects existing style. One person households should be included in addition to the suggested groups (they represent 29% of total households, and are likely to grow).
66	Robert Philip Cunliffe	Growth plans need to be revised in line with more aggressive climate change models; for both affordability and impact
67	William Mortimer	I regret I am out of time to think any further on these matters before the deadline for submission and they are not an area in which I have expertise. I have focused on the items needing further attention, namely: 1. the use of the river for its historic purpose of moving people and materials safely and reliably 2. the preparations that should be undertaken under local authority to ready every area for disasters of various kinds, e.g flooding, aircraft crashes and dirty bombs (viral or nuclear).

Respondent reference no.	Name / Organisation	Detailed comments
68 (a)	Mark Jopling	CIL payments for C2 and C3 should be same level to stop speculators trying to exploit arbitrary differences to maximise margins and avoid building genuine affordable housing to meet local needs.
What do you think are priorities for the type and size of new dwellings?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The council need to be careful not to just concentrate on the needs of the housing register. Many young adults have problems accessing the housing market because of the low number of starter homes and studios are being built, as developers now favour the demands of buy-to-let landlords. Whilst most single people don't show up on the housing register – and this could result in demand for family housing being more pronounced that it actually is.
28	Alice Shackleton on behalf of The Kew Society	There must be a range of one – three bedroom flats as well as houses, so that young people, families and older residents are part of a mixed community that is alive. The current trend to blocks of small flats risks creating “ghetto” areas appealing to and aimed at younger residents who commute to work and have less involvement in the local community. Green space with the dwellings is a priority.
31	Tim Catchpole on behalf of MESS	We await results of the Housing Needs Assessment Study.
40	Jamie Edwards	no more please!
41	Anthony Swan	If we want families living here then you need more than one bedroom. Council and Housing trusts should concentrate on 1, 2, 3 bed flats to rent...maybe to sharers, The buyers of larger houses can look after themselves.
42	Jeremy Gill	Small homes in houses, not flats. Blocks of flats overload local infrastructure.
44	Roger Cutler	Flats.
45	Sally Beeson	As housing is costly in our borough, families are living in very small flats even though they may have several children - we're going backwards to Victorian overcrowding. I think there should therefore be fewer units built, but larger inside.
46 (a)	Joan Gibson	You have left Social housing building out of your list of building homes. This should be included as lack of social housing, high rents and insecurity around term of rent is making the rental market difficult, and leading to mental health issues and homelessness. This would also help your very low level of affordable housing – 17%. There are too many excuses as to why your affordable housing is so low – this needs to stop. You apparently cannot find sites for the housing, so giving what you have to self-build is surely a bad idea. I like your ideas of exploring modern pre-fab buildings.
47	Trevor Rowntree	No new dwellings.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
49	Margaret Edwards	See above re extra care housing. Plus all new homes should be fully accessible, meeting at least M4 (2) with 40% meeting M4 (3) Building Regs.
51	Su Bonfanti	It is important for the borough and East Twickenham to offer a range of housing for a range of household types. Strongly support retaining 50% affordable target on all developments. Where I live in East Twickenham, the only site are small sites in already densely built areas. For neighbours to welcome such developments, it's especially important that they respects the existing scale and style. That need not prevent modern interpretations but they must be in the right place. Recently there was a proposal - rightly in my view rejected - to build a two bedroomed house with underground living area at the end of Alexandra Road. The idea was innovative and could work - in the right place. But the land currently occupied by two garages and a bit of parking in a network of late Victorian/Edwardian redbrick terraces is not the right place.
52	Winston W Taylor	I dont think anybody really knows the answer. The survey of Housing need is a major priority. I have a feeling that there is a need for 3/4 bed family houses as the developments in recent years seem to have been mainly of flats for singles and childless couples.
62	Richard Woolf on behalf of McDaniel Woolf Architects	Acknowledge that larger scale dwelling have always been a part of Richmonds history, as well as smaller more typical dwellings.
55	Jon Rowles	These seem to be based upon the housing register and not the broader needs of the entire population of the borough

Respondent reference no.	Name / Organisation	Detailed comments
56	Rob Kennedy, Environment Agency	2-3 bedroom flats and houses.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	The priorities for the type and size of new dwellings are genuinely affordable family homes for rent and homeownership for working residents on low to middle income.
63	Carol Rawlings	No additional dwellings required as have already met the target. Any new ones should be social housing only, as there is a severe shortage. No new luxury dwellings of any size should be allowed.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	This should be guided by facts and growing trends.
66	Robert Philip Cunliffe	Zero carbon footprint
68 (a)	Mark Jopling	Be strict with the tenure mix of affordable housing. Some developers driven by exploiting the different definitions of affordable housing and relying on Councils having a lack of resourcing for enforcement. Council must also have stricter enforcement of Planning Conditions and s106 agreements.
68 (b)	Mark Jopling	Proper tenure mix of affordable housing. Eliminate difference in CIL for C2 and C3 to stop speculators being incentivised to pretend to deliver a certain type of housing for which demand is limited. Greater enforcement of s106 and Planning Conditions so the community gets guaranteed delivery of what is committed in Planning Applications
Could other forms of housing assist with meeting local needs?		
Of respondents who answered the question: 12 said yes, 3 said no and 6 said don't know [17 did not answer the question]		
28	Alice Shackleton on behalf of The Kew Society	A relatively recent form of housing, co-working, is an imaginative concept that provides bedrooms for young adults to rent, having communal work/living space and garden space. That could provide affordable, well-designed living in the borough where such residents might struggle to buy. It could give them a transition time between, say, college, establishing their work and perhaps buying a property, thus fulfilling a need for somewhere affordable for people to live in this expensive borough.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	If there were more student halls of residents built – it would free up many flats and houses the students now occupy. Need to give consideration of the needs of homeless people – we have very limited supported housing for homeless people. Maybe a need for accommodation on the YMCA hostel model to reduce the large sums paid for emergency bed and breakfast accommodation – as suggested in the 2012 DTZ Evidence Base for Tenancy Strategy (paragraph 127 and 140) https://www.richmond.gov.uk/media/11322/dtz_full_report.pdf The alms-houses model would mean we have a permanent supply of assisted housing for older people. It would also encourage more people to downsize which would free up more family sized units.
31	Tim Catchpole on behalf of MESS	We await results of the Housing Needs Assessment Study.
41	Anthony Swan	Council houses and to rent properties.
45	Sally Beeson	Empty shops or unused buildings near to the town centres.
46 (a)	Joan Gibson	Social Housing
49	Margaret Edwards	Home sharing between people with support needs and people with housing needs, land allocated for intergenerational housing with space , support for co-housing schemes - be a pioneering borough as only one other in whole of London.
50	John O'Brien	Council houses
52	Winston W Taylor	See 27.

Respondent reference no.	Name / Organisation	Detailed comments
62	Richard Woolf on behalf of McDaniel Woolf Architects	Higher density dwellings new transportations hubs.
55	Jon Rowles	<ul style="list-style-type: none"> - More student housing - in the form of halls of residence - could free up a lot of houses and flats in the borough. - Might be a need for supported housing for homeless people, young people having to move out of abusive homes. In the form of a YMCA hostel etc - more starter home being built rather than two double bedroom flats targeted at buy-2-let landlords. - Need to explore 'Discount Market Sales' – where a discount is given against the market rate, and this discount is passed onto all subsequent purchasers. These schemes also result in more favourable mortgage interest rates compared to shared ownership. -The 'gap in the middle' needs to be addressed – currently only the very well off or those on benefits can access secure housing.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Community-led housing and self- and custom-build. Offsite manufactured homes can also contribute to meeting local needs.
63	Carol Rawlings	Social housing; shared housing.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	If new developments are not possible, areas to consider would be residential areas on main roads. Because of the high level of disturbance on these roads, these don't currently make the best permanent homes. However since there's an objective to reduce environmental pollution, these could be a future opportunity. Because of online shops, shops on high streets are becoming empty. If there's a clear policy to keep a minimum of quality shops, the empty sites could become residential.
Would you support housing delivery from small sites, if it is of good design and contributes to local infrastructure?		
Of respondents who answered the question: 19 said yes, 4 said no and 2 don't know [13 did not answer the question]		
28	Alice Shackleton on behalf of The Kew Society	Yes, as long as tall buildings are not sited on such small sites – there should be a maximum limit on height and density.
What other ways could help deliver more affordable housing, in the right locations, given land values and property prices in the borough, and recognise the wider community benefits it brings?		
14	Mayor of London	<p>Affordable Housing</p> <p>The Mayor welcomes Richmond's intention to seek 50% affordable housing from residential development. However, the Mayor has set out a Threshold Approach to affordable housing delivery in Policy H5 of the Intend to Publish London Plan and this should be reflected in Richmond's emerging Local Plan. The Threshold Approach seeks to limit those circumstances where viability evidence is required as part of residential planning proposals by providing the incentive for developers to achieve at least the minimum level of affordable housing to qualify for the Fast Track Route thereby avoiding scrutiny of viability at various stages of development. The Regulation 18 version of the Local Plan should be drafted in line with this approach.</p> <p>It is noted that the Inspector for Richmond's adopted Local Plan found that Richmond's Whole Plan Viability Assessment identified the potential for some sites in Richmond to realise proportions of affordable housing approaching 50%. Therefore, should Richmond wish to set a threshold higher than 35%, this should be evidenced through its viability evidence, including how the threshold will incentivise housing and affordable housing delivery.</p>
17	Hannah Bridges, Spelthorne Borough Council	Given the lack of affordability within the area affordable housing provision should be prioritised within the new Plan. The Local Plan should distinguish between brownfield and greenfield sites in determining its affordable housing provision given that greenfield land generally has lower associated development costs.
19	DP9 Ltd on behalf of London Square Developments	<p>Affordable housing – p. 20</p> <p>The Direction of Travel document acknowledges a shortfall in delivery of affordable housing. Richmond will need to consider further opportunities, including the Site, to deliver affordable housing. The Greggs application seeks to maximise the affordable housing provision and it is proposed to deliver circa 57 units as affordable</p>

Respondent reference no.	Name / Organisation	Detailed comments
		(49% of total units) on site. The former Greggs Bakery Site offers a unique opportunity to deliver a high proportion of affordable units on site including a mix of unit sizes and family homes.
22	Jimmy Wallace, Richmond Athletic Association	<p>The borough's initial assessment of its affordable housing requirements and the suggested policy directions to address these are acknowledged and broadly supported. However, in the spirit of positive planning as outlined in the overall approach to preparing the Local Plan, we do think that the borough should be seeking to develop policies that are taking a transparent and robust approach to <i>understanding</i> as opposed to <i>challenging</i> viability evidence to maximise delivery. In this regard, there is a requirement for the borough work collaboratively with all partners including the Mayor of London, housing associations, developers etc. to work towards delivering the best affordable housing outcomes in the context of a robust but pragmatic discussion around the overall viability of development projects and the many competing interests.</p> <p>In this regard, there may be cases (albeit rare) where a particular development is required to prioritise the delivery of other forms of social infrastructure (e.g. enhanced sports and community facilities) over-achieving the target percentage of affordable housing as identified in policy. Taking a pragmatic approach to such forms of development is likely to deliver the optimum outcome for the borough in terms of the delivery of both affordable housing and other forms of vital social and community infrastructure.</p>
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	We recognise the need for affordable housing in the community given the high property-values and need to have an inclusive community. We encourage key worker accommodation and consideration being given to provision for police accommodation in Richmond given the need for policing of the evening economy and healthcare worker accommodation on account of a relatively high proportion of elderly residents in the area.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>There are models where the discount is maintained in perpetuity; discount Market dales, restriction on staircasing etc. Adopting these methods would see more recycling of affordable housing.</p> <p>Richmond Housing Partnerships (RHP) own a lot of blocks of flats built in the garden city style with pitches roofs. Though most of the flats have been sold on freehold, the roof spaces will still belong to RHP and could be converted into flats. The land by the side of the blocks of flats is likely to be under their control too – and there may be room room to build units there too.</p> <p>Some of the older London County Council style blocks of flats could have their roof space converted into new units. Such developments are common in the private sector and the council need to check to see if RHP still own these roof spaces.</p> <p>[See photo in Appendix]</p> <p>The council could also take a radical approach and start building new council housing directly or set up their own property company. Councils that have previous transferred their housing stock can set up a new Housing Revenue Account and this is easier now that Theresa May's Government abolished the debt cap. See https://www.socialhousing.co.uk/comment/comment/reopening-the-housing-revenue-account--is-it-actually-an-option-63624</p>
28	Alice Shackleton on behalf of The Kew Society	See answer to question above in relation to co-working.
31	Tim Catchpole on behalf of MESS	More priority should be given to affordable housing than to payment of CIL.
40	Jamie Edwards	What benefits? I only see problems with Parking. Overcrowding of swimming pools. Trains etc.
41	Anthony Swan	Renting by Council as above.
42	Jeremy Gill	Compulsory purchasing of properties empty for two years or more.
44	Roger Cutler	Better planning & consideration for surrounding residents.
46 (a)	Joan Gibson	Sites can be rebuilt to provide more efficient use – especially council owned sites. i.e. rebuild Whitton Community centre which is old and inefficient and have flats above it. Fixes the carbon footprint of the community centre whilst giving you some houses with access to infrastructure, green land and good transport links. Rebuild nursery on Whitton Corner in the same manner. Build flats over Sainsbury St. Clares, Homebase and McDonalds (both shops and carparks – carparks can be underground), build flats over Tesco Rugby Road (both shop and carpark), you can do the same with business parks The list is endless.
52	Winston W Taylor	I am not an expert on housing finance. I would need to talk to one to answer this

Respondent reference no.	Name / Organisation	Detailed comments
53	Richard Woolf on behalf of McDaniel Woolf Architects	Get Richmond Housing Partnership to review land use, intensification and replacement over a 10 year strategy.
55	Jon Rowles	If you managed to get the government to change the Broad Market Rent Areas - people on housing benefit may be able to access more housing options. There is also this toolkit from the Community Led Homes which has a variety of measures the council can take, including restricting 'staircasing' so the housing association can buy back more housing. http://clhtoolkit.org/housing/how-ensure-community-led-housing-schemes-are-genuinely-affordable-and-remain-so-perpetuity
56	Rob Kennedy, Environment Agency	The use of brown field sites for new housing.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Making efficient use of land whilst it is awaiting long-term development for meanwhile housing.
63	Carol Rawlings	Prefabricated building is cheap, quick to build, and can be carbon neutral. This is the commonest form of private housing in Japan.
General comments relating to this topic area		
32	Mark Jopling on behalf of UPPFT	The Trust makes the following comments on the "Direction of Travel": Eliminate delta in CIL between C2 and C3 to prevent developers being incentivized to deliver profit maximising tenures not based on social need.
Shaping and supporting our town and local centres as they adapt to changes in the way we shop		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 15 said yes, 3 said no and 5 don't know [15 did not answer the question]		
29	Richmond Cycling Campaign	P22-27 local town centres We want to support local town centres and all the things people choose to do there. However, they're invariably places of high pollution (like Richmond's George St.), and of high perceived danger for those walking and cycling. However, we think any long term vision for the borough needs to put people back into the town centres, and cars at the periphery. None of our town centres should be a place to 'drive through', nor should their space be so dominated by provision for motor vehicles. We think successful town centres are pedestrianised where at all possible, and they support frequent, smaller shopping journeys - and the borough, as part of this strategy, should be discouraging or closing 'out-of-town' style shopping centres built around large car parks.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The council needs to recognise the value of storage to retailers as it cuts down on frequent deliveries and enables the unit to appeal to a broader range of tenants. There is a value in units remaining as large as possible as hiving off parts for housing at the rear reduces the flexibility of the building and means it appeals to fewer potential tenants. Service yards are important too – those in good condition attract good tenants and enable efficient deliveries. When they are blocked by parked cars, or the service areas built over, deliveries then have to be made by from the main road and these result in extra delivery costs. If the they become squalid – with rubbish not bins not managed properly etc they can put off new tenants and this can affect the viability of town centres.
31	Tim Catchpole on behalf of MESS	Yes, but there is no mention of retail parks.
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	HPNF support the strategic aim to develop a self-sustaining borough where shops, services and employment are available locally and the contribution that this makes to community cohesion and reduction in travel. This aligns with Ham and Petersham Neighbourhood Plan (HPNP)2 objectives for Travel and Streets (section 4.1), Community Facilities (Section 5.1), Retail and Local Services (Section 6.1) and the Opportunities for Change section for Ham Parade (Policy O1) and St Richard's Square (Policy O2). This approach, also described as the '20 minute neighbourhood' is being developed and implemented by Melbourne city planning departments, Victoria, Australia ³ and is also in the latest Sustrans Manifesto ⁴ .

Respondent reference no.	Name / Organisation	Detailed comments
		<p>'Adapt to changes' suggests a reactive approach to change which could be complimented by a more proactive approach which aligns with the '20 minute neighbourhood'.</p> <ul style="list-style-type: none"> • Policy for neighbourhood centres should consider the use of local development orders relaxing use class controls so as to allow any street level use which includes an active frontage and does not involve conflict (following "Bad Neighbour" definition) • Policy for local/neighbourhood centres should encourage the upgrade of the pedestrian environment to include landscape, surfaces, access, cycle parking etc., in line with Healthy Streets objectives, as documented in HPNP proposals for Ham Parade and St Richards Square in the Opportunities for Change section for Ham Parade (Policy O1) and St Richard's Square (Policy O2). • Other thoughts include: <ul style="list-style-type: none"> ○ Support for local centres and local traders with a shared management support and accountancy, website design / graphic design package. ○ Supporting community shops / markets with zero rates and access to funding ○ Provision of (franchised?) delivery cargo bike scheme for local shops to residents ○ Improvement of infrastructure for sustainable transport to reach shopping areas. <p>References: ³ London Borough of Richmond upon Thames Climate Change and Sustainability Strategy (2019) Available at: https://www.richmond.gov.uk/media/17738/climate_change_and_sustainability_strategy_2019_2024.pdf (Accessed: 29 March 2020). ⁴ Victoria State Government (2020) 20-minute neighbourhoods. Available at: https://www.planning.vic.gov.au/policy-and-strategy/planning-for-melbourne/plan-melbourne/20-minute-neighbourhoods (Accessed: 29 March 2020)</p>
41	Anthony Swan	What is the Policy? Shaping and Supporting are just words without any proposed actions. Too many shops are charity outlets so should not count as commercial premises.
42	Jeremy Gill	Your policy does not appear to have any direction. The above document, as with most of what you present here is unreadable and meaningless. It conveys almost no tangible information about the subject it purports to cover.
44	Roger Cutler	Vacancy levels are still too high.
46 (a)	Joan Gibson	Agree with most of this – however would like to see business premises at the bottom of flats considered. i.e. Powdermill Lane new development has retail units at the bottom, but these shops are not used that much and ownership changes frequently. It would be better if it was business space attracting jobs into the area.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	We should promote walking, public transport and cycling, and stop use of cars and vehicles across the Borough.
52	Winston W Taylor	Broadly yes but..... I am sure it will be dealt with below
63	Carol Rawlings	I can't read the policy direction. Where is it? There is no link that I can use. Whatever the current direction may be, it needs to be on hold until the full effects of the current virus lockdown can be evaluated.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We think the hierarchy of centres is still useful and that think East Twickenham is correctly classed as a local centre, i.e. not suitable for the biggest stores or for the night-time economy, but intended to provide for largely local needs, including through specialist shops. We don't want to lose retail space, but we support flexibility of use to allow businesses to change how they work and to allow businesses to share space if they think their offerings are compatible. Similarly, it would be good to have more flexibility around conversion to housing. We would like to retain the feeling of a local centre but equally we don't want a permanent array of vacant shops. One approach would be for certain locations to be amenable to conversion eg at the ends of the run of shop frontage in East Twickenham, on the corner of Rosslyn Road or under Poplar Court, where the loss of retail would not change the character of the local centre.
66	Robert Philip Cunliffe	THIS REALLY NEEDS TO BE REWORKED WITH THE IMPACTS of COVID-19, as well as the now dramatic move away from the concept of a "shopping - based" view of urban centres, and the significant shift to web based delivery of good and services. A new model will suggest new business opportunities, in a sustainable way.
68 (a)	Mark Jopling	Per earlier answers - redevelop Big Box parks and space over transport hubs Protect our village High Streets
Do you agree with the spatial strategy proposed?		
Of respondents who answered the question: 12 said yes, 5 said no and 5 don't know		

Respondent reference no.	Name / Organisation	Detailed comments
[16 did not answer the question]		
22	Jimmy Wallace, Richmond Athletic Association	We support the borough's broad approach to its town centre and retail policies. We support the potential policy direction that would encourage more housing in centres to help meet housing need. However, we think that it should also be recognised that additional housing should also be supported in the residential hinterland locations that surround the borough's town centres such as Richmond. This would not alone increase housing supply but will also potentially continue to encourage further vitality on the edges of town centres where a growing residential population will require greater access to retail and other town centre uses.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The problem with the centre hierarchy is that Whitton and Teddington are closer to being small towns, whilst Twickenham and Richmond are larger almost touching metropolitan centres. It would be very difficult for Whitton to accommodate major development – other than the Telephone Exchange site that is unlikely to come to market. Catchment areas for each centre should be defined, as they don't necessarily follow ward boundaries (i.e. a large part of West Twickenham is part of St Augustine's Whitton Parish – and many residents there shop in Whitton and commute from Whitton Station).
28	Alice Shackleton on behalf of The Kew Society	Major developments of retail space should be located in Richmond and Twickenham rather than spread out amongst other centres. This allows a mix of size of development appropriate to each centre, including, of course, other shopping centres as presently designated.
31	Tim Catchpole on behalf of MESS	As above. Yes, but again there is no mention of retail parks.
39	Solomon Green	If traffic is to be reduced or kept to present levels it is desirable that major developments be spread more evenly.
40	Jamie Edwards	LOL. We don't need more retail floor space. Have you actually walked down Twickenham High street recently. Empty units and charity shops! Why on earth in a digital economy are you suggesting more retail space? Bonkers.
41	Anthony Swan	Developments or any sort should be encouraged anywhere an entrepreneur wants to be situated. eg if an office needs parking space then provide it as best possible. Major developments have already gone to Kingston. Richmond, Twickenham (apart Waitrose) and Teddington are the bars and coffee shop areas of the Borough. Encourage the river side with hire boats. Don't Tax new startups or existing businesses too heavily. Make parking available where possible. Encourage near stations.
42	Jeremy Gill	Obviously.....
44	Roger Cutler	Should be spread equally.
45	Sally Beeson	I think Twickenham has more space to play with, but as precedence has now been given to a high rise building at the station, I am worried that more could be built. Where I live in Teddington, I can't see where more development can come. Elleray Hall has already been designated a prime site.
46 (a)	Joan Gibson	You are providing too much retail space in general - retail is reducing. The space should be used for small flexible business, and community instead. Major development should be spread around all areas.
49	Margaret Edwards	All five town centres need good range of shops and services. Im not sure how sustainable this is as I note that Twickenham and Richmond have more empty shops in recent years and quite a few businesses that do not survive. Twickenham seems able to support thriving small shops - fruit/veg, bakers, butchers alongside Waitrose but large low cost supermarkets would be a threat to this.
52	Winston W Taylor	Teddington has plenty of retail floorspace. Not sure about the other town centres but the further work proposed should establish this. Dont think Twickenham needs any more retail floorspace - subject to the proposed riverside development - which could change everything
55	Jon Rowles	The majority of new floorspace should be directed towards Twickenham and Richmond as these are closer to metropolitan centres than any of the others. There would also be a benefit from these two towns having more floor space - in that more services/retail would be offered locally resulting in fewer trips to neighbouring Kingston or Hounslow.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Major development should not be encouraged equally amongst the five town centres. Rather the location of major development should take account of the role and position of the town centre in the town centre hierarchy network.
61	Tom Minns	Focus on Major centres
63	Carol Rawlings	I can't read the strategy as I have no link to it. Why am I being asked questions about things I cannot read about? Major developments must be kept on hold until the effects of the current crisis are fully known. It is absurd to propose a plan at this stage.

Respondent reference no.	Name / Organisation	Detailed comments
66	Robert Philip Cunliffe	see response to q32
<p>Does the existing hierarchy categorise borough centres correctly? Are there too many local centres and parades in this defined centre hierarchy? Local centres, neighbourhood centres and parades are relatively well spread across the borough. However, should we reduce the number of centres in the hierarchy, and/or reduce the amount of/or completely remove designated frontages in some, taking into account their role in meeting local need?</p>		
<p>Of respondents who answered the question: 14 said yes, 7 said no and 3 don't know [14 did not answer the question]</p>		
14	Mayor of London	Richmond's strategic approach to its town centres should take account of the town centre network guidance set out in Table A1.1 of the Intend to Publish London Plan which establishes individual centres' night-time economy classifications, commercial growth potential, residential growth potential and office guidelines classifications. In this regard, Twickenham and Teddington are identified as having important areas of night time economy which are of local significance and Richmond is a more substantial area of regional or sub-regional significance. This should be reflected in the approach taken in the forthcoming Local Plan.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	Fundamentally, we do not disagree with the London Plan's heirarchy of town centres.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	We do not support changing the approach. We feel, however, that the council should produce a deficiency map, so that when sites come up for redevelopment, there is more leverage to insist that new facilities are provided.
28	Alice Shackleton on behalf of The Kew Society	<i>[Are there too many local centres and parades in this defined centre hierarchy? Local centres, neighbourhood centres and parades are relatively well spread across the borough. However, should we reduce the number of centres in the hierarchy, and/or reduce the amount of/or completely remove designated frontages in some, taking into account their role in meeting local need?]</i> No. The existing hierarchy provides protective measures for the smaller but locally useful areas.
31	Tim Catchpole on behalf of MESS	As above . Yes, but again there is no mention of retail parks.
41	Anthony Swan	If a business wants to trade then let it. It will only succeed if there is the demand. Pop up shops/businesses has already been mentioned and should be encouraged. Reducing centres means moving businesses on. Larger developments like Lidl should be encouraged because they are in the right place. Because there is a big enough footprint and useful parking. Morrisons tried in Teddington, failed, and moved on. Let economics answer the above questions so long as any development is appropriate for its area.
42	Jeremy Gill	Utterly meaningless. A disgraceful document.
44	Roger Cutler	Too many road closures as the result of parades & fairs.
45	Sally Beeson	If a parade of shops is in decline, then maybe its use could be changed to accommodate new building of fewer shops and flats
46 (a)	Joan Gibson	No change needed
47	Trevor Rowntree	I think the local centres are very important. I live near a local centre and feel very under catered for. More should be done to encourage the growth of local centres rather than town centres.
49	Margaret Edwards	Having lived in St Margarets and Kew I believe there is value in trying to sustain local parades to reduce the need to travel for everyday shopping. In Strawberry hill the parade is limited but has some useful stores/food outlets.
51	Su Bonfanti	I think the hierarchy of centres is still useful and that East Twickenham is correctly classed as a local centre, i.e. not suitable for the biggest stores or for the night-time economy, but intended to provide for largely local needs, including through specialist shops. Generally I think people here don't want to lose retail space, but I agree there should be flexibility of use to allow businesses to change how they work and to allow businesses to share space if they think their offerings are compatible. Similarly, it would be good to have more flexibility around conversion to housing. The question is how to retain the feeling of a local centre without ending up with a

Respondent reference no.	Name / Organisation	Detailed comments
		permanent array of vacant shops. One approach would be for certain locations to be amenable to conversion eg at the ends of the run of shop frontage in East Twickenham, on the corner of Rosslyn Road or under Poplar Court, where the loss of retail would not change the character of the local centre.
52	Winston W Taylor	Not sure. Again the further work may inform this.
55	Jon Rowles	If the council are not careful, we will only be left with coffee shops, nail bars and takeaways. In smaller town centres like Whitton we may need more areas designated as key retail, as it's not just about percentages but absolute numbers too.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	As your local centres, neighbourhood centres and parades are relatively well spread across the borough they are significant in contributing to the borough's achievement of both sustainable development and reduction in carbon emission given that they enable local communities to access shopping facilities mostly by walking, cycling or public transport.
63	Carol Rawlings	The local parade in Ham Street was identified for improvement 24 years ago when I first moved into the borough but nothing has been done about it. At present it is an eyesore and there are retail spaces that have been unoccupied for years. This is a parade that needs redeveloping with a reduced number of shops.
66	Robert Philip Cunliffe	TAKE THIS OPPORTUNITY to have a radical rethink to come up with a minimum impact sustainable strategy
68 (a)	Mark Jopling	Each community should nurture its own High Street and local traders.
69	Geoff Bond on behalf of Ham and Petersham Association	You seem to have forgotten that Ham Parade is a critical centre. Ashburnham road is also important. Without these flourishing more car journeys will be made and the local community with diminish in cohesion and wellness.
If the evidence supports a more flexible approach to retail policies, what other uses should be encouraged? - Please give us your comments here:		
7	Michael P Martin, Milestone Commercial	Can I suggest a meeting with local commercial property specialists to discuss the evolution of the High Streets and the protections therein sought by the local plan. The commercial property agents are on the coalface of keeping the local parades busy against overwhelming market conditions and we feel it best to work in partnership with LBRUT to expand the knowledge base, in both directions, as the parades move ever further away from sustainability as traditional retail.
14	Mayor of London	Much of Richmond's intended approach towards the borough's commercial centres and hubs is based on traditional ways of managing town centre development. Richmond should take into account the changing nature of retailing and consumer behaviour. There has been a general decline in retailing across London with high street operators losing market share to online traders. The impacts of these changes have been considerable and many high-street operators are re-establishing themselves through new business models. To maintain vibrancy in London's town centres, the wide range of town centre uses identified in Intend to Publish London Plan SD6 should be considered acceptable in Richmond's town centres including office development, residential, social infrastructure, cultural uses and leisure uses.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	We cannot be precise about our views on the balance of uses in Central Richmond without the evidence the Council says it will be preparing. It seems highly probable that the current corona virus epidemic will have a major impact on retail, casual dining and the evening economy. Retail has been under stress for several years due to internet shopping and high rates and rents. The leisure sector has been increasingly under stress due to Equity Capital investors taking over of restaurant-chains and funding this with high levels of debt, discounting of meals, rising rents and staffing costs, thin profit margins and over capacity. Many already weak retail and leisure businesses will not survive. This raises major issues about commercial uses in Central Richmond in the future and the rate of economic recovery. Increasingly people may work from home or remotely and office use may decline. As discussed in the theme 'Protecting what is special', Richmond may best be served by focussing on its cultural and heritage assets including the Riverside and the Green. The Richmond Theatre and Orange Tree Theatre are already valuable assets. Perhaps increased provision for the visual arts and performing arts in conjunction with education in the arts could be a viable focus going forward. We are not in favour of relaxing the approach to retail planning policies and reducing the importance of the shopping-frontage policies, especially in George Street. We are not in favour of introducing large-footplate retail in Central Richmond. For example, major retail development at Richmond Station in our view is not acceptable and would put at risk the viability and vitality of existing retail activity in Central Richmond. We believe it essential that cumulative impact constraints should remain in both planning and licensing policy so as to avoid any increase in the anti-social behaviour, public nuisance and crime and disorder arising from alcohol consumption in Central Richmond, on the Riverside and on the Green.

Respondent reference no.	Name / Organisation	Detailed comments
		<p>We are most concerned at the prospect of any relaxation in the uses-classes, whereby planning control over restaurant and bar capacity is weakened. We are concerned at the possibility of permitted development rights being extended to the change-of-use of existing retail premises. We believe the marketing rule may become largely redundant but there should still be control over the future uses of Central Richmond.</p> <p>When making applications it is important that the applicant identifies all buildings within reasonably close proximity that are Listed or Buildings of Townscape Merit and the applicant should explain how the proposed development will not be detrimental to these buildings in respect of noise, pollution, etc.</p> <p>We continue to be concerned with the need for the Council to control noise from patrons of premises in the heart of Richmond, especially during the evening economy.</p> <p>We continue to be concerned with the need for the Council to control noise from extractors and other M+E plant supporting commercial premises in proximity to residential properties.</p> <p>We continue to be concerned with the need for the Council to control fumes and cooking-smells from commercial premises in proximity to residential properties. It is unclear how the Internet will effect retail activity in Richmond long-term, but clearly the changing market will need to be monitored and projections will need to be included in decision-making.</p> <p>We believe the policies in the current Local Plan cover these issues adequately and if further amplification is required we would suggest that it could be dealt with by subsidiary planning tools. We are concerned that the Direction of Travel document seems to suggest relaxation of existing controls that are essential to maintaining the health of Richmond.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Cultural and social uses such as art galleries, performance spaces and permanent market pitches.
28	Alice Shackleton on behalf of The Kew Society	As retail shopping switches increasingly to online shopping (this may become even more prevalent after the Coronavirus experience) it would be beneficial and, we think, welcomed by residents, for service uses such as physiotherapy, osteopaths, spas, beauty shops and would keep the area as a living area visited by residents. It seems inevitable that high street retail shopping will go through an even more severe decline – better to replace shops with service uses, than turn them into residences where the community use will be lost.
31	Tim Catchpole on behalf of MESS	Discourage retail park development as it generates too much traffic.
39	Solomon Green	There should be flexibility between office and residential use granted in town centres but not in predominantly residential areas. While, at present, it pays landlords to switch from office to residential, it was within the last forty years that the Council were anxious to resist a demand from landlords to switch the other way.
40	Jamie Edwards	Community centres. Youth clubs. New Libraries. Health and well being businesses / Gyms
41	Anthony Swan	Which would we prefer in Twickenham... Poundland or a shared workspace café? One is tat the other is a nursery for self starters, micro businesses, clubs and business communication. So Yes to scope for community centres. Office business rates and rents should be more flexible and accommodating. Areas should exist for retaining offices but make them affordable. Cafes are fine as is late opening but a night time economy is not. Even Magaluf is being more responsible and the majority of Families living in the area would not want that distraction.
42	Jeremy Gill	Again, meaningless waste of people's time even to read this, let alone write it.
44	Roger Cutler	Too many cafes. More re4tail required.
45	Sally Beeson	I think that there are too many coffee shops/cafes in my area and that local offices and businesses are important, as they bring trade into the small shops which are struggling and into the local economy. If there is no local business then an area just becomes stagnant - we need shops, businesses and housing to make a thriving and forward looking local area - all of these things

Respondent reference no.	Name / Organisation	Detailed comments
46 (a)	Joan Gibson	We should continue providing protection for post office – and add in small shared bank premises (or something of the sort). You should pedestrianise the main town centres as this makes them more attractive and increases footfall.
52	Winston W Taylor	Community use - The Elleray Hall proposals are important here - but this is just off the main Teddington shopping centre. I think Teddington has sufficient cafes and restaurants.
53	Richard Woolf on behalf of McDaniel Woolf Architects	An honest review of decommissioned and redundant retail sites. Both high street and larger shed sites.
55	Jon Rowles	Quite a number of key shopping frontage units have been lost to non-retail. I would argue that you need to check the numbers lost since the last plan and 'top' up the number with new designations.
56	Rob Kennedy, Environment Agency	café culture and drinking establishments
58	Michael Atkins, Port of London Authority	The PLA's Vision for the Tidal Thames (The Thames Vision) (2016) includes the goal to see more people people coming to enjoy the Thames and its banks. As such the PLA would broadly support instances
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	All uses which can co-locate and uses which meet community needs.
63	Carol Rawlings	Reinstatement of the local police station in Ham.
66	Robert Philip Cunliffe	INSIST that "true" dwelling space provisions MUST be applied to concessions from old "re-purposed" office space - otherwise this is storing up even more problems for the next generation
68 (a)	Mark Jopling	Flexible office space is the future, CV-19 taught many jobs can be done productively from home or at least without travelling to central London
68 (b)	Mark Jopling	Get ahead of the decline Big Box retail and encourage our local High Streets. Richmond can be a model Borough, we have many advantages to be progressive.
70	Melissa Compton-Edwards	Post Covid-19, businesses and employees may take a more favourable view of home- working, which would be beneficial for the environment, resulting in less road congestion and air pollution. However, not everyone lives somewhere suitable for home working, and people can feel socially isolated working from home, so it would be desirable if residents' local high street offered drop-in or bookable communal work hubs with cafe facilities.
Would housing, including residential on upper floors, work if located next to other (potentially noisy or smelly) uses in centres work? Where might a relaxed policy to encourage more housing apply? Should it, for example, apply in designated frontages?		
22	Jimmy Wallace, Richmond Athletic Association	See comments above.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<i>Comments as above re using upper floors for housing:</i> We expect there to be increasing use of Central Richmond for residential use, especially above ground floor retail and other uses. Adaptation though may be difficult given the historic nature of many of the buildings. It may be worthwhile developing specific policies to return buildings to their original all residential use (with careful reference to historic photographs, etc.) especially in the non-core area such as Hill Rise/Richmond Hill where there is photographic evidence of how these buildings once looked as residences before shops were added in the 20th century. We urge there to be evidence prepared to help assess the balance in Central Richmond between residential, retail and office use. See comments on controlling smells and noises above.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Agent of change principle is the issue here. New developments should lead to bars and clubs being forced to close – unless the noise they are making is already unreasonable / illegal. This could have a negative cultural impact.

Respondent reference no.	Name / Organisation	Detailed comments
31	Tim Catchpole on behalf of MESS	Yes, there could be more housing (apartments) in our town centres.
39	Solomon Green	Yes. Especially if it is aimed at single occupants.
40	Jamie Edwards	NO MORE PEOPLE NEEDED! It just creates even more pressure on failing infrastructure.
41	Anthony Swan	Housing would work anywhere depending on the rent etc costs. I would not want housing on designated frontages unless most of that frontage is failing.
42	Jeremy Gill	Housing in houses, offices in office buildings. It's not Shoreditch.
44	Roger Cutler	There should be a more relaxed policy on housing. Developers need to take more responsibility for what they sell.
45	Sally Beeson	Yes a good idea
46 (a)	Joan Gibson	Not sure fully what you are asking here, but flats should be above businesses as this is efficient land use and noise or smells dealt with in the design of the build.
49	Margaret Edwards	People do need to be able to open windows for ventilation so double glazing etc only works in Winter to block out noise (unless you have air conditioning and this is not sustainable) People might exchange some noise for handy location especially if there is access to green space close by - Richmond Green for example.
52	Winston W Taylor	Depends on the further work being done. In principle I have no objection.
53	Richard Woolf on behalf of McDaniel Woolf Architects	With over 50% of space above retail sites vacant, it's more an issue of fire engineering and acoustic segregation.
55	Jon Rowles	Agent of change principle is the issue here. New developments should lead to bars and clubs being forced to close – unless the noise they are making is already unreasonable / illegal. This could have a negative cultural impact.
56	Rob Kennedy, Environment Agency	It should apply in designated frontages.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Residential use of upper floors should be encouraged and maximised to increase housing supply and meet local housing needs especially for single persons or couples without children.
61	Tom Minns	Yes
63	Carol Rawlings	It might result in being more noise and disturbance by delivery lorries at night.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	The effort of the government should be to make town centres less noisy (road resurfacing with special type of treatment, being careful with bins collection times, encouraging silent buses, etc.) and then yes to encourage more housing above shops. All residents should have minimum standards to live in which complies with WHO policies in terms of environmental pollution. Nobody should be asked to compromise on key standard of living (noise, etc.).
66	Robert Philip Cunliffe	Yes
68 (a)	Mark Jopling	As a last resort though local High Streets should be encouraged as trading and social hubs before being converted to residential.
68 (b)	Mark Jopling	Yes
In terms of developing centre strategies and visions, what should they include? How should these relate to local and wider transport accessibility? Your views in relation to specific centres are welcomed.		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<p><i>Comments as above in other sections:</i></p> <p>We cannot be precise about our views on the balance of uses in Central Richmond without the evidence the Council says it will be preparing. It seems highly probable that the current corona virus epidemic will have a major impact on retail, casual dining and the evening economy. Retail has been under stress for several years due to internet shopping and high rates and rents. Respondent reference no.	Name / Organisation	Detailed comments
		<p>We are not in favour of relaxing the approach to retail planning policies and reducing the importance of the shopping-frontage policies, especially in George Street.</p> <p>We are not in favour of introducing large-footplate retail in Central Richmond. For example, major retail development at Richmond Station in our view is not acceptable and would put at risk the viability and vitality of existing retail activity in Central Richmond.</p> <p>We believe it essential that cumulative impact constraints should remain in both planning and licensing policy so as to avoid any increase in the anti-social behaviour, public nuisance and crime and disorder arising from alcohol consumption in Central Richmond, on the Riverside and on the Green.</p> <p>We are most concerned at the prospect of any relaxation in the uses-classes, whereby planning control over restaurant and bar capacity is weakened. We are concerned at the possibility of permitted development rights being extended to the change-of-use of existing retail premises. We believe the marketing rule may become largely redundant but there should still be control over the future uses of Central Richmond.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>Hounslow Council in their draft West of London Plan want to link up Hanworth with Whitton via a cycle route along the main roads. Each town centre should have good quality & safe cycle routes planned for the communities they serve.</p> <p>Need to provide secure cycle storage near all stations – for example the cycle storage at Whitton Station is open to all comers thus its targeted by thieves on a regular basis and this discourages commuters using a bike for the first leg of their journey.</p>
31	Tim Catchpole on behalf of MESS	They should include more local business space to discourage commuting to central London and make up for the loss of such space to housing that has occurred in recent years under 'permitted development' rights.
40	Jamie Edwards	Get rid of business rates in the Bourough. That would totally rejuvenate the high streets.
41	Anthony Swan	<p>A centre strategy should include an ICE RINK as was lost in Richmond. There are sites that would work.</p> <p>Support sports, golf clubs and gyms. I know the excellent staff at the Council do this already.. but more could be done.</p>
42	Jeremy Gill	Once again, blindingly obvious. Some shops, some roads leading to them.
44	Roger Cutler	Car parking. It is no good building or developing anywhere if people won't visit because they can't park a car.
45	Sally Beeson	I think there has to be a common sense approach here - some car parking is a must, not everyone can shop on foot all the time. If there is such difficulty parking as in Twickenham, I tend not to shop there. I shop on foot locally as much as I can.
46 (a)	Joan Gibson	<p>Need a full review of public transport. I regularly wait 25minutes+ for buses to Whitton when I see other frequent services go past me half empty. The Whitton bus then comes packed to the gills. If a driver is off sick (which it appears many are always on sick) then drivers need to be taken off more frequent services to ensure the less frequent ones are covered. Trains to Whitton although 4 an hour come grouped together so the net effect is, they arrive every half an hour. Bus timetables need to be linked to train timetables, so when you leave the train you can get a bus quickly. If there are road works buses, cycles and pedestrians need to be given their own route so the road works do not affect their timetables. Road works must be done in a more joined up manner. When the exit to the A316 at Hanworth was closed by TfL they routed the traffic through Whitton but refused to change the traffic light sequencing at the Whitton A316 junction to allow the traffic (which included buses) to disperse. Instead we had miles of traffic jams which again made public transport unreliable.</p> <p>Cars must be stopped from crowding pavements. In Church Street Twickenham even, a single pedestrian cannot walk along the pavement as the pavements have been made narrow due to car parking spots (cars often then park on the kerb). Cars do not even need to access this road – they can use the road next to York House. Ban the car on roads such as this and town centres.</p>
47	Trevor Rowntree	I live near Heathside (Powder Mill Lane) and I feel it needs investment. The Duke of York has been closed for a long time. This should be reopened by offering reduced rates to any chain willing to reopen it. The council should investigate some money in developing this area to make it more pleasant which would hopefully encourage better establishments to open shops in this area. A public house is a key part of a local centre.
49	Margaret Edwards	As crossing the river creates traffic it is desirable to have sufficient services and housing in each centre. The use of private cars to transport children to and from school needs to be reduced, possibly by incentives for parents or schools such as increased bus frequency at key times, time banking schemes that encourage volunteers to accompany small children on foot, bike or bus, car pooling.

Respondent reference no.	Name / Organisation	Detailed comments
52	Winston W Taylor	Not enough time to do the research to answer this.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Connectivity , viability , place making and architectural delight.
55	Jon Rowles	- People who live at the top end of Heathfield Ward have no direct bus service to Whitton High Street and this cuts off a lot of elderly people from their community. - Need to develop cycle routes into Whitton Town Centre to encourage more of an active lifestyle. There is only one part-time cycle route near the high street, and that only operates early in the morning for Twickenham School pupils. - If the telephone exchange comes up for redevelopment - it should be used to extend the town centre and provide extra shops and offices.
63	Carol Rawlings	The development of Ham would lead to a change of character for the area, decreased open space and a dangerous and polluting increase in road traffic. The roads are narrow and choked by residential parking already. Even if basement parking lots were built into the plan, the increase in traffic would be unacceptable. There are blind corners in some roads that are already dangerous.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	For East Twickenham, it's critical that they include the policies from the Village Plan that are still relevant and consider any development in context of the Conservation area and buildings of township merit. The approach needs to be holistic. The Local plan should also enable to unlock the right amount of budget to significantly improve high streets which are in the most need. East Twickenham is in dire need of improvement.
69	Geoff Bond on behalf of Ham and Petersham Association	They should look at all wards, but Ham and Petersham, the most inaccessible in terms of transport has been forgotten.
70	Melissa Compton-Edwards	I agree with Richmond Cycling Campaign that any long-term vision for the borough needs to make our town centres people rather than car-centric. None of our town centres should be a place to 'drive through', nor should their space be so dominated by provision for motor vehicles. I think successful town centres are pedestrianised where at all possible, and they support frequent, smaller shopping journeys - and the borough, as part of this strategy, should be discouraging or closing 'out-of-town' style shopping centres built around large car parks.
Should the amount of key shopping frontages be reduced and/or should secondary shopping frontages (where some change of use is already allowed) also be reduced or removed altogether? Do we need to protect shopping in just the core areas which correspond with designated key shopping frontages?		
7	Michael P Martin, Milestone Commercial	Please see comments above.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<i>Comments as above in other sections:</i> We are not in favour of relaxing the approach to retail planning policies and reducing the importance of the shopping-frontage policies, especially in George Street. We are most concerned at the prospect of any relaxation in the uses-classes, whereby planning control over restaurant and bar capacity is weakened. We are concerned at the possibility of permitted development rights being extended to the change-of-use of existing retail premises. We believe the marketing rule may become largely redundant but there should still be control over the future uses of Central Richmond.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to fully review it – and not just take the predetermined view that it needs to be reduced. Indeed, many residents in Whitton want the percentage of retail units to increase in Whitton.
31	Tim Catchpole on behalf of MESS	Key shopping frontages and secondary shopping frontages should be retained.
39	Solomon Green	Core retail comparisons are probably less necessary as many, if not most, compare online.
40	Jamie Edwards	You should make it compulsory to have high quality, colour coded shop fronts that are kept in acceptable condition.
41	Anthony Swan	Some key frontages are important for maintaining the character of a shopping or High street. Some are not. Let economics mainly see which shops remain, move to a pop up shop somewhere, which should be encouraged.

Respondent reference no.	Name / Organisation	Detailed comments
42	Jeremy Gill	Do you mean that our High Streets should have some shops on them? Yes.
44	Roger Cutler	True competition should be allowed. Most importantly, retail units should be desirable & profitable places for people to work.
45	Sally Beeson	Two small and very successful shops in Teddington have recently closed, because: The landlord increased the rent and leasehold years Local people would go into one shop and buy online instead - thereby increasing van traffic many fold
46 (a)	Joan Gibson	The retail units at bottoms of flats need to be reduced and used for community and business space
49	Margaret Edwards	See 34 above.
52	Winston W Taylor	Again, further research is required to answer this. In general I think we ought to reflect demand from the most vulnerable and ensure the shops they depend upon are supported.
53	Richard Woolf on behalf of McDaniel Woolf Architects	We need to reduce retail and decommission it strategically , rather than just let it wither.
55	Jon Rowles	The main threat town centres face is the near-total loss of retail - and if anything we need more protections not less.
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	The amount of key shopping frontages should not be reduced and/or the secondary frontages reduced or removed altogether unless account is taken of market signals justifying their reduction. The amount of key shopping frontages define the extent of a town centre's important shops where the dominant retail facilities and footfall are concentrated. Core Shopping areas which correspond with designated key shopping frontages should be protected.
61	Tom Minns	Keep the spread we have. It reduces travel.
63	Carol Rawlings	The shopping parade in Ham Street/Ashburnham Road needs to be updated and the number of units decreased. At present it is an eyesore with several units unoccupied for years.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Shopping frontage should be maintained as much as possible to contribute to the livelihood of the neighborhood and key "retail needs" indispensable to the area should be identified and maintained.
66	Robert Philip Cunliffe	adopt a wider spread of convenience based shopping centres, and rationalise the delivery systems driven by the rapidly expanding use of internet based shopping, to avoid endless road use by competing internet companies.
68 (b)	Mark Jopling	As a last resort, thriving local High Streets are essential social hubs. The response to CV-19 has started to rebuild a stronger sense of community.
Should the 'key shopping area' relating to the operation of permitted development rights continue to be both key and secondary frontages?		
Of respondents who answered the question: 6 said yes, 2 said no and 10 don't know [20 did not answer the question]		
Is it appropriate to continue to protect local top-up shopping facilities?		
Of respondents who answered the question: 20 said yes, 1 said no and 5 don't know [12 did not answer the question]		
Is it appropriate to continue to protect local top-up shopping facilities? - Should this protection only extend to food shops and/or some selected types of businesses?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<i>Should this protection only extend to food shops and/or some selected types of businesses?</i> They are extremely important to older people, who otherwise would only make it to the town centre once a week – or in some cases never get out of the house at all.
31	Tim Catchpole on behalf of MESS	Yes, in order to minimise travel.
41	Anthony Swan	I dont know what protection they get. Generally let economics decide.

Respondent reference no.	Name / Organisation	Detailed comments
42	Jeremy Gill	I don't know what you mean by that.
44	Roger Cutler	No
45	Sally Beeson	I think all small local shops need protecting
49	Margaret Edwards	Yes
52	Winston W Taylor	Not sure
55	Jon Rowles	No - we need to protect shops
56	Rob Kennedy, Environment Agency	Yes
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	This protection should extend to essential goods shops and post office facilities.
61	Tom Minns	Yes
63	Carol Rawlings	Yes
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Food shop
66	Robert Philip Cunliffe	All
69	Geoff Bond on behalf of Ham and Petersham Association	This should be all shopping needs to make sure we have a thriving community.
Is it appropriate to continue to protect local top-up shopping facilities? - Is 400 metres an appropriate proxy for easy walking distance?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Yes, but where possible it should be shorter – to take into account that people are living much longer than when the policy was originally brought in.
28	Alice Shackleton on behalf of The Kew Society	Yes
31	Tim Catchpole on behalf of MESS	For most it would be more like 800m
39	Solomon Green	It could be doubled without any loss.
41	Anthony Swan	No. But Yes for a fir oerson and when its not belying down with rain.
42	Jeremy Gill	Do you mean can most people walk 400 metres? Why not say so. Yes
44	Roger Cutler	Yes. It is usually much further.
45	Sally Beeson	Yes
46 (a)	Joan Gibson	Too close - Whitton has just had a KFC and Dominos open in the High Street which 3000 school children can access
49	Margaret Edwards	yes
52	Winston W Taylor	No. Too much. I can now do 400m easily but after a spell in hospital at the end of last year I could not do 100m for a couple of months.
55	Jon Rowles	EU policy research which suggests a 300m walk to basic services is more appropriate.
56	Rob Kennedy, Environment Agency	Yes

Respondent reference no.	Name / Organisation	Detailed comments
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Yes
61	Tom Minns	Yes
63	Carol Rawlings	Yes
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Yes
66	Robert Philip Cunliffe	no - 600 metres
69	Geoff Bond on behalf of Ham and Petersham Association	yes
Is it appropriate to continue to protect local top- up shopping facilities? - Should we continue to provide additional protection for shops selling essential goods and Post Offices generally?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Yes we strongly support this. They provide great value to the community.
28	Alice Shackleton on behalf of The Kew Society	Yes
31	Tim Catchpole on behalf of MESS	Yes
39	Solomon Green	Yes
41	Anthony Swan	Yes
42	Jeremy Gill	Yes of course. Why wouldn't you?
44	Roger Cutler	Definitely. Ensure there are banks present.
45	Sally Beeson	Yes
46 (a)	Joan Gibson	Yes and extend to banks
49	Margaret Edwards	yes
52	Winston W Taylor	Yes
55	Jon Rowles	Yes - these are extremely valuable, esp for the elderly
56	Rob Kennedy, Environment Agency	Yes
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	Yes, because they support a sustainable and inclusive communities by making it possible for the elderly, women with children in pushchairs, people with disability and other families to meet top up shopping needs by Thewalking or cycling.
61	Tom Minns	Yes
63	Carol Rawlings	Yes
64	Johanna Eschbach on behalf of Richmond	Yes

Respondent reference no.	Name / Organisation	Detailed comments
	Bridge Residents Association	
66	Robert Philip Cunliffe	no
68 (a)	Mark Jopling	Yes
68 (b)	Mark Jopling	Yes
69	Geoff Bond on behalf of Ham and Petersham Association	yes
Do we need to continue to protect pubs as strongly?		
Of respondents who answered the question: 14 said yes, 8 said no and 3 don't know [13 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	In the more suburban parts of the borough, such as Heathfield Ward there is now only one open pub and one community association bar which mean the majority of the population either have to catch a bus or a taxi to go out and socialise. This is probably prompting a number of our younger residents to move out of the area. The test shouldn't be – do they currently offer food – but could it be reasonably provided. Otherwise you are creating an easy way for a developer to move in and make windful profits at the cost of the local community.
31	Tim Catchpole on behalf of MESS	It is better that pubs should serve food as well as drink. The pubs that remain are now gastro pubs.
39	Solomon Green	I do not know of any that do not sell some form of food even if it is only crisps.
41	Anthony Swan	But give the local community the chance to take them over. If that doesnt happen allow change of use.
42	Jeremy Gill	There are too any pubs already. We don't need to support them.
44	Roger Cutler	Too many pubs are closing.
45	Sally Beeson	These pubs could be used as dwellings perhaps as more people drink at home
46 (a)	Joan Gibson	Difficult one - if pubs are struggling that do not offer food - they need to offer food (they are a private business). The Duke or York at the end of Powdermill Lane was very unpleasant and attracted bad behaviour and drug dealing. It is good that this is going. Well run popular pubs stay open.
47	Trevor Rowntree	My local pub has been closed for a long time. I now do not have a pub in easy walking distance. This served as a community centre and the area is worse off since it has closed. What is being done to encourage the re-opening of the Duke of York pub?
49	Margaret Edwards	Pubs need to find ways to be of value, as fewer people drink alcohol and dont want to pay high prices for soft drinks the pubs need to offer social activities, free space for community groups - if they do this they should be protected
52	Winston W Taylor	At the moment unscrutable pub companies deliberately run down pubs by raising rents and other means and then sell to developers giving evidence that the pub is not viable. Developers then purchase knowing that the Council will refuse planning for two years but then grant it.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Stop the romantic nonsense of the ' happy boozer '.... the pub has seen its day. It was a 19th Century affectation
55	Jon Rowles	It has become common for developers to buy pubs and then refuse to let the out to try and get around the marketing requirements
60	Kingsley Izundu, The Royal Borough of Kingston upon Thames	They are community facilities where people meet to socialise.
63	Carol Rawlings	They are a valuable social gathering centre. Alternatively, require coffee shops to stay open.
68 (a)	Mark Jopling	Pubs to be encouraged to be more social hubs if the demand for their traditional product has declined in that neighbourhood
68 (b)	Mark Jopling	Pubs should be encouraged to think what their local community needs

Respondent reference no.	Name / Organisation	Detailed comments
69	Geoff Bond on behalf of Ham and Petersham Association	all pubs with and without food are struggling. Key is to remove the financial incentive to convert pubs to other uses
Are the locally set thresholds for impact and sequential tests still appropriate?		
Of respondents who answered the question: 4 said yes, 3 said no and 13 don't know [18 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The more pubs that are lost – the more important the remaining ones are.
46 (a)	Joan Gibson	I have no idea what these are - but find LBRuT planning accept and support developers results on sequential tests when they know they are incorrect - LBRuT know for THS Castell Hospital site is sequentially better than Bridge Farm, but still supported Bridge Farm site. What will LBRuT do to fix this.
49	Margaret Edwards	The doc is too long to look at all the detail
53	Richard Woolf on behalf of McDaniel Woolf Architects	Economic viability testing should end ... it's no longer fit for purpose.
60	Kingsley Izundu on behalf of The Royal Borough of Kingston upon Thames	The level of locally set threshold for impact and sequential tests should be backed by research evidence to justify it.
How long should shops and pubs be marketed before a change of use is allowed if the proposal is contrary to policy?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Two years is too short as landlords, and some large chains are prepared to keep a site empty as change of use can result in an uplift of value in excess of two years loss rent.
39	Solomon Green	For shops a maximum of six months but only if the asking rent is not deliberately set too high as is the case when landlords wish to obtain permission for change of use. Otherwise, say, five years (or more)..
41	Anthony Swan	Ah.. these can be run down on purpose and marketed at unrealistic prices related to their now lower turnover. A realistic view should be taken , maybe audit and spot checks, to confirm any claim of hopeless business conditions. A value judgement re length of time may then be made. Also ask the locals...
42	Jeremy Gill	Do you mean how long they should be allowed to stay vacant? Why not say so. 6 months.
44	Roger Cutler	The least time possible.
45	Sally Beeson	No idea
46 (a)	Joan Gibson	4 months
47	Trevor Rowntree	As long as required. Investors seem to be able to purchase properties and market them for an inflated price to force a change of use. Shop/pub change of use should no longer be granted to ensure this is not allowed to continue. If the shop/pub is not sold then sales should be forced and incentives should be offered to encourage the current use rather than accepting change of use.
52	Winston W Taylor	This must depend on the facts of each case. But there should be a signal to developers that it will not be allowed as being contrary to policy. Sham reports showing that a premises is unviable with designated usage should be examined much more critically than in the past.
53	Richard Woolf on behalf of McDaniel Woolf Architects	1 year.

Respondent reference no.	Name / Organisation	Detailed comments
55	Jon Rowles	Two years is too short - and most of the vacancies recorded in our high streets are down to landlords keeping units empty so they can gain a change of use and thus windfall profit. Maybe extend it to three years - ensure that its offered at the going rate from the outset.
56	Rob Kennedy, Environment Agency	1 year
60	Kingsley Izundu, Royal Borough of Kingston upon Thames	One year
61	Tom Minns	6months
63	Carol Rawlings	I don't know. As I can't easily access the local plan, it is difficult to know what you are referring to.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	At least 2 months but more than the time, these changes need to be shared with the relevant associations (including neighbours) to make sure the community can properly assess.
66	Robert Philip Cunliffe	6 months
69	Geoff Bond on behalf of Ham and Petersham Association	Pubs should a minimum of five years but change of use to should not be to residential but to other community uses after this time.
Should a policy be developed for redevelopment of existing retail parks/stores in less central locations?		
Of respondents who answered the question: 15 said yes, 4 said no and 4 said don't know [15 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Yes – some of the out of town 'sheds' are hugely space inefficient. Shops / offices should be retained on lower floors – with flats above. We need genuine mixed-use development – so maybe insist that new offices are included to address the shortage in the borough. Large supermarkets such as Sainsbury's St Clare's could become mixed use and provide much needed housing units and workplaces above the footprint of the existing floor.
32	Mark Jopling on behalf of UPPFT	Creatively re-build declining "big box" retail sites, car parks and railway stations to enable more housing without encroaching on green space.
28	Alice Shackleton on behalf of The Kew Society	Retail parks are prey to developers who will maximise economic gain by maximising density. It is essential that such retail parks are subject to a policy of redevelopment, focusing on height maxima (not tall buildings), provision of significant green space (for health and environmental reasons) and provision of on-site social infrastructure (usually dealt with by legal agreement).
31	Tim Catchpole on behalf of MESS	Yes, they take up a lot of valuable space and should be discouraged.
35	Alice Roberts, CPRE London	Surface and multi-storey car parks, along with low-rise retail sites, should be redeveloped to make more efficient use of space and discourage car trips. <ul style="list-style-type: none"> • Surface car parks are an inefficient use of space and encourage non-essential car journeys. In Annex 1 a number of sites are identified which could be redeveloped to find space for housing and commerce and at the same time reduce reliance on cars. • These sites are viable and much more sustainable alternatives to Green Belt. [See Annex 1 in the Schedule of Call for Sites Responses]
41	Anthony Swan	You don't need a policy for this. Judge it on a case by case basis but generally let economics and transport decide.
42	Jeremy Gill	I recommend you don't mess with this, you will only make people angry.
44	Roger Cutler	Only if they are properly planned & accessible. Should not, however, replace high streets.

Respondent reference no.	Name / Organisation	Detailed comments
46 (a)	Joan Gibson	If a shop is not working in a central location - it will not work in a less central location
53	Richard Woolf on behalf of McDaniel Woolf Architects	We are reordering land use at a much slower rate than in previous generations. Take a look at the long view. Respond quickly before land becomes redundant.
55	Jon Rowles	Most of these are very wasteful of space. The development could include local shopping facilities, offices and some housing.
60	Kingsley Izundu, Royal Borough of Kingston upon Thames	Such policies should encourage mixed use incorporating housing or for housing densification depending on context and constraints.
63	Carol Rawlings	Retail parks encourage people to use private vehicles. They could be redeveloped for social housing.
68 (a)	Mark Jopling	See above Massive opportunity to re-think the space dedicated to "Big Box" retail, building multiple storey developments over supermarkets and their car parks
68 (b)	Mark Jopling	Yes - the biggest opportunity in the Borough for housing
Increasing jobs and helping business to grow		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 17 said yes, 1 said no and 2 don't know [18 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Large housing schemes should also provide more workspaces or make a contribution to off-site ones.
19	DP9 Ltd on behalf of London Square Developments	See comments below.
52	Winston W Taylor	Broadly agree
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We support the general direction of continuing to protect industrial sites to encourage SMEs and new businesses and to protect river-related business. It is essential that Richmond continues to be a place of employment not just a dormitory; this must be an essential contribution to shifting the current large outflow of commuting and its contribution to congestion, pollution etc
69	Geoff Bond on behalf of Ham and Petersham Association	Not enough emphasis on live work settings
Should we continue to protect our industrial-type uses?		
Of respondents who answered the question: 17 said yes, 1 said no and 2 don't know [18 did not answer the question]		
14	Mayor of London	Industrial and Employment Land The Mayor welcomes Richmond's intention to conduct an up to date Employment Land Review and carry out an industrial land audit to supplement its current evidence on employment land. Richmond should follow the Mayor's guidance set out in his Practice note on industrial intensification and co-location through planned and masterplan approaches. Guidance is also set out in Policies E4 and E7 of the Intend to Publish London Plan and should be embedded in the draft Local Plan. Again, these policies are subject to Directions from the Secretary of State. Richmond should clearly differentiate its approach towards industrial and office development.

Respondent reference no.	Name / Organisation	Detailed comments
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	There is a risk the council is misreading the market about industry use not being in demand and being replaced with distribution. What we are more likely to be seeing is the Heathrow airports freight business edging out local manufacturing businesses by out bidding them.
46 (a)	Joan Gibson	You should continue to protect business premises, but add new small low-cost premises instead of or as well as retail units at the bottom of flats.
53	Richard Woolf on behalf of McDaniel Woolf Architects	I'm sorry ... I'd love to say ' yes ' , but I know the direction of travel is away from manufacture and has been for 30 + years.
58	Michael Atkins, Port of London Authority	The PLA supports the intention of the policy directions to establish Agent of Change principle into policy, which places the responsibility for mitigating impacts from existing noise and other nuisance-generating activities or uses on the proposed new noise-sensitive development. This must be included in any future Local Plan policy in line with paragraph 182 of the National Planning Policy Framework (NPPF) and the emerging London Plan.
Should we take a proactive approach and encourage intensification, or adopt a more locally distinctive policy in this regard that focuses less on introduction of residential on industrial sites, but that encourages further industrial / employment uses?		
14	Mayor of London	See comments below.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Should focus on the latter – as more local jobs will help us improve the environment.
31	Tim Catchpole on behalf of MESS	We recommend a study including survey work is required in order to properly shape this policy.
41	Anthony Swan	Encourage further industrial and employment. Always.
42	Jeremy Gill	No
44	Roger Cutler	Yes - be pro-active. It would be a start if you weren't trying to reduce industrial use. Twickenham Embankment & businesses on Eel Pie Island are due to be starved out by making the Embankment traffic-free. No existing businesses can survive without collections & deliveries. Local trades-people will lose work because they can't park vans.
45	Sally Beeson	I think a locally distinctive policy could be decided on locally by residents and business
46 (a)	Joan Gibson	No you should build flats above business premeses - more efficient land use, employees and customers on site.
47	Trevor Rowntree	Yes. industrial / employment uses should be given priority over residential sites.
51	Su Bonfanti	I support the general direction of continuing to protect industrial sites to encourage SMEs and new businesses and to protect river-related business. It is essential that Richmond continues to be a place of employment not just a dormitory; this must be an essential contribution to shifting the current large outflow of commuting and its contribution to congestion, pollution etc. I don't recall that you have really linked local employment and environmental impact together in your policies before and I think this is something you need to get across to residents more.
52	Winston W Taylor	Not enough time to consider properly
53	Richard Woolf on behalf of McDaniel Woolf Architects	I'm sorry I'd love to say ' yes ' to support of industrial use , but where are the manufactures for the 21st Century located ?? Not in Greater London.
55	Jon Rowles	We need a more local approach that encourages further industrial / employment uses - due to the large amount of space already lost.
60	Kingsley Izundu, Royal Borough of Kingston upon Thames	Given that the emerging London Plan places Richmond Council on the "Restraint" category in regard to managing its stock of industrial land, it seems reasonable to Richmond to adopt a more locally distinctive policy that focuses less on introduction of residential on industrial sites.
68 (a)	Mark Jopling	Need Richmond to be ahead of economic shifts driven by automation and ecology
Should we continue to specify flexible small-scale units suitable to meet local business needs?		

Respondent reference no.	Name / Organisation	Detailed comments
Of respondents who answered the question: 17 said yes, 1 said no and 1 don't know [19 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	We are very close to Heathrow Airport and thus larger sites are likely to be used for freight forwarding that employ relatively few people and provide lower quality jobs.
31	Tim Catchpole on behalf of MESS	This will depend on the study outcome.
44	Roger Cutler	Small-scale units are essential. Stop trying to force them out of business.
46 (a)	Joan Gibson	At the bottom of flats instead of retail
53	Richard Woolf on behalf of McDaniel Woolf Architects	Small scale is the best option.
What priority should we give to employment uses over residential amenity, if at all?		
2	CBRE on behalf of LGC Ltd, Teddington	<i>[See the Schedule of Call for Sites Responses relating to Queens Road site Teddington]</i>
19	DP9 Ltd on behalf of London Square Developments	<p>On behalf of our client, London Square Developments, we submit the following representations to the London Borough of Richmond upon Thames Local Plan Direction of Travel Consultation and Call for Sites. These representations relate to the Greggs Bakery, Gould Road, Twickenham, known as the 'Site'.</p> <p>The existing Site comprises the former Greggs Bakery Site in Twickenham, within the London Borough of Richmond Upon Thames. The Site is L shaped and is bound by the River Crane to the north and railway line beyond, residential properties on Norcutt Road to the east, Edwin Road to the south, residential properties on Crane Road to the west and further residential properties on Crane Road/ Gould Road and at Crane Mews to the north west.</p> <p>There are a range of buildings covering the majority of the Site which comprises an area of 1.1ha. The majority of the Site is covered by a single storey industrial shed alongside large extract equipment. There are also a number of associated two and three storey commercial buildings across the remainder of the Site which have developed in a piecemeal way over time. The existing buildings have reached the end of their life cycle.</p> <p>Background By way of background, the Site is subject to a planning application (ref. 19/0646/FUL) for residential-led redevelopment. This application was submitted in February 2019 and is pending determination. It is the project team's firm position that the Site is appropriate for residential-led development as set out within the planning submission and as explained further below.</p> <p>The Site is currently allocated within the 'Locally Important Industrial Land and Business Park – West Twickenham Cluster (including Greggs Bakery and surroundings), Twickenham' under the adopted Local Plan. The Site also falls within the 'Key Office Area – West Twickenham Cluster' under the adopted planning policy position.</p> <p>Representations were made to the currently adopted Local Plan (July 2018). These representations to the new Local Plan follow the same matters raised in relation to this Site. It was thoroughly demonstrated that the Site is inappropriate for continued employment use and this position was supported by the Council's own evidence base assessment (Employment Sites & Premises Study, 2017 prepared by Peter Brett Associates). The report identifies the 'West Twickenham Cluster (including Greggs Bakery and surroundings)' as a designated site that is less attractive to occupiers and identifies it as being constrained by poor access, particularly for HGV's, and by its residential surrounds. Paragraph 3.10 of the Study states that the West Twickenham Cluster is "located within residential areas like many of Richmond's</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p><i>industrial sites, but they also have particularly poor access arrangements that significantly constrains their potential for redevelopment for alternative forms of industrial use."</i></p> <p>Despite the locational disadvantages identified within the LBRuT Employment Sites and Premises Study (2017), which formed part of the Council's evidence base, the Site was allocated within the 'West Twickenham Cluster (including Gregg's Bakery and surroundings)' which seeks to protect the use of the land for employment. This approach is inconsistent with Paragraph 82 of the National Planning Policy Framework ('NPPF') which directs industrial uses to suitably accessible locations. The allocation of the Site is also contrary to draft London Plan Policy GG5 which requires Boroughs to plan for sufficient employment and industrial space in the <u>right locations</u>.</p> <p>Prior to the adoption of the current Local Plan in October 2013, the LBRuT published the Local Plan 'Site Allocations Plan' for consultation. Within this, draft Policy TW 11 (West Twickenham cluster, Twickenham) identified the Site for "<i>Mixed residential, start-up and small scale hybrid business space and/or primary school. Proposed Designation as key employment site.</i>" This document was not taken forward and has been superseded by the adopted Local Plan (July 2018), however this represents the Borough's initial approach to the Site's redevelopment which was considered to be more appropriate in this location.</p> <p>In the intervening period since the adoption of the Local Plan in July 2018, the Site has been marketed by Colliers International's marketing team for employment uses. This has occurred over a period of more than two years since January 2018 and is ongoing. To date no meaningful offers have been received for the Site due to the severe site restrictions. It is acknowledged within the Marketing Report prepared in support of the planning application that there are strong trends for West London industrial markets in prime locations such as Park Royal, Acton and Heathrow. However, it is recognised that these areas benefit from superior logistical and distributional links. The Site's location within a residential area is off-putting to industrial occupiers as the roads surrounding the Site are unsuitable for large delivery vehicles and has deterred a number of potential occupiers, as demonstrated within the Marketing Report.</p> <p>Offers have been invited for the Site in its current use as industrial/ employment generating floorspace. The Marketing report concludes that the agents cannot let the Site due to the current configuration and Site restrictions. It is confirmed that potential industrial or warehouse occupiers were put off by the physical constraints associated with the Site. The reasons were identified as: the size and configuration of the buildings which are not fit for current uses, the small yard and insufficient car parking area which are an issue owing to the high site coverage, the tight arrangement of the units within the loading bay which is difficult to navigate in certain areas, concerns with regards to road access into the Site and traffic movement of HGV's and vans for deliveries and the surrounding established residential area and concerns with regards to potential restrictions on noise and hours of use.</p> <p>These long-standing issues forced Greggs to relocate bakery operations to a more appropriate site which has better logistical connections. The Site is now redundant and the bakery operations have ceased with only part of the Site in continued use for associated operational functions. The Site is in poor condition, comprises asbestos and would need significant expenditure in order to bring it up to modern standards.</p> <p>The Site was not considered to be suitable by any of the operators approached and no offers were forthcoming. There was interest in the Site for longer term redevelopment of the Site for residential use however commercial occupiers are deterred by the evident Site constraints.</p> <p>The marketing exercise has demonstrated that the redevelopment of the Site for similar employment generating uses would be an unviable prospect as the Site is too restricted to retain the same floor area and deliver sufficient servicing and car parking. As such there is no realistic prospect of a commercial operator occupying the Site either in its current condition or through redevelopment.</p> <p>The applicant has also sought advice from Milestone, a local commercial agent who supports the findings of the Marketing Report produced by Colliers and confirms that whilst there is demand for light-industrial units within the Borough, the registered demand is for purpose-built trading estates. Examples of these locally comprise Colne Road, Twickenham, Princes Works and Teddington Business Park. This type of commercial accommodation is able to accommodate car parking and open-plan design with mezzanine floors or double height workspace for fork-lift access in addition to turning circles for 7-tonne plus lorries. Additionally, these</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>estates have the benefit of enhanced electricity capability and dedicated waste management. The suitability of the Greggs Site to accommodate the same grade of floorspace is considered poor.</p> <p>It has been demonstrated within the Milestone report that there are plenty of much better located, more accessible, higher quality office buildings and Sites within Twickenham that are vacant and could accommodate any demand. This data is specific to the Site's location and is therefore a material consideration which should be taken into account. It is demonstrated in the evidence provided through the ongoing marketing exercise and from commercial agents that there is no demand for the use or redevelopment of this site for commercial employment generating uses.</p> <p>The demand for housing within the Borough is significant and should be prioritised over the restriction to retain the employment land uses in areas inappropriate for continued use. This approach is backed by planning permission ref. 17/1033/FUL which was granted on appeal on 23rd May 2018 for the redevelopment of the adjacent Lockcorp House, also within the West Twickenham Cluster, to deliver student housing. Importantly, the Inspector's report notes that <i>"whilst the loss of this existing employment site would conflict with Policies DM EM2 and LP40, the proposed student accommodation would meet and identified housing need which policies DM HO 5 and LP37 support. On the evidence before me, including what I heard at the hearing, I consider the need for the development outweighs that of retaining the employment use of the site."</i></p> <p>Draft London Plan update</p> <p>It is important and extremely relevant to note that the Secretary of State ('SoS') has identified that the draft London Plan Intend to Publish Version is not consistent with the NPPF and is therefore not sound and cannot be published. It is acknowledged by the SoS in his letter to the Mayor dated 13 March 2020 that the previous aspiration to 'retain' sufficient industrial capacity 'may not be realistic' and is inconsistent with the NPPF which importantly requires <i>"that sufficient land of the right type is available in the right places and at the right time to support growth and innovation."</i>(Emphasis added).</p> <p>In particular, the SoS recommends that Policy E4 is modified to remove the requirement for 'no net loss' of industrial floorspace capacity (and operational yard space capacity) within designated SIL and LSIS.</p> <p>The SoS recommends new supporting text at paragraph 6.4.8 which sets out that <i>"Where industrial land vacancy rates are currently well above the London average, Boroughs are encouraged to assess whether the release of industrial land for alternative uses is more appropriate if demand cannot support industrial uses in these location. Where possible a substitution approach to alternative locations with higher demand for industrial uses is encouraged."</i></p> <p>The proposed modifications are required to make it easier for London Boroughs to identify a supply of industrial land to meet demand, or to replace other land that can subsequently be released for housing development. It also removes the target that is deemed to be unrealistic.</p> <p>The currently adopted Local Plan policies and West Twickenham cluster site allocation were prepared in the context of the draft London Plan requirement to retain capacity, and this context has now changed significantly. This is of key importance in assessing the Greggs Site for redevelopment for alternative uses, particularly housing.</p> <p>Richmond Annual Monitoring Report</p> <p>Richmond's Local Plan Annual Monitoring Report (AMR) 2018/19 (September 2019) assesses the Borough's housing supply and delivery in relation to the adopted London Plan's requirement of 3,150 new homes over the period between 2015-2025. The Borough delivered a net gain of 419 units in 2018/19 and considers that it will meet its target by 2025. Richmond estimates a supply of 1,474 new homes coming forward over the five-year period, meeting the target in the London Plan 2015. However, it is noted that the draft London Plan sets an increased ten-year housing target of 4,110 net completions or 411 per year. This is a target that has not been disputed by the SoS during his review of the draft Plan. The London Borough of Richmond upon Thames has not yet demonstrated how they will meet these revised targets and the AMR therefore fails to demonstrate a five-year housing supply.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Given the GLA's projected growth in the Borough's population, the need for housing in the Borough will continue to outstrip supply. This will continue to drive up house prices making the borough less affordable for all. Moreover, the borough has delivered only 17% (70 units net) of housing as affordable in 2018/19 which is considerably below the strategic borough-wide target (50%). Richmond will therefore need to consider further opportunities, including the Site, to deliver housing. The proposals for the redevelopment of the Greggs Site seek to deliver 116 new dwellings comprising a significant number of family-sized homes and affordable units. This contribution to the overall housing supply and affordable housing provision in the Borough should not be overlooked.</p> <p>-----</p> <p>Delivering new homes and an affordable borough for all – p. 19</p> <p>We support the consideration of further locations for housing delivery, including site allocations to meet housing need. Brownfield employment land that is unviable for continued use, including the subject Site, should be considered for this purpose.</p> <p>Increasing jobs and helping business to grow – p. 28-29</p> <p>It is acknowledged by the SoS in his letter to the Mayor dated 13 March 2020 that the previous aspiration to 'retain' sufficient industrial capacity 'may not be realistic' and is inconsistent with the NPPF which requires "that sufficient land of the right type is available in the right places and at the right time to support growth and innovation." In particular the SOS recommends that draft London Plan Policy E4 is modified to remove the requirement for 'no net loss' of industrial floorspace capacity (and operational yard space capacity) within designated SIL and LSIS.</p> <p>It is considered that investment in industrial and employment land to encourage redevelopment and refurbishment for modern industrial occupiers will not necessarily spur demand. Locational characteristics are important for occupiers, particularly access provision and potential for land use conflict.</p> <p>As outlined above, the Site is not suitable for continued employment use and is blighted by highways impacts and locational difficulties. In light of the SoS' guidance and in line with the NPPF, the allocation of the Site which is in an unsuitable location for continued employment use should be reviewed. The need to 'retain' capacity is unrealistic and should be relaxed.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Delivery noise can be very disturbing – esp. when it involves HGVs. So maybe focus on restricting the really disturbing activities, rather than keeping the whole site shut.
31	Tim Catchpole on behalf of MESS	See above . This will likewise depend on the study outcome.
41	Anthony Swan	Its a balancing act. eg if a business park was near a school then objections may be valid because of pollution. If near houses then which was there first. Maybe the business park businesses are too industrial for its coexistence with domestic housing.
42	Jeremy Gill	Depends on the individual circumstances, you can't have a meaningful policy about something so case-specific.
44	Roger Cutler	A properly planned assessment is needed in every case. No priority should just be given.
45	Sally Beeson	In individual case should be looked at individually and not as a lumped together policy
46 (a)	Joan Gibson	none they can both be built at the same site
47	Trevor Rowntree	Employment uses should be given priority. Neighbours' objections should be taken in to account but should not override the benefit to the whole area.
52	Winston W Taylor	Neighbours will almost always object. I moved into a flat 35 years ago close to Teddington Business Park. Neither I or my neighbours had any problems - noise. traffic or otherwise with it. Business does need some sort of priority to override unjustified residential complaints.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Agree on the wholesale redevelopment of industrial sites rather than permitted development reuse which provides poor quality dwellings.
55	Jon Rowles	All depends on what is reasonable - could make the agent of change pay for soundproofing and have a more detailed policy on what amount of noise is acceptable when.
63	Carol Rawlings	Residential amenity should be given priority. But let's wait and see what emerges from the current virus crisis. All will change.....

Respondent reference no.	Name / Organisation	Detailed comments
68 (b)	Mark Jopling	Flexible office space is key. Lesson from CV-19 is that we don't all need to herd into Central London 5 days per week - more flexible local office space would make a big difference to carbon footprint and quality of life
69	Geoff Bond on behalf of Ham and Petersham Association	Impact on neighbours matters so should be a consideration
What type of sites, buildings and facilities are most needed to support the borough's office occupiers, in particular its small and micro businesses, as well as those working remotely from their usual place of work?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Many small businesses used to occupy space above shops, but most of these spaces have now been converted to flats, leaving town like Whitton with virtually no office space.
36	Tim Catchpole on behalf of MESS	See above. This will likewise depend on the study outcome.
41	Anthony Swan	Low rent/rate shared space with flexible rental periods. ie down to 1 month. High level of security for eg their computer equipment.
42	Jeremy Gill	Offices, I would imagine.
44	Roger Cutler	Car parks or parking facilities.
45	Sally Beeson	Existing building - eg the now empty Nat West and Lloyds Banks in Teddington
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough. Do not provide parking spaces for businesses. For existing parking spaces, until they are removed, heavily increase parking levy and charges.
52	Winston W Taylor	The "Space" development in Teddington appears to be successful - that is purely an observation on my part looking at the number of small business logos in reception - if I am right, similar facilities might be encouraged elsewhere.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Well , the space above shops and the beneficial use of historic buildings, decommissioned places of worship etc ...
55	Jon Rowles	- In Whitton, there is hardly any office space left. - Need more flexible office space for start-ups in places like Twickenham and Richmond that are suitable for new businesses. The existing providers are very expensive so maybe there is something that could be incorporated into libraries or the town hall - as some form of social enterprise incubator outfit.
63	Carol Rawlings	Fast, affordable and reliable broadband is urgently needed throughout the borough to support home-working.
68 (a)	Mark Jopling	See above, growth in flexible office spaces as people avoid travelling to central London
69	Geoff Bond on behalf of Ham and Petersham Association	Local small offices not all centred on a small number of locations.
Should we encourage and protect river-related business?		
Of respondents who answered the question: 17 said yes, 0 said no and 2 don't know [19 did not answer the question]		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	We support protection of riverside employment.

Respondent reference no.	Name / Organisation	Detailed comments
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	It adds greatly to the character of the area – and is a very good way of increasing the employment opportunities for those without many qualifications.
31	Tim Catchpole on behalf of MESS	This also needs to be addressed in this study.
44	Roger Cutler	At the moment you are trying to destroy them in Twickenham.
45	Sally Beeson	It's unique
46 (a)	Joan Gibson	Is it needed?
52	Winston W Taylor	This has not been the case, in my experience, for some time.
53	Richard Woolf on behalf of McDaniel Woolf Architects	100% !!
55	Jon Rowles	More boat houses could be provided both for small boat and rowers etc
58	Michael Atkins, Port of London Authority	It is welcomed that the Direction of Travel document states that the council will continue to protect river dependent facilities such as boatyards, wharves, slipways, piers, jetties and more. This approach is supported by the current and emerging London Plan for example emerging London Plan Policy SI16 (waterways - use and enjoyment) specifically states that development plans should protect and enhance waterway infrastructure to enable water-dependent uses. This is also supported by the PLAs Thames Vision which includes the goal to see more goods and materials routinely moved on the river. These existing businesses make a vital contribution to the borough and must continue to be protected, in line with current adopted plan policy.
General comments relating to this topic area		
14	Mayor of London	With regards to office development Richmond should take note of Policy E1 of the Intend to Publish London Plan, which directs new office development to the borough's town centres and regard should also be given to Table A1.1 which sets out the office guidelines identifying those town centres with the greatest potential to accommodate different types of office development. It identifies Richmond major town centre as having high commercial growth potential and suitable for both speculative and mixed-use office development while Twickenham is identified as having potential for mixed-use office development. East Sheen and Teddington are identified as having existing small office capacities which should be protected. Richmond should clearly differentiate its approach towards industrial and office development.
19	DP9 Ltd on behalf of London Square Developments	What do we have to find out? - p. 32 We consider that intensification, co-location or storage and distribution use on the subject Site is inappropriate considering its poor access via residential roads and the potential for harm to the amenity of surrounding residents. Such development should be directed to suitable locations which benefit from greater logistical arrangements What do you think? – p. 33 In light of the SoS' response to the draft London Plan, the approach to protection of industrial uses requires further consideration. The findings of the LBRuT Employment Sites and Premises Study (2017) accurately reflects the significant site constraints that existing at the Greggs Bakery Site. We are confident that further studies that form part of the evidence base for the next Local Plan will reach the same conclusions and this should be reflected in the allocation of the site for residential use. Policy direction should be towards flexibility in relation to unviable employment land uses in areas inappropriate for continued use in order to meet strategic objectives such as housing delivery. Housing delivery is a pressing issue facing London, and in particular the Borough. The delivery of housing should therefore be a key priority in the new vision for the Local Plan. The use of Brownfield Sites for residential development should be a key policy aspiration which outweighs the need to protect inappropriate sites for continued employment use. This is a view that shared by the Planning Inspector in respect of the adjacent site at Lockcorp House which is also within the West Twickenham Cluster as outlined above.
27	Peter Willan, Paul Velluet and Laurence	We cannot be precise about our views on jobs in Central Richmond without the evidence the Council says it will be preparing. Richmond is attractive to international service companies such as PayPal and encouraging similar businesses to locate in Richmond is important.

Respondent reference no.	Name / Organisation	Detailed comments
	Bain on behalf of Prospect of Richmond	Encouragement of small businesses, start-ups and the like we believe is important.
Protecting what is special and improving our areas (heritage, culture and open land)		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 20 said yes, 2 said no, 1 both agreed and disagreed and 2 said don't know [13 did not answer the question]		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<p>We believe the policies in the current Local Plan adequately cover the issues outlined below on Heritage, Culture and Protecting Open Space, and if further amplification is required we would suggest that it could be dealt with by subsidiary planning tools. We are concerned that the Direction of Travel seems to relax the controls that already exist and which are essential to maintaining the heritage, culture and green infrastructure and open land.</p> <p>Broadly we support the Direction of Travel on encouraging visitors and tourism. It is important that residents are supported in their efforts to maintain the heritage and culture of Central Richmond, the Riverside and the Green not only for their own benefit but for the wider community and visitors.</p> <p>As we say in para 33 above, promoting heritage and culture in the heart of Richmond should possibly be a prime objective, as some of the current uses of Central Richmond decline. This could involve the visual and performing arts and education in the arts. It would involve wider participation.</p> <p>The Riverside and the terraces are also a place for visitors and residents to relax and enjoy the scenic river Thames. [comments as in Heritage section]</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>We disagree that the Village Plans should be discontinued. These are based upon Neighbourhood Plans – and are very useful in ensuring the local population can contribute to how their town develop.</p> <p>There are also very useful for historic towns such as Twickenham and Richmond to have a whole town approach to managing their heritage rather than through conservation areas which fragment the approach (and in this borough most of the conservation statements are out of date). Without them we are disadvantaged compared to Ham & Petersham that have a full singing and dancing a Neighbourhood Plan. This is likely to result in other areas of the borough applying to create their own neighbourhood forums.</p>
28	Alice Shackleton on behalf of The Kew Society	We do not see a justification for altering the existing policies in the adopted Local Plan and are concerned that certain proposals (see our reply below in relation to development impact on character and or appearance of conservation areas) would water down such protections.
20	Gary Backler, Friends of the River Crane Environment.	<u>Green Infrastructure</u> : FORCE strongly supports the objective of protecting and where possible enhancing “The rivers, surrounding banks and green spaces, along with their biodiversity and wildlife.” We also welcome the recognition of “opportunities associated with new development to enhance access and to improve poorer quality areas such that they provide a wider range of benefits” (p38). FORCE is strongly in favour of investing to improve underutilised open spaces for public and environmental benefit, rather than taking their underutilisation as a cue to build on them.
37	John Waxman, Crane Valley Partnership	I would like to highlight that CVP and the Colne Valley Regional Park, working in association with environmental consultants ARUP, have recently produced the Colne and Crane Valleys Green Infrastructure Strategy. [This document, along with an associated interactive map, can be viewed online via: http://www.cranevalley.org.uk/news/post/Colne-and-Crane-Valleys-Green-Infrastructure-Strategy-published.html .] This strategy promotes the landscape-scale approach and lists a wide range of environmental enhancement opportunities. LBRuT was one of the strategy consultees. The Borough’s revised Local Plan should make reference to the strategy and should be aligned to it.
42	Jeremy Gill	No idea what you're talking about
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
68 (a)	Mark Jopling	Do more to protect the street scene in Victorian/Edwardian that are not BTM

Respondent reference no.	Name / Organisation	Detailed comments
69	Geoff Bond on behalf of Ham and Petersham Association	There is a significant risk, not mentioned, to increase the urbanisation of Conservation areas. This should be clearly and definitively controlled
<p>Are our current policies strong enough to ensure the ongoing protection of the borough's historic assets?</p>		
<p>Of respondents who answered the question: 5 said yes, 9 said no and 9 said don't know [15 did not answer the question]</p>		
3	Katie Parsons, Historic England	<p>As the Government's advisor on the historic environment Historic England is keen to ensure that the protection of the historic environment is fully taken into account at all stages and levels of the planning process. Therefore we welcome the opportunity to comment on the draft document these comments have been formed in line with the NPPF (2019) and with reference to draft New London Plan (At time of writing this is the Intend to Publish version (dated December 2019) available: https://www.london.gov.uk/what-we-do/planning/london-plan/new-london-plan/intend-publish-london-plan-2019) which will become part of the Borough's development plan when adopted. It is understood that the new Local Plan for Richmond borough will replace the current Local Plan and Twickenham Area Action Plan.</p> <p>The new plan is an opportunity to make real advancements in how the historic environment can be conserved or enhanced. This goes far beyond ensuring that wording complies with up-to-date national legislation and policy, but should be locally specific, detailed and aspirational while being realistic.</p> <p>The current policies are helpful but they can be strengthened and provide more guidance to applicants and decision makers. For example, heritage policies can do more to link conservation aims with maintenance activity, policies to tackle carbon emissions should make specific provisions as to how historic buildings can be retrofitted without making damaging fabric, and should highlight the risks of maladaptation than can cause a building to be less thermal effective; strong policies on the multifaceted benefits of green infrastructure and improvements that can be made to the historic environment through enhancing setting, improving access and enjoyment of heritage assets, and tackling flood risk which would help protect historic fabric etc. Looking at how policies can be improved demonstrates a positive, proactive strategy to conserve the historic environment. Policies should be revised over plan periods to reflect specific changes in development pressures and trends so we advise that up-to-date evidence is used. A good strategy will offer a positive holistic approach through the whole plan whereby the historic environment is considered not just as a standalone topic but as an integral part of every aspect of the plan, being interwoven within the entire document. The draft New London Plan advocates for a design-led approach to growth based on characterisation and understanding of local areas. We have commissioned several London-wide research report that would be helpful evidence sources for undertaking characterisation work:</p> <p>Characterisation of London's Historic Environment (LUC) – full report London's Local Character and Density (Allies and Morrison) – full report London's Image and Identity – Revisiting London's Cherished Views</p> <p>Conclusion We have produced a number of detailed Good Practice Advice and Advice Note documents that we recommend you review as part of your plan preparation process: The Historic Environment in Local Plan – Good Practice Advice in Planning 1 https://historicengland.org.uk/images-books/publications/gpa1-historic-environment-local-plans/ The Setting of Heritage Assets – Good Practice Advice in Planning 3 https://historicengland.org.uk/images-books/publications/gpa3-setting-of-heritage-assets/ The Historic Environment and Site Allocations and Local Plans – Advice Note 3 https://historicengland.org.uk/images-books/publications/historic-environment-and-site-allocations-in-local-plans/ In preparation of the forthcoming plan, we encourage you to draw on the knowledge of local conservation officers, the Greater London Archaeological Advisory Service, and local heritage groups.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Finally, we should like to stress that this opinion is based on the information provided by the Council in its consultation. To avoid any doubt, this does not affect our obligation to provide further advice and, potentially, object to specific proposal, which may subsequently arise where we consider that these would have an adverse effect upon the historic environment.</p>
5	Helen Monger, London Parks & Gardens Trust	<p>The London Parks and Gardens Trust (LPGT) is a member organisation of the The Gardens Trust (GT) and works in partnership with it in respect of the protection and conservation of registered sites, and is authorised by the GT to respond on GT's behalf in respect of planning consultations.</p> <p>LPGT contributed to the preparation of the 2018 Local Plan. Our comments were already made in the context that Outer London Boroughs would have to take considerable quantities of new development and that development should provide quality homes in attractive neighbourhoods with adequate provision of parks and open spaces for the mental and physical well being of the whole community. High density developments should still be well designed with access to parks and open spaces.</p> <p>We do not feel that these policies have had long enough to be applied/tested. These policies should be carried forward to ensure clarity for all new development proposals. Indeed, the revised context of the need for more housing and climate action calls for the protection and the enhancement of the quality of parks and open spaces whether designated heritage assets or not.</p> <p>We are aware that the government is instructing London to release industrial land for housing. This land is currently unlikely to have access to parks and open spaces, especially local green spaces. All new residential development must be within easy reach of well designed open spaces offering a variety of experiences and this should be provided in new residential areas.</p> <p>We look for local plan policies to carry forward principles already adopted eg Recognition of the value of both designated and non designated heritage assets Ensure investment in parks and open spaces via the development that contributes to its greater use. Taking care to avoid unintended consequences of development eg impact of views out from parks and open spaces and overlooking arising from tall buildings. Accessibility and functionality of parks and open spaces - increased densities mean a reduction in private amenity space, putting pressure on public space for activities and quite relaxation, policies should ensure easy access to a range of park landscapes. This is encapsulated in the adopted Local Plan in Para 8.3.6 & 8.4.10 " The borough's extensive provision of parks and open spaces enable local communities to lead lifestyles with greater levels of physical activity, resulting in better physical and mental health improvements, reduced stress levels and increased social interaction. These spaces provide a vital free resource in which people of all ages can play, exercise, relax and enjoy the natural world, so easy access for all residents to high quality open and natural space is important, particularly within identified areas of deficiency (see policy LP 31 in 8.4 'Public Open Space, Play Space, Sport and Recreation'). Parks and open spaces are particularly important in promoting activity in young children thereby targeting the increasing childhood obesity levels in the borough. Children's play space and outdoor 'green gyms' for use by the whole community are encouraged." "It is acknowledged that on-site provision may not be feasible or practicable for every major development site, but this will be assessed on a case-by-case basis, taking account of the existing open space provision relevant to the development site. Where it has been accepted by the Council that on-site provision cannot be made, the Council will expect existing surrounding open spaces to be improved, and where appropriate made more accessible to the users and occupiers of the new development. Financial contributions may be required to either fund new off-site provision, or improvements and enhancements of existing facilities, including access arrangements, in order to mitigate the impacts of new development." We wish the following policies to be carried forward Policy LP 1 Local Character and Design Quality, Policy LP 2 Building Heights, Policy LP 3, Designated Heritage Asset, Policy LP 4 Non-Designated Heritage Assets, Policy LP 5 Views and Vistas, Policy LP 12 Green Infrastructure, Policy LP 13 Green Belt, Metropolitan Open Land and Local Green Space</p>
14	Mayor of London	<p>Richmond's recognition of the importance of the Royal Botanical Gardens Kew as a World Heritage Site (WHS) is welcome and the WHS Site Management Plans should be used to inform Richmond's plan making process. Policy HC2 of the Intend to Publish London Plan should be noted and Richmond's Local Plan should require development proposals with potential to impact the WHS and its setting be accompanied by Heritage Impact Assessments.</p>
20	Gary Backler, Friends of the River Crane Environment.	<p><u>Heritage</u>: The borough's heritage is to be found not only in its conservation areas, royal parks and listed buildings, but in its historic industrial sites and watercourses. These should be protected and promoted at least as rigorously. This includes for example the formerly industrial landscape of Crane Park and the historic water features in the grounds of Kneller Hall. Note that the whole of the Crane corridor is an area of archaeological importance.</p>

Respondent reference no.	Name / Organisation	Detailed comments
22	Jimmy Wallace, Richmond Athletic Association	See comments below.
23	Peter Willan & Paul Velluet on behalf of Old Deer Park Working Group	See response below, set out in general comments relating to this subject area.
24	Paul Velluet	See response below, set out in general comments relating to this subject area.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	The Direction of Travel says: <i>'The borough's unique and locally distinctive natural, built and historic and cultural environment is highly valued, and we want to protect what is special and improve our areas for residents, businesses and visitors.'</i> We endorse this, especially in relation to Central Richmond, the Riverside and the Green. The Riverside and the terraces are also a place for visitors and residents to relax and enjoy the scenic river Thames. [comments as in Culture section] Central Richmond, the Riverside and the Green all need to be de-cluttered from unnecessary signage and signage needs to be made consistent across the area.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Will be much weaker without Village Plans and the protection will mainly be the fragmented conservation areas. Many of the Conservation Area Statements are too brief, whilst many of the studies are very old. This has been exploited by developers in some cases and thus they all need comprehensive reviews. We feel that Whitton High Street should become a Conservation Area; it is a classic interwar high street with an interesting mix of styles including the work of notable architects. Conservation Areas status would assist in retaining the architectural detailing and replacement (overtime) of inappropriate windows and signage.
28	Alice Shackleton on behalf of The Kew Society	If not, this could be dealt with by SPDs.
31	Tim Catchpole on behalf of MESS	The policies are strong but does the Council have sufficient resources to implement?
42	Jeremy Gill	Again I'm none the wiser from reading the above.
45	Sally Beeson	I don't think they are strong enough but hope they are!
46 (a)	Joan Gibson	I agree with all proposals, but am missing how we control visitor numbers and make sure visitors do not travel to attractions by car. LBRuT need to fix the public transport issues that mean Richmond has the highest percentage of people travelling by car to the Royal Parks (for instance).
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
52	Winston W Taylor	So far so good. But as the paper says a review is necessary to ensure this is the case.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	It is proposed to identify further areas to protect but the borough is currently doing a poor job at protecting these areas currently. The focus should be on finding an efficient way to protect the current ones before looking expanding these areas. Indeed conservations areas, grade II listed building and buildings of township merit in East Twickenham are being completely ignored and current policies bypassed. For example: recycling centre and a bus stop being placed right in front of the only grade II listed building we have in the area. The new Lidl development site completely jars with the character of the area and has bypassed many planning policies despite being a protected area. In planning applications, conservation area policies are being ignored. There is also no budget allocated to maintain these areas. If the borough is trying to expand these, how can this be done in a meaningful way?
68 (a)	Mark Jopling	Need to be more responsive on NDHA
68 (b)	Mark Jopling	Need to be more responsive to NDHA directions and engaging with GLHER and HE on Planning matters
69	Geoff Bond on behalf of Ham and Petersham Association	BTMs can be demolished with impunity without permission it should be made easier to pursue those responsible

Respondent reference no.	Name / Organisation	Detailed comments
Do you agree that we should actively identify opportunities for development and/or redevelopment where these can result in improvements to the character and appearance of existing conservation areas?		
Of respondents who answered the question: 4 said yes, 18 said no and 0 said don't know [16 did not answer the question]		
22	Jimmy Wallace, Richmond Athletic Association	In relation to heritage, we welcome the proactive approach the borough suggests taking to identify opportunities for development that can result in improvements to the character and appearance of a conservation area, and more generally, the approach of ensuring that the emerging Local Plan policies will follow the approach outlined in National guidance as it relates to the requirement for development proposals to be assessed against the requirement to seek to avoid harm to heritage assets and the justification for the proposal. We are also in agreement with the suggested policy approach whereby the borough would actively identify opportunities for development and / or redevelopment where these can result in improvements to the character and appearance of existing conservation areas. We think this approach could also be extended in relation to other heritage assets such as listed buildings and parks.
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	The Group questions the proposal for the Council to actively identify opportunities for development or redevelopment within conservation areas, such as the Old Deer Park Conservation Area, simply on the basis that 'where these can result in improvements to the character or appearance of conservation areas'. Such an approach is simplistic and premature, in the absence of a coherent, evidence-based study of each conservation area (using existing or updated Conservation Area Studies) identifying those buildings or features which detract from the character, appearance or significance of the conservation area, and where their development, subject to scale and design could serve to enhance the character and/or appearance of the area and sustain its significance.
24	Paul Velluet	I would question the proposal for the Council to actively identify opportunities for development or redevelopment within conservation areas, simply on the basis that 'where these can result in improvements to the character or appearance of conservation areas'. Such an approach is simplistic and premature, in the absence of a coherent, evidence-based study of each conservation area (using existing or updated Conservation Area Studies) identifying those buildings or features which detract from the character, appearance or significance of the conservation area, and where their development, subject to scale and design could serve to enhance the character and/or appearance of the area and sustain its significance.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	Central Richmond, the Riverside and the Green are all covered by Conservation Area Policies that protect and seek to enhance their heritage. We do not believe there is any case for relaxing the constraints on development in Central Richmond, the Riverside or the Green. The Green is an historic park of national significance with many listed buildings, and it is essential that it is not commercialised and that it remains distinct from its urban neighbour - Central Richmond - joined physically by the passageways from George Street. The Green's paramount use is for visitors and residents to relax and enjoy its relatively peaceful presence and historic surrounds. We note the Council proposes to review Conservation Areas, saying on page 35 of the Direction of Travel ' <i>particularly where there is pressure as well as opportunity arising out of development proposals, such as in Richmond town centre.</i> ' Apart from the House of Fraser re-development (whose increase in massing and height we continue to strongly oppose) we are not clear what other developments the Council has in mind.
28	Alice Shackleton on behalf of The Kew Society	No. We see no benefit to seeking out such opportunities – a review to update Conservation Area studies is one thing and is useful; but seeking out opportunities for development is a major risk as "improvements" may be subjective and ultimately detract from the CAs.
31	Tim Catchpole on behalf of MESS	Yes but again the Council must have sufficient resources
Are there other opportunities through planning to enhance the cultural offer and widen participation?		
10	Stuart Morgans, Sport England	Please see comments in Section relating to Social Infrastructure.
22	Jimmy Wallace, Richmond Athletic Association	We broadly support the approach outlined towards maintaining and enhancing the borough's culture. We note the identification of Twickenham Stadium and the Stoop (Harlequins) as major attractions for the continued use of the grounds for sports uses. Similarly, the Richmond Athletic Ground also has a current site allocation for ongoing sports use and we consider it to be equally important to the borough's cultural offer. Not only does the facility meet many of the day to day sporting

Respondent reference no.	Name / Organisation	Detailed comments
		needs of the community of all ages, it also hosts a number of important sporting and leisure-based events as outlined in our introduction to this letter. In our view, this highlights the importance of ensuring that facilities such as the Athletic Ground should continue to be identified as being of cultural significance to the borough and appropriate policies drafted to support its enhancement and evolution into a modern sporting and cultural facility of excellence.
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	The Group suggests that there is scope to promote the cultural significance of the Old Deer Park for the benefit of both residents and visitors alike by identifying and celebrating its heritage and ecological interest, parkland character and accessibility as Richmond's 'Other Park'.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	See comments on value of cultural offer to Richmond above.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to identify areas in cultural deficit – much like you do with access to public open space. Then you would have more leverage to incorporate things like cinemas or galleries into large projects.
28	Alice Shackleton on behalf of The Kew Society	Possibly although it may be that this is better dealt with through financial assistance to relevant groups than through planning.
36	Tim Catchpole on behalf of MESS	In town centres. [Additional comment in response by email] Not just in town centres but also on major development sites.
41	Anthony Swan	Udney Park site
42	Jeremy Gill	Do you mean encourage more people to go to the theatre for instance? Probably yes.
44	Roger Cutler	Only if you properly listen to people & don't, as now, just ride roughshod over any objections you don't like.
45	Sally Beeson	I think you do a very good job already
46 (a)	Joan Gibson	For point 56. this cannot be used to justify building on green land - especially undisturbed and inaccessible green land
52	Winston W Taylor	The Borough needs more music venues to reflect its history in the R&B/Jazz/Rock area. Planning policy could reflect this and also stop things like the ludicrous threat to the Bulls Head in Barnes several years ago.
53	Richard Woolf on behalf of McDaniel Woolf Architects	We are 'very' fortunate to have such excellent cultural sites within the borough. We should also celebrate great 20th C and 21st C places and spaces, which tend to be over looked.
57	Tom Clarke, Theatres Trust	We are supportive of the plan's approach to widening participation in culture, and that the borough's theatres have been noted. These contribute towards the overall vibrancy of the borough, and the cultural well-being of local people. We would encourage the plan to suggest engagement with the Trust where developments proposing or impacting theatres come forward. Part of encouraging participation is protecting and supporting what already exists. As such the plan should have strong policies protecting existing facilities from loss, as are referenced within the Social and Community Infrastructure section.
58	Michael Atkins, Port of London Authority	Welcome reference in the Direction of Travel document to the Thames Policy area and the need for development proposals within the area to respect and take account of the areas special character.
63	Carol Rawlings	Support for Kew Gardens in order that it can continue its essential botanical research and preservation work and reduce the entrance fee, which disadvantages low income people. Appreciation of the natural world must be encouraged if we are to develop zero carbon plans to meet climate needs but currently the entrance fee is unaffordable for most people.

Respondent reference no.	Name / Organisation	Detailed comments
69	Geoff Bond on behalf of Ham and Petersham Association	A reappraisal of the BTMs of Ham and Petersham as these were missed both in the Neighbourhood plan and the recent reassessment. There is no mention of Other Sites of Nature Importance. Protection from the introduction of urban features including signage into conservation areas should be clearly restricted.
Do you agree that the MOL and Green Belt boundary review should also incorporate a review of designated Other Open Land of Townscape Importance?		
Of respondents who answered the question: 14 said yes, 5 said no and 2 don't know [17 did not answer the question]		
14	Mayor of London	The borough is home to a substantial amount of MOL and to a lesser extent Green Belt. The Mayor is pleased that it is Richmond's intention to provide strong protection against inappropriate development in these areas in accordance with Policies G2 and G3 of the Intend to Publish London Plan. Please note the Secretary of State has issued Directions on Intend to Publish Policies G2 and G3.
17	Hannah Bridges, Spelthorne Borough Council	Spelthorne Borough Council is supportive of Richmond's approach to explore all options to meeting development needs, including the production of a Green Belt review to determine if any areas are not fulfilling their purpose. As mentioned in the consultation document, this will demonstrate at the examination stage that reasonable options have been considered, should exceptional circumstances exist. If land is to be released to help meet development needs, in line with the NPPF 2019 brownfield land and sustainable locations should be prioritised. If the decision is taken to review the Green Belt we would appreciate being notified of any implications for the strategic Green Belt that runs between Spelthorne and Richmond. We feel that it would be beneficial to hold a Duty to Cooperate meeting in due course to discuss Green Belt and other cross boundary issues as both authorities progress Local Plan preparation.
20	Gary Backler, Friends of the River Crane	[See earlier comments relating to green infrastructure] We note with concern that the Council are; "committed to carrying out a review of existing Green Belt, Metropolitan Open Land and Other Open Land of Townscape Importance to fully inform our spatial strategy and approach to growth and development in the borough." (p39) We are concerned that on this occasion, revised housing targets appear to be regarded as a legitimate test for the existence of "exceptional circumstances." Such an approach would appear to legitimise the challenging of Green Belt/MOL boundaries on any future occasion when housing targets or other development imperatives are adduced. We would oppose any de-designation of Green Belt and any development of Metropolitan Open Land which diminished the overall value, or potential value, of the open space network of the borough and did not, as a minimum, offer a compensating increase in open space quantum and open space protection elsewhere in the borough. We would also oppose any re-designation from Green Belt to Metropolitan Open Land, which would thereby enable development to be brought up to the very boundary of the re-designated space. We believe that any review of Green Belt, MOL and OOLTI should have, as an at least equal purpose, the consideration of how the quality of open spaces with such protections can be improved and managed to increase their public-welfare, environmental and ecological value. We would also like to see at least equal energy injected into a review of the obstacles and severance factors which prevent the physical joining up of current, near-adjacent open spaces of various designations into larger spaces; and of the obstacles to improved pedestrian and cycle connectivity between such open spaces, including land ownership. Our own survey data, assessing the way in which local communities engage with open spaces in the borough, demonstrates quantitatively the extent to which users of an open space seek to "join-up" their visits with visits to adjacent open spaces. This is particularly the case for visits which involve children; whereas other research shows that children in general are reluctant to engage with open spaces. Improving the links between open spaces, and resisting any loss of linkage caused by de-designation and development, is therefore key to engaging children in open spaces. The Council should be concerned about this as a matter for the health of future generations. ("Prevalence of obesity more than doubles between reception and year 6" p56 – "a preventable public health issue" p58).
22	Jimmy Wallace, Richmond Athletic Association	In relation to open land, we support the borough's intention to carry out a borough-wide review of Green Belt and Metropolitan Open Land. This is now also particularly relevant in the context of the Secretary of State's letter to the Mayor of London on 13th March in relation to the 'Intention to Publish version of the London Plan'. Specifically in relation to Green Belt, the Secretary of State has directed amendments to the emerging London Plan which are intended to bring it into line with the NPPF by ensuring there is reference to 'very special circumstances' that would make otherwise harmful development acceptable.

Respondent reference no.	Name / Organisation	Detailed comments
		<p>A second important change that has been directed relates to local plan making where the suggestion changes is that <i>“Exceptional circumstances are required to justify either the extension or de-designation of the Green Belt through the preparation or review of a local plan.”</i> (our emphasis). This wording introduces the ability for Green Belt to be altered, either extended or de-designated. As made clear in the London Plan, the Metropolitan Open Land (MOL) is afforded the same status and level of protection as Green Belt so in this regard, it is entirely appropriate for the borough to carry out a review of such designated open land also.</p> <p>We support the acknowledgement that the reassessment of existing constraints is an important part of the plan process, focusing on whether designated open land still meets its purposes as outlined in the NPPF, London Plan and Local Plan. We agree that it is likely that the majority (but not all) of the existing land that is protected by these designations fulfils the policy requirements and criteria for ongoing designation. However, we do agree with the borough’s suggestion that there is potentially pockets of land that could benefit from a thorough assessment against the relevant policy criteria for designation. We discuss this in greater detail in our commentary on the ‘Call for Sites’ consultation below insofar as believe this applies to elements of the Richmond Athletic Ground site which have already been developed with existing buildings, car parking and hard landscape and as such can be argued as not meeting the necessary policy criteria for ongoing designation. We endorse the borough’s intention to run an open and transparent assessment of such areas of designated open land and the commitment to ongoing consultation both to agree the assessment methodology and in relation to site specific changes that might be suggested.</p> <p>To conclude on open land, we broadly support the policy directions as outlined on p.40 and we look forward to studying the detail of the emerging policies in due course. Similarly, we would like to be involved in the proposed Green Belt / MOL review process and look forward to submitting evidence to justify the partial release of some previously development parcels of the Richmond Athletic Ground site from the designations of protected open land.</p>
23	Peter Willan on behalf of Old Deer Park Working Group	<p>[First para following on from comments to the Introduction].</p> <p>1.12 However, the Group remains apprehensive that the stated commitment to carrying out a review of existing Green Belt, Metropolitan Open Land and Other Open Land of Townscape Importance (‘to fully inform our spatial strategy and approach to growth and development in the Borough’) to which reference is made on page 39 of the consultation document, and reflected in Questions 11 to 17 of the questionnaire, raises the considerable risk the potential de-designation of many, much valued open spaces of the Borough such as the Old Deer Park, as an unintended consequence of a simplistic search for growth.</p> <p>The Group supports the proposed review of the boundaries of Metropolitan Open Land, but only insofar as it will serve to provide scope for the Council to give proper consideration to adjustments in the boundaries of open land currently designated as MOL to embrace areas presently and anomalously excluded from such designation, such as those in the Old Deer Park – an issue on which the Group has repeatedly pressed in its submissions in response to consultation on the preparation of the present <i>Local Plan</i> and the present <i>Old Deer Park Supplementary Planning Document</i> and in earlier submissions. Copies of the Group’s submissions on this matter are attached. [See Appendix for Group’s earlier submissions]</p>
25	Phoebe Quayle	<p>The borough should not use Green Belt, protected Metropolitan Open Land or other valuable open green space for development of any kind. Richmond should instead make more efficient use of land to find space for housing and commerce.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>Need to review all designations to make them as watertight as possible.</p> <p>There are some areas that could be added to MOL such as Hounslow Cemetery (which backs onto Hounslow Heath), Twickenham Cemetery, and the Heathfield Schools playing field.</p> <p>The actual Metropolitan Green Belt within the GLA area is now very thin – and the council should be careful not to confuse this with the home counties green belt. There is a green chain that runs from Whitton Dene, Twickenham Stoop, Kneller Gardens, Lincoln Avenue that acts as green belt separating the historical boundaries of Whitton from the rest of Twickenham. We feel this important ‘break’ in development should be more formally recognised and not just seen as part of the Crane Valley.</p>
32	Mark Jopling on behalf of UPPFT	<p>The Trust makes the following comments on the "Direction of Travel":</p> <ul style="list-style-type: none"> • Upgrade all LBRUT OOLTI locations to MOL, no need for LBRUT to have a separate local designation for protecting green space. • Protect all green space from inappropriate buildings in such strong terms as to dissuade all speculative schemes on green space

Respondent reference no.	Name / Organisation	Detailed comments
35	Alice Roberts, CPRE London	<p>CPRE London is a membership-based campaigning charity concerned with protecting and enhancing London’s Green Belt, Metropolitan Open Land, parks, green spaces and green infrastructure, and achieving compact, green, urban communities to help prevent low-carbon sprawling development in the countryside.</p> <p>Green Belt and MOL Sites which are designated with the strongest protection in planning policy should not be allocated for development. Releasing and developing protected land neither necessary nor desirable. The Green Belt to the east of the borough is vital to ensure London does not sprawl into open countryside and so Londoners do not have to live with the devastating impact of urban sprawl i.e. high transport and energy costs, congestion and pollution.</p> <p>MOL is a strategic asset for all of London not just Richmond upon Thames residents. Furthermore, it is vital to ensure Londoners have access to open space and as an ecological asset delivering ecosystem services like urban cooling and water management; as well as providing vital habitat for diverse species.</p> <ul style="list-style-type: none"> • Green Belt / MOL reviews should only be conducted to assess whether the land meets the purposes and should not be used as a way to identify land for development. • Developments in Green Belt are high-carbon, car-dependent and rarely affordable (according to CPRE evidence). • There are clear alternatives for locating development within the borough – please see Annex 1 where we have suggested a number of large sites which could be redeveloped for residential, commercial or mixed-use neighbourhoods.
37	John Waxman on behalf of Crane Valley Partnership	The review of Green Belt, Metropolitan Land and Other Open Land of Townscape Importance linked with Theme 5 is concerning if there is an underlying risk that this could result in a net loss of green space and/or local shortages of wildlife refuges. The commitment to take a ‘transparent approach’ to that review is therefore welcome.
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	<ul style="list-style-type: none"> • The HPNF are concerned at the prospect of the review of MOL and OOLTI, which forms such a major role in Ham and Petersham and is its defining characteristic. Whilst there is justification for the review, H&P with its limited connectivity is not appropriate for major development which we have noted above should be located in areas with good public transport and sustainable transport infrastructure. There has been progress on some of the infill sites which were identified in the NP, for example at Cave Road/Riverside Drive, Craig Road and Maguire Drive/Dukes Avenue, and that is where attention should continue to be directed. • Nibbling away at designated protected areas would undermine public confidence in the strongly supported HPNP. For example the proposed loss of a strip of St Richards School Playing Fields with the apparent presumption that this could be simply compensated for by the provision of a MUGA would, we believe, contravene both the loss of OOLTI open space and the protection of character policies in the HPNP. There are lots of positive policy directions for improving green spaces and enhancing biodiversity which we can support, but not the loss of designated areas.
42	Jeremy Gill	What on earth does that mean?
44	Roger Cutler	It will only be used as an excuse to bring in other unpopular measures.
46 (a)	Joan Gibson	You should also stop seeing MOL as somewhere you can build on
46 (b)	Joan Gibson	MOL review must designate the whole of Heathfield Rec as MOL (including any extensions), and change the area to parkland.
52	Winston W Taylor	And why not?
53	Richard Woolf on behalf of McDaniel Woolf Architects	The definition of ' development ' in respect to open land is vague. We need management and conservation strategies for our open land and should look to the wonderful work by Thames Landscape Strategy and along the River Craine as being first rate examples of how to conserve open land and ensure it has meaning and purpose. We suffer in this borough with an unhelpful view that doing ' nothing ' is the best option. It is exactly the opposite. We must take our open land in our hands and maintain it , conserve it and make use of it. Every square inch of this borough has evolved.
63	Carol Rawlings	The green belt and other open land should be sacrosanct.
68 (a)	Mark Jopling	OOLTI is local designation, why isnt all OOLTI upgraded to MOL by default ?
68 (b)	Mark Jopling	OOLTI should by default re-classified at MOL, no need for a separate local classification
69	Geoff Bond on behalf of Ham and Petersham Association	this should not include very recent OOLTI designations added in the last plan, of which there are very few. These were only ratified after legal challenge earlier this year. It would seem odd to change these at this stage when it has been so vigorously and recently investigated.
Are there any sites that you would like to be identified for designation as ‘Local Green Space’?		

Respondent reference no.	Name / Organisation	Detailed comments
9	Shirley Meaker	lets hope udney park planning is reviewed by an intelligent body this time affordable housing is desperately needed as is the doctors surgery too much time has been wasted toing and froing green belt rubbish there is still plenty of playing field left for the schools as for residents thinking it will spoil their view hard luck were in comfortable houses plenty are not do the right thing for gods sake and let the plan go ahead
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The triangle of grass on the Woodlawn Estate – at the junction of Lyndhurst and Chiltern Avenue could be turned into a pocket park. We also request that public open space designation is expanded to cover all of Heathfield Recreation Ground. There is a strip next to Heathfield School that is not covered.
31	Tim Catchpole on behalf of MESS	Yes, the Stag Brewery Playing Fields.
45	Sally Beeson	Udney Park Playing Fields Langham Road open space River towpaths and open space leading down to the Thames
46 (a)	Joan Gibson	Heathfield Recreation ground and it's future extension should have the highest level of protection you can give it - not all the site is designated MOL at the moment. This to guarantee the space in one of the poorest areas of Richmond with the most ill health and to ensure this land is NOT lost to local schools wanting to expand onto it. This land needs to be for the whole community.
47	Trevor Rowntree	I think Crane Park and the Shot Tower should be designated as a 'Local Green Space' and developed for the community
50	John O'Brien	Westerly Ware, Pensford Field, North Sheen Rec, Raleigh Road rec.
51	Su Bonfanti	I want to nominate Cambridge Gardens and Warren Gardens for designation as a Local Green Space, which holds particular significance and value to the local community. It is the only green space in our network of streets on the south of Richmond Road. It is the only remnant of one of the largest riverside estates in Twickenham belonging to Cambridge House, originally a Jacobean mansion standing on the east of the current Cambridge Road. It is therefore part of the chain of green spaces originally associated with important riverside estates from Syon House up stream to Ham House. Given its location, it also forms part of the amenity of Richmond Riverside, preserving open views on both sides of Richmond Bridge, as well as providing leisure facilities for local people. And Warren Gardens is the location of the memorial to the Belgian refugee community who lived in the area in World War
52	Winston W Taylor	Udney Park Playing Fields now have this status. I am not aware at this stage of any other sites.
53	Richard Woolf on behalf of McDaniel Woolf Architects	No
63	Carol Rawlings	Ham Village Green should be included in the list of designated village greens.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We want to nominate Cambridge Gardens and Warren Gardens for designation as a Local Green Space, which holds particular significance and value to the local community. It is the only green space in our network of streets on the south of Richmond Road. It is the only remnant of one of the largest riverside estates in Twickenham belonging to Cambridge House, originally a Jacobean mansion standing on the east of the current Cambridge Road. It is therefore part of the chain of green spaces originally associated with important riverside estates from Syon House up stream to Ham House. Given its location, it also forms part of the amenity of Richmond Riverside, preserving open views on both sides of Richmond Bridge, as well as providing leisure facilities for local people. And Warren Gardens is the location of the memorial to the Belgian refugee community who lived in the area in World War
68 (a)	Mark Jopling	The Council should have a LGS Policy and encourage communities to nominate sites. Likewise use the Asset of Community Value legislation where appropriate
68 (b)	Mark Jopling	The Borough through Village Planning should encourage LGS and ACV applications from the community. Both of these relatively new designations were missing in the original 2018 Local Plan consultations.
69	Geoff Bond on behalf of Ham and Petersham Association	Ham Library garden
General comments relating to this topic area		

Respondent reference no.	Name / Organisation	Detailed comments
14	Mayor of London	Richmond should ensure that its strategic and local views are protected in accordance with Policy HC3 of the Intend to Publish London Plan. Table 7.1 of the Intend to Publish London Plan identifies the King Henry VIII's Mound to St Paul's Cathedral linear view as a protected vista and this should be preserved by ensuring that it is clearly illustrated on maps and the borough's policies map so that it can be identified by developers and officers to enable the effective management of development in and around the view. The view should be managed by following the principles of Policy HC4 of the Intend to Publish London Plan. The importance of 3-D modelling through images and/or software should be noted as a valuable tool in this regard.
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	In responding to questions 54, 55, 56, 57, 58 and 59 in relation to 'Heritage', 'Culture' and 'Green infrastructure and protecting open land', the Group can see no benefit or justification in seeking to amend, let alone dilute, the existing policies for the protection of local character, heritage assets (including listed buildings, conservation area and Registered Historic Parks and Gardens), views and vistas, the Royal Botanic Gardens Kew World Heritage Site, Metropolitan Open Land, trees, woodlands and landscape, social and community infrastructure, Public Open Space, Allotments, contained in the presently adopted <i>Local Plan</i> .
24	Paul Velluet	In responding to questions 54, 55, 56, 57, 58 and 59 in relation to 'Heritage', 'Culture' and 'Green infrastructure and protecting open land', I can see no benefit or justification in seeking to amend, let alone dilute, the existing policies for the protection of local character, heritage assets (including listed buildings, conservation area and Registered Historic Parks and Gardens), views and vistas, the Royal Botanic Gardens Kew World Heritage Site, Metropolitan Open Land, trees, woodlands and landscape, social and community infrastructure, Public Open Space, Allotments, contained in the presently adopted <i>Local Plan</i> .
29	Richmond Cycling Campaign	P36 (culture, open land, etc.) We would like all considerations in this area to include how people arrive at cultural destinations. For example, on match days at Twickenham, we should have a wider strategy that prioritises those who arrive by foot, by bike and by public transport. As a general rule, it should never be easier or more convenient to drive to our cultural destinations compared to walk/cycle/public transport options, and this should be embedded in policy. We would like to see plans for each of our cultural destinations which consider how people arrive there, capacity, etc., with planning for safe places for bike parking, and appropriate access for those who still need a motorised vehicle (for example blue badge holders). P40 uses the phrase "well served by public transport". We very much welcome this, but want to emphasise that it should specifically include walking and cycling access as well.
Increasing biodiversity and the quality of our green spaces, and greening the borough		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 20 said yes, 1 said no and 2 said don't know [15 did not answer the question]		
20	Gary Backler, Friends of the River Crane Environment.	FORCE welcomes the inclusion of this theme, and its prioritisation. The Local Plan should recognise (missing from pp41-42) the contribution that improvement to the borough's river channels and wetlands can make to tackling the climate emergency. We believe that all development proposals should carry a <i>mandatory</i> requirement to "enhance green spaces and green features" – elsewhere in the borough if such enhancement proves undeliverable on the site of the development. The "if possible" get-out (p42) should be removed. We would welcome the Council's "implementing a biodiversity net gain imperative" for all developments (p43). We welcome a review "identifying potential new SINC's for designation" (p43), and would be pleased to work with the Council to address obstacles to new such designations. We also support the proposal to customise the Urban Greening Factor model to LBRuT-specific criteria. (p44) The LB Richmond Biodiversity Action Plan is a document of key value and importance to the recognition and protection of the diverse habitats and species of the borough. It was completely updated in 2019 and is an ongoing collaborative enterprise with contributions from the council, community and private partners. The BAP needs to be adopted as a supplementary planning document for the plan and the values and targets of the BAP need to be integrated into the broader planning policy of the borough through the plan.
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	In responding to questions 61 and 53 in relation to 'Increasing biodiversity and the quality of our green spaces and greening the borough', the Group supports the action points set on page 44 of the consultation document insofar as these are consistent with or simply amplify existing policies in the <i>Local Plan</i> . However, the Group can see no particular benefit or justification in seeking to amend the existing policies in the present <i>Local Plan</i> for the protection of designated sites and other areas of importance for biodiversity conservation; for safeguarding protected species and priority species, including those listed in local biodiversity action plans; for

Respondent reference no.	Name / Organisation	Detailed comments
		retaining and protecting existing trees; and for protecting green and open spaces, contained in the presently adopted <i>Local Plan</i> unless further refinement of those policies cannot be more effectively or speedily delivered through the preparation and adoption of one or more supplementary planning documents.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	No mention of protecting existing green verges or promoting reinstatement. There is the potential of uncapping miles of tarmac verges and reducing pressure on drains. A freedom of information request in 2019 showed that the cost of mowing the grass was calculated the same way as parks – on a square meter basis. Many of our street trees are suffering because they are surrounded by tarmac – and this cause stress, and results in shorter lifespans compared to trees planted in parks. In the height of droughts this results in the release of large amounts of VOCs – and is thought by some scientific papers to greatly add to smog, please see the following links for further information https://www.sciencemag.org/news/2019/04/drought-not-just-about-water-it-affects-air-pollution-too https://www.frontiersin.org/articles/10.3389/ffgc.2019.00050/full
38	Justine Langford on behalf of Ham and Petersham Neighbourhood Forum	HPNF support the 'policy direction' to "Continue to ensure that the impact of large new development is assessed, so that the impact of additional burdens on existing facilities is mitigated", and look forward to this principle being applied and implemented in the redevelopment proposals for Ham Close.
42	Jeremy Gill	Self-evident
46 (a) (b)	Joan Gibson	I worry in this section that Richmond consider green areas which are not accessible by the public as less important than those our many visitors are degrading. You are justifying these can be built on. This attitude needs to stop – land which is dark and undisturbed is more valuable to wildlife than accessible areas. This is the subject of the climate emergency which explains how much wildlife we are losing in the UK and Globally, and you quote in the next section. The Local plan must reflect the climate emergency which has triggered this consultation.
52	Winston W Taylor	Broadly
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We support the proposed policy directions, including developing a local Urban Greening Factor model, which relates to the specific issues here. We also support the expectation that all development should make a positive contribution; if small developments are let off the hook, that will cover much of happens here and it will be a big opportunity missed.
68 (a)	Mark Jopling	Yes though greater protection needed for grass Playing Fields. The Playing Pitch Strategy is a critical Planning document that speculators seek to exploit. Community sports clubs will be strained financially by the CV-19 impact, the Borough must do everything possible to dissuade speculators from trying to buy up distressed sports clubs.
69	Geoff Bond on behalf of Ham and Petersham Association	It is concerning that very recent OSNIs should be reviewed having only very recently been added and vigorously examined.
Do you agree with our overall policy directions for protecting and enhancing our biodiversity as well as recognising the contribution that green infrastructure and urban greening make to tackling climate change?		
Of respondents who answered the question: 21 said yes, 2 said no and 1 don't know [14 did not answer the question]		
22	Jimmy Wallace, Richmond Athletic Association	Biodiversity: We support many of the proposed policy directions as outlined on p. 44. Specifically given the functions of the Richmond Athletic Ground, we support the intention to have policy which encourages enhanced green and open spaces to provide a wider range of benefits for residents including improved public access and recreational facilities.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to recognise railway lines as habitat corridors and make them SINCS – in the way Hounslow Council has done. We note the Biodiversity Action Plan map misses out three large 'bat' sites in Whitton; Crane Park, Hounslow Heath, and Kneller Hall.

Respondent reference no.	Name / Organisation	Detailed comments
37	John Waxman on behalf of Crane Valley Partnership	<p>The Crane Valley Partnership (CVP) is an unincorporated association of public, private and third sector organisations that aims to:</p> <ul style="list-style-type: none"> • raise awareness and support action for conservation, restoration and new approaches to design and management of the river valley • help communities take a sustainable approach to managing and improving the River Crane and its tributaries • improve and protect the biodiversity of the area • maximise the use of the river corridor as a resource for healthier living and educational activities for local people • promote connectivity along the river corridor <p>For more information on CVP please see: www.cranevalley.org.uk</p> <p>Please note that London Borough of Richmond upon Thames is a member of CVP. I should also highlight that my comments do not present the collective view of the various partner organisations within CVP. Members of CVP will have their own perspectives on this consultation and will submit their own responses accordingly if they wish to engage in the consultation process.</p> <p>I have seen the detailed response to the consultation from Friends of the River Crane Environment (FORCE). I fully support and endorse the comments within that considered response [See respondent number 20]. Given FORCE's extensive local knowledge and strong community focus I would suggest that its views should carry considerable weight within this consultation.</p> <p>I will however take the opportunity to make some reinforcing points myself: LBRuT has declared a 'Climate Emergency' and must now act accordingly by ensuring that Local Plan policies are <u>fully aligned</u> with that declaration. There should be no anomalies or contradictions in the Borough's position. In this context, the Local Plan must recognise that the River Crane, the Lower Duke of Northumberland's River, the Whitton Brook and the open spaces along the river corridors are extremely valuable green infrastructure assets that need to be protected and enhanced so they can fully play their part in helping to mitigate the impacts of climate change.</p>
42	Jeremy Gill	How much did you pay people to write this?
44	Roger Cutler	The word "biodiversity" is made up & meaningless.
46 (a) (b)	Joan Gibson	<p>You are also using MOL and green land as cheap areas to build on. This has to stop – as listed before there is a huge amount of “efficient” rebuilding you can do on brown field sites to achieve building targets.</p> <p>The Local plan must state only the many brown field sites can be built on.</p>
46 (b)	Joan Gibson	<p>See also comments in section 'Increasing Biodiversity'</p> <p>Hedges are often more valuable as wildlife habitat and in reducing pollution. Along with trees you need to promote and plant hedges too. They are much more effective and sustainable than green walls which often never happen (Twickenham School plan had green walls which were never planted, and LBRuT have done nothing about). You need to only agree planning permission when the development is going to deliver green infrastructure that works and LBRuT will enforce.</p> <p>New developments should have a 30% tree canopy, very little grass lawn (could use alternative planting like yarrow which is more valuable to wildlife), hedges for borders (rather than fences), insect walls, and bird habitats.</p> <p>There is no justification for the “unavoidable” loss of wildlife habitat and the assumption that developments can be justified when removing habitat must be removed from the local plan.</p> <p>Undisturbed, inaccessible green areas must be given a higher protection on the bases of their value to wildlife.</p>
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough to help biodiversity.
50	John O'Brien	Include Pensford Field in this plan

Respondent reference no.	Name / Organisation	Detailed comments
58	Michael Atkins on behalf of Port of London Authority	Support the intention to enhance green and open spaces to provide a wider benefit for residents, including improved public access for all.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We would like to see more tangible ways for urban greening to be included in new developments sites and local town centres with the use of green walls and equivalent of CityTree
68 (a)	Mark Jopling	Needs to be stronger presumption against development of green space to deter the speculators who waste massive public resources trying to challenge the Local Plan
68 (b)	Mark Jopling	Should be much stronger on protecting green space and playing fields so any speculators don't try and fight the Council. Sports clubs will be vulnerable post CV-19 and the "vultures" may circle if they building on pitches in remotely possible
69	Geoff Bond on behalf of Ham and Petersham Association	Key here is preserving and developing green corridors
Do you agree that we should develop our own Urban Greening Factor model rather than relying on the generic London-wide model?		
Of respondents who answered the question: 13 said yes, 2 said no and 5 don't know [18 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	We have an above average percentage green space because of Richmond Parks, Bushey Park and Hampton Court – and this may result in green models designed for the more urban central London having perverse results.
44	Roger Cutler	Provided you listen to people properly rather than put in what you feel they need.
45	Sally Beeson	Most definitely!
46 (a)	Joan Gibson	Absolutely not - you can adapt the London wide model but rewriting will miss points and is costly, and slow.
46 (b)	Joan Gibson	I do not agree you should develop your own greening model rather than using the London wide one as this is just wasting time and increasing cost. You should adapt the London wide model and make sure any adaptations work across borough boundaries.
51	Su Bonfanti	Your proposed policy directions, including developing a local Urban Greening Factor model, which relates to the specific issues here, sounds right to me. I support the expectation that all development should make a positive contribution; if small developments are let off the hook, that will cover much of happens here and it will be a big opportunity missed.
52	Winston W Taylor	Tend to yes but I would have to do more research. I have not seen the London-wide model
63	Carol Rawlings	Roof gardens and green walls should be developed.
68 (a)	Mark Jopling	Richmond should be leading London though the models should be London-wide
68 (b)	Mark Jopling	Lead London-wide not go-it-alone
Do you agree with the introduction of the biodiversity net gain requirement?		
Of respondents who answered the question: 17 said yes, 2 said no and 4 don't know [15 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to ensure green roofs are not over relied upon (they can turn out to be low value sedum matts) and that any wildlife corridors are wide, robust, and little light penetration.

Respondent reference no.	Name / Organisation	Detailed comments
44	Roger Cutler	Totally meaningless phrase.
46 (a) (b)	Joan Gibson	LBRuT are not trusted to protect our green land as you have already demonstrated you do not ensure all viable alternatives are used before agreeing to build on MOL for the THS development. I see nothing in this update or previous local plans which demonstrates you will protect our green infrastructure in the manner you think you are doing so already. The wording and agreements to protect green land with GLA and the government need to be stronger, and you need to commit to standing your ground rather than being afraid someone will overturn your planning decision. I am missing what you will do to ensure our many visitors travel to green sites without using cars, limit their damage to the green site, and desist from using the park as a car through route.
46 (b)	Joan Gibson	I totally agree on biodiversity net gain requirements. This should be assessed by independent LBRuT staff and not by consultants employed by the developer who will not get repeat business unless they prove what the developer wants to deliver. Currently LBRuT take the word of Developers when assessing impact on air quality, biodiversity and travel arrangements. This is (it is happening now) leading to developments which increase car traffic and decrease air quality. How you do this is to specify as a minimum: 30% tree canopy, hedges for fences, lawn areas to be yarrow (or some such plant), green roofs, bird and bat boxes, stag loggeries, insect walls, bath and shower water collection for watering, hard landscaping to be porous, car free developments (car park area can be used for wildlife).
52	Winston W Taylor	Not enough time to consider
53	Richard Woolf on behalf of McDaniel Woolf Architects	Before you define net gain , you have to establish a net loss. This can only be done if you survey what exists. We don't have any up to date survey information on much of the boroughs woodland and open spaces.
63	Carol Rawlings	Roof gardens and green walls.
General comments relating to this topic area		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	Green Infrastructure & Protecting Open Land The Green and the Riverside are key MOL assets and must be protected from development. In recent years small portions of MOL on the terraces of the Riverside have been occupied by a restaurant. This should not be repeated. There is pressure to commercialise the Riverside and this must be resisted. Access to the Old Deer Park from Richmond is important and needs recognition as such. Increasing biodiversity and the quality of our green spaces, and greening the borough It is important that the grass surface of the Green and the grass terraces by the Riverside are supported and not compromised. It is important that the trees around the Green and along the Riverside and elsewhere in Central Richmond are properly maintained. It is important the wild life on the Riverside and elsewhere in gardens is protected. We believe the policies in the current Local Plan cover the biodiversity issues adequately and if further amplification is required we would suggest that it could be dealt with by subsidiary planning tools.
29	Richmond Cycling Campaign	P44 - with regard to trees on our pavements, we draw the council's attention to recent discussions on how tree roots can damage pavements and make them impassable for those using (for example) walking frames or mobility scooters or chairs. We would like to see policy specify that pavement space will not be given to trees in this way, and that: a) Any new development will place trees into the space usually occupied by car parking, leaving clear, unobstructed pavements. b) A programme to reallocate car parking spaces to trees - using buildouts as appropriate - whenever trees are replaced or planted.
46 (b)	Joan Gibson	Need to stop people paving over their gardens. Their gardens can include porous car parking, and planting to ensure no net loss of biodiversity or water absorption. Pavements around new developments (and roll this out to the whole of Richmond) must include hedges to protect against pollution and flooding, and improve biodiversity.

Respondent reference no.	Name / Organisation	Detailed comments
		Additionally, LBRuT can green the borough by running a campaign to get gardens, patios etc. greened up. Tell people how to do it (even in pots), what to plant (native shrubs etc.) and how it will help their personal air quality.
Improving design, delivering beautiful buildings and high-quality places		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 17 said yes, 4 said no and 1 don't know [16 did not answer the question]		
22	Jimmy Wallace, Richmond Athletic Association	We acknowledge the various suggested policies directions for improving design and delivering high quality buildings and places. We look forward to reviewing the detailed policy wording as it emerges and we recognise the requirement for high quality design of new buildings and places to contribute to the beauty and character of the borough.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The council is planning on removing the Whitton & Heathfield Village Plan which will reduce the protection of the area against inappropriate development, because most of Whitton was developed in the inter-war years and has a very small percentage of properties protected by formal designations. Most of the Councils 'heritage' policies value Victorian and earlier neighbourhoods higher than interwar ones – and mechanisms like conservation areas won't be much use in areas like Whitton.
28	Alice Shackleton on behalf of The Kew Society	The explanation with the policy directions seems to indicate that there is already a substantive and substantial volume of appropriate policy, whether in the adopted Local Plan or in SPDs or other documents and acknowledges the value of these. This does not indicate a need for a review and new Local Plan but rather refining what currently exists. For instance, a tighter policy on siting of tall and taller buildings to protect the character of some town centres (e.g. Richmond) and out of town areas (e.g. Homebase, Manor Road) and potentially retail parks (such as Kew Retail Park) is needed.
42	Jeremy Gill	Got more important things to worry about and so should you.
44	Roger Cutler	Your plans for Twickenham Riverside are definitely not beautiful.
46 (a)	Joan Gibson	I agree with what you are doing and think LBRuT is good at ensuring our borough keeps its character. Aging population – possible to build high quality sheltered / monitored accommodation to entice people out of their large homes?
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
53	Richard Woolf on behalf of McDaniel Woolf Architects	I am very uncomfortable with a Richmond Borough Design Guide. The emphasis within this section is on ' history ' being the key issue, not quality . I am very uneasy with the current Governments direction of travel towards Classical Architecture being favoured over other forms of architectural design and even more worried that developments which express their facades in a ' classical ' manner will be granted planning in the mistaken view that they are more ' beautiful ' that others.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We support the preparation of a design guide for the borough, reflecting specific setting, character and history of different neighbourhoods. We would like any guide to recognise the importance of Richmond Road in East Twickenham as an approach to Richmond Bridge, one of the most important structures in the borough. We support the idea of embedding the Richmond Design Review that further. Although it seems unlikely that schemes in our area would be big enough to qualify, we hope there would be a trickle down from larger schemes, both in signalling to developers what is acceptable and in strengthening the hand of the Planning Committee.
How should the Urban Design Study identify areas for change and locations where tall buildings and/or high density development may be appropriate?		
20	Gary Backler, Friends of the River Crane Environment.	<p>FORCE welcomes the objective that “new buildings are well designed and contribute positively to the character of the townscape,” but we emphasise that new buildings must also contribute positively to the maintenance and improvement of the character of open spaces too: namely by reducing massing and visual intrusion into open spaces and, in particular, along the green corridors associated banks of the River Crane and the Duke of Northumberland’s River. FORCE believes that no such locations are suitable to accommodate tall buildings, and would welcome assurances that these would not be considered suitable for such locations by the application of the proposed “Urban Design Study” principles. (p47)</p> <p>We support “effective place making strategies” in principle. We believe that the borough’s open spaces are a key feature of “place” in the borough, for both residents and visitors. Our usage surveys, undertaken over seven years and at multiple locations along the River Crane and DNR, provide considerable insight into the connection of residents and visitors with these places; and we would be pleased to share our insights. We believe that these usage surveys are a critical insight into the current</p>

Respondent reference no.	Name / Organisation	Detailed comments
		public usage of open spaces, and the potential enhancement of this usage, and we would expect the council to be undertaking comparable surveys across the borough to inform its policies and strategies.
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	In responding to questions 66, 67, 68 and 69, in relation to improving design, delivering beautiful buildings and high quality places, the Group can see no particular benefit or justification in seeking to amend the existing policies relating to local character and design quality, building heights, designated heritage assets, non-designated heritage assets and views and vistas, contained in the presently adopted <i>Local Plan</i> . The Group suggests that any further refinement of those policies could be effected by the preparation and adoption of one or more Supplementary Planning Documents, or by appropriate amendment to the published Borough-wide <i>Sustainable Urban Development Study</i> which already sets out an unduly relaxed and highly questionable approach to the development of 'tall buildings' close to Richmond Station and 'taller buildings' in the centre of Richmond. Insofar as reviewing and amending the existing <i>Study</i> , the Group urges that the potentially harmful impact of the development of 'tall' and 'taller' buildings on the Old Deer Park Conservation Area and its setting and on the adjacent part of the Richmond Riverside Conservation Area (which embraces part of the Old Deer Park) should be a major consideration.
24	Paul Velluet	In responding to questions 66, 67, 68 and 69, in relation to improving design, delivering beautiful buildings and high quality places, I can see no particular benefit or justification in seeking to amend the existing policies relating to local character and design quality, building heights, designated heritage assets, non-designated heritage assets and views and vistas, contained in the presently adopted <i>Local Plan</i> . I would suggest that any further refinement of those policies could be effected by the preparation and adoption of one or more <i>Supplementary Planning Documents</i> , or by appropriate amendment to the published Borough-wide <i>Sustainable Urban Development Study</i> which already sets out an unduly relaxed and highly questionable approach to the development of 'tall buildings' close to Richmond Station and 'taller buildings' in the centre of Richmond. Insofar as reviewing and amending the existing <i>Study</i> , I would urge that the potentially harmful impact of the development of 'tall' and 'taller' buildings on designated conservation areas and their settings and should be a major consideration.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	See also comments in Housing section. We oppose tall buildings and high density development in Central Richmond. At page 47 of the Direction of Travel document, it is stated that ' <i>We are considering undertaking an Urban Design Study which identifies local context and the locations in the Borough which have the capacity of development as well as their suitability for tall buildings</i> '. It remains unclear how such a proposed study relates to the Council's Borough-wide Sustainable Urban Development Study of September, 2008 and to its conclusions, to which reference is made at paragraph 4.2.2. in the present Local Plan. We very much hope that in reviewing the 2008 Study every opportunity will be taken to challenge the identification of the area around Richmond Station as offering 'the potential for "tall buildings"' and 'the centres of Richmond and Twickenham... where "taller" buildings may be appropriate'. ('Taller' buildings being defined as those being significantly taller than the neighbouring buildings, but less than 18 metres in height (below six storeys) and 'tall' buildings being defined as buildings of 18 metres in height or higher). We would suggest that nowhere within the boundary of the Central Richmond offers the scope for such developments.
28	Alice Shackleton on behalf of The Kew Society	Again, we ask why this is needed and why is the Council looking, apparently, to facilitate tall buildings and high density development (presumably of the sort provided by high rise blocks as in the Homebase, Manor Road, development). Such aspect of the Study must go in hand with identifying/specifying further areas where this is <u>not</u> appropriate, as present local policy LP2 seeks.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The main factor here is how connected they are to frequent public transport that can cope with extra passengers. It's also important to consider the timings of last services too. For example, the last train to Whitton from London Waterloo is known at the Cinderella Service as it leaves at 23.58 – which requires you to leave social gatherings in town earlier than anyone else. Maybe the council need to assess each town and look at the limitations – such time it takes to get to central London, spare capacity on the trains, bus routes or lack off, as this will help show what needs to be done to unlock the potential of areas.
31	Tim Catchpole on behalf of MESS	By focusing on the existing retail parks. Tall buildings are not appropriate in this borough.
41	Anthony Swan	Don't know. Tall building not so appropriate in this Borough
42	Jeremy Gill	They aren't.
44	Roger Cutler	LISTEN to the views of local people rather than profit-hungry developers, dubious quangos & out-of-the-area people who always get consulted but don't have to live with the end-result.
45	Sally Beeson	Only allow quality building to proceed which highlights our local character.

Respondent reference no.	Name / Organisation	Detailed comments
46 (a)	Joan Gibson	Places you can build more high rise are above large supermarkets – Rugby Road, Hampton and business park buildings etc. etc. Town centres such as Twickenham.
49	Margaret Edwards	The issue with many tall buildings is that they create wind tunnels at street level. This is already noticeable outside the new Twickenham station concourse. It makes it less attractive as a walking route and dangerous for less able people. Tall buildings also screen out sunshine and reduce daylight at street level - to be avoided in town centres and where other housing is low level. High density can work in town centres where access to facilities and green space is good.
52	Winston W Taylor	I would need to talk to planners, architects etc to answer this. Perhaps a good exercise for a degree level student in town planning or architecture to research.
53	Richard Woolf on behalf of McDaniel Woolf Architects	As Richmond continues to reject higher density construction I'm afraid we'll have to have this policy dictated to us by the Inspectorate and the Major of London.
55	Jon Rowles	The most important factor will be access to train stations with a metro turn up and go service.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Conservation areas or areas with grade II listed buildings should be excluded. Also, where tall buildings might jar a view of particular merit.
69	Geoff Bond on behalf of Ham and Petersham Association	Where they fit the local character of the wider area and the related infrastructure (transport, schools and healthcare) will not be overloaded.
Should design review be embedded as one of the policy tools to inform determination of planning applications?		
Of respondents who answered the question: 21 said yes, 0 said no and 2 don't know [15 did not answer the question]		
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	In relation to the proposed increase in the use of design review and its potential involvement in proposed developments in and around the Old Deer Park, the Group believes this should no longer be a process carried on 'behind closed doors'. Instead, it should be undertaken on a much more open and transparent basis. Whilst planning officers and members of the applicants' team are allowed to attend and participate in dialogue with members of the Richmond Design Review Panel, others, with the exception of local councillors who may have a particular interest in the proposals are not allowed to attend. Such a situation appears to be in conflict with the role of the Review Panel in the public interest. It is noted that unlike the Council's former Conservation Areas Advisory Committee, the majority of the members serving on the Panel have no direct association with Richmond, nor have any declared special knowledge or understanding of its history, architecture, landscape and character, let alone, its conservation areas. Such a situation would suggest that the scope for the Panel to contribute usefully and effectively to the planning process in relation to proposed developments in the Old Deer Park and nearby may be limited. For many years right up until the present, the real problem in relation to issues such as the design of new development, the design of alterations and extensions to existing buildings and the design of urban spaces, has been the tendency of the Council in its decision-making to approve proposals that are demonstrably inconsistent with its own adopted policies, guidance and planning-briefs, as so clearly reflected in the recent decisions to approve the proposals for the Stag Brewery Development at Mortlake – without consultation with the Council's own Design Review Panel – and the proposals for the House of Fraser Development in Richmond.
24	Paul Velluet	In relation to the proposed increase in the use of design review and its potential involvement in proposed developments, I believe this should no longer be a process carried on 'behind closed doors'. Instead, it should be undertaken on a much more open and transparent basis. Whilst planning officers and members of the applicants' team are allowed to attend and participate in dialogue with members of the Richmond Design Review Panel, others, with the exception of local councillors who may have a particular interest in the proposals are excluded from attendance. Respondent reference no.	Name / Organisation	Detailed comments
		inconsistent with its own adopted policies, guidance and planning-briefs, as so clearly reflected in the recent decisions to approve the proposals for the Stag Brewery Development at Mortlake – without consultation with the Council’s own Design Review Panel – and the proposals for the House of Fraser Development in Richmond.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to engage local communities in the plan making process earlier on. Often the Council has a planning performance agreement where officers give pre application advise – need to have some form of community engagement at this early state of the process. The council also needs to improve transparency and add to the public planning file and add the formal pre-application advise it gives. Some councils already do this, and it helps to provide confidence in the planning system.
28	Alice Shackleton on behalf of The Kew Society	Whether design review should be embedded must depend greatly on the structure, membership and openness of the Design Review Panel and its involvement. If members were required to have detailed local knowledge and if its participation in planning applications with the applicants was open to other interested parties as well as the applicants, it could be useful. Another tool perhaps could be the involvement of local amenity societies in the design review. These have the necessary detailed knowledge and connection to their areas.
31	Tim Catchpole on behalf of MESS	Yes, and it should have been done for the Brewery development.
41	Anthony Swan	Environmental ie amount heating etc required
42	Jeremy Gill	Will it fall down after thirty years. Will people be burned alive in it if there's a fire.
44	Roger Cutler	The ears to listen & take in local peopls' views. Most notably the views of people who live there who will be stuck with the end result.
45	Sally Beeson	New buildings should try and blend in with the local architectural style if there is any nearby
46 (a)	Joan Gibson	Not sure what a design review is - but currently LBRuT are agreeing to designs and layout which are not the optimum due to viewing that this is the responsibility of the developer and the developers offer has to be agreed.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	All developments must be holistically carbon neutral - else they could be subject to legal challenge re Paris COP objectives, as per Heathrow third runway.
51	Su Bonfanti	I like the idea of embedding the Richmond Design Review further. Although it seems unlikely that schemes in our area would be big enough to qualify, I hope there would be a trickle down from larger schemes, both in signalling to developers what is acceptable and in strengthening the hand of the Planning Committee.
52	Winston W Taylor	Consultation over large developments such as Twickenham riverside.
55	Jon Rowles	Need to have more 'verified' images as some of the CGG images are very misleading.
63	Carol Rawlings	The need for greater biodiversity and the greening of our towns through green walling, planted roofs and balconies.
Should we develop our own borough-wide design guide to assist delivering high quality design, and what are the local areas' qualities and opportunities?		
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	Anomalously, questions are posed about whether the Council should adopt its own Borough-wide design guide to assist in developing high quality design and what are the local areas' qualities and opportunities. The Group notes that the Council already has a very sound <i>Supplementary Planning Document – Design Quality</i> , adopted in February, 2006, and a very sound <i>Public Space Design Guide</i> , adopted in January, 2006, and can see no reason why either or both documents cannot be modestly updated insofar as is necessary. Similarly, the Group notes that the Council has published and adopted a series of no less than 13 <i>Village Plan Supplementary Planning Documents</i> , 56 <i>Conservation Area Studies (SPDs)</i> and 85 <i>Conservation Area Statements</i> , over past and more recent years – together with other documents such as the <i>Old Deer Park Supplementary Planning Document</i> of March, 2018. The Group notes that these documents already identify the local areas' qualities and opportunities, and can see no reason why they cannot be modestly updated insofar as is necessary.
24	Paul Velluet	Anomalously, questions are posed about whether the Council should adopt its own Borough-wide design guide to assist in developing high quality design and what are the local areas' qualities and opportunities. In this connection, I note that the Council already has a very sound <i>Supplementary Planning Document – Design Quality</i> , adopted in February, 2006, and a very sound <i>Public Space Design Guide</i> , adopted in January, 2006, and can see no reason why either or both documents cannot be modestly updated insofar as is necessary. I note that these documents already identify the local areas' qualities and opportunities, and can see no reason why they cannot be modestly updated insofar as is necessary.

Respondent reference no.	Name / Organisation	Detailed comments
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Yes, but this will need to have another tier to reflect the distinctiveness of each town that makes up the borough. Whitton's main quality is that most of the roads and estates were planned and incorporate many green spaces and verges – giving the area a feel that is much lower density than it actually is.
28	Alice Shackleton on behalf of The Kew Society	A comprehensive design guide to incorporate existing SPDs on design quality, Conservation Area statements, Village Plans with the character areas, is possible within the adopted Local Plan scheme by amending as appropriate.
31	Tim Catchpole on behalf of MESS	The Village Plan studies in 2016 were surely the makings of Design Guides?
41	Anthony Swan	If it doesn't exist in this Country or as USA standards
42	Jeremy Gill	No and I haven't the faintest idea. You decide.
44	Roger Cutler	Only if it takes into account the views of the local resident which is rarely the case.
45	Sally Beeson	Yes most definitely!!!!
46 (a)	Joan Gibson	Use of pocket parks to give areas of good biodiversity (trees, hedges, flowers) with seating so people can walk a short distance to get outside and sit / chat. Park sheds and Pavilions and unused shops to be upgraded to run local workshops – music, art, knitting, baking etc. etc. Seating stops on the way to town centres to encourage active travel. Infrastructure such as schools, NHS, dentist etc. to be local. Ensure parks have the right play areas. Teenager clubs in park pavilions to hang and play table tennis etc. An awareness we need to make our designs greener and fuller of wildlife habitat so they will need to look different to the area. This needs to be added as an objective in the plan.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Yes
51	Su Bonfanti	I think the preparation of a design guide for the borough is essential, reflecting specific setting, character and history of different neighbourhoods. Any guide should recognise the importance of Richmond Road in East Twickenham as an approach to Richmond Bridge, one of the most important structures in the borough.
52	Winston W Taylor	Yes. As for qualities and opportunities, not enough time to consider
53	Richard Woolf on behalf of McDaniel Woolf Architects	Only if we see this as an issue of quality over style ... I'm uncomfortable with an historic architecture becoming the narrative, rather than an appropriate response to site, context and function.
55	Jon Rowles	Yes, but it should be done in a way where it can be updated outside of the local plan process.
56	Rob Kennedy, Environment Agency	Yes
58	Michael Atkins, Port of London Authority	Yes, it is considered this should include specific guidance for riverside developments in the borough.
59	Paul Massey	Yes as Richmond is a very special borough providing much needed open space for the residents of Richmond and beyond
61	Tom Minns	Yes
63	Carol Rawlings	Yes and it should be in keeping with the local areas including adequate space for biodiversity.
64	Johanna Eschbach on behalf of Richmond	Yes but within the borough there are different areas which might warrant these design guides to be adapted (e.g. leveraging shopfront traditions from Richmond Rd).

Respondent reference no.	Name / Organisation	Detailed comments
	Bridge Residents Association	
Do you have any views as to how the design and development of homes could address different lifestyles, abilities and stages of life, including an ageing population?		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	There is an ageing population and a requirement to comply with the Equalities Act. This is important for reasons of access to buildings and the sustainability of many to undergo changes (lifts and level access for example) so that there is equal access for all as required by the Act. Many of the Central Richmond buildings simply cannot be adapted to new uses and comply with current Building Regulations (the folly of not doing so - Grenfell). So although A1 to A3 use may be thought straightforward it is not and a blanket A3 use along George Street would not work safely.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	You could have a system where a percentage of units have to address the needs of different groups, such as a percentage of units suitable for elderly people, studio / home workers, for families – so that large sites have a broader mix of units than what often gets delivered. Some people do not drive – and new developments should also cater for them, rather than making them pay extra for parking spaces they will never use. Need to investigate if parking standards should be amended so that only X percentage of houses need to have car parking.
28	Alice Shackleton on behalf of The Kew Society	An important consideration must be to develop homes that accommodate different demographics within a community. If, for example, the residential element of town centres is devoted to small one and two bedroom flats appealing to younger working age people, it is difficult to see how a vibrant inclusive community would result. There must be a range of types of home, from the example of co-working mentioned earlier, small flats catering for working age people but also those for older people who may need support too, and larger flats and houses for families. There must be green space (not just on the roof!) for health of all groups. The importance of there being life in the community during the day as well as evening and weekends is vital. The need for affordable housing for young people (currently being met by densification) must not override considerations that make a vibrant community.
31	Tim Catchpole on behalf of MESS	It is important that homes are adaptable for lifelong living, e.g. for the elderly to live on the ground floor, etc.
41	Anthony Swan	Don't know. Probably!
42	Jeremy Gill	More homes for the increasing single population
44	Roger Cutler	Yes. Ask & listen.
45	Sally Beeson	I think there needs to be huge research into where our local ageing population would like to live. If there were good quality housing for them with maybe a warden on site, then they wouldn't feel the need to stay in their homes which are probably larger than their present needs. I am sure that many people would like to leave but see nothing to suit their lifestyle. Houses then would be possible for families with children.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
49	Margaret Edwards	I have already covered this in earlier responses. Extra care housing is a priority, intergenerational housing, reduced street clutter. Changes in Richmond Town were very good but Richmond station has not set down space at front and does not provide visual clues for access into station and from station to bus stops, taxis, shops, car park etc. Seating in Twickenham is good addition, Richmond and Teddington don't have as much.
52	Winston W Taylor	Not at this stage.
53	Richard Woolf on behalf of McDaniel Woolf Architects	This is a Building Regulations matter. I agree whole heartedly with the need for adaptive lifetime homes for all age groups.
55	Jon Rowles	- Need more starter homes (i.e. one double with a single bedroom) rather than the two double bedroom flat for the buy 2 let market. - More artisans flats - ie studio space attached - housing for older people should be near town centres where possible
56	Rob Kennedy, Environment Agency	No

Respondent reference no.	Name / Organisation	Detailed comments
63	Carol Rawlings	There should be a requirement for all flats to incorporate balconies where residents can grow plants and food. Homes for older residents or people with mobility problems should incorporate lifts and balconies with raised beds.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	A holistic approach is needed which also includes how design can help reduce environmental and noise pollution as these issues are likely to increase over time.
68 (b)	Mark Jopling	Yes - end the distinction in CIL payments between C2 and C3 which distorts the market.
General comments relating to this topic area		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	We have stressed the importance of the built environment to the future of Richmond and would be concerned with any potential relaxation of the high standards of design required under the policies in the present Local Plan. [section about compliance with Equalities Act and Building Regulations above] We believe the policies in the current Local Plan covers design issues adequately and if further amplification is required we would suggest that it could dealt with by subsidiary planning tools.
Reducing the need to travel and improving the choices for more sustainable travel		
Do you agree with the proposed policy directions?		
Of respondents who answered the question: 18 said yes, 8 said no and 1 don't know [11 did not answer the question]		
1	David Mattes	<p>What I have to say may be controversial and not very PC but I believe it represents the views of a large number of residents and businesses in Richmond and therefore should be taken into account.</p> <p>Your draft plan laudably aims to encourage sustainability in travel/transport and to discourage use of private vehicles where possible. However:</p> <p>A great number of businesses in the borough rely on road transport for their supplies and to deliver to their customers.</p> <p>A great number of residents enjoy – and place a high value on – using their cars for social as well as business purposes.</p> <p>A smaller number of residents use their cars as an essential (ie: the only) link to family and friends, eg: the elderly and disabled people.</p> <p>With the increase in online ordering comes an increase in business vehicles delivering to homes and also to small businesses.</p> <p>The position of the borough, just south of the River Thames, means that many journeys by both business and personal vehicles are to and from places north of the river; and there are a limited number of road and rail bridges, several of which are often 'out of action' for long periods or have limited access because of ongoing work.</p> <p>Traffic jams in the borough are already at an unacceptable length, both of frequency and of length of delay.</p> <p>Therefore, the Council is faced with two diametrically opposite objectives: 1) To reduce traffic and make road use and other travel more sustainable; and 2) To improve traffic flow and to make homes, shops and other businesses more accessible by cars and delivery lorries.</p> <p>The current draft appears to address 1) but to ignore 2). Instead it should be aiming to solve this paradox or at least to achieve an acceptable balance between these two objectives.</p> <p>What is an 'acceptable balance'?</p> <p>The answer to this question will undoubtedly be controversial.</p> <p>My own view is that we should aim to eradicate – or greatly reduce – the worst effects of both options. Having done that, we should then aim to bring in measures that provide the greatest benefits of both options. Only after that should we consider tweaking any of the 'in between' measures. Do you agree?</p> <p>I wouldn't presume to say what are the best and worst of each of the two objectives; but I think it would be helpful if the Council were to set up panels or committees to do that, as a first step before recommending the best and most practical balance between them that would suit the business, social and residential demography of the borough.</p>
12	Tim Lester	Please see comments below.
13	Heather Archer, Highways England	Highways England has been appointed by the Secretary of State for Transport as strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN). The SRN is a critical national asset and as such Highways England

Respondent reference no.	Name / Organisation	Detailed comments
		<p>works to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity. Highways England will be concerned with proposals that have the potential to impact on the safe and efficient operation of the SRN.</p> <p>In the case of the area covered by the London Borough of Richmond, although there is no SRN within the borough boundaries, it should be noted that the M4 is located approximately 6km to the north of the borough and the M3 is located approximately 5km to the south west. Both the M3 and M4 are heavily congested throughout the peak hour periods and any material increase in traffic on this section of the SRN would be a concern to the Highways England.</p> <p>In spatial planning and development control terms, we have a duty to safeguard the operation of the SRN as set out in the DfT Circular 02/2013 (The Strategic Road Network and the Delivery of Sustainable Development). The circular encourages Highways England to work co-operatively with Local Planning Authorities within the framework of the Government's policies for planning, growth areas, regeneration, integrated transport and sustainability.</p> <p>We are a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents. Highways England is aware of the relationship between development planning and the transport network, and we are mindful of the effects that planning decisions may have on the operation of the SRN and associated junctions. We cannot be expected to cater for unconstrained traffic growth generated by new developments, and we therefore encourage policies and proposals which incorporate measures to reduce traffic generation at source and encourage more sustainable travel behaviour.</p> <p>Local Plan Direction of Travel Consultation</p> <p>It is noted that Highways England and the SRN have not been referenced within the Local Plan Direction of Travel Consultation document. Highways England should be consulted on any development that may have an impact on the M3 and the M4 which are the closet points of the SRN to the London Borough of Richmond. The document makes reference to a reduction in the availability of parking and a desire to embed car-free or car-lite developments within the borough, which would likely reduce the impact of such developments on the SRN. However, it should be ensured that we are consulted prior to submission of the updated plan for examination, to enable us to make an informed decision as to the soundness of the plan at the appropriate time.</p>
15	Transport for London	See comments above.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<p>Walking and cycling can be enjoyable and provide the benefit of exercise. We suggest walking and some cycling should be the principle mode of travel within Central Richmond, along the Riverside and around the Green. There already exists the riverside cycle route. It is important to take account of any adverse impact from cycling in the area largely set aside for walking. Through-traffic should be directed away from Central Richmond and the Green but we recognise that for the foreseeable future there will be a need for traffic along George Street and that pedestrianisation is not an option given the displacement around the Green and to other areas of Richmond.</p> <p>Cars emit carbon and air pollutants and the Direction of Travel seeks to reduce these as does the current Local Plan. During the life time of the current Local Plan zero emission cars could represent a significant proportion of the car fleet. But the DfT's current consultation on Transport De-carbonisation projects vehicle km to increase between 2020 and 2030 by around a 15% and associated carbon emissions to reduce by around 25%. These are UK wide statistics. Based on these figures, road congestion and carbon seem likely to remain issues through the life of the current Local Plan.</p> <p>We believe it important that planning takes on board electric charging of cars at scale.</p> <p>We support modal shift to public transport.</p> <p>Notwithstanding the direction of travel outlined, we do recognise that residents and visitors with zero emission vehicles should not be unduly inconvenienced with a reduction in visitor and resident car parking capacity.</p> <p>We believe the policies in the current Local Plan cover the travel issues adequately and if further amplification is required we would suggest that it could dealt with by subsidiary planning tools.</p>
29	Richmond Cycling Campaign	<p>P48 and onwards - Need to travel / sustainable travel</p> <p>We welcome the analysis and thrust of this section. In our view, there is now a much clearer understanding in the council than we have previously experienced of the importance of active and sustainable travel options.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Given the related policy frameworks, from the mayor, but also from the Government, we believe that the council needs to be more aggressive in its pursuit of mode share changes, for both environmental and public health reasons.</p> <p>In this section we would like to see some more detail, and some more concrete objectives that will help to deliver sustainable travel - the elements so far do an excellent job of identifying all the different things which are needed to make these goals a reality, but we would suggest inclusion of elements like:</p> <ul style="list-style-type: none"> • A plan to offer low traffic neighbourhoods across the borough • A commitment to offer cycle hangars on every road by 2026 • Provide safe, pedestrian priority crossing points on every road in the borough (whether zebra, toucan, etc.) • Implementation of school streets for every school in the borough by 2025 • Design and maintain publicly shared plans to provide everyone with a safe cycle lane within 400m of their home by 2030, and 200m by 2035 • Create a working group with town centre businesses to set up last mile transport hubs, shared deliveries, and other identified schemes to reduce and coordinate deliveries • Work with 'car club' organisations and groups to see if there are opportunities for closer working, to speed the reduction in car ownership in the borough.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>There needs to be two approaches to cycle lanes – we need through routes for people commuting long distances, e.g. into London. But we also need spokes of shorter cycle routes from town centres into their catchment areas to encourage more people to switch to bikes for short journeys into their local high street. Many existing cycle routes have missing signs, badly faded signs, no road markings, and can be in places almost invisible – such as the one that runs along Whitton High Street. The council need to audit the existing cycle routes and put in place a program to bring them up to an acceptable standard. Many cycle lanes are interrupted by crossing build outs which force cycles into the path of traffic – such as outside Twickenham School.</p>
31	Tim Catchpole on behalf of MESS	Yes, but more needs to be said about the role of the CPZ in making people pay for the use of the public realm including higher payments for additional cars.
39	Solomon Green	Large residential areas of the borough contain dwellings that are more than 800 meters from public transport and/retail. Elderly and disabled cannot ride bicycles or are unsafe on them. they rely on cars. Any proposal to reduce car ownership and usage would only lead to more elderly and disabled being trapped in their homes or, for those who could afford, making more use of uber and other hire cars as well as food deliveries. The latter already clog some many streets when delivering thereby adding to exhaust pollution..
42	Jeremy Gill	Disagree that you can plan this
44	Roger Cutler	The advent of green battery cars makes it unnecessary to reduce car usage.
46 (a) (b)	Joan Gibson	I like your focus on car-lite developments which have only delivery, disabled and car-club facilities only. Good public transport must also be available.
56	Trevor Rowntree	I disagree with CPZs. We should be able to park our cars close to amenities. Not having park spaces encourages people driving around to locate a parking space. This in turn causes more congestion and higher emissions.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	We should Promote walking, public transport and cycling., and stop use of cars and vehicles across the Borough.
50	John O'Brien	Deliberately making car travel unpleasant is not a good approach. There are still many traffic issues that could be solved by the plan which would improve driving experience and reduce wasted time in jams. You should give maximum advantage to 100% electric vehicles and include them in your list with walk, cycle, public transport
51	Su Bonfanti	I support the overall direction of reducing car usage and increasing public transport/cycle/walk. But I am not clear how you can affect through journeys, especially through-commuting by car, unless your policies are co-ordinated with neighbouring boroughs on this.
54	Paul Luton	Tending to be lacking in ambition.
61	Tom Minns	You seem to have become anti car almost as a religion. It's reached point where you are ignoring anyone with another viewpoint

Respondent reference no.	Name / Organisation	Detailed comments
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We support the overall direction of reducing car usage and increasing public transport/cycle/walk. But we are not clear how you can affect through journeys, especially through-commuting by car, unless your policies are co-ordinated with neighbouring boroughs on this. There is a particular issue in East Twickenham in the difficulty of cycling over Richmond Bridge. We would welcome a specific study of this issue, including the option of making the 9 pavement on one side a shared cycle/pedestrian path with separation curb, though this would also need consideration of what happens at the Richmond end. We don't support changing parking standards in low PTAL areas of the borough, ahead of actual improvements in access to public transport, as those areas likely to be less affluent ones already. We agree that some reduction in town centre parking might encourage more non-car trips. Alternative uses of some existing car parks might make sense, where they are in desirable locations, but at same time, could remaining car park areas be more intensively used? The Richmond Town Car Park is an extensive area but only on one level. A 2 storey car park in a pretty ugly location between the A316 and the railway line could provide what's needed and allow other locations to be freed for other uses. Generally, where parking is reduced, parking reserved for residents should be prioritised and parking for visitors removed first. And the council should consider the continued issuing of more than one parking permit per household. The CPZ in East Twickenham, Zone F, is already over-subscribed and this frustrates many possible changes.
69	Geoff Bond on behalf of Ham and Petersham Association	Until the PTAL rating is improved significantly for Ham and Petersham disincentives of car use will fall most heavily on those reliant on cars which tend to be older less mobile and those with young families
71	Patrick Wood	There should be more emphasis on reducing car-dependence.
What measures need to be put in place if the Council is to support car-free and car-lite development in areas with currently lower levels of access to public transport?		
21	Lucy Wakelin, Transport for London Commercial Development	TfL CD broadly supports Richmond's approach towards sustainable travel. We strongly agree that car-free developments should be supported and that development in locations with high existing or planned public transport accessibility should be optimised, in line with Intend to Publish London Plan Policy H1.
25	Phoebe Quayle	All new development should be 'car-free' with no parking for private cars. Most existing housing in Richmond has private car parking: there is no need for more of this type of housing. Many residents cannot or do not want to live with a car, particularly older and young people, and those on low incomes. New housing should cater for these people and, in doing so, also reduce car trips in the borough. The borough should also promote the redevelopment of sites like large surface car parks which encourage car trips, and reduce or remove parking for private cars, moving wherever possible to car club parking only, and ensure its Local Plan more generally links closely to the Borough's transport targets i.e. those relating to increasing use of public transport, walking and cycling, improving air quality and reducing car trips, traffic and road danger.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to get more bus routes built, and better cycle lanes – preferably segregated cycle lanes along main roads. Areas with lower levels of public transport also have higher levels of car use and this means there is more need to control fast and aggressive driving, therefore, more physical traffic calming measures need to be taken. Any new cycling facilities should also allow faster cyclists to be able to overtake slower cyclists – where possible - as this can cause conflict which puts people off cycling. As the volume of cyclists increase there is likely to be more conflict between different types of cyclists.
31	Tim Catchpole on behalf of MESS	Provide better public transport and more car club spaces.
35	Alice Roberts, CPRE London	Planning for low-carbon, car-free development within the urban footprint is essential <ul style="list-style-type: none"> It is vital that all development is planned in such a way that people can live without private cars (since most housing in Richmond has car parking available, there is no need for new housing to cater for private car-parking: new developments can have car club parking only and sustainable transport hubs with cycle parking, delivery hubs etc.). Richmond needs to meet the Mayor's Transport Strategy targets, tackle air pollution, the climate emergency and road danger and improve people's activity levels and health. It will not be able to do this unless it plans for car-free housing development. <p>See also comments made above.</p>
39	Solomon Green	None the Council should consider improving and extending access to public transport as well as improving and road access.

Respondent reference no.	Name / Organisation	Detailed comments
40	Jamie Edwards	Not Answered
41	Anthony Swan	Bicycle lanes separate from that used by busses lorries and cars. Secure cycle parking near public transport.
42	Jeremy Gill	Build places closer together.
43	Paul Hart Prieto	This should not be based on increasing costs for car use as many have cars for longer distances. it should be based on providing a better service in public transport or cycle ways and cycle security etc. Intelligent public transport routing and increased frequencies "Uber style" shared service autonomous green vehicles etc. for shopping, many would need a car for larger purchases. if they cannot and start to use more online shopping then this negatively impacts our town centres and employment levels. maybe a scheme that allows someone to shop and then same day delivery routing?
44	Roger Cutler	More charging points for battery cars. As these are green you don't need car-free & car-lite policies.
45	Sally Beeson	Public transport needs to significantly improve with lower costs for everyone
46 (a) (b)	Joan Gibson	Need a full review of public transport. I regularly wait 25minutes+ for buses to Whitton when I see other frequent services go past me half empty. The Whitton bus then comes packed to the gills. If a driver is off sick (which it appears many are always on sick) then drivers need to be taken off more frequent services to ensure the less frequent ones are covered. Trains to Whitton although 4 an hour come grouped together so the net effect is, they arrive every half an hour. Bus timetables need to be linked to train timetables, so when you leave the train you can get a bus quickly. If there are road works buses, cycles and pedestrians need to be given their own route so the road works do not affect their timetables. Road works must be done in a more joined up manner. When the exit to the A316 at Hanworth was closed by TfI they routed the traffic through Whitton but refused to change the traffic light sequencing at the Whitton A316 junction to allow the traffic (which included buses) to disperse. Instead we had miles of traffic jams which again made public transport unreliable. Cars must be stopped from crowding pavements. In Church Street Twickenham even, a single pedestrian cannot walk along the pavement as the pavements have been made narrow due to car parking spots (cars often then park on the kerb). Cars do not even need to access this road – they can use the road next to York House. Ban the car on roads such as this and town centres.
56	Trevor Rowntree	Lower emission cars should be encouraged rather than car-free/car-lite development.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Segregated cycle lanes. Improved walking routes. Prioritise pedestrians and cyclists over cars and vehicles. More, improved and cheaper public transport.
49	Margaret Edwards	Answered earlier re school journeys and commutes
52	Winston W Taylor	Restrict parking.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Investigate connectivity and new foot and cycle bridges. Review your WSP report from October 2018. [A copy of the WSP Report was provided, which is available at https://www.richmond.gov.uk/media/16409/thames_bridge_feasibility_summary.pdf]
54	Paul Luton	Safe cycling routes to stations, shops, schools etc. In fact a safe borough cycle network. Cycling levels are high despite poor provision. With good provision we could reach Dutch levels. Lower levels of access to public transport is highly relative ; compared with most of the country the whole borough is well provided.
59	Paul Massey	clean public transport is the the key to a brighter future in the borough
60	Kingsley Izundu, Royal Borough of Kingston upon Thames	1. Improved public transport accessibility 2. Good design that will reduce conflict between pedestrians and motor vehicles. 3. Good accessibility to social and cultural facilities within the area. 4. Location of facilities in an accessible location to pedestrians and cycle use.
61	Tom Minns	Change the policy

Respondent reference no.	Name / Organisation	Detailed comments
63	Carol Rawlings	Bus lanes wherever feasible. Reintroduction of trolley buses (quieter and smoother than buses and less polluting). A tram to run along the current 65 bus route.
68 (a)	Mark Jopling	EV charging infrastructure, shared-ownership vehicle infrastructure 100% EV buses by 2030 Although outside the Borough, there should be a new "multi-modal" transport hub just SW of Jn1 M3 to take "through traffic" off the M3 and onto SW Trains Shepperton Line (and in future Crossrail 2)
68 (b)	Mark Jopling	More EV charging More dedicated cycling routes Multi-mode hub on the M3 to offload car traffic onto SWT
69	Geoff Bond on behalf of Ham and Petersham Association	Improve the public transport and avoid a reduction in space for cars by opposing closing Richmond Park to through traffic. Make owning an electric car possible by providing some public charging points.
70	Melissa Compton-Edwards	Improve public and active transport provision in low PTAL areas (including bus frequency) so that car-free and car-lite developments are possible. Take active transport provision into account when considering applications. Do not give approval to any new residential or business developments that are not car-free/car-lite.
71	Patrick Wood	Better public transport provision, if necessary through prioritising buses over private vehicles, including where they can be parked.
What additional facilities does the borough need to support greater levels of walking and cycling?		
12	Tim Lester	I read through a lot of the plan, most of which I agree with, and then ran out of time. There is one area on which I would like to comment which relates to cycling in the Borough. 1. Encouraging more young people to cycle <i>I live at [full Hampton address details removed for data protection].</i> Every morning a string of buses passes up the road to Hampton School and LEH carrying their pupils. A number of pupils, mainly boys it seems, walk past probably from the R70 bus stop or Hampton Station. The thing which I find surprising and disappointing is how few pupils cycle past. If we are to change to a more sustainable transport system we need more people cycling. If they don't cycle when they are young it is likely to be very difficult to get them on a bike in later years. I see some cycling proficiency classes in progress locally which is great but is it possible to encourage a larger proportion of youngsters to learn to cycle safely? Another problem is probably parents fears over safety and the 20 MPH limit may help in this respect. Cycling UK might have ideas and suggestions or indeed be able to organise help. 2. Cycle Paths I feel that those responsible for transport in the Borough should be sent out on bikes to use and experience the cycle paths for a few weeks. There is a tendency for paths to stop when things get tight, for the surface to be terrible (eg alongside the A316), to find vehicles parked across the cycle path (e.g. the Upper Sunbury Road, as it leaves Hampton invariably has one or more coaches parked on the path), etc. Some first hand experience by those who normally drive around could be very educational.
14	Transport for London	See comments in General Section. Securing sufficient quantities of good-quality cycle parking will also enable more people to cycle. We welcome the commitment to the London Plan cycle parking standards and commend the Council for looking beyond this to investigate the potential for higher standards. We strongly support this approach in Richmond, given the proportion of existing journeys that could be cycled and considering that the borough has one of the highest cycle mode shares in London. We welcome the Council's approach to securing developer contributions to the cycle networks within Richmond and note that the Council's Active Travel Strategy highlights areas that are less permeable by cycle. This is something that developer contributions could also potentially look to improve alongside strategic and local routes. We welcome the recognition of the importance of bus networks within the borough and will continue to work with the Council to understand how services and infrastructure can be improved, protected and funded.

Respondent reference no.	Name / Organisation	Detailed comments
20	Gary Backler, Friends of the River Crane Environment.	<p>FORCE supports improvements in transport provision for both cyclists and pedestrians. Our surveys offer quantitative evidence of the order of magnitude increases in cyclist and pedestrian usage that can follow investment in new and improved provision. We support the improvements that have been made in this regard in the borough during recent years. We believe there is scope for further improvements along the River Crane and DNR that will benefit road traffic management, connectivity and public health, and address positively the “constraint...of open space, linked by roads and interwoven by railways” (p8) that characterise the borough.</p> <p>FORCE would welcome a borough-wide review of the obstacles to “inclusive access and connectivity” (p51) for pedestrians and cyclists. We would particularly welcome a review of the severance factors which prevent the physical joining up of current, near-adjacent open spaces into larger spaces; and of the obstacles to improved pedestrian and cycle connectivity between such open spaces, including land ownership; and a prioritised plan to address such factors.</p> <p>We know that many people use pedestrian and cycle networks across borough boundaries and this is what enhances their value for local residents and the wider communities. This approach can also bring in funding sources that are not available to in-borough schemes. As yet though, despite asserting that “We also work closely together with neighbouring boroughs...particularly where issues cross borough boundaries” (p6), the Local Plan in general does not consider what happens beyond the borough boundary. We believe that the council needs to consider active travel at a sub-regional level, working alongside other boroughs and in concert with agencies such as Crane Valley Partnership and Thames Landscape Strategy, to help deliver these cross borough links.</p> <p>In 2019 FORCE worked alongside Ove Arup, The Crane Valley Partnership and The Colne Valley Partnership to produce the “Colne and Crane Valley Green Infrastructure Strategy”. This document sets out a strategy for enhancing the linkages along the Crane valley and Colne valley corridors, linking the Thames with the Chilterns through a network of biodiverse green transport networks http://www.cranevalley.org.uk/news/post/Colne-and-Colne-Valleys-Green-Infrastructure-Strategy-published.html LB Richmond officers engaged with this project as a key consultee. FORCE considers that the Local Plan would benefit significantly from adopting the strategy as a strategic objective for enhancing green links between the borough and wider green infrastructure network.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p><u>Borough:</u></p> <p>Of the utmost importance there is secure cycle parking – as bike theft is the number one reason why people choose not to cycle. We need this in town centres, and in all new housing units.</p> <p>Need a compressive system of cycle lanes marked onto the main roads.</p> <p>Need to review all existing cycle lanes and ensure the road markings and more prominent – the current light touch approach means that most cycle lanes are unusable. Twickenham town centre is an example where the markings are not up to the job.</p> <p>Where cycle lanes have to stop – such as on a narrow bridge or through a busy high street – the council need adopt a mixed-use zone approach – so that its very clear to motorists that they are sharing he space equally with cyclists. For this to work we need a change is tarmac colour or surface, prominent road markings and signs, and traffic calming.</p> <p>Need to identify main walking routes and maintain them better – to match the standards on the main roads – currently most main routes are based on car usage.</p> <p>To survey all the crossing points as many don’t meet the requirements of the Equalities Act – i.e. no dropped curbs or dropped curbs not flush with road.</p> <p>Maintain vegetation on bridges better – many footpaths over bridges have hedges that encroach on the footpath and narrow it down too much. When this occurs, it can take months before its cut back.</p> <p>Need more secure cycle parking near stations.</p> <p>Need more speed calming on main roads as the 20 MPH is not adhered too – and fast traffic dissuades people from cycling and walking.</p> <p>Need benches at periodic intervals so people can sit down and rest on walking routes. We used to have a network of these, but some of these were removed because they were perceived to led to antisocial behaviour.</p> <p><u>Heathfield & Whitton</u></p> <p>Need a road cross by the underpass on the A316 by Jubilee Avenue / Meadway. There is a large part of what was historically Whitton (and still part of St Augustin’s Whitton Parish) across the A316 including Lincoln Avenue and Kneller Gardens.</p> <p>We believe the speed limit on the A316 between Hospital Bridge Road and Whitton Road should be reduced to 30 MPH and the lanes narrowed / regraded so that the A316 does not slice the area into two. The reclaimed space could be used to prove good quality cycle lanes.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>There is a need for a network for cycle lanes that fan out from Whitton High Street so that local residents are encouraged to make short trips by bike rather than car. The cycle lane in Hanworth Road has large gaps and the zebra crossings haven't been updated to reflect the changes in legislation that allows a cycle lane to continue through them.</p> <p>Percy Road has a part time cycle lane that operates from 8am to 9.30am on one side of the road only. We recommend that the council explores converting this to 24 hour operation, and one is added to the other side of the road too.</p> <p>On Hospital Bridge Road, the TFL cycle lane around the roundabout ends at the TFL land boundary outside the church and the cyclists are expected to squeeze back onto the main road where there is hardly any room for them. We suggest that the pavements around the Hospital Bridge Road Traffic Lights also become mixed use. The railway bridges on Hanworth Road, Hospital Bridge Road and Nelson Road need upgrading to provide footpaths at least 2 meters wide (as they only have footpaths on one side).</p> <p>Some of the traffic islands on Percy Road need to be altered to convert them into pedestrian refuges. None of the five islands between Rycroft Avenue and Montrose Avenue had pedestrian facilities.</p>
31	Tim Catchpole on behalf of MESS	Reduce parking spaces in our town centres but keeping provision for the elderly and disabled.
39	Solomon Green	Improve pavements and prosecute all cyclists (and scooter users) riding on them.
41	Anthony Swan	protected cycle lanes
42	Jeremy Gill	Fill some of the holes in the roads. They cause cyclists to fall off a lot and buckle wheels. Repair some of the pavements. You know pavements, what we walk on.
43	Paul Hart Prieto	Secure bike storage more and simpler "rent a bike" schemes new and direct, walkways between towns
44	Roger Cutler	For walkers we need cycle-free pavements. Although against the law, pavement cycling is injuring more walkers daily. It is ignored by police and council workers (indeed pavement cycling is even promoted by one council worker.) We don't want any more cycling in the borough. Cyclists are insensitive, travel too fast for safety &, worst of all, are not licensed so they can be prosecuted. Cycling receives too much money & attention.
45	Sally Beeson	I think in general, the Borough does a very good job to raise awareness. Schools and parents should encourage children to walk more
46 (a) (b)	Joan Gibson	<p>We need to get away from thinking cars and powered vehicles can be zero emissions. They always will emit particulates and until we have a 100% renewable generated electricity will create emissions somewhere in the UK. I make this point as this needs to be reflected in policies as there is a tendency to think we do not have to change our behaviour technology will save us – this is not the case. I would be happier with lower emission vehicles being used as a term in your document. Huge concerns about the cycling plans. You have taken only what is happening now to focus improvements and spend on areas where cycling is high. Richmond must have a vision and plan to improve those areas where cycling trips are low. These low cycle areas have the biggest potential to get more folks cycling, reduce car use and improve health.</p> <p>Planning does have a massive role in enabling Active travel, but all the rules and policies exist already and planning are accepting less from developers. Could LBRuT explain how this will change in the future.</p>
47	Trevor Rowntree	None. Enough/too much has been done already.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	<p>Segregated cycle lanes.</p> <p>Improved walking routes.</p> <p>Prioritise pedestrians and cyclists over cars and vehicles.</p> <p>More, improved and cheaper public transport.</p>
49	Margaret Edwards	Better walking access to riverside all the way along, some owned privately. Footbridge between Ham and Twickenham a good idea
50	John O'Brien	Segregated cycle lanes that are continuous and which cannot be parked in.
51	Su Bonfanti	There is a particular issue in East Twickenham in the difficulty of cycling over Richmond Bridge. I think you need a specific study of this issue, including the option of making the pavement on one side a shared cycle/pedestrian path with separation curb, though this would also need consideration of what happens at the Richmond end.

Respondent reference no.	Name / Organisation	Detailed comments
52	Winston W Taylor	Stop clutter on pavements such as advertising boards; widen some pavements; stop cycling on pavements; increase cycle parking in some areas where demand arises.
53	Richard Woolf on behalf of McDaniel Woolf Architects	See response to Q.73
54	Paul Luton	A circulation plan with through traffic limited to certain roads would provide a better environment for walking and cycling. Safe crossings of the main roads would be needed. Cycling generally provides longer distance travel so segregated provision on main roads would also be needed.
58	Michael Atkins, Port of London Authority	Considered that there must be reference within the Local Plan that for developments in close proximity to the River Thames, there must either maintain and improve existing access to riverside areas or provide new access to the riverside and the Thames Path., in line with existing Local Plan policy LP 18 (River Corridors)
59	Paul Massey	Dedicated cycling safe route from Ham to Richmond 24 /7
60	Kingsley Izundu, Royal Borough of Kingston upon Thames	1. Adequate and affordable cycle parking bays. 2. Subsidised cycle renting. 3. Well segregated pedestrian walkways and cycle routes. 4. Better frequency of bus services.
61	Tom Minns	None
63	Carol Rawlings	Walkers and cyclists need to be separated from one another, particularly along the tow path which has become dangerous for walkers and seriously overcrowded at weekends. If vehicles continue to use Richmond Park, cyclists should be banned from using the roads and the cycle paths, which are never used, need to be upgraded.
68 (a)	Mark Jopling	Better protected cycle routes through the Borough
69	Geoff Bond on behalf of Ham and Petersham Association	Make sure all facilities that are needed are local eg all healthcare, all schools and all shops. Until they are people will continue to use vehicles. Hold developments to their green transport policy and prevent future developments until they do - the German School gets ever bigger without actually keeping to its green travel plan.
70	Melissa Compton-Edwards	Given the related policy frameworks, from the mayor, but also from the Government, the council needs to be more aggressive in its pursuit of mode share changes, for both environmental and public health reasons. In this section I support the Richmond Cycling Campaign's desire to see some more detail, and some more concrete objectives that will help to deliver sustainable travel - and would suggest inclusion of elements like: A plan to offer low traffic neighbourhoods across the borough A commitment to offer cycle hangars on every road by 2026 Provide safe, pedestrian priority crossing points on every road in the borough (whether zebra, toucan, etc.) Implementation of school streets for every school in the borough by 2025 Design and maintain publicly shared plans to provide everyone with a safe cycle lane within 400m of their home by 2030, and 200m by 2035 Create a working group with town centre businesses to set up last mile transport hubs, shared deliveries, and other identified schemes to reduce and coordinate deliveries.
71	Patrick Wood	Better cycling infrastructure: better road surfaces, segregated infrastructure, ASLs, enforcement of existing traffic laws to make the roads less intimidating for cyclists of all abilities.
If the availability of parking in the borough's town centres was less than it is now, would it encourage you to walk, cycle or use public transport more?		
Of respondents who answered the question: 9 said yes, 14 said no and 3 don't know [12 did not answer the question]		
14	Mayor of London	The Mayor is pleased that Richmond intends to apply the Intend to Publish London Plan residential parking standards, including those for areas with low public transport accessibility levels (PTALs). Richmond should also explore the potential for increasing levels of public transport, cycling infrastructure and promoting other

Respondent reference no.	Name / Organisation	Detailed comments
		forms of active travel such as walking in accordance with the Mayor's Healthy Streets Approach. Whilst the Mayor strongly supports Richmond's objectives on sustainable travel, it should be aware of the Secretary of State's Directions on the Intend to Publish car parking standards.
15	Transport for London	See comments in General Section. A key part in achieving this ambition [addressing the climate emergency and housing crisis and its recognition of the importance of transport in achieving this, as well as tackling other health and environmental challenges through prioritisation of sustainable transport users] will be restricting the provision of car parking in new developments. We would therefore strongly encourage the Council to require car-free and car-lite development as far as possible. We strongly welcome that the Council are considering adopting the London Plan residential standards across the whole borough and encourage this option to be pursued. This will help minimise new development's contributions to the climate emergency, make it easier to tackle the housing crisis and reduce congestion on the road network and the borough grows.
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	Ideally, cars used by visitors to Richmond should be parked at the perimeter of Richmond and bikes used to access the Richmond rail station should be parked at the station. People transferring from cars to train/tube should use Richmond's car parks. Cars used by residents should be allowed within Central Richmond and around the Green. Clearly these suggestions raise issues of displacement, parking and implementation.
22	Jimmy Wallace, Richmond Athletic Association	We note the suggested policy directions to encourage sustainable transport and welcome the opportunity to review the detailed policies as these are further drafted. At this stage, we would simply note that appropriate levels of car parking for development should appropriately be assessed as part of any future planning application dependent upon the uses within the scheme. It is also recognised that it is necessary for there to be overarching policy and guidance in the context of planning applications that are referable to the Greater London Authority (and by extension Transport for London) for its determination. However, we think it is necessary for there to be clarity in the policies at the local level that acknowledge that local site circumstances and transport considerations should be the key determinant in setting appropriate levels of car parking, as opposed to the London wide parking standards adopted by the GLA & TfL which by their very nature cannot consider the individual transport and accessibility circumstances of all sites.
29	Richmond Cycling Campaign	A possible study, which could inform a number of other policy areas, could be analysis of how much space in the borough is given to car parking, whether residential or business - it would surely be worthwhile to understand how much public land is devoted to the parking of vehicles right now, as we could then have another data set to show us the benefits gained from releasing this land to other uses.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Though its unpopular to reduce parking, evidence shows that mode shift can be achieved. However, there is the risk that it could have a negative environmental impact if it results in people driving round the block several times before a space becomes free. It may be more appropriate for the council to look at changing the charging structure, and prioritise short term stays rather than allowing all day parking. In Richmond Town Centre many parking spaces are taken up by commuters using it as an all-day park and ride to central London – and the consequence lack of parking is prompting local people to drive to Kingston instead when they need to access higher level services and this results in money leaving the boroughs local economy.
39	Solomon Green	We live too far from the (currently infrequent) public services to make regular use and would merely transfer our expenditure to other areas outside our borough.
41	Anthony Swan	It would discourage me from visiting. Short term free parking ie 30mins already in existence is very good.
42	Jeremy Gill	Which of the above do you mean? Cycle
43	Paul Hart Prieto	I already use public transport and walk mainly. less parking would simply stop me making larger purchases in the town centre
44	Roger Cutler	Neither I, nor any friends, would continue to use the town centres. Public transport is too unreliable
45	Sally Beeson	It would annoy me - we cannot demonise all car related activities
46 (a)	Joan Gibson	Pedestrianising the town centre would encourage me to use them more
46 (b)	Joan Gibson	To encourage me to go back to cycling to Whitton and Twickenham town centres you must fix the issues you have caused by narrowing the roads and give cyclists a priority above cars. Stop cars parking in cycle lanes, create cycle routes such as an off-road cycle lane at Whitton corner so cyclists do not have to try and negotiate a junction which is recognised as being dangerous.
49	Margaret Edwards	Already walk or use bus/train to get into town centres
50	John O'Brien	Already use public transport except when my trip requires me to take the car.

Respondent reference no.	Name / Organisation	Detailed comments
51	Su Bonfanti	I live so close that we don't drive into Richmond anyway.
52	Winston W Taylor	I dont drive so this question is not for me.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Parking and cycling are separate issue. Economics and the quantum shift required to move to sustainable transport isn't about parking.
54	Paul Luton	That is how I travel now.
60	Kingsley Izundu, Royal Borough of Kingston upon Thames	1. Yes, if the alternative is good enough. 2. Improve frequency of bus service. 3. Adequately segregated pedestrian walkway. 4. Affordable cycle rental service.
63	Carol Rawlings	I avoid using my car to go to any town centre.
69	Geoff Bond on behalf of Ham and Petersham Association	It would discourage me from shopping there
70	Melissa Compton-Edwards	I already walk, cycle or use public transport to get to the borough's town centres and support reducing parking availability in town centres to encourage mode shift to sustainable forms of transport.
Should the Council actively pursue alternative uses (such as much needed affordable housing, employment space and/or social and community infrastructure uses) on its existing car parks in town centres?		
Of respondents who answered the question: 16 said yes, 11 said no and 2 don't know [9 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	It would be a mistake to remove car parks in town centres as it would push the parking onto the roads and make it more difficult to reallocate space on these roads to cycle lanes. However, cities like Paris have made better use of their open-air carparks by redeveloping the sites and putting the parking underground and putting much needed housing and offices above.
35	Alice Roberts, CPRE London	[Response also in Retail section]. Surface and multi-storey car parks, along with low-rise retail sites, should be redeveloped to make more efficient use of space and discourage car trips. <ul style="list-style-type: none"> • Surface car parks are an inefficient use of space and encourage non-essential car journeys. In Annex 1 a number of sites are identified which could be redeveloped to find space for housing and commerce and at the same time reduce reliance on cars. • These sites are viable and much more sustainable alternatives to Green Belt. [See Annex 1 in the Schedule of Call for Sites Responses]
39	Solomon Green	But it could build over rather than on top of some car parks such as that in Richmond on the A 316.
41	Anthony Swan	Be a bit more brutal with large developers over affordable housing.
43	Paul Hart Prieto	Parking will still be required. that said, parking with Flats above could provide a reasonable solution
44	Roger Cutler	We need MORE parking, not less.
45	Sally Beeson	I think this should be monitored to see if all car parking spaces are used enough, and then maybe change the policy
46 (a)	Joan Gibson	With the car parking underground
46 (b)	Joan Gibson	I agree the council should build on its town centre car parks. The parking could be place under the building with very little net loss.
49	Margaret Edwards	Richmond car park opposite Old Deer park seems a prime location
51	Su Bonfanti	I think that some reduction in town centre parking might encourage more non-car trips. Alternative uses of some existing car parks might make sense, where they are in desirable locations, but at same time, could remaining car park areas be more intensively used? The Richmond Town Car Park is an extensive area but only on one level. A 2 storey car park in a pretty ugly location between the A316 and the railway line could provide what's needed and allow other locations to be freed for other uses. Generally, where parking is reduced, parking reserved for residents should be prioritised and parking for visitors removed first. And the council should consider the continued issuing of more than one parking permit per household. The CPZ in East Twickenham, Zone F, is already over-subscribed and this frustrates many possible changes.

Respondent reference no.	Name / Organisation	Detailed comments
52	Winston W Taylor	Elleray Hall proposal is a good example
53	Richard Woolf on behalf of McDaniel Woolf Architects	Look at the ' air above ' the land.
60	Kingsley Izundu, Royal Borough of Kingston upon Thames	The evidence should dictate the approach to provision of uses. There should be a good balance in the pursuit and provision of alternative uses. The provision of use should lead to sustainable development.
63	Carol Rawlings	Housing that is truly affordable is more important than driving a car.
69	Geoff Bond on behalf of Ham and Petersham Association	This would just mean the shops close and people drive to where they are open
71	Patrick Wood	Car parking is massively subsidised: the real cost is shocking, both monetary and environmental.
General comments relating to this topic area		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	<p>We have referred to the importance of reducing carbon and other air pollutants under the theme on these two topics. <i>[See comments as above]</i></p> <p>Walking and cycling can be enjoyable and provide the benefit of exercise. We suggest walking and some cycling should be the principle mode of travel within Central Richmond, along the Riverside and around the Green. There already exists the riverside cycle route. It is important to take account of any adverse impact from cycling in the area largely set aside for walking. Through-traffic should be directed away from Central Richmond and the Green but we recognise that for the foreseeable future there will be a need for traffic along George Street and that pedestrianisation is not an option given the displacement around the Green and to other areas of Richmond.</p> <p>Ideally, cars used by visitors to Richmond should be parked at the perimeter of Richmond and bikes used to access the Richmond rail station should be parked at the station. People transferring from cars to train/tube should use Richmond's car parks. Cars used by residents should be allowed within Central Richmond and around the Green. Clearly these suggestions raise issues of displacement, parking and implementation.</p> <p>Cars emit carbon and air pollutants and the Direction of Travel seeks to reduce these as does the current Local Plan. During the life time of the current Local Plan zero emission cars could represent a significant proportion of the car fleet. But the DfT's current consultation on Transport De-carbonisation projects vehicle km to increase between 2020 and 2030 by around a 15% and associated carbon emissions to reduce by around 25%. These are UK wide statistics. Based on these figures, road congestion and carbon seem likely to remain issues through the life of the current Local Plan.</p> <p>We believe it important that planning takes on board electric charging of cars at scale.</p> <p>We support modal shift to public transport.</p> <p>Notwithstanding the direction of travel outlined, we do recognise that residents and visitors with zero emission vehicles should not be unduly inconvenienced with a reduction in visitor and resident car parking capacity.</p> <p>We believe the policies in the current Local Plan cover the travel issues adequately and if further amplification is required we would suggest that it could dealt with by subsidiary planning tools.</p>
46 (b)	Joan Gibson	Worried you are saying street building should be for walking (only) – this focus on walking only has meant LBRuT have spent a huge amount of money making changes to roads and pavements which has made it worse for cyclists. Whitton and Twickenham town centres could have been designed to include cyclists when you spent multi-millions of pounds on pavements and road layout. Instead you narrowed the roads and forced cyclists into the flow of traffic. In Whitton it has resulted in

Respondent reference no.	Name / Organisation	Detailed comments
		<p>less people cycling. This sort of costly mistake must not be repeated. All new street and road design must include separated pedestrian, cycling and road infrastructure – with road being the least important.</p> <p>Cars must be stopped from parking in cycle lanes.</p> <p>Your connectivity plans do not include improvement to certain areas in Hampton with no bus routes and Whitton with low frequency. Cycle routes must be made in Whitton.</p> <p>You can improve walking routes by opening up routes through cemeteries (pleasant, direct and low pollution) and other infrastructure sites. Walking routes need to be mapped out and focus put on them. i.e. all the budget in Whitton seems to be focussed on the car routes to the High Street rather than the walking routes along Springfield Road etc. These walking routes are in a poor state of repair.</p> <p>New developments must include secure cycle storage – not just outdoor posts. Cycle crime is a key obstacle to cycling.</p> <p>New developments must provide good walking and cycling routes to local areas like town centres, parks, medical centres.</p> <p>I disagree you are trying to ensure congestion and airquality is a consideration in new developments currently. In the case of both THS and Lidl on South Road planning recommended approval without any mitigating actions despite knowing about the huge levels of congestion. Once again, I think you are over estimating what quality criteria LBRuT impose on developments, making the likelihood of this change to the local plan actually working very remote.</p> <p>I worry that in areas of low PTAL you focus on parking standards rather than improving the PTAL. If you are serious about getting more people on public transport you need to improve the PTAL. I completely disagree with you adopting the London plan parking levels (high or low). You must improve the PTAL to make car ownership and use less needed.</p> <p>I worry about remarks like “if PTAL can be improved or if walking routes can be improved”. There is no option your plan should say – high PTAL, walking and cycling routes will be provided – otherwise no development.</p> <p>Walking routes need seating along them.</p> <p>All developments (not just large) should have a levy which contributes to walking and cycling infrastructure so you do not let lots of “small” developments through with the net effect of raising car use and reducing active travel.</p>

Securing new social and community infrastructure to support a growing population

Do you agree with the proposed policy directions?

Of respondents who answered the question: 20 said yes, 2 said no and 3 don't know
 [13 did not answer the question]

10	Stuart Morgans, Sport England	Please see comments in Section relating to Social Infrastructure.
22	Jimmy Wallace, Richmond Athletic Association	Please comments below.
42	Jeremy Gill	Incomprehensible
46 (a)	Joan Gibson	See below

Respondent reference no.	Name / Organisation	Detailed comments
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
55	Jon Rowles	The council needs to have a 'Sequential Test ' process written down so we don't have the re-run of the Turing House School situation where council officers wrote the test as they went along.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	We support the idea of 'increased public access to school facilities'. We're about to have a whole new school - the biggest bit of infrastructure in East Twickenham for years - and it would be good for it to be well used. We also recognise the importance of sustaining ETNA, as well as the existing tennis, cricket and bowls facilities.
Is there a need for a particular type of community facility in your local area?		
4	Lambert Smith Hampton on behalf of Metropolitan Police Service	<p>Lambert Smith Hampton (LSH) has been instructed by the Metropolitan Police Service (MPS) to make representations to the above consultation. This representation concerns the MPS' infrastructure requirement for a car pound facility within the London Borough of Richmond, S106 contributions to mitigate impact on crime, and the MPS infrastructure requirement for neighbourhood police facilities.</p> <p>Requirement for a car pound</p> <p>The MPS infrastructure requirement has changed since we submitted our representation to the Council in January 2020 for the Richmond Planning Obligations SPD Consultation. The MPS now have an urgent infrastructure requirement for a car pound facility within the London Borough of Richmond or any other London Borough. The requirement is for 6 - 12 acres (2.5 - 5 hectares) of open industrial land (leased from private landlords or purchased freehold).</p> <p>A car pound facility is where the MPS deal with vehicles that have been stolen, seized for motoring offences or for forensic examination. The MPS are finding that the owners of their existing car pound sites are seeking to pursue development opportunities and cease the current use when the lease permits. Both of the current car pound sites are subject to pressure for industrial and/or residential development and intensification of use.</p> <p>The MPS are concerned that if their existing car pounds have to be vacated, this may have significant difficulties in operating their vehicle recovery and car pound service. The difficulties that exist in finding land for car pounds also extend to other aspects of policing, including the following:</p> <ul style="list-style-type: none"> - Driver training; - Firearms training; and - Dog Training. <p>The MPS are therefore requesting that the London Borough of Richmond work with the police to identify suitable plots for the delivery of a car pound facility within the borough. (Richmond is considered to be a good location for the delivery of a MPS car pound facility).</p> <p>Further to the above, the MPS request that the emerging Richmond Local Plan and/or Infrastructure Delivery Plan (IDP) include a section highlighting the importance of the MPS car pound requirement in the borough.</p> <p>Neighbourhood police facility infrastructure requirement</p> <p>As noted in our representation to Richmond Council in January 2020, the MPS have an infrastructure requirement for neighbourhood police facilities that can provide a base of operation for officers of the MPS.</p> <p>Summary</p> <p>The MPS have an urgent infrastructure requirement for a car pound facility and are requesting that the Council work with the police to identify suitable plots. The MPS would like this infrastructure requirement to be referenced in the new Local Plan and/or IDP. The MPS are pleased to see that policing is referenced as social infrastructure in the adopted Local Plan and have an infrastructure requirement for neighbourhood police facilities.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		We are keen to engage with you to discuss how the MPS car pound infrastructure requirement can be accounted for in the borough and the potential for a site allocation in the future.
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	In responding to Question 78, the Group supports the proposed continuation of the policy for the protection and, where possible, the enhancement of existing land and facilities for sport and playing fields, and the protection of Public Open Space and the provision of enough play-space. In relation to the Old Deer Park in particular, the Group supports the continued use of both public and private open space for outdoor sports, including rugby football, association football, cricket, tennis, archery and bowls, and the retention and potential enhancement of the existing, listed Pools-on-the-Park – including, importantly, its associated landscaped open-space – for swimming and directly related leisure activity. In addition, the Group supports the commissioning of up-to-date research on Indoor Sports Facilities Needs Assessment, Playing Pitch Assessment, Playing Pitch Strategy and an Open Space Assessment, as put forward on page 54 of the consultation document.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The pavilion in Heathfield Recreation Ground needs rebuilding, to provide better sports facilities and a room for community use in the South part of Whitton. The original pavilion built in the first half of the twentieth century had these facilities.
31	Tim Catchpole on behalf of MESS	Yes, Mortlake needs a health centre. There are ongoing discussions about community infrastructure on the Brewery site.
32	Mark Jopling on behalf of UPPFT	The Trust makes the following comments on the "Direction of Travel": <ul style="list-style-type: none"> Keep the Playing Pitch Strategy up-to-date as a strong document, with regular local club and NGB consultation. Speculators seek to exploit documents like PPS if they are not current and robust, community clubs will be vulnerable to "vultures" after loss of income due to CV-19.
36	Rebecca Marwood, NHS Property Services Ltd	<p>Foreword</p> <p>NHS Property Services (NHSPS) is actively working with our customers regarding the recent cases of coronavirus (COVID-19) and are currently assessing vacant or underused space across our portfolio to identify space that could be repurposed for the provision of clinical beds. In the interests of continuing to support the NHS in the longer term, however, we are keen to continue 'business as usual' activity where possible, and are supporting our customers in the management of their buildings and wider portfolios, to ensure the most efficient and effective use of NHS space.</p> <p>NHS Property Services</p> <p>NHSPS is a limited company owned by the DHSC. It was established in 2013 to bring property expertise to the NHS estate, with the aims of creating a more fit for purpose estate, reducing property related costs and generating funds to be reinvested in healthcare services and facilities. NHSPS had a portfolio of around 3,500 buildings across England which represents around ten percent of the entire NHS estate. Most of these buildings are used for primary healthcare and are either health centres or hospitals. However, NHSPS' properties are diverse in terms of their function and include many other types of premises, such as care homes and offices.</p> <p>A key part of NHSPS' role relates to the provision of new healthcare facilities with the goal of ensuring that the healthcare needs of communities can be met. NHSPS works with commissioners to identify and respond to local property needs. As such, it is involved in the acquisition and development of new facilities, and the redevelopment of existing facilities. Another important aspect of NHSPS' role is to dispose of facilities that have been identified as surplus to NHS requirements by commissioners.</p> <p>Representation</p> <p>At this stage of the Local Plan process, London Borough of Richmond upon Thames is asking for feedback on how the borough should accommodate growth and plan for new development. In this regard, NHSPS have reviewed the document and respond to the document through the below comments.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Securing new social and community infrastructure to support a growing population Question: Continue to have firm policies to resist the loss of existing facilities, and to require the site to be considered for other types of community facilities before being released for other uses.</p> <p>The document considers the policy direction associated with community infrastructure and sets out that the London Borough of Richmond upon Thames will ‘continue to have firm policies to resist the loss of existing facilities, and to require the site to be considered for other types of community facilities before being released for other uses’.</p> <p>In April 2013, the Primary Care Trust and Strategic Health Authority estate transferred to NHSPS, Community Health Partnerships and NHS community health and hospital trusts. All organisations are looking to make more effective use of the health estate and support strategies to reconfigure healthcare services improve the quality of care and ensure that the estate is managed sustainably and effectively.</p> <p>NHSPS’s Property Strategy team has been supporting Clinical Commissioning Groups and Sustainability and Transformation Plan groups to look at ways of better using the local health and public estate. This will include identifying opportunities to reconfigure the estate to better meet commissioning needs, as well as opportunities for delivering new homes (and other appropriate land uses) on surplus sites emerging from this process.</p> <p>The ability of the NHS to continually review the healthcare estate, optimise the use of land, and deliver health services from modern and fit for purpose facilities is crucial.</p> <p>It is important to note that there are separate, rigorous testing and approval processes employed by NHS commissioners to identify unneeded and unsuitable healthcare facilities. These must be satisfied prior to any part of or all of a property being declared surplus. This often includes extensive public consultation on any proposed service relocations.</p> <p>Given that there is very careful oversight from NHS England and CCGs to ensure sufficient services are provided, and that the estate is fit-for-purpose, additional protection through planning policy should be unnecessary in relation to public healthcare facilities.</p> <p>Whilst Paragraph 92 of the Revised NPPF states that planning policies and decisions should ‘guard against the unnecessary loss of valued facilities and services’, the overarching objective of this same paragraph is to ensure the delivery of facilities and services for the community.</p> <p>Finally, any policy should make provision for the circumstances envisaged at paragraph 3.87A of the London Plan so that where public facilities are no longer needed the proceeds from the sale of those facilities / land can be invested in public facilities; not to do so could cause viability and / or funding issues, particularly given the requirement for the NHS to maximise receipts from the sale of surplus facilities and land.</p> <p>Additionally, The London Plan, in the supporting text for Policy 3.17 explicitly recognises the role of NHS PS in ensuring that surplus sites are released for other uses as part of the reorganisation of the NHS estate, which is taking place so that services can be provided more efficiently. The draft new London Plan is likely to go further, and proposed Policy S2 states that Boroughs should work with the NHS to “identify opportunities to make better use of existing and proposed new infrastructure through integration, co-location or reconfiguration of services, and facilitate the release of surplus buildings and land for other uses”.</p> <p>For the above reasons, any policy linked to the loss of community or health uses should be appropriately qualified so that it does not present an unnecessary or unreasonable hurdle to health service provision reconfiguration.</p> <p>Question: Continue to ensure that the impact of large new development is assessed, so that the impact of additional burdens on existing facilities is mitigated.</p> <p>When preparing Local Plans, Local Authorities should be tasked with a specific duty to co-operate with the NHS to facilitate its estate planning functions and delivery. We therefore support the requirement to ‘work closely with our partners to identify and meet people’s needs’.</p> <p>It is vital that boroughs work with NHS organisations to plan for healthcare facilities to meet the needs of Richmond’s future population. The explicit requirement for Local Authorities to collaborate with the NHS is welcomed. We would encourage the inclusion of health providers being actively involved in the preparation of their local plans, as this will help to enable the NHS to provide a comprehensive healthcare service to Richmond’s growing population.</p> <p>When preparing local plans, Local Authorities should be tasked with a specific duty to co-operate with the NHS to facilitate its estate planning functions and delivery.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Local Planning Authorities should ensure that they work with NHS commissioners and providers to ensure that adequate healthcare infrastructure is provided to support new residential development. Healthcare facilities (including primary and secondary care) are essential infrastructure and where new facilities are required, they should be delivered alongside additional housing units to mitigate the impact of population growth on existing infrastructure. LPAs should therefore work with NHS commissioners and providers to consider the quantum and location of healthcare facilities that will be required to ensure that new developments are sustainable.</p> <p>Summary: The proposed changes would ensure that the NHS is able to effectively manage its estate, disposing of unneeded and unsuitable properties where necessary, to enable healthcare needs to be met.</p> <p>An essential element of supporting the wider transformation of NHS services and the health estate is to ensure that surplus and vacant NHS sites are not strategically constrained by local planning policies. NHS PS support more flexible policies that enable the NHS Commissioners conclusions to be acted upon where surplus land is identified, for the benefit of the local community and the NHS for the shared aim to provide essential services.</p> <p>Where NHS Commissioners can demonstrate that healthcare facilities are no longer required for the provision of services, there should be a policy presumption that such sites are suitable for housing (or other appropriate uses). It is imperative that NHS sites are not subject to overly onerous policies, particularly when the NHSPS is pressured by the White Paper and DCLG to deliver more housing. It also has a statutory duty to help finance improved healthcare services and facilities nationally through the disposal of their sites.</p>
41	Anthony Swan	Protected housing as proposed Udney Park
42	Jeremy Gill	Like Ellera Hall you mean? Yes. Leave it alone.
44	Roger Cutler	Sporting, or other provision, for teenagers
45	Sally Beeson	With an ageing population, a community space for the elderly is vital, as is nursery provision but at a minimal cost to parents
46 (a)	Joan Gibson	<p>Parks can provide local community infrastructure with high quality 2-storey Pavilions without any loss of green space. In Whitton both Heathfield rec and Murray Park have areas which are currently a hut or shipping container. Perfect for development to high quality Pavilions with community space for nurseries, life enhancing classes, music etc.</p> <p>Large Developments should include community and business space rather than retail.</p>
56	Trevor Rowntree	Yes. In my area we need a Public House which is a very effective community facility.
50	John O'Brien	Youth centres
51	Su Bonfanti	We have good community facilities here, so the important thing is sustaining ETNA, as well as the existing tennis, cricket and bowls facilities. Some of those are private but they do increasingly offer services to the community as a whole.
52	Winston W Taylor	I think Teddington is lucky with its community facilities. This is subject to the Ellera Hall consultation that rightly proposes a new facility providing additional community services.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Emergency housing for rough sleepers with medical , social and phycological support.
55	Jon Rowles	<p>Heathfield Recreation ground needs its pavillion rebuilding.</p> <p>The 1970s one was burnt down and was replaced with a prefabricated building which was a lot smaller and proves only the most basic of facilities. The LBRUT playing pitch strategy on page 14 states that local sports teams view this as having poor quality old and dated facilities.</p>
56	Rob Kennedy, Environment Agency	No
57	Tom Clarke, Theatres Trust	It should be ensured, as referenced within this section, that strong policies protecting facilities are carried forward. It should be made clear such policies apply to cultural facilities and venues such as theatres, cinemas and music venues. This will ensure consistency with London Plan and NPPF policy.

Respondent reference no.	Name / Organisation	Detailed comments
58	Michael Atkins, Port of London Authority	As part of the revised Local Plan there must be continued support for the protection and expansion of river related sports and recreation facilities in the borough. The PLAs Thames Vision includes the goal to see greater participation in sport and recreation on and alongside the river by 2035 and the London Borough of Richmond Upon Thames, with it's large number of existing facilities can play a key part in achieving this aim.
63	Carol Rawlings	Ham already has a good range of community facilities.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Maintaining ETNA as a community group is essential.
68 (b)	Mark Jopling	Council takes too long to make decisions eg North Lane/Ellaray Hall Teddington, years of indecision serves no-one.
69	Geoff Bond on behalf of Ham and Petersham Association	Improved football and cricket facilities
What is the best way to provide enough school places for our growing population?		
18	Phoebe Juggins, Department for Education	<p>1. The Department for Education (DfE) welcomes the opportunity to contribute to the development of planning policy at the local level.</p> <p>2. Under the provisions of the Education Act 2011 and the Academies Act 2010, all new state schools are now academies/free schools and DfE is the delivery body for many of these, rather than local education authorities. However, local education authorities still retain the statutory responsibility to ensure sufficient school places, including those at sixth form, and have a key role in securing contributions from development to new education infrastructure. In this context, we aim to work closely with local authority education departments and planning authorities to meet the demand for new school places and new schools. We have published guidance on securing developer contributions for education, at https://www.gov.uk/government/publications/delivering-schools-to-support-housing-growth. You will also be aware of the corresponding additions to Planning Practice Guidance on planning obligations, viability and safe and healthy communities.</p> <p>6. The National Planning Policy Framework (NPPF) advises that local planning authorities (LPAs) should take a proactive, positive and collaborative approach to ensuring that a sufficient choice of school places is available to meet the needs of communities and that LPAs should give great weight to the need to create, expand or alter schools to widen choice in education (para 94).</p> <p>7. DfE supports the principle of LBRuT safeguarding land for the provision of new schools to meet government planning policy objectives as set out in paragraph 94 of the NPPF. When new schools are developed, local authorities should also seek to safeguard land for any future expansion of new schools where demand indicates this might be necessary, in accordance with Planning Practice Guidance and DfE guidance on securing developer contributions for education (https://www.gov.uk/government/publications/delivering-schools-to-support-housing-growth). We would be happy to share examples of best practice.</p> <p>8. LBRuT should also have regard to the Joint Policy Statement from the Secretary of State for Communities and Local Government and the Secretary of State for Education on Planning for Schools Development (https://www.gov.uk/government/publications/national-planning-policy-framework-2) (2011) which sets out the government's commitment to support the development of state-funded schools and their delivery through the planning system.</p> <p>9. In light of the above and the Duty to Cooperate on strategic priorities such as community infrastructure (NPPF para 24-27)(NPPF paragraph 24-27 specifies that this collaborative working should include infrastructure providers), DfE encourages close working with local authorities during all stages of planning policy development to help guide the development of new school infrastructure and to meet the predicted demand for primary and secondary school places. Please add DfE to your list of relevant organisations with which you engage in preparation of the plan.</p> <p>10. Please note that there are two routes available for establishing a new school. Firstly, a local authority may seek proposals from new school proposers (academy trusts) to establish a free school, after which the Regional Schools Commissioner will select the successful trust. Under this 'local authority presumption route' the local authority is responsible for finding the site, providing the capital and managing the build process. Secondly, school proposers can apply directly to DfE during an application round or 'wave' to set up a free school. The local authority is less involved in this route but may support groups in pre-opening and/or provide a site. Either of these routes can be used to deliver schools on land that has been provided as a developer contribution. DfE has published further general information on opening free schools. (https://www.gov.uk/government/collections/opening-a-free-school)</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Site Allocations</p> <p>11. Site allocations and/or associated safeguarding policies should seek to clarify requirements for the delivery of new schools, including when they should be delivered to support housing growth, the minimum site area required, any preferred site characteristics, and any requirements for safeguarding additional land for future expansion of schools where need and demand indicates this might be necessary. It is important that social infrastructure is in the right place at the right time to support population growth.</p> <p>12. Viability assessment should inform options analysis and site selection, with site typologies reflecting the type and size of developments that are envisaged in the borough/district. This enables an informed judgement about which developments would be able to deliver the range of infrastructure required, including schools, leading to policy requirements that are fair, realistic and evidence-based. In accordance with Planning Practice Guidance, there should be an initial assumption that applicable developments will provide both land and funding for the construction of new schools. The total cumulative cost of complying with all relevant policies should not undermine deliverability of the plan, so it is important that anticipated education needs and costs of provision are incorporated at the outset, to inform local decisions about site selection and infrastructure priorities (PPG on viability and planning obligations: https://www.gov.uk/government/collections/planning-practice-guidance).</p> <p>13. While it is important to provide this clarity and certainty to developers and the communities affected by development, retaining a degree of flexibility about site specific requirements for schools is also necessary given that the need for school places can vary over time due to the many variables affecting it. DfE therefore recommends the Council consider highlighting in the next version of the Local Plan that:</p> <ul style="list-style-type: none"> - specific requirements for developer contributions to increasing capacity of existing schools and the provision of new schools for any particular site will be confirmed at application stage to ensure the latest data on identified need informs delivery; and that - requirements to deliver schools on some sites could change in future if it were demonstrated and agreed that the site had become surplus to requirements, and is therefore no longer required for school use. <p>Evidence Base</p> <p>14. It would be good practice for LBRuT to continually monitor the position with regards to pupil places and school delivery, as part of ensuring the Infrastructure Delivery Plan is up to date, setting out clearly how the forecast housing growth at allocated sites has been translated (via an evidence based pupil yield calculation) into an identified need for specific numbers of school places and new schools over the plan period, and also how this compares to what has been delivered practically. This would help to demonstrate that the approach to the planning and delivery of education infrastructure is justified based on proportionate evidence, and also to ensure that approaches can be flexible and resilient to changes in circumstances and the reality of the delivery of housing.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Schools need to be located within their catchment areas with space them to allocated in the local plan. A full public sequential site search process should be undertaken to identify new sites so that the selection is as open and democratic as possible.
31	Tim Catchpole on behalf of MESS	We are over-provided with primary school places and possibly also with secondary school places given the significant decline in the birth rate since 2012.
33	Tim Catchpole on behalf of the Mortlake Brewery Community Group	<ol style="list-style-type: none"> 1. Don't over-react when there is a sudden dramatic increase in births - like there was in 2008-2012. We have witnessed strenuous attempts by the Council to respond to this by providing a huge increase in school places, but it has turned out to be a bulge and the birth rate since 2012 has been falling steadily. Primary schools are now experiencing a significant decline in numbers and the latest ONS population projections (published 24 March 2020) show that the population of 11-year-olds in Richmond will peak in 2021 (and in neighbouring boroughs in 2023) and then go into significant decline. 2. Don't support the development of a new secondary school on an inappropriate site just because it is being offered by the DfE with all expenses paid. Recognise that while over-provision of primary or lower secondary school places does not damage the educational offer, over-provision post-16 could prevent existing schools from achieving viable 6th forms (indeed a new school might not be able to achieve viability of its own 6th form). Instead, negotiate with the DfE to allow existing secondary schools to expand in order to achieve such viability and get the DfE to fund such expansion. 3. If, and <i>only if</i>, a new school is really needed, then make sure the right site is selected using the ten criteria set out in the Mayor's New London Plan covering accessibility by public transport, linkages to pedestrian/cycle networks, proximity to open space, etc, supplemented with additional criteria covering impact on

Respondent reference no.	Name / Organisation	Detailed comments
		existing schools and on protected land, noting that MOL is no longer sacrosanct. The case for the new school must be robust and evidenced (as requested by the GLA). 4. Carry out more detailed research into the percentage of pupils going into independent education in different areas of the borough, and the factors affecting this choice. It is not adequate to apply a fixed percentage of the state primary-school leavers, across large areas of the borough. 5. Do not accept that, just because secondary schools and colleges are no longer funded by the Local Authority, the authority has no responsibility for asserting what their role should be in relation to one another. In particular, it has a duty to do what it can to ensure on behalf of residents that there is the best possible <u>pattern</u> of educational provision, particularly post-16 where an adequate range of courses should be reliably available. This is not the case at present.
41	Anthony Swan	Restrict new builds
42	Jeremy Gill	Build some schools.
44	Roger Cutler	Inject more money by reducing the money you waste elsewhere eg. yet more plans & expenditure on Twickenham Riverside which works fine as it is.
45	Sally Beeson	Find a site on which to build a new school - local authorities should have the power to overrule proposed planning for flats for this reason. Also to expand existing school buildings as long as playgrounds and playing fields are not built upon and reduced in size, which has been the fate of many of our local schools. Use adjacent boroughs' schools if their school places aren't filled
46 (a)	Joan Gibson	School places. There are a number of schools that can be expanded. Twickenham School, Hampton High, Heathfield school, Nelson school is 30 pupils down etc. etc. You need to stop your policy of expanding via new schools. This is removing potential sites from housing development and worse still removing green sites from Richmond. Your policy should be to expand on current school brown field sites rather than open new schools. This also ensures the school places are in the area of need so encourages active travel.
53	Richard Woolf on behalf of McDaniel Woolf Architects	The borough is providing new schools . The new school places will respond in the future to an increasing population. No doubt relocation of metropolitan open land by Richmond Council will take place, as happened at the Russell School in Petersham. With this site, a new school was built in an inappropriate location, against local opposition and with poor strategic thinking. If precious MOL and place space is to be lost, please learn from the Russell project on what not to do.
55	Jon Rowles	1) The council can use its influence to amend catchment areas. Currently, around a third of secondary school places are taken up by out of borough pupils and this is also causing a lot of extra congestion and pollution. 2)The council need to find sites for new schools and reserve them using the local plan process as most local authorities do. 3) Schools must be located in their main catchment area to make them sustainable
56	Rob Kennedy, Environment Agency	By building more schools or expanding existing schools.
63	Carol Rawlings	Expand the current private provision by providing free school places for children.
69	Geoff Bond on behalf of Ham and Petersham Association	Only introduce additional need where the school places can be satisfied. Do not over stretch existing schools but use existing capacity elsewhere by focusing development near this capacity.
Should we encourage more community uses in borough centres?		
Of respondents who answered the question: 19 said yes, 1 said no and 2 don't know [16 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<i>[Should they be encouraged as part of larger or mixed-use developments?]</i> Depends on the size of the town centre – it could jeopardise the viability of smaller town centres to lose even more units. Should consider making it easier for gym chains to open up in our town centres. It easier to open up a vape store or cake shop than open a facility that improves peoples health.
31	Tim Catchpole on behalf of MESS	Not necessarily in the borough centres - churches provide floorspace for community uses.
41	Anthony Swan	Should be encouraged anywhere

Respondent reference no.	Name / Organisation	Detailed comments
42	Jeremy Gill	Possibly, first sensible question you've asked
44	Roger Cutler	Whatever works best. Must be versatile.
56	Trevor Rowntree	But the community uses should ensure they are for the whole community and not be exclusively for use for a subsection of the community.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Both
53	Richard Woolf on behalf of McDaniel Woolf Architects	I'm not sure who 'community' is ??
55	Jon Rowles	But not at the expense of retail.
63	Carol Rawlings	Mixed us
Should there be increased public access to school facilities?		
Of respondents who answered the question: 17 said yes, 2 said no and 3 don't know [16 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	All new school developments should have a community use agreement for access to sports facilities, classrooms, etc – so should the demand arise in the future it can be accommodated. With schools increasing separate from the council, these agreements will need to be more formalised in the future.
31	Tim Catchpole on behalf of MESS	Schools have become like fortresses, so this may be unrealistic.
42	Jeremy Gill	Evening classes
44	Roger Cutler	Once again, more expenditure.
45	Sally Beeson	I think they are used already, and there comes a tipping point whereby the school isn't for the children alone, which I think it should be. It's a special and safe place for many and security could be compromised.
46 (a)	Joan Gibson	Not unless you are going to provide the staff to run them out of hours - schools cannot afford this
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Including independent schools
51	Su Bonfanti	I support the idea of 'increased public access to school facilities'. We're about to have a whole new school - the biggest bit of infrastructure in East Twickenham for years - and it would be good for it to be well used.
52	Winston W Taylor	The school facilities should be available to the public.
53	Richard Woolf on behalf of McDaniel Woolf Architects	I feel access is well served with many schools. Not sure we have a challenge ?
55	Jon Rowles	There needs to be community use agreements for not just sports facilities but the classrooms too.
63	Carol Rawlings	School swimming pools should be available for public use at weekends and holidays.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Yes where relevant and if it doesn't generate more disruptions from nearby residents.

Respondent reference no.	Name / Organisation	Detailed comments
69	Geoff Bond on behalf of Ham and Petersham Association	Extend the K5 to Grey Court School. Discourage teachers from driving to school
General comments relating to this topic area		
4	Lambert Smith Hampton on behalf of Metropolitan Police Service	<p>Section 106/CIL contributions to mitigate impact on crime</p> <p>We are pleased to see that Richmond Council references ‘policing and other criminal justice or community safety facilities’ as social infrastructure within the adopted Local Plan. As noted in our representation to the Richmond Planning Obligations SPD Consultation in January 2020, the MPS have to move towards securing S106/CIL from development due to the impacts on crime. The MPS would like to have the ability to receive financial contributions in due course and are in the process of working up a formula linking to development impacts which should be available soon.</p> <p>A breakdown of non-property related infrastructure sought by the MPS in the future is detailed below. This list has been taken from other Police and Crime Commissioners who are already receiving financial contributions;</p> <ul style="list-style-type: none"> • Staff set up costs <ul style="list-style-type: none"> - Uniforms. - Radios. - Workstation/Office equipment. - Training. • Vehicles <ul style="list-style-type: none"> - Patrol vehicles. - Police community support officers (PCSO) vehicles. - Bicycles. • Mobile IT: The provision of mobile IT capacity to enable officers to undertake tasks whilst out of the office in order to maintain a visible presence. • CCTV technologies: Automatic Number Plate Recognition (ANPR) cameras to detect crime related vehicle movements. • Police National Database (PND): Telephony, licenses, IT, monitoring and the expansion of capacity to cater for additional calls. <p>Text secured within the draft Wandsworth Planning Obligations SPD</p> <p>The MPS have secured the following text within the draft Wandsworth Planning Obligations SPD;</p> <p>‘The impact of large-scale development on the Metropolitan Police has funding implications, and it is widely accepted that policing infrastructure can be included within CIL and s106 obligations. S106 infrastructure is not limited to buildings and could include equipment such as surveillance infrastructure, CCTV; staff set up costs, vehicles, mobile IT and Police National Database. The Metropolitan Police is currently preparing a calculation formula to enable collection of financial contributions and this will be used when available by the Council’.</p>
14	Mayor of London	The themes regarding new social and community infrastructure, creating safe, healthy and inclusive communities are closely aligned with the Mayor’s Good Growth Objective GG1, Building strong and inclusive communities. The intended approach is welcome.
18	Phoebe Juggins, Department for Education	<p>5. DfE welcomes reference within the plan to support the development of appropriate social and community infrastructure on p12.</p> <p>Location of Social Infrastructure</p> <p>15. As set out above, site allocations for educational uses (new schools and facilities as well as expansions) should be robustly evidence-based and ensure that the plan is positively prepared. It is also important that there is a positive planning policy framework to ensure that education provision can come forward during the plan period expediently, to respond flexibly to need and demand.</p> <p>16. It can be challenging for sites to be identified for the delivery of social and community infrastructure, including education uses. DfE would recommend that LBRuT does not take an onerous position requiring significant policy tests to be met for changes of use from other land uses to social and community uses (including education). For example, marketing evidence requirements for releasing land can lead to social infrastructure and education uses being unable to be delivered in line</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>with need and demand. It is important that there is flexibility within types of social infrastructure to enable best value for money for public services and agencies delivering these.</p> <p>17. Such policy requirements can also be challenging to the public sector/third sector organisations required to meet the tests, given the intensity of resource and timescales involved. This places additional burden on such organisation who are already frequently stretched and need to be able to realise value for money and efficiency.</p> <p>18. All new development can cumulatively impact on the requirement for social infrastructure facilities, not just <i>large</i> new development as referenced on page 55. DfE therefore recommends that a policy approach be developed to ensure that all development which either standalone, or in conjunction with other planned or proposed development, is assessed to ensure that proportionate contributions are secured to mitigate any impact that may arise. This could be contributions towards existing facilities' expansion or enhancement, or a proportionate contribution towards new provision.</p>
18	Phoebe Juggins, Department for Education	<p>Forward Funding</p> <p>23. DfE loans to forward fund schools as part of large residential developments may be of interest, for example if viability becomes an issue. Please see the Developer Loans for Schools prospectus for more information (The Developer Loans for Schools prospectus is available here -https://www.gov.uk/government/publications/developer-loans-for-schools-apply-for-a-loan). Any offer of forward funding would seek to maximise developer contributions to education infrastructure provision while supporting delivery of schools where and when they are needed.</p> <p>Developer Contributions and Community Infrastructure Levy (CIL)</p> <p>24. One of the tests of soundness is that a Local Plan is 'effective', meaning the plan should be deliverable over its period. In this context and with specific regard to planning for schools, there is a need to ensure that education contributions made by developers are sufficient to deliver the additional school places required to meet the increase in demand generated by new developments. DfE notes that LBRuT will be producing an Infrastructure Delivery Statement which will reflect Local Plan priorities (set out on page 59), and that the Council may also wish to review CIL rates to ensure appropriate rates are levied and the right infrastructure is secured across the borough.</p> <p>25. Where additional need for school places will be generated by housing growth, the Infrastructure Delivery Statement should identify the anticipated CIL and Section 106 funding towards this infrastructure. The statement should be reviewed annually to report on the amount of funding received via developer contributions and how it has been used, providing transparency to all stakeholders.</p> <p>26. Local authorities have sometimes experienced challenges in funding schools via Section 106 planning obligations due to limitations on the pooling of developer contributions for the same item or type of infrastructure. However, the revised CIL Regulations remove this constraint, allowing unlimited pooling of developer contributions from planning obligations and the use of both Section 106 funding and CIL for the same item of infrastructure. The advantage of using Section 106 relative to CIL for funding schools is that it is clear and transparent to all stakeholders what value of contribution is being allocated by which development to which schools, thereby increasing certainty that developer contributions will be used to fund the new school places that are needed. DfE supports the use of planning obligations to secure developer contributions for education wherever there is a need to mitigate the direct impacts of development, consistent with Regulation 122 of the CIL Regulations.</p> <p>27. We also request a reference within the Local Plan's policies or supporting text to explain that developer contributions may be secured retrospectively, when it has been necessary to forward fund infrastructure projects in advance of anticipated housing growth. An example of this would be the local authority's expansion of a secondary school to ensure that places are available in time to support development coming forward. This helps to demonstrate that the plan is positively prepared and deliverable over its period.</p> <p>28. DfE would be particularly interested in responding to any update to the Infrastructure Delivery Plan/Infrastructure Funding Statement, viability assessment, Obligations SPD or other evidence relevant to education which may be used to inform local planning policies and CIL charging schedules. As such, please add DfE to the database for future consultations on relevant plans and proposals.</p> <p>Conclusion</p> <p>29. Finally, I hope the above comments are helpful in shaping LBRuT's Local Plan, with regard to the provision of a policy approach, site allocation and contributions strategic to securing school places. Please advise DfE of any proposed changes to the approach to emerging Local Plan policies, supporting text, site allocations and/or evidence base arising from these comments.</p>

Respondent reference no.	Name / Organisation	Detailed comments
22	Jimmy Wallace, Richmond Athletic Association	<p>We are fully supportive of the borough's intention to update the following aspects of its evidence base as outlined on p. 54:</p> <ul style="list-style-type: none"> • Indoor Sports Facility Needs Assessment; • Playing Pitch Assessment; • Playing Pitch Strategy; and • Open Space Assessment <p>We would welcome the opportunity to input into the development of these strategies and assessments, particularly in the context of our emerging masterplan for the enhancement of the existing facilities at the Richmond Athletic Ground.</p> <p>We also note the various policy directions, including the support for the enhancement of existing land and facilities for sport and playing fields, and we look forward to reviewing the detailed policies as these emerge in draft.</p>
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	We support the essential provision of schools, care and other community facilities.
<p>Creating safe, healthy and inclusive communities</p> <p>Do you agree with the proposed policy directions?</p> <p>Of respondents who answered the question: 15 said yes, 4 said no and 3 don't know [16 did not answer the question]</p>		
20	Gary Backler, Friends of the River Crane Environment.	<p>Again, we welcome the inclusion of this theme and its prioritisation, but again we are concerned that the emphasis is inappropriate. As set out, the policy places importance on aspects such as Healthy Streets, fastfood outlets, sports and health facilities. This is inadequate: for example, "providing access to sports centres and recreation facilities" (p58) that require user payments risks being regressive and exclusionary in both health and financial terms.</p> <p>We believe that greater emphasis should be placed on the role that the borough's open and wild spaces can play in creating safe, healthy and inclusive communities, as well as in improving air quality and promoting physical and mental health. These open spaces should be accessible to communities without the need to overcome severance obstacles. They should not be over-exploited and degraded by excess demand. They should be freely available to the public. Crucially, the policy needs to recognise that these open spaces should be of high – and improving – quality, with the commitment that safety, cleanliness, reduction in crime and anti-social behaviour, management and maintenance will have equal priority for the open spaces as for the built environment.</p> <p>We help to support three TCV Green Gyms in the borough, provide a programme of Walks & Talks and conduct usage surveys which quantify the use made of some of the borough's open spaces. There is considerable work of this nature being done by a network of volunteer based organisations across the borough and we believe this work needs to be more actively supported by the council. Organisations such as South West London Environment Network help to support and co-ordinate these activities, working with a network of over 70 friends groups across the borough.</p>
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to ensure that public health is an official consultee – par the Lib Dem Manifesto.
37	John Waxman, Crane Valley Partnership	Furthermore the revised Local Plan must recognise that convenient access to a Borough-wide network of connected high quality open spaces offers significant benefits to residents - for example in terms of enhanced health and well-being and opportunities for sustainable travel.
46 (a)	Joan Gibson	Health – I feel your summary of what is causing ill health in Richmond, high levels of obesity and risky behaviour in adolescents misses out the reasons. You seem to only blame it on smoking, alcohol drinking, drug taking and air quality. I live in a middleclass area of Whitton, both adults in our household are fit and healthy for our age, and our child is normal weight fit and healthy, and does not drink. We drink more than 14 units a week, used to smoke and breath in poor air quality so should not be fit and healthy. We have neighbours who are must less fit and healthy, and have overweight children but do not drink as much as we do. You need to get to

Respondent reference no.	Name / Organisation	Detailed comments
		the bottom of what is making these families less fit despite less alcohol and the same air quality. If you do not understand why you will fail to put the right changes in place.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
55	Jon Rowles	A lot of health inequalities are down to 'cold houses' and more need to be done to ensure that the poor and elderly are not in substandard housing.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	There needs to be a greater focus on mental health in context of general wellbeing of residents in the borough. Noise disruption is high and is not given any focus when considering new developments. The borough needs to include noise pollution as a key issue in the borough (likely to increase if Heathrow 3rd runway goes ahead). In East Twickenham, our high street is very noisy (vehicles, businesses operating, buses, etc.) and we are also plagued by heavy air traffic. This could become a significant health issue beyond obesity, etc. which are already tackled by national policies.
65	SSA Planning Limited on behalf of Kentucky Fried Chicken (Great Britain) Limited	Numerous studies (Marmot, Michael et al; (2010) 'Fair Society, Healthy Lives' The Strategic Review of Health Inequalities in England post-2010, p.132 and Williams, J et al (2014) 'A systematic review of the influence of the retail food environment around schools on obesity-related outcomes ' Obesity Reviews 15, p.374) have found no or conflicting evidence for any effect of the food environment around schools on childhood obesity. Controlling the primary school environment is particularly problematic as there is neither correlation nor mechanism, since pupils may not leave unattended.
69	Geoff Bond on behalf of Ham and Petersham Association	The most popular way to improve health is by recreational walking. By improving the areas used for recreation walking, such as the Avenues in Ham and Petersham more people will walk. You don't need buildings for this
Should it be easier to change use from other land uses to community uses?		
Of respondents who answered the question: 9 said yes, 2 said no and 7 don't know [20 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Some "community uses" don't have much local community value. There is a unit in Whitton which is occupied by a postal pharmacy and thus could be located anywhere and just removes a retail unit.
41	Anthony Swan	Buildings then yes
44	Roger Cutler	Depends on need.
55	Jon Rowles	Depends what the use is. School use could be very controversial and cause lots of pollution.
63	Carol Rawlings	Unused retail spaces should be changed to community use.
68 (a)	Mark Jopling	Yes though not green space unless related to functional use of that green space
68 (b)	Mark Jopling	Yes though anything built on green space must be related to the function of the green space
Should policy strongly resist more takeaways in areas in proximity to schools?		
Of respondents who answered the question: 15 said yes, 2 said no and 2 don't know [19 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Some council go further and ban additional all additional takeaways in wards where childhood obesity is above a certain level. The council could also try and reduce adverting on and around fast food units – as its walking past what are effectively bill-boards promoting bad eating which is the biggest part of the problem The council could look at preventing banner advertising on barriers around outside eating areas, and posters that are allowed in the window. The council should consider wider restrictions to prevent what Unicef call 'food swamps' from developing. In some wards we are in danger of seeing the majority of children eating poor diets. Please see this link https://www.unicef.org.uk/press-releases/poor-diets-damaging-childrens-health-warns-unicef/
41	Anthony Swan	Provide free school lunches where students can sit and talk...like in France. No phones allowed on!
44	Roger Cutler	But money talks.
45	Sally Beeson	Absolutely, the obesity figures speak for themselves!

Respondent reference no.	Name / Organisation	Detailed comments
52	Winston W Taylor	Health; behaviour
53	Richard Woolf on behalf of McDaniel Woolf Architects	Although I support the principle , I also feel this is a democracy. I know chip-shops opposite school gates isn't ideal , but I would prefer democracy over calories. Sorry, not very PC.
55	Jon Rowles	The planning inspector is undermining the current policy, so many look into also having a bar on new takeaways where over a certain percentage of children are overweight (which is also commonly used).
63	Carol Rawlings	Encourage healthy eating. Discourage confectionery, fast food and chips!
65	SSA Planning Limited on behalf of Kentucky Fried Chicken (Great Britain) Limited	Banning a specific type of food and drink use within effectively random areas rather than the total number or proportion of all food and drink premises, is unlikely to be beneficial, but likely to contradict wider retail policy by reducing accessibility and therefore footfall, vitality and, ultimately, viability. Recent evidence (Robinson, E et al, 2018. '(Over)eating out at major UK restaurant chains: observational study of energy content of main meals' BMJ 2018 (363) 4982) demonstrates that over-consumption is possible at premises and brands within a wide range of planning use classes, so that action to improve, rather than restrict, the offer is required across all uses where food and drink are sold, particularly where this is for immediate consumption.
Do you have any other suggestions on how planning can promote or contribute to creating places and an environment that is conducive to weight loss and active lifestyles?		
10	Stuart Morgans, Sport England	<p>Sport England has an established role within the planning system which includes providing advice and guidance on all relevant areas of national, regional and local policy as well as supporting local authorities in developing the evidence base for sport.</p> <p>Sport England aims to ensure positive planning for sport, enabling the right facilities to be provided in the right places, based on robust and up-to-date assessments of need for all levels of sport and all sectors of the community. To achieve this our planning objectives are to seek to PROTECT sports facilities from loss as a result of redevelopment; to ENHANCE existing facilities through improving their quality, accessibility and management; and to PROVIDE new facilities that are fit for purpose to meet demands for participation now and in the future.</p> <p>We work with the planning system to achieve these aims and objectives, seeking to ensure that they are reflected in local planning policies, and applied in development management. Please see our website for more advice: http://www.sportengland.org/facilities-planning/planning-for-sport/</p> <p>Protecting playing fields and other sport facilities</p> <p>Sport England is keen to ensure that there is a relevant policy within any new Local Plan in order to ensure that both indoor and outdoor sport facilities are adequately protected in line with both the London Plan (Intend to Publish version 2019) and the NPPF 2019.</p> <p>I note that the existing Richmond Local Plan LP31 states that playing fields and sports facilities should be protected and where possible enhanced. However, both national policy and the London plan reference specific exceptions to this. A new Local Plan should consider bringing this policy into line with the NPPF and London Plan.</p> <p>National policy currently states: Existing open space, sports and recreational buildings and land, including playing fields, should not be built on unless: a) an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or b) the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or c) the development is for alternative sports and recreational provision, the benefits of which clearly outweigh the loss of the current or former use.</p> <p>The London Plan (Intend to Publish 2019) states: Existing sports and recreational land (including playing fields) and facilities for sports and recreation should be retained unless: 1) an assessment has been undertaken which clearly shows the sports and recreational land or facilities to be surplus to requirements (for the existing or alternative sports and recreational provision) at the local and sub-regional level. Where published, a borough's assessment of need for sports and recreation facilities should inform this assessment; or 2) the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or 3) the development is for alternative sports and recreational provision, the benefits of which clearly outweigh the loss of the current or former use.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Sport England considers that this is an excellent opportunity to ensure that any new Local Plan is compliant with both the London Plan and NPPF. Sport England are likely to object if the relevant policies in the new Local Plan are inconsistent with the guidance contained within the NPPF (particularly para 97), and Sport England's Playing Fields Policy (see attached link). https://www.sportengland.org/how-we-can-help/facilities-and-planning/planning-for-sport#playing_fields_policy</p> <p>Sport England may also wish to comment further on any policy that relates to protecting sport following the Inspectors decision into the Udney Park Road appeal Inquiry, where the implications of Richmond's existing policy around sport facilities may well become clearer.</p> <p>New provision Sport England supports the element of policy LP31 relating to provision to meet the needs of major development, as it references assessing need in line with the Borough's Playing Pitch Strategy (PPS). Sport England suggests that a revised policy should identify a mechanism for calculating demand from new developments and set out how this is to be applied to establish the level of onsite/off-site provision for both indoor and outdoor facilities. For example, the use of Sport England's Sports Facility Calculator and New Playing Pitch Calculator, which provide a useful starting point to demonstrate demand generated by new housing development. Should an on-site contribution not be deemed appropriate, the policy should provide for an off-site contribution. The Playing Pitch Strategy Action Plan should to be used to identify sites requiring investment where appropriate.</p> <p>Evidence base I note that the Council benefits from a relatively recent PPS updated in 2018; now is a good opportunity to consider beginning the process of updating this document in order to ensure that the information in it remains robust and up-to-date in accordance with para 96 of the NPPF. I further note that the Council has not updated its evidence base with regard to indoor facilities since 2015 and would therefore strongly encourage that the Council develop an updated/new Built Facilities Strategy (BFS). It is essential that the Council has an up-to-date PPS and BFS in order to ensure that the new Local Plan evidence base in order to comply with national policy guidance. The lack of an up to date evidence could lead to the new Local Plan being found to be unsound.</p> <p>Health and wellbeing – Active Design Sport England believes the new Local Plan would benefit by specifically referencing Sport England's Active Design Guidance, with the recommendation that future design proposals follow its principles. Sport England and Public Health England have refreshed our 'Active Design' guide which provides some really useful advice and case studies with clear reference to the NPPF to maximise the opportunities for design in physical activity. Sport England would commend this to you and suggest the concept of 'Active Design' be incorporated into policy and any new developments – please see website extract and link below:</p> <p>Active design We believe that being active should be an intrinsic part of everyone's daily life – and the design of where we live and work plays a vital role in keeping us active. Good design should contribute positively to making places better for people and create environments that make the active choice the easy choice for people and communities. That's why Sport England, in partnership with Public Health England, has produced the Active Design Guidance. This guidance builds on the original Active Design (2007) objectives of improving accessibility, enhancing amenity and increasing awareness, and sets out the Ten Principles of Active Design.</p> <p>Ten principles The ten principles have been developed to inspire and inform the layout of cities, towns, villages, neighbourhoods, buildings, streets and open spaces, to promote sport and active lifestyles. The guide features an innovative set of guidelines to get more people moving through suitable design and layout. It includes a series of case studies setting out practical real-life examples of the principles in action to encourage planners, urban designers, developers and health professionals to create the right environment to help people get more active, more often.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>The Active Design Principles are aimed at contributing towards the Government's desire for the planning system to promote healthy communities through good urban design.</p> <p>Active Design has been produced in partnership with David Lock Associates, specialists in town planning and urban design. http://sportengland.org/facilities-planning/planning-for-sport/planning-tools-and-guidance/active-design</p>
18	Phoebe Juggins, Department for Education	<p>Open space and recreation</p> <p>19. The NPPF (2019) sets out at paragraph 97 that:</p> <p>97. Existing open space, sports and recreational buildings and land, including playing fields, should not be built on unless:</p> <p>a) an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or</p> <p>b) the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or</p> <p>c) the development is for alternative sports and recreational provision, the benefits of which clearly outweigh the loss of the current or former use.</p> <p>20. It is important that the LBRuT Local Plan allows flexibility to allow the provision of educational facilities, where there is a clear overall benefit in terms of enhanced facilities provision (taking into account local needs), despite a limited loss in the quantity of existing facilities, such as a new school providing indoor and outdoor facilities for sport of significantly improved <i>quality</i>, accessibility and availability for shared use by the local community (secured through a community use agreement if appropriate). It should be acknowledged that enhancements can take the form of both quality as well as quantity and as such, any quantitative loss may be more than compensated by qualitative enhancements. This flexibility will enable greater benefits to health and wellbeing.</p> <p>21. Any future policy should comply with the NPPF.</p> <p>22. DfE additionally notes that LBRuT intends to produce/update relevant evidence base in relation to playing pitches and open space, and therefore we suggest that assessments (in accordance with the proposed abovementioned point regarding policy direction) should consider qualitative factors (for both existing condition and proposed need) as well as the quantity of open space in existence and proposed. This will ensure that the policy approach is founded on robust and comprehensive evidence.</p>
22	Jimmy Wallace, Richmond Athletic Association	We endorse the proposed policy directions to support the creation of safe, healthy and inclusive communities. Particularly, we fully endorse the borough's prioritisation of healthy communities and we recognise the opportunity for the enhancement of the Richmond Athletic Ground facilities to contribute to meeting this priority through the provision of improved sport and recreation facilities.
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>Some new developments don't have pavements and people have to walk on the roadway. Whilst this may slow cars down, it also means that parents are more reluctant to let their children travel unaccompanied.</p> <p>[See photo in Appendix]</p> <p>Arden Close in Whitton – and example of lack of pavements discouraging exercise</p> <p>The Infrastructure Delivery Plan notes that membership at fitness clubs is falling and that borough residents are now traveling outside of the borough to access no-frills gyms (such as the gym group Hounslow where monthly subs are £18.99 with no contract) compared to the legacy chains like Virgin Active Twickenham (£99 per month for a 12 month contract), Nuffield Health Twickenham (£69.00 per month for a 12 month contract) and David Lloyd (£120 per month for a 12 month contract + 3 month notice to cancel). We recommend that council look to ensure that more low-cost gyms can be set up in the borough.</p>
31	Tim Catchpole on behalf of MESS	No, the Borough is well provided with space for a healthy life style. Certain residents appear not be taking advantage of them?
41	Anthony Swan	Yes..protected bike lanes. Use school gyms for sport clubs.
42	Jeremy Gill	Not your concern at all
44	Roger Cutler	More money needs to be spent on health. The availability of prescription drugs should be improved rather than money spent on weight loss & active lifestyles. Existing basic care needs money before those things
45	Sally Beeson	Playgrounds and school playing fields are vitally important Keep our open spaces green
46 (a)	Joan Gibson	I recommend you look at: Diet – how many calories and what sort of calories these families eat. Do parents pickup children from school and give them a chocolate bar, do the children get

Respondent reference no.	Name / Organisation	Detailed comments
		<p>driven to school, does the whole family rely on cars, how big are their portions, is the child addicted to fats and sugar etc. etc. A child / adult that gets obese finds it hard to exercise. Why are teenagers in Richmond drinking more than average? Lack of self-esteem??, lack of hobby or interest caused be lack of self-esteem?? It tends not to be lack of opportunities as Richmond has a huge leisure offer and schools give children all they could possibly dream of.</p> <p>To get people more active you need to focus on separate walking, public transport and cycling routes with cars given limited routes. This needs to be for ALL areas of Richmond (not just the ones where people walk and cycle a lot now). In fact, priority needs to be given to those areas with the least active travel.</p> <p>I like that you want to engage with youth. However, the youth parliament which is full of successful and motivated teenagers will not have a clue what makes children obese, drink, smoke and take drugs. You need to engage the children who have the problems you want to fix too.</p> <p>Your plans around this issue have missed out changes to roads to promote active travel both walking and cycling / scootering.</p> <p>Unhealthy takeaways should be resisted – currently your policy is failing with a KFC and Dominos coming to Whitton High Street with 2000+ school children in close proximity. This needs fixing.</p>
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
52	Winston W Taylor	Making car travel more difficult through parking restrictions. Providing facilities (in the widest sense) promoting active lifestyles easily accessed by residents, An example where this does not work - Teddington Sports Centre at Teddington School. This centre is not accessible to me and I am sure a number of Teddington residents. There is no public transport so you have to use a car and pollute the atmosphere or not use it at all.
53	Richard Woolf on behalf of McDaniel Woolf Architects	I would strongly support cycle and foot bridges to get residents connecting across the borough rather than slogging over traffic clogged road bridges.
54	Paul Luton	Low traffic neighbourhoods.
55	Jon Rowles	1) Need to make the public health director a consultee on planning applications as par the Lib Dem Manifesto.
56	Rob Kennedy, Environment Agency	The encouragement of outside gyms in public parks.
59	Paul Massey	More cycle docking/parking areas
63	Carol Rawlings	Use school buildings for community use in evenings, at weekends and during school holidays.
65	SSA Planning Limited on behalf of Kentucky Fried Chicken (Great Britain) Limited	Fundamentally, delivering adequate housing with sustainable access to jobs and facilities, including open space and recreation is the key means by which planning can promote health. Ensuring a healthy mix of uses in town centres and of lower-order uses across out-of-centre geographies also promotes retail and public health.
68 (a)	Mark Jopling	Not appropriate to specify "weight loss" as a Policy goal, active lifestyle is sufficient description.
68 (b)	Mark Jopling	Weight loss is inappropriate as a Policy goal, active lifestyle is sufficient.
69	Geoff Bond on behalf of Ham and Petersham Association	Make sure it is harder to convert playing fields. Make sure people can travel to sports facilities, this will include driving to them in some instances
Are there other opportunities through planning to promote healthy lifestyles?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	<p>Public Health England has noted that "Some of the UK's most pressing health challenges - such as obesity, mental health issues, physical activity and the needs of an ageing population – can all be influenced by the quality of our built and natural environment...the considerate design of spaces and places can help to promote good health; access to goods and services; and alleviate, and in some cases even prevent, poor health and thereby have a positive impact on reducing health inequalities". Building Better Places'. Report of Session 2015-16. Written evidence (BEN0186) by Public Health England. House of Lords Select Committee on National Policy for the Built Environment</p> <p>We recommend that the council look at the Camden Planning Guidance: Planning for health and wellbeing.</p> <p>https://www.camden.gov.uk/documents/20142/4833316/CPG+Planning+for+health+and+wellbeing+March+2018.pdf/f84469ed-8fdd-67fb-bfea-c948f94dfcb4</p>

Respondent reference no.	Name / Organisation	Detailed comments
36	Tim Catchpole on behalf of MESS	See above.
37	John Waxman, Crane Valley Partnership	See above.
41	Anthony Swan	Jumping through hoops to obtain environment friendly planning permission
42	Jeremy Gill	No
44	Roger Cutler	It might be better to ensure planning doesn't produce unhealthy lifestyles. Education is most important of all . not more gyms. Stop allowing cyclists to injure people by cycling on the pavements.
45	Sally Beeson	Don't build lifts
46 (a)	Joan Gibson	The main way planning can help with health is separate walking and cycling infrastructure for all of Richmond (especially Whitton which has been completing left out of the current cycling and walking plans), and stopping unhealthy takeaways. The best way to improve exercise levels is to make it easier for Active travel to work or school. You could also work with traders to change how they layout their shops so healthy drinks and snacks are at eye level, put in footprints in train stations etc. to get people to walk upstairs, create active travel maps see https://www.newcastlecan.com/articles/metro-walking-map-the-step-by-stop-active-travel-guide , run school cookery courses to teach staff and pupils how to create healthy snacks and meals, lobby for changes to the cookery curriculum so only healthy food is cooked, write to businesses to get them to promote active travel, healthy eating by providing fruit to snack on and exercise breaks.
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough. There are many traffic jams and speeding, dangerous polluting vehicles across the Borough - ban them.
52	Winston W Taylor	See previous answer. I am sure there are others but no time.
53	Richard Woolf on behalf of McDaniel Woolf Architects	Accessible green open spaces , and not just the Royal Parks who take the brunt of the heavy lifting . Let's get our derelict common land and woodlands restored.
54	Paul Luton	See travel above.
55	Jon Rowles	- Ensure that new developments are permeable and link up - all too often roads are dead ends and or gated. This also increases the social isolation of the elderly which is also a health risk
63	Carol Rawlings	Swimming pools and the replacement of the old Richmond skating rink. The former could be provided by making school swimming pools open to the public when not in use.
65	SSA Planning Limited on behalf of Kentucky Fried Chicken (Great Britain) Limited	As a precautionary measure, not allowing changes of use to food and drink uses based on lack of viability in areas of deprivation may promote a healthier mix of uses in those area.
69	Geoff Bond on behalf of Ham and Petersham Association	Do more to protect areas from development that are used for recreation. I am less likely to walk down Great South Avenue for recreational purposes since the St Michael's Convent building or Petersham Avenue since the Russell School and German school buildings
How can we ensure convenient and welcoming development with no disabling barriers, providing independent access without additional undue effort, separation or special treatment?		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	Need to ensure there is a segregated pedestrian access, there is secure cycle parking in a convenient and safe location, there is proper covered bin storage (to stop fly tipping).
31	Tim Catchpole on behalf of MESS	By liaising with the disadvantaged.

Respondent reference no.	Name / Organisation	Detailed comments
42	Jeremy Gill	Some facilities for disabled people that work.
44	Roger Cutler	Use better planners. Get better value for money.
46 (a)	Joan Gibson	Separated walking and cycling routes
48	Roger Wilson on behalf of Roger Wilson Consulting LLP	Promote walking, public transport and cycling. Stop use of cars and vehicles across the Borough.
52	Winston W Taylor	Not enough time to think about this.
53	Richard Woolf on behalf of McDaniel Woolf Architects	It's all down to good patronage , design lead development and long term over short term returns. The Building Regulations offer the practical side to this , and to be honest , the fact that the borough attracts developers who usually respond with high quality proposals should be acknowledged. How the borough responds to gated communities is a concern.
58	Michael Atkins, Port of London Authority	There must be continuing reference for riverside developments to provide riparian life-saving equipment where required and necessary, as stated in existing Local Plan policy LP 18 (River Corridors). The PLA also considers that there is need for suicide prevention measures in appropriate locations (such as CCTV and signage with information to access support) to be provided as part of new development along riverside areas where appropriate.
63	Carol Rawlings	Ban pavement parking. Make Richmond town centre traffic-free. River buses.
64	Johanna Eschbach on behalf of Richmond Bridge Residents Association	Towards implementation, infrastructure, delivery and sites
General comments relating to this topic area		
27	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond	We support measures to protect the health and well-being of the community. We urge the Council to continue its opposition to expansion of Heathrow and increased numbers of flights over the Borough and the consequential harm to people's health from noise and air pollution as well as the global issue of carbon emissions and climate change.
Call for Sites – General Views (see the details of sites put forward separate in the separate Schedule of all the Call for Sites Responses)		
Are there are any barriers to delivery, such as infrastructure constraints?		
Of respondents who answered the question: 11 said yes, said 1 no and 3 don't know [23 did not answer the question]		
30	Jon Rowles on behalf of Friends of Heathfield Recreation Ground and Environs	The value of sites is affected by transport links. More sites would become viable for redevelopment if the frequency of services on the railway were improved. We request the council lobby for the re-phasing of the Hounslow Loop and Windsor Service to restore the former 4 trains per hour – equally spaced out – metro style service. LBRUT is a member of South London Partnership who have a number of policies that should be feeding into the Local Plan. However there website is not being updated and there is a lack of transparency over its work. The NHS South London Partnership is also reshaping the delivery of services in South London (including LBRUT) though a Sustainability and Transformation Plan and this to should feed into the local plan https://www.swlondon.nhs.uk/our-plan/our-plan-for-south-west-london/ .However, many LBRUT residents are reliant upon services provided at West Middlesex Hospital which is covered by the North West London Partnership – and there is a possibility that we are falling between two stalls. https://www.healthiernorthwestlondon.nhs.uk/sites/nhsnwondon/files/documents/nwl_stp_submission_summary_october_2016v2.pdf The LBRUT will also need to keep a watching brief on the proposal for the West London Orbital Railway, could it result in less services for Whitton Station. Alternatively, is there an opportunity for it to be extended to Twickenham or Feltham, both alternatives may serve LBRUT better? This is the link to the business case http://content.tfl.gov.uk/west-london-orbital-strategic-outline-business-case.pdf

Respondent reference no.	Name / Organisation	Detailed comments
		LBRUT should consider how it can liaise better with the West London Alliance (WLA) which is a partnership body of Barnet, Brent, Ealing, Hammersmith & Fulham, Harrow, Hillingdon and Hounslow. Like the NHS Partnerships there is a risk that neighbouring areas are not considering our needs fully.
31	Tim Catchpole on behalf of MESS	Delivery on the Brewery site will be constrained by gridlock on Lower Richmond Road.
41	Anthony Swan	Width of road, parking
44	Roger Cutler	Unsafe roads & pavements. The allowing of pavement cycling.
52	Winston W Taylor	I am sure there are plenty but no time to consider properly.
53	Richard Woolf on behalf of McDaniel Woolf Architects	We should consider connective links within open land and not be scared of having an adult conversations about land use.
55	Jon Rowles	The three narrow railway bridges in Whitton (Hospital Bridge Road, Nelson Road, and Hanworth Road) are a barrier to getting people walking and cycling more. They also act to separate communities and make the area too car centric.
59	Paul Massey	Tommy Steel bend
63	Carol Rawlings	Many multi-storey buildings do not have lifts, especially homes above shops.
68 (a)	Mark Jopling	The Council should be bolder in its convictions and decision making behind the Local Plan. Take a stronger line on legal matters to dissuade inappropriate development.
69	Geoff Bond on behalf of Ham and Petersham Association	Richmond Park and the River Thames means Ham and Petersham has one road through it.
Other General comments		
15	Transport for London	<p><i>Please note that these comments represent the views of Transport for London (TfL) officers and are made entirely on a "without prejudice" basis. They should not be taken to represent an indication of any subsequent Mayoral decision in relation to this matter. The comments are made from TfL's role as a transport operator and highway authority in the area. These comments also do not necessarily represent the views of the Greater London Authority (GLA).</i></p> <p>Thank you for giving Transport for London (TfL) the opportunity to comment on Richmond's Local Plan Direction of Travel document. Given the advanced stage of the draft London Plan in the adoption process – with the Intend to Publish version now available on the GLA website – we will have regard to it when assessing and responding to local planning policy consultations, including Richmond's Local Plan Direction of Travel document. We also note that the Mayor has received direction from the Secretary of State and is currently considering his response.</p> <p>[See Appendix for copy of TfL's response on Richmond's draft Transport SPD and a graph of Destinated-based cycle mode shares. Note the response to the Transport SPD was previously published on the Council's website https://cabnet.richmond.gov.uk/ieDecisionDetails.aspx?AllId=38737]</p>
16	Avison Young on behalf of National Grid	<p>National Grid has appointed Avison Young to review and respond to local planning authority Development Plan Document consultations on its behalf. We are instructed by our client to submit the following representation with regard to the current consultation on the above document.</p> <p>About National Grid</p> <p>National Grid Electricity Transmission plc (NGET) owns and maintains the electricity transmission system in England and Wales. The energy is then distributed to the electricity distribution network operators, so it can reach homes and businesses. National Grid Gas plc (NGG) owns and operates the high-pressure gas transmission system across the UK. In the UK, gas leaves the transmission system and enters the UK's four gas distribution networks where pressure is reduced for public use. National Grid Ventures (NGV) is separate from National Grid's core regulated businesses. NGV develop, operate and invest in energy projects, technologies, and partnerships to help accelerate the development of a clean energy future for consumers across the UK, Europe and the United States.</p> <p>Proposed development sites crossed or in close proximity to National Grid assets:</p> <p>Following a review of the above Development Plan Document, we have identified that one or more National Grid assets pass through your Local Authority area. Details of these National Grid assets are provided below.</p>

Respondent reference no.	Name / Organisation	Detailed comments
		<p>Electricity Transmission</p> <p>Asset Description</p> <p>275Kv Underground Cable route: WIMBLEDON - WILLESDEN</p> <p>275Kv Underground Cable route: EALING - LALEHAM 1</p> <p>A plan showing details of National Grid's assets is attached to this letter. Please note that this plan is illustrative only. <i>[See Appendix for plan]</i></p> <p>Please also see attached information outlining further guidance on development close to National Grid assets. <i>[See Appendix for further guidance]</i></p> <p>Further Advice</p> <p>National Grid is happy to provide advice and guidance to the Council concerning their networks. If we can be of any assistance to you in providing informal comments in confidence during your policy development, please do not hesitate to contact us.</p> <p>To help ensure the continued safe operation of existing sites and equipment and to facilitate future infrastructure investment, National Grid wishes to be involved in the preparation, alteration and review of plans and strategies which may affect their assets. Please remember to consult National Grid on any Development Plan Document (DPD) or site-specific proposals that could affect National Grid's assets.</p>
17	Hannah Bridges, Spelthorne Borough Council	<p><i>[Infrastructure]</i></p> <p>Given the scale of development planned in the area additional demand on local infrastructure and transport is expected, therefore Spelthorne would welcome further engagement regarding strategic transport and infrastructure issues, along with Surrey County Council who recently produced transport modelling for Spelthorne's Preferred Options Local Plan.</p>
6	Marine Management Organisation	<p>The Marine Management Organisation (MMO) is a non-departmental public body responsible for the management of England's marine area on behalf of the UK government. The MMO's delivery functions are; marine planning, marine licensing, wildlife licensing and enforcement, marine protected area management, marine emergencies, fisheries management and issuing grants.</p> <p>Marine Licensing</p> <p>Activities taking place below the mean high water mark may require a marine licence in accordance with the Marine and Coastal Access Act (MCAA) 2009. Such activities include the construction, alteration or improvement of any works, dredging, or a deposit or removal of a substance or object below the mean high water springs mark or in any tidal river to the extent of the tidal influence. Local authorities may wish to refer to our marine licensing guide for local planning authorities for more detailed information. You can also apply to the MMO for consent under the Electricity Act 1989 (as amended) for offshore generating stations between 1 and 100 megawatts in England and parts of Wales. The MMO is also the authority responsible for processing and determining harbour orders in England, and for some ports in Wales, and for granting consent under various local Acts and orders regarding harbours. A wildlife licence is also required for activities that would affect a protected marine species.</p> <p>Marine Planning</p> <p>As the marine planning authority for England the MMO is responsible for preparing marine plans for English inshore and offshore waters. At its landward extent, a marine plan will apply up to the mean high water springs mark, which includes the tidal extent of any rivers. As marine plan boundaries extend up to the level of the mean high water spring tides mark, there will be an overlap with terrestrial plans which generally extend to the mean low water springs mark. Marine plans will inform and guide decision makers on development in marine and coastal areas.</p> <p>Planning documents for areas with a coastal influence may wish to make reference to the MMO's licensing requirements and any relevant marine plans to ensure that necessary regulations are adhered to. For marine and coastal areas where a marine plan is not currently in place, we advise local authorities to refer to the Marine Policy Statement for guidance on any planning activity that includes a section of coastline or tidal river. All public authorities taking authorisation or enforcement decisions that affect or might affect the UK marine area must do so in accordance with the Marine and Coastal Access Act and the UK Marine Policy Statement unless relevant considerations indicate otherwise. Local authorities may also wish to refer to our online guidance and the Planning Advisory Service soundness self-assessment checklist. If you wish to contact your local marine planning officer you can find their details on our gov.uk page.</p> <p>See this map on our website to locate the 6 marine plan areas in England. For further information on how to apply the marine plans please visit our Explore Marine Plans service.</p> <p>The East Inshore and Offshore marine plans were adopted on the 2nd April 2014, becoming a statutory consideration for public authorities with decision making functions. The East Inshore and East Offshore Marine Plans cover the coast and seas from Flamborough Head to Felixstowe.</p>

This is the final stage of statutory public consultation before we submit the marine plan.</p> <p>The draft South West Inshore and Offshore marine plans were published on the 14th January 2020 becoming a material for consideration for public authorities with decision making functions. The South West Inshore and Offshore marine plans cover the coast and seas from the River Severn border with Wales to the River Dart in Devon. CONSULTATION OPEN UNTIL 6TH APRIL 2020. This is the final stage of statutory public consultation before we submit the marine plan.</p> <p><u>Minerals and waste plans and local aggregate assessments</u></p> <p>If you are consulting on a mineral/waste plan or local aggregate assessment, the MMO recommend reference to marine aggregates is included and reference to be made to the documents below:</p> <ul style="list-style-type: none"> • The Marine Policy Statement (MPS), section 3.5 which highlights the importance of marine aggregates and its supply to England's (and the UK) construction industry. • The National Planning Policy Framework (NPPF) which sets out policies for national (England) construction minerals supply. • The Managed Aggregate Supply System (MASS) which includes specific references to the role of marine aggregates in the wider portfolio of supply. • The National and regional guidelines for aggregates provision in England 2005-2020 predict likely aggregate demand over this period including marine supply. <p>The NPPF informed MASS guidance requires local mineral planning authorities to prepare Local Aggregate Assessments, these assessments must consider the opportunities and constraints of all mineral supplies into their planning regions – including marine. This means that even land-locked counties, may have to consider the role that marine sourced supplies (delivered by rail or river) play – particularly where land based resources are becoming increasingly constrained.</p>
23	Paul Velluet & Peter Willan on behalf of Old Deer Park Working Group	<p>The Group would once again urge the Council to prepare an updated <i>Proposals Map</i> (or <i>Policies Map</i>) to replace that adopted in July, 2015, showing amendments or additions to boundaries and site-specific Allocations adopted since then, including, we hope, adjustments to the boundaries of designated Metropolitan Open Land and Public Open Space in the Old Deer Park, potential adjustments to the boundary of the Historic Registered Park, the boundary of the area covered by the <i>Old Deer Park Supplementary Planning Document</i> and the boundary of the Old Deer Park Conservation Area, to remedy significant and long-established anomalies, as set out very clearly in the Group's submissions to the Council in response to consultation on the preparation of the <i>Richmond-upon-Thames Local Plan</i> of July, 2018 and the <i>Old Deer Park Supplementary Planning Document</i> of February, 2018, and in earlier submissions. Regrettably, the Group's formal submissions proposing and justifying these boundary adjustments were not properly or adequately considered by either the Council or the Inspector. Also attached is a copy of the letter of the 22nd January, 2018 addressed to the Council's Project Manager for the Village Planning Programme responding to the invitation to review and comment on the substantially deficient and defective <i>draft Pools-on-the-Park, Richmond Statement of Significance</i> – relating to Site-specific proposal SA 22 in the <i>Local Plan</i> - to which specific reference is made in the <i>Old Deer Park Supplementary Planning Document</i> and which remains unchanged on the Council's planning policy web-site, despite repeated requests to revise the document.</p> <p>Copies of the following items are appended to this statement:</p> <ul style="list-style-type: none"> • The London Borough of Richmond-upon-Thames Local Plan, A Statement by the Old Deer Park Working Group for presentation at the relevant hearing session of the Inspector's examination, based on the Group's earlier submissions to the Council, September, 2017; • <i>The Old Deer Park Draft Supplementary Planning Document, December, 2017, A response by the Old Deer Park Working Group, January, 2018;</i> and

Respondent reference no.	Name / Organisation	Detailed comments
		<ul style="list-style-type: none"> Letter to Ms Nicky Linihan (the Council's Project Manager for the Village Planning Programme) of the 22nd January, 2018 responding to the <i>Draft Pools-on-the Park, Richmond, Statement of Significance</i>. <p>[See Appendix for Group's earlier submissions]</p>
(23)	Peter Willan & Vivien Harris on behalf of Friends of Richmond Green	<p>Please note the Friends of Richmond Green have indicated that they wish to support the comments made by Prospect for Richmond, Respondent No. 23. FoRG are a long established amenity group covering around 350 households around and in the vicinity of Richmond Green and Little Green (the Green). We aim to preserve the special qualities, character and setting of the historic Richmond Green. The Green is a wonderful setting with many historic views and vistas and is a major attraction for people visiting the town, its shops and offices and is much appreciated by the many residents in the vicinity of the Green as well as residents in the town's wider reaches.</p> <p>The Richmond Town response includes the Green, which FoRG is particularly interested, but we also support the concept of Richmond comprising Central Richmond, the Green and the Riverside Conservation Areas as addressed in the Richmond Town response.</p>
32	Mark Jopling on behalf of UPPFT	<p>We encourage the Council to be bold with the Local Plan, and then defend it rigorously. One of the lessons from UPPF was that a tougher stance by the Council 5 years ago could have avoided a costly and long Planning saga. The Trust would like to thank the Council for their ongoing support of upholding the current Local Plan protection bestowed on Udney Park. The Trust are dismayed that the speculative punt by Quantum has absorbed so much public and volunteer resource to defend the Local Plan and so urge the Council to use this Local Plan revision to prevent such schemes ever getting funding.</p> <p>To resolve the future of UPPF as a long term sustainable self-funded community facility the Trust urge the Council to use the Compulsory Purchase Order and Community Asset Transfer process to ensure that the current owners cannot carry out their threats to close the playing fields to try and force a submission from the community and the LPA. Such a move would send a clear signal to speculators, invest where the Richmond Local Plan directs or lose.</p>

Table of organisations registering acknowledgement of engagement and making no comment

Respondent number	Respondent name and/or organisation	Response
8	Sharon Jenkins, Natural England	Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development. Natural England have no comments to make on this consultation.
11	Surrey County Council	Thank you for consulting Surrey County Council's the Minerals and Waste Planning Policy team and Spatial Planning team on the Local Plan Direction of Travel consultation and Call for sites. We do not have any specific comments to make on this consultation, but please keep us informed of any future consultations.

Appendix A: Specific suggested edits and comments from TfL on Richmond’s draft Transport Supplementary Planning document

Section	Page	Track change/comment
Introduction	4	<p>We greatly support Richmond’s recognition of the climate emergency and the importance of transport infrastructure and active travel facilities/networks to support travel around existing and new communities.</p> <p>We therefore request that the anticipated date for the publication of the draft London Plan in March 2020 is removed/updated as appropriate, as this is unlikely to be met.</p>
Introduction - Our Place in London –	6	<p>We believe that the borough’s main challenges include high levels of car ownership, congestion and the promotion of sustainable travel in less accessible parts of the borough. We also appreciate that the Council recognises that cross borough boundary issues, such as congestion and improving sustainable travel networks will need to be addressed by working with neighbouring boroughs and TfL.</p> <p>Richmond’s new draft Local Plan should focus on how sustainable travel can be prioritised above private car travel, especially in areas where new developments are planned. Focusing car-free and car-lite development in well-connected parts of the borough supported by existing/planned sustainable transport infrastructure will ensure the best use of land within the borough and help reduce reliance on private vehicles. Policies that support the delivery of sufficient levels of high quality cycle parking should also be adopted in order to enable more people to cycle.</p> <p>We also believe that it is vital that Richmond continue to protect Green Belt and MOL from development. These areas also will not have the appropriate services and transport infrastructure to support new developments in line with Good Growth.</p>
Responding to the climate emergency	14	<p>We strongly support Richmond’s declaration of a climate emergency in July 2019 and adoption of their Climate Emergency Strategy in 2020, which will help the Council overcome environmental challenges faced by the borough. We also welcome the Council’s commitment to become carbon neutral by 2030, which will help minimise the borough’s contribution to climate change. Influencing</p>

Section	Page	Track change/comment
		transport behaviour will be key to achieving this and the Council should develop strategies to enable residents to be less car dependent and travel more on foot, cycle and public transport.
Shaping and supporting our town centre and local centres	26	<p>We strongly support Richmond’s policy to focus development in line with the town centre first principle, which is in line with the policies set out in the Intend to Publish version of the London Plan. We also would encourage the Council to build residential and mixed use developments in well-connected town, local and community centres. The Council should ensure that travel to/from and within their town centres by foot, cycle and public transport is as safe, convenient and attractive as possible. We would also encourage reducing the provision of car parking in town centres and would recommend that the Council look at opportunities to convert on-street parking bays to provide additional cycle parking.</p> <p>The approach to redevelop existing out-of-centre developments/retail parks should make sure that these are accessible by sustainable modes of transport so that they are not car dependent. Car and cycle parking provision should also be in line with the policy standards in the Intend to Publish London Plan and make sure that they are designed and located in a way which prioritises active travel choices.</p> <p>The borough has been identified in the draft London Plan as an area where higher cycle provision is required, both to cater for future growth and to reflect that around 7.5 per cent of trips arriving at workplace, leisure and shopping destinations are made by cycle, more than twice the average for inner London (see Appendix B). To support town centre and out of centre retail developments we would welcome clearer support for ensuring cycle parking quality, such as in relation to location, spacing and access.</p>
Green Infrastructure and protecting open land	40	We would urge the Council to resist developing areas of the Green Belt and Metropolitan Open Land (MOL). In transport terms, these areas are generally more likely to have lower levels of connectivity by public transport i.e. PTAL 0-1 and lower levels of local amenities compared to developed areas that could potentially be intensified.
Improving design	45	We welcome the design-led approach to help provide high quality places and improved design and

Section	Page	Track change/comment
		support the reference made to the ten characteristics of well-designed places as set out in National Design Guidance. We would welcome a public realm policy in the Richmond's local plan that supports the Healthy Streets Approach and the delivery of high quality public realm that enables inclusive active, inclusive travel.
Promoting sustainable transport	48	<p>We welcome the Council's commitment to addressing the climate emergency and the importance of improving transport and achieving the Mayor's modal shift target in achieving this. We are extremely supportive of the Council prioritising sustainable travel and its recognition of the importance of enhancing the bus, walk and cycling networks in particular as part of this.</p> <p>While we also acknowledge that there will likely be some trips that will continue to be made by car, it is important to view new development as a particular opportunity to embed the best possible approach to maximising sustainable travel. This in turn reduces the extent to which mode shift among residents/users of existing development is needed to meet Richmond's target, which could involve fewer opportunities than having ambitious planning policies in place. Embedding car-free and car-lite lifestyles in development schemes from the outset, as the Council suggests, is an excellent way of achieving this.</p> <p>We welcome the reference made to Crossrail 2, given the transformational effect the scheme could have on the borough. We note the Council's concern regarding ensuring connecting journeys to Crossrail 2 stations are made by public transport, walking and cycling. We strongly support this aim and are open to further discussion on the matter to understand and look to address these concerns.</p>
Buses	49	We welcome the recognition of the importance of bus networks within the borough. We will continue to work with the Council to understand how the existing routes, frequencies and access to bus stops/stations can be improved. To support this, we would welcome clear policies for protecting land/space for bus infrastructure, the expansion of bus priority and developer contributions towards enhanced services.
Hierarchy of street users/active	50	We welcome the intention of the hierarchy of street users. However, we would urge the Council to

Section	Page	Track change/comment
travel		<p>consider some additional nuance around the role of cycling and buses. The two modes need to be considered together to maximise sustainable mode share overall and the benefits each mode offers. In some areas buses play a key role in providing transport connectivity and this needs to be considered alongside expanding access to cycling. In particular, buses play a key role in making London accessible, both in terms of cost of travel and for people who are less able to walk long distances or use stairs and/or escalators at stations.</p> <p>We welcome the Council’s recognition of both the current high levels of active travel in the borough and the potential to grow these further.</p>
Car parking, town centre parking provision, cycle parking, cycling infrastructure and	52	<p>We commend the Council for considering how to deliver less car-dependent development including through lower parking standards. We strongly encourage the Council to requiring car-free and car-lite development as far as possible, so as to best support the vision for sustainable transport it has set out. This will also help minimise new development’s contributions to the climate emergency, make it easier to tackle the housing crisis and reduce congestion on the road network and the borough grows. We welcome that the Council are considering adopting the draft London Plan residential standards across the whole borough, and encourage this option to be pursued. We would also welcome discussion on whether we can better support the Council to achieve lower parking provision in new development, including in less well-connected areas.</p> <p>If parking standards above those set out in the draft London Plan are adopted, particularly in well-connected areas and in borough centres, the Council will risk undermining their ambitions for ensuring ‘walking, cycling and public transport are the natural choice for trips to and from new developments’ and becoming carbon neutral by 2030. In light of the borough’s emphasis on the climate emergency, there is a considerable benefit to reducing emissions more quickly, such as through ambitious parking and mode shift policies, than relying on longer term emission reductions alone (e.g. full electrification of the vehicle fleet). It is therefore essential that car parking in new developments is kept to a minimum and is at least in line with the standards set out the draft London Plan.</p>

Section	Page	Track change/comment
		<p>To support this approach, the Council could look into the expansion of Controlled Parking Zones (CPZs) as necessary. CPZ implementation can be funded by developers when secured as mitigation for their development and we would be happy to offer support such as by sharing best practice from other boroughs and elsewhere to help their implementation. While this may bring about change for some existing residents, this is a better solution than accepting lower housing delivery or higher congestion resulting from more off-street parking. The issue of parking permits can be capped or restricted to residents of new development – as practiced by other local authorities – to prevent additional parking stress on surrounding streets.</p> <p>We welcome that the Council is looking at the potential to reduce the number of parking spaces available in the borough’s centres, and encourage it to pursue this option. By doing so, the Council will better discourage car use where there are good alternatives and encourage walking, cycling and bus access to town centres, where there is considerable potential for mode shift.</p> <p>We strongly support Richmond’s adoption of cycle parking standards and welcome the Council’s plans to investigate adopting cycle parking standards higher than those in the London Plan to reflect local circumstances. We would also welcome specific policies in the borough’s new local Plan to provide policies to support the delivery of cycle parking quality, such as location, spacing and access, as detailed in Richmond’s draft Transport SPD.</p> <p>We strongly support the Council’s approach to securing developer contributions to the cycle networks within Richmond as set out in the recent draft Transport SPD. The Council’s Active Travel Strategy highlights areas that are less permeable by cycle, and this is something that developer contributions could also look to improve alongside strategic and local routes.</p>
Securing social and community infrastructure	53	We welcome references made to delivering the Healthy Streets Approach to support community cohesion and a growing population. We, especially welcome these references in the context of improving the public realm.

Respondent 16. Avison Young on behalf of National Grid

National Grid
24 March 2020
Page 3

Guidance on development near National Grid assets

National Grid is able to provide advice and guidance to the Council concerning their networks and encourages high quality and well-planned development in the vicinity of its assets.

Electricity assets

Developers of sites crossed or in close proximity to National Grid assets should be aware that it is National Grid policy to retain existing overhead lines in-situ, though it recognises that there may be exceptional circumstances that would justify the request where, for example, the proposal is of regional or national importance.

National Grid's 'Guidelines for Development near pylons and high voltage overhead power lines' promote the successful development of sites crossed by existing overhead lines and the creation of well-designed places. The guidelines demonstrate that a creative design approach can minimise the impact of overhead lines whilst promoting a quality environment. The guidelines can be downloaded here: <https://www.nationalgridet.com/document/130626/download>

The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.

National Grid's statutory safety clearances are detailed in their 'Guidelines when working near National Grid Electricity Transmission assets', which can be downloaded here: www.nationalgridet.com/network-and-assets/working-near-our-assets

Gas assets

High-Pressure Gas Pipelines form an essential part of the national gas transmission system and National Grid's approach is always to seek to leave their existing transmission pipelines in situ. Contact should be made with the Health and Safety Executive (HSE) in respect of sites affected by High-Pressure Gas Pipelines.

National Grid have land rights for each asset which prevents the erection of permanent/ temporary buildings, or structures, changes to existing ground levels, storage of materials etc. Additionally, written permission will be required before any works commence within the National Grid's 12.2m building proximity distance, and a deed of consent is required for any crossing of the easement.

National Grid's 'Guidelines when working near National Grid Gas assets' can be downloaded here: www.nationalgridgas.com/land-and-assets/working-near-our-assets

How to contact National Grid

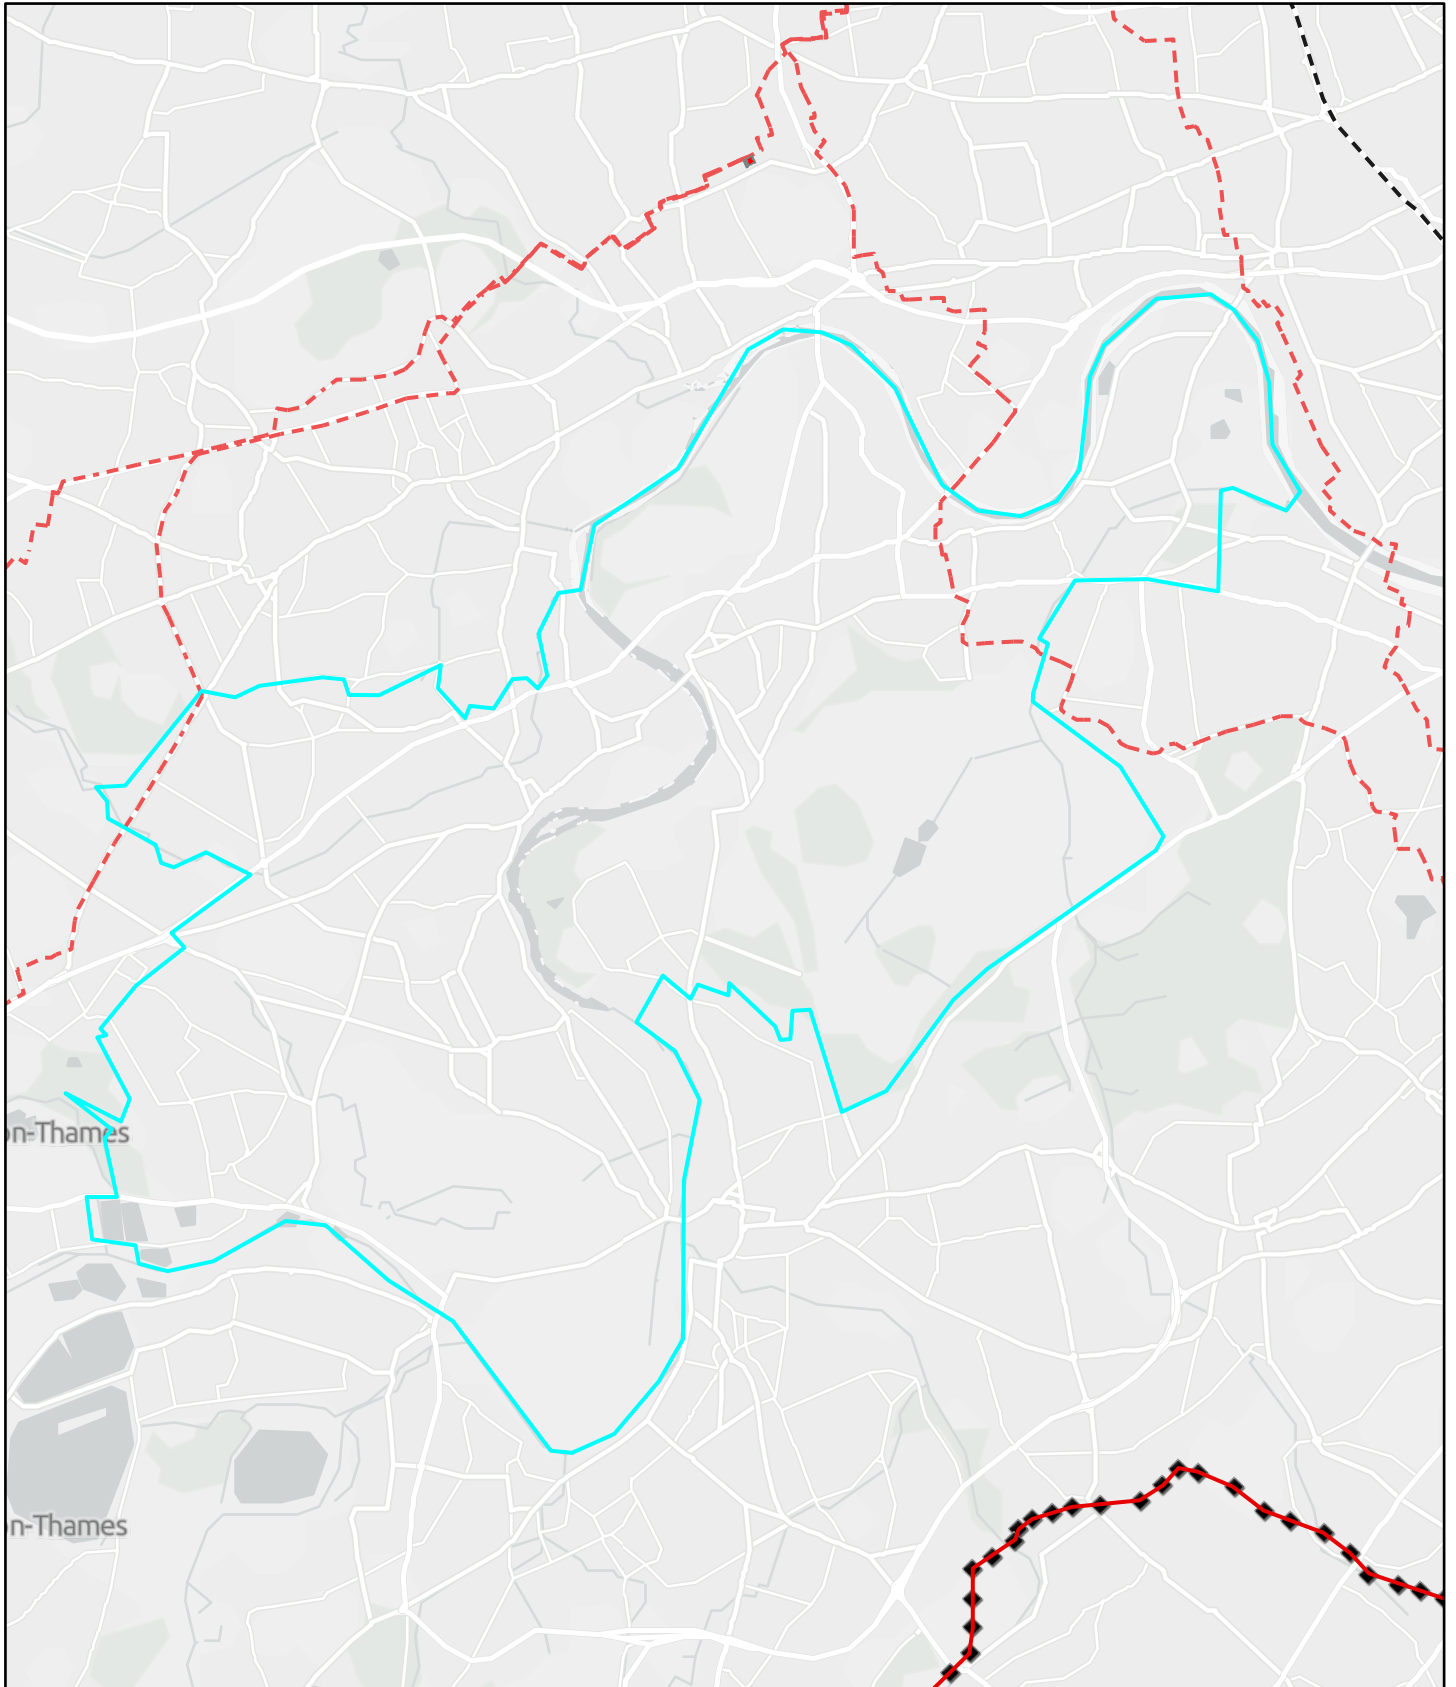

If you require any further information in relation to the above and/or if you would like to check if National Grid's transmission networks may be affected by a proposed development, please contact:

LONDON BOROUGH OF RICHMOND-UPON-THAMES LOCAL PLAN

A STATEMENT BY THE OLD DEER PARK WORKING GROUP FOR PRESENTATION AT THE RELEVANT HEARING SESSION OF THE INSPECTOR'S EXAMINATION, BASED ON THE GROUP'S EARLIER SUBMISSIONS TO THE COUNCIL, SEPTEMBER, 2017

1. INTRODUCTION

- 1.1 The Old Deer Park Working Group comprises representatives of The Richmond Society, The Kew Society, The Friends of Richmond Green, The Friends of Old Deer Park and The St Margaret's Estate Residents Association. Details of each of the groups are attached in Appendix A.
- 1.2 This statement conveys the concerns of the Working Group regarding the soundness of a number of specific aspects of the Council's final version *Richmond-upon-Thames Local Plan* relating to the Old Deer Park, Richmond. The statement focuses on those aspects of the Council's *Plan* which the Group considers are insufficiently robust in providing the Council, as local planning authority and the local community with effective control over development affecting the particular architectural, historic and landscape significance of the Old Deer Park as a designated heritage asset in the terms commended in the relevant parts of the *National Planning Policy Framework*.
- 1.3 In Section 3 of this Statement, the Working Group has set out its concerns about the soundness of specific aspects of the *Plan* relating to the particular definition of boundaries in the *Proposals Map* insofar as they relate to the Old Deer Park; to the wording of some of the policies of the *Plan* insofar as they relate to the Park; and to the wording of two of the site- specific proposals which relate directly to the Park. In each case, the Group has explained the reasons for its concerns, and put forward its suggestions as to the potential means of addressing the weaknesses of the *Plan* as presently submitted and securing modest amendments which will contribute to providing a sounder statement of Policy insofar as is necessary to ensure that the significance of the Old Deer Park as a designated heritage asset will be assured.

2. THE BACKGROUND TO THE WORKING GROUP'S STATEMENT

- 2.1 In July, 2012, the Group prepared and published a report - *The Old Deer Park, Richmond – Re-connecting the Town to its local park – Realising an under-recognised parkland asset – A framework for future conservation and enhancement*. A copy of the report is attached as Appendix B. The report was intended to provide a positive contribution to discussion and debate in anticipation of the falling-in (in April,

2016) and potential renewal of all but two of the existing leases granted by the Crown Estate for the land comprising the Old Deer Park, Richmond.

- 2.2 Over many years, many living and working in Richmond, Kew and St Margaret's had expressed substantial interest in the effective conservation and enhancement of the Park and have attached considerable value to its amenity, and its particular character and historic, landscape and ecological interest and significance. Accordingly, the Working Group believed that it was timely to set out the corporate views of its constituent bodies on the opportunities that would arise and its keen hope that the Crown Estate would progress the future management of its Old Deer Park estate with a view to assuring its effective conservation and enhancement in addition to its continued use for outdoor sports and recreational activity by the local community.
- 2.3 Importantly, the Working Group was concerned that any development that might be advanced within the area should not only be sustainable in the fullest sense but also consistent with the designation of the Park as a conservation area and its inclusion on English Heritage's *Register of Parks and Gardens of Special Historic Interest* and in the buffer-zone of the *Royal Botanic Gardens Kew World Heritage Site*. In addition, the Group believed that high priority should be given to improving and enhancing physical links between the Town and the Park and suggested a number of measures that might be delivered relatively easily and inexpensively.
- 2.4 Importantly, too, the Working Group also raised concerns regarding significant anomalies regarding the definitions of a number of boundaries relating to the Old Deer Park shown in the Council's *Local Development Framework Proposals Map, Adopted November, 2011*.
- 2.5 Such concerns were set out in detail and justified in the Working Group's report *The Old Deer Park, Richmond - Re-connecting the Town to its local park - Realising an under-recognised parkland asset - A framework for future conservation and enhancement – A submission urging review of boundary definitions* in February, 2013.
- 2.6 In November, 2013, the Working Group set out its formal response to consultation by the Council on its pre-publication version of the *Richmond-upon-Thames Local Plan, Site allocations plan*, published in October, 2013. The substantive part of the concerns of the Working Group about each of the three sites related directly but not exclusively to the significant anomalies in the definitions of boundaries relating to the Old Deer Park shown in the Council's *Local Development Framework Proposals Map, Adopted November, 2011*, as had already been highlighted in the Group's submission of February, 2013.
- 2.7 In July, 2014, the Working Group set out its formal response to consultation by the Council on the pre-publication version of *The Richmond-upon-Thames Local Plan, Site Allocations Plan – New Additional Sites, June, 2013*. Once again, the Working Group

stressed its concerns about the significant anomalies in the definitions of boundaries relating to the Old Deer Park shown in the Council's *Local Development Framework Proposals Map, Adopted November, 2011*.

- 2.8 In August, 2016, the Working Group set out its formal response to consultation by the Council on the first draft, pre-publication version of *The Richmond-upon-Thames Local Plan*, published in July, 2016. In this response, the Working Group stressed its continuing concerns about the significant anomalies in the definitions of boundaries relating to the Old Deer Park shown in the Council's *Local Plan Proposals Map – unchanged* from those shown in the *Local Development Framework Proposals Map, Adopted November, 2011*.
- 2.9 Finally, in February, 2017, the Working Group set out its formal response to consultation by the Council on its final, publication version of the *Richmond-upon-Thames Local Plan*, published in January, 2017. Once again, the Working Group stressed its continuing concerns about the significant anomalies in the definitions of boundaries relating to the Old Deer Park shown in the Council's *Local Plan Proposals Map, Adopted July, 2015 – still unchanged* from those shown in the *Local Development Framework Proposals Map, Adopted November, 2011*.
- 2.10 In this submission, the Working Group observed that a note had been added to the present document advising that 'The existing Proposals Map (2015) and its designations will be retained unless indicated otherwise within this document. In addition, the site-specific allocations as set out within this Plan will also be incorporated into the Council's final version of the Proposals Map'. Regrettably no such advice was provided in relation to the earlier *First Draft of the Local Plan – thus the earlier concern expressed by the Group regarding the absence of a draft, amended Proposals Map*.
- 2.11 The Working Group went on to observe that given the fundamental significance of the *Proposals Map* in securing a sound understanding and appreciation of the policies and site-specific proposals set out in the Final Version of the *Local Plan* and their potential application, the Group remained of the view that the draft, amended *Proposals Map* should be subject to the same consultation and scrutiny as the *Local Plan* and that such a process should be carried out as an integral part of the consultation and scrutiny of the *Local Plan*.
- 2.12 Subsequently, the Group has noted with disappointment that the Council's 32-page document - *Proposals map changes, Local Plan, Publication version for consultation, 4th January – 15th February, 2017* – provided for no amendment to any of the boundaries relating to the Old Deer Park, noting that it specifically excluded the site-specific allocations set out in the main publication version Local Plan at Section 12, and stated unequivocally at paragraph 1.4: 'The Proposals map (2015) will be retained unless indicated otherwise. As such all other designations remain unchanged'.

- 2.13 In addition and importantly, over the last two years the Working Group has been actively engaged with Council officers in discussions and written exchanges in connection with the emerging *Supplementary Planning Document* for the Old Deer Park (otherwise referred to at earlier stages by the Council as a 'Village Plan' and as a 'Planning Brief'). Such engagement has included the submission in November, 2016 of a formal response to the Council's consultation on the development of a *Supplementary Planning Document for the Old Deer Park*, published in October, 2016. A copy of the Working Group's submission is attached as Appendix C.
- 2.14 In this submission, the Working Group drew attention to a number of specific errors in the definition of some of the boundaries shown in the draft document and once again expressed concern regarding the significant anomalies in the definitions of the boundaries extrapolated from the Council's *Local Plan Proposals Map, Adopted July, 2015*; stressing that such anomalies in the relevant boundary definitions should not be perpetuated in the *Old Deer Park SPD* before the Council's *Local Plan Proposals Map* had been properly addressed and resolved in the light of the Working Group's consistent representations and formal examination of the overall *Richmond-upon-Thames Local Plan*. In recent months, the Working Group has been reassured by the Council's planning consultants that the specific errors will be corrected and a number of other matters resolved. However, the Group is concerned that one of the two maps proposed for inclusion in the final version of the *SPD* – that showing land-use designations – may perpetuate the anomalies in the boundaries to which the Working Group has repeatedly referred to.

3. THE KEY ISSUES

THE PROPOSALS MAP (Council references 29 and 113)

- 3.1 The Working Group observes that a note was added to the published version of the Local Plan document advising that 'The existing Proposals Map (2015) and its designations will be retained unless indicated otherwise within this document. In addition, the site-specific allocations as set out within this Plan will also be incorporated into the Council's final version of the Proposals Map'. Regrettably no such advice was provided in relation to the earlier *First Draft of the Local Plan* – thus leading to the earlier concern expressed by the Group regarding the absence of a draft, amended *Proposals Map*.
- 3.2 Given the fundamental significance of a *Proposals Map* in securing a sound understanding and appreciation of the policies and site-specific proposals set out in the final version of the *Local Plan* and their potential application, the Group urges the Inspector to address the boundary-related issues affecting the Old Deer Park to which the Working Group has repeatedly referred in its submissions to the Council as an

integral part of his formal examination the Council's *Local Plan* and to recommend the appropriate amendments to the relevant boundaries shown in the *Proposals Map*.

THE BOUNDARIES OF METROPOLITAN OPEN LAND, PUBLIC OPEN SPACE AND THE RICHMOND TOWN CENTRE (Council reference 481)

- 3.3 The Working Group notes with considerable regret the continuing resistance of the Council to address and resolve the significant and longstanding anomalies in the boundaries of Metropolitan Open Land, Public Open Space and the Richmond Town Centre insofar as they relate to the Old Deer Park as shown on the current and earlier *Proposals Maps*. The Group does not accept the reasons stated by the Council for repeatedly rejecting the need to address and resolve these significant anomalies and believes that the present definition of the boundaries remains entirely unsound, as stated and justified consistently by the Working Group since 2012.

METROPOLITAN OPEN LAND

- 3.4 The greater part of the Park, including the Richmond Athletic Association Ground, the Old Deer Park Car-park and the former and now derelict Public Conveniences and British Legion buildings immediately adjacent, has long been rightly designated as Metropolitan Open Land. However, entirely anomalously, the MOL designation excludes the listed, Council-owned *Pools-on-the-Park* complex, its landscaped grounds and the adjacent car-park, together with the carriageway and footways of the Twickenham Road, despite the inclusion of all these areas within the grade I *Royal Botanic Gardens Kew Registered Park* and the buffer-zone of the *Royal Botanic Gardens Kew World Heritage Site*, and despite repeated representations by groups in the local community over the last thirty or more years. Anomalously too, the present *MOL* designation also excludes the land to the immediate south of the Old Deer Park Car-park on which the single-storey, utility buildings occupied by voluntary groups presently stand.
- 3.5 The Working Group urges the Inspector to recommend that the boundaries of the Metropolitan Open Land within the Park should be amended to include these areas given that they are wholly consistent in their function and open character to the adjacent parkland areas which are properly designated as MOL, and that they are consistent with the definitions of Metropolitan Open Land given in the *London Plan, 2016* and in the *Richmond-upon-Thames Local Plan* itself. Importantly, none of the roads in the Borough's other major historic parks – Richmond and Bushy Parks are similarly excluded from designation as MOL.

PUBLIC OPEN SPACE

- 3.6 The greater part of that park leased by the Council from the Crown Estate has long been rightly designated as Public Open Space. However, entirely anomalously, the POS designation excludes the extensive landscaped grounds which form the immediate

setting of listed, Council-owned *Pools-on-the-Park* complex and the adjacent car-park, which enjoys unrestricted public access, despite their inclusion within the grade I *Royal Botanic Gardens Kew Registered Park* and the buffer-zone of the *Royal Botanic Gardens Kew World Heritage Site*, and despite repeated representations by groups in the local community over the last thirty or more years.

- 3.7 The Council-owned Old Deer Car-park is located in that part of the Old Deer Park closest to The Green and at the principal entry-points to the Park for pedestrians from the northern corner of The Green and the western end of Park Lane. It presents an open and partly landscaped character and appearance, enjoys unrestricted public access and is in public ownership (through the Council as a lessee of The Crown Estate). It is located entirely within the formally designated *Old Deer Park Conservation Area* and the grade I *Royal Botanic Gardens Kew Registered Park*. Despite these major factors, wholly anomalously, the entire car-park site is presently excluded from designation as Public Open Space. Importantly, none of the car-parks in the Borough's other major historic parks – Richmond and Bushy Parks are similarly excluded from designation as Public Open Space.
- 3.8 The Working Group urges the Inspector to recommend that the boundary of Public Open Space within the Park should be amended to include the extensive landscaped grounds which form the immediate setting of the listed, Council-owned *Pools-on-the-Park* complex and the adjacent car-park and the Old Deer Park Car-park given their open and landscaped character, their accessibility to the public, and their consistency with the definitions of *Public Open Space* given in the in the *Richmond-upon-Thames Local Plan* itself.

RICHMOND TOWN CENTRE

- 3.9 The Working Group notes that wholly anomalously, the entire area of the Old Deer Park Car-park, the land to the immediate south of the Old Deer Park Car-park extending down towards the railway (on which the single-storey buildings occupied by voluntary groups stand); and the Royal Mail Depot and former TA Centre are identified as forming part of the designated *Richmond Town Centre* despite their falling within the surviving historic boundary of the Old Deer Park, despite their inclusion within the grade I *Royal Botanic Gardens Kew Registered Park*, despite their location on the north side of the deep railway-cutting that separates the Park from The Green and the historic heart of the Town, despite the designation of the Car-park as Metropolitan Open Land, and despite repeated representations in past years by groups in the local community questioning the designation of this part of the Park within an *Area of mixed use*. The present, anomalous designation clearly prejudices its protection from inappropriate urban development, as reflected in proposals submitted in recent years for the development of a below-ground supermarket located below a 'green blanket'.

- 3.10 The Working Group urges the Inspector to recommend that the Old Deer Park Car-park, the land to the immediate south of the Old Deer Park Car-park extending down towards the railway (on which the single-storey buildings occupied by voluntary groups stand); and the Royal Depot and former TA Centre, should be removed from the boundary of the Richmond Town Centre.

THE BOUNDARIES OF METROPOLITAN OPEN LAND, PUBLIC OPEN SPACE AND THE RICHMOND TOWN CENTRE - SUMMARY

- 3.11 In summary, the Group urges the Inspector to recommend that the relevant boundaries should be amended as follows:

- To include the listed *Pools-on-the-Park* swimming pools complex and its landscaped grounds and adjacent car-park; the land to the immediate south of the Old Deer Park car-park extending down towards the railway (on which the single-storey utility buildings occupied by voluntary groups presently stand); and the carriageway and footways of the Twickenham Road, as Metropolitan Open Land.
- To include the listed *Pools on the Park* swimming pools complex and its landscaped grounds and adjacent car-park; the entirety of the Old Deer Park Car-park; the land to the immediate south of the Old Deer Park Car-park extending down towards the railway (on which the single-storey buildings occupied by voluntary groups stand); as Public Open Space.
- To remove the Old Deer Park Car-park; the land to the immediate south of the Old Deer Park Car-park extending down towards the railway (on which the single-storey buildings occupied by voluntary groups stand); and the Royal Mail Depot and former TA Centre from designation as part of the Town Centre.

The existing boundaries of all these areas are shown on the Council's *Local Plan Proposals Map, Adopted July, 2015*, and in outline of the Working Group's *The Old Deer Park, Richmond – Re-connecting the Town to its local park – Realising an under-recognised parkland asset – A framework for future conservation and enhancement*. A copy of the report is attached as Appendix B.

THE ABSENCE OF REFERENCES TO *THE OLD DEER PARK, RICHMOND: THE CROWN ESTATE LANDSCAPE STRATEGY* (Council references 113, 118, 448 and 451)

- 3.12 The Group views with considerable regret the continuing resistance of the Council to include references to *The Old Deer Park, Richmond: The Crown Estate Landscape Strategy* under Policy LP 5 – Views and vistas, Policy LP 6 – Royal Botanic Gardens, Kew World Heritage Site, Site specific proposal SA 22 – Pools on the Park and surroundings, Old Deer Park, Richmond, and Site specific proposal SA 23 – Richmond Athletic Association Ground. Old Deer Park, Richmond.

- 3.13 The Group does not accept the reasons stated by the Council for the continuing omission of references to this most important and still highly relevant conservation and planning document – not least, given the references to the similar *Royal Botanic Gardens Kew World Heritage Site Management Plan* and the *Royal Botanic Gardens Kew Landscape Management Plan*. Whilst the Group notes that the *Crown Estate Landscape Strategy* contains limited references to planning policies that have now been superseded in the very brief Section 10, the substantial part of the document remains highly relevant, it sees no reason why references cannot be made to the document, with a brief note regarding the policies cited in Section 10. The Group urges the Inspector to address this significant omission and recommend the inclusion of references to *The Old Deer Park, Richmond: The Crown Estate Landscape Strategy*.

THE WORDING OF POLICIES LP 6 AND LP 14 (Council references 118 and 168)

- 3.14 The Working Group notes with considerable regret the continuing resistance of the Council to amend the wording of new Policy LP 6 – Royal Botanic Gardens Kew World Heritage Site to recover reference to ‘working with others’ and to include reference to *The Old Deer Park, Richmond: The Crown Estate Landscape Strategy*. The Group urges the Inspector to address these omissions and recommend their resolution, given the clear need for effective participation by the Crown Estate, leaseholders, national and other agencies and local community groups in the care, conservation and management of the World Heritage Site and its buffer-zone in order to secure the policy objective.
- 3.15 The Group notes with considerable regret the continuing resistance of the Council to amend – in the interests of clarity and certainty - the wording of new Policy LP 14 – Other Open Land of Townscape Importance to amend the heading of the policy and the relevant parts of the policy to refer to ‘Other open land of townscape and landscape importance’. Such a modest adjustment would extend appropriate protection to open land within the Park (and in other parts of the Borough) which falls outside Metropolitan Open Land designation but nevertheless possesses particular landscape interest and significance (as distinct from ‘townscape interest’. The Group urges the Inspector to address this issue and recommend that the heading and wording of the policy should be amended accordingly.

THE WORDING OF SITE-SPECIFIC PROPOSALS SA 22 AND SA 23 (Council references 448 AND 451)

- 3.16 Whilst noting that detailed guidance on the potential development of the respective sites will be provided in the proposed *Old Deer Park Supplementary Planning Document*, the Working Group notes with considerable regret the continuing resistance of the Council to amend the wording under both Site-specific Proposals SA 22 – Pools on the Park and surroundings, Old Deer Park, Richmond and SA 23 –

Richmond Athletic Association Ground, Old Deer Park, Richmond - as urged by the Group in its formal submission of August, 2016.

SITE SPECIFIC PROPOSAL SA 22

- 3.17 In relation to Site-specific Proposal SA 22 relating to the Pools-on-the Park complex, the Group remains concerned by the absence of wording to the effect that any proposed improvements or upgrading of the existing facilities and any additional leisure facilities, community and other complementary uses should ensure the preservation of the special interest of the existing listed complex and its setting, and sustain their significance; preserve or enhance the character or appearance of the conservation area and the World Heritage Site buffer-zone, and sustain their significance; and respect the parkland character of the adjacent Metropolitan Open Land, avoiding encroachment into the area beyond the boundary of the site and the existing public sports changing-rooms and club-room building and the largely redundant and derelict Council maintenance-depot for the Park. The Group also remains concerned by the absence of wording to the effect that any proposed development should have full regard to the relevant policies set out in the Crown Estate's *The Old Deer Park Richmond – Landscaping Strategy*.
- 3.18 In the interests of clarity and certainty, the Group urges the Inspector to recommend appropriate amendment of the wording of the proposal.

SITE SPECIFIC PROPOSAL SA 23

- 3.19 In relation to Site-specific Proposal SA 23 relating to the Richmond Athletic Association ground, the Group remains concerned by the absence of wording to the effect that any proposed improvements or upgrading of the existing facilities and any additional leisure facilities and other complementary uses should ensure the preservation of the special interest of the existing listed pavilion/grandstand and its setting, and sustain their significance; preserve or enhance the character or appearance of the conservation area and the World Heritage Site buffer-zone, and sustain their significance; and respect the parkland character of the Metropolitan Open Land, avoiding encroachment into the area beyond the boundary of the site.
- 3.20 In the light of significant unauthorised development, both today and in the past, the Working Group also remains concerned by the absence of wording to the effect that only car-parking directly relating to the primary use of the site for recreation use shall be permitted and should be extensively landscaped to reflect the significant location of the site within the Park, and that the potentially adverse effects of any floodlighting of pitches should be mitigated in order to protect the significance of the site as an integral part of the Old deer Park and the amenity of nearby local residents. The Group is further concerned by the absence of wording to the effect that any proposed development should have full regard to the relevant policies set out in the

Crown Estate's *The Old Deer Park Richmond – Landscaping Strategy*. In the interests of clarity and certainty, the Group urges the Inspector to recommend appropriate amendment of the wording of the proposal.

4. ADDITIONAL NOTE

- 4.1 The Working Group remains entirely willing to provide copies to the Inspector of any of its submissions to the Council and to clarify any of the issues it has raised in this submission. In addition, the Group would wish to encourage the Inspector to undertake a site inspection of key parts of the Old Deer Park in order to appreciate its considerable architectural, historic and landscape interest and significance, and to recognise the need to ensure that sound policies are in place to ensure that such interest and significance will be effectively sustained in accordance with the relevant policies of the *National Planning Policy Framework*.

Paul Velluet

4th September, 2017.

APPENDIX A - THE CONSTITUENT MEMBERS OF THE WORKING GROUP

THE RICHMOND SOCIETY

The Richmond Society was founded in 1957 and has a long established reputation for positive engagement in local conservation, development and planning issues. The Society has charitable status and has approaching one thousand paid members, generally without restriction. The Society encourages an active interest in Richmond and its community. It is run by a committee of volunteers who communicate with members through regular newsletters and meetings. Its interests include the natural and built environment, infrastructure which includes roads, transport and aircraft, and uses of Richmond town and surrounds in terms of licensing, policing, cleansing and events. The Society campaigns to preserve and enhance Richmond's historic character and the quality of life for residents and visitors. It arranges events for social interaction and enjoyment of its members and the public. It works with other amenity groups and the Council and other public bodies. It covers no defined geographical area but focuses on Richmond Town and its surrounds, including the associated stretch of the River Thames. It has sound finances and raises funds from subscriptions, legacies and campaigns. The money raised is used to run the charity and to invest in projects that benefit the community.

THE KEW SOCIETY

The Kew Society, founded more than one hundred years ago, is an influential organisation dedicated to enhancing the beauty of Kew and preserving its heritage. It became a Society in the 1970s and a Registered Charity in 1987 and remains as one of the larger and more active community groups in Greater London, with a subscribed membership of around six hundred. Its main aims are to review all planning applications in Kew with special regard to the architectural integrity and heritage of the neighbourhood and to play an active role in the improvement of local amenities. To achieve its aims, The Kew Society works closely with local authority councillors and the Member of Parliament; monitors all the planning applications and comments as needed; makes representations to public and private organisations; and provides a forum for local groups to strengthen Kew's voice in the area and in London. The Society is run by unpaid volunteers. The Executive Committee meets eleven times a year while sub-committees look after particular areas of interest. The society organises community events including parties, picnics, lectures and outings and produces the *On Kew* newsletter with information about general local issues, events, planning matters and forthcoming activities.

THE FRIENDS OF RICHMOND GREEN

The Friends of Richmond Green is an amenity action group. It operates for the benefit of residents located in the immediate vicinity of The Green. In geographical terms, the FoRG 'constituency' encompasses the area bounded by the triangle of the railway line, the river Thames and George Street. Its key aims and objectives are: To promote public interest and civic pride in Richmond Green and vicinity; To improve the quality of life and long-term attractiveness for residents; To improve the character and quality of the built and natural

environments; and To encourage responsible use of The Green and surrounding area. FoRG was started over forty years ago and has worked with the Council and other local groups on a number of projects – major improvements to the pedestrian Gateway to Richmond between Old Deer Park and Richmond Green; the up-grading of the network of paths on the Green. The RHC, convened by Friends of Richmond Green and the Richmond and Kew Societies, amalgamates and co-ordinates the efforts of the three bodies to more effectively represent our mutual interests as far as Heathrow expansion and related proposals are concerned. FoRG successfully lobbied the Council to revise the daily timetable for litter collection and in the last couple of years we have seen major improvements in this area. Membership is open to any person who resides in the immediate vicinity of the Green. We do not currently levy any form of charge on our members. Management is vested in an Executive Committee which meets around 8 times a year. The committee and officers are elected each year at an AGM. A newsletter is produced annually.

THE FRIENDS OF OLD DEER PARK

Established in 1987, The Friends of Old Deer Park is a group within the local community constituted with the overall aims of fostering, promoting and sustaining recognition and appreciation of the unique parkland character, amenity value, and particular historic, architectural, archaeological and ecological interest of the Old Deer Park, and securing its preservation and enhancement for the benefit of all. The Friends played an important role in supporting the establishment of the working group for *The Thames Landscape Strategy* in 1991, and successfully worked for and secured the designation of the Old Deer Park by the London Borough of Richmond upon Thames Council as a conservation area in June, 1990, the inclusion of the Old Deer Park on English Heritage's *Register of Parks and Gardens of Special Historic Interest* (as an integral part of the already registered grade I Royal Botanic Gardens, Kew historic landscape) in June, 1998, and its inclusion within the buffer-zone of *The Royal Botanic Gardens, Kew World Heritage Site* in 2003, and the listing of the 1960s *Richmond Swimming Pools* complex in January, 1996, and the late-Victorian sports pavilion/grandstand in the grounds leased by *Richmond Athletic Association* in November, 1997.

THE ST MARGARET'S ESTATE RESIDENTS ASSOCIATION

The St Margaret's Estate Residents Association was established some forty years ago to protect and conserve the area that originally covered the St Margaret's Estate of 1854. The Association includes approximately 330 houses, mainly within the area bounded by the A316, St Margaret's Road, Kilmorey Road and Ranelagh Drive which looks over the river onto the Old Deer Park. The main remit of the Association is to monitor all planning applications within the boundaries of the Association and it also monitors tree lopping and felling, traffic, aircraft noise and any other matter that affects the environment.

OLD DEER PARK DRAFT SUPPLEMENTARY PLANNING DOCUMENT, DECEMBER, 2017

A RESPONSE BY THE OLD DEER PARK WORKING GROUP TO CONSULTATION

JANUARY, 2018

I. INTRODUCTION

- I.1 The Old Deer Park Working Group (the Group) comprises representatives of The Richmond Society, The Kew Society, The Friends of Richmond Green, The Friends of Old Deer Park and The St Margaret's Estate Residents Association. This submission represents the joint response from the five groups.
- I.2 The Group welcomes the publication and consultation on a significantly amended and extended draft Supplementary Planning Document for the Old Deer Park further to the publication and consultation on an earlier draft in October, 2016, on which the Group commented in its submission of the 4th November, 2016. The Group welcomes the satisfactory resolution of the significant anomalies and omissions contained in the earlier draft document identified in the Group's response of November, 2016. The Group commends the authors on the drafting of the revised draft document and for responding positively to the issues raised by the Group at the earlier stage.
- I.3 The Group was formed in 2012 in recognition of the importance of the Old Deer Park and has since been working on immediate issues and on encouraging the preparation of a coherent strategy for the effective conservation, development and management of the Park. The Group started by publishing the report: *The Old Deer Park, Richmond - Re-connecting the Town to its local park - Realising an under-recognised parkland asset – A framework for conservation and enhancement.*
- I.4 The Working Group supports the potential adoption of the draft document subject to the various issues raised in sections 2 to 5 below, and looks forward to adjustments being effected to the present draft that will enable it to convey full support. In addition to setting out our detailed response to the draft document, we have included answers to the eight specific tick-box questions posed in the Council's questionnaire. These should be read in conjunction with our detailed response to the document.
- I.5 In order to assist in easy and ready use and understanding of the document by stakeholders, the public and others and its effective application of the guidance it contains, the Working Group suggests that the document should be printed at A.4 size, with the text in portrait format and the maps in landscape format; the structure of sections, sub-sections and subsidiary sections made clearer (with the point-sizes of their headings adjusted accordingly); and the paragraphs numbered.

- 1.6 The Group would be pleased to discuss its submission with the Council and to provide further information, if requested. Contact: Peter Willan, Chair - The Old Deer Park Working Group at willan829@btinternet.com.

2. THE TERMS USED IN THE DOCUMENT

- 2.1 The Group suggests that the publicly accessible park leased by the Council from the Crown Estate to the north-west and south-east of the Twickenham Road should be referred to throughout the document as the Public Park rather than the Recreation Ground – a term normally associated with modestly scaled, local authority owned public open-spaces of no or only minimal historic and landscape significance used primarily for outdoor sport and walking dogs.
- 2.2 We note the proposed use of the recently adopted term ‘The Old Deer Park Sports Ground’ for that part of Old Deer Park adjacent to the Kew Road immediately to the south of the Royal Botanic Gardens presently used by Richmond Cricket Club, London Welsh Rugby Football Club, The Mid-Surrey Bowling Club, Richmond Tennis Club and The Royal Richmond Archery Club.
- 2.3 We would suggest that in order to avoid confusion, the term ‘The King’s Observatory’ should be used consistently throughout the document. The term ‘Kew Observatory’ was used at the time that the building and surrounding site was used by the Meteorological Office and when the building was first listed in January, 1950. The term ‘The Royal Observatory’ is used in the description accompanying the formal registration of the historic park, and the term ‘King’s Observatory’ used in the description accompanying the formal scheduling of Shene Charterhouse.

3. THE ROLE OF THE DOCUMENT

- 3.1 We note and recognise the aim of the document as stated in Section I – Introduction: ‘...To provide an integrated framework which supports the conservation and enhancement of the Old Deer Park as a historically important and well used recreational and community area of the Borough’, and that the document ‘identifies opportunities to support its maintenance and enhancement’. However, as will be recalled, since 2012 the Working Group has been pressing for ‘a coherent strategy for the effective conservation, development and management of the Park’.
- 3.2 In order to strengthen the document, we urge adjustment in the wording in the first paragraph in Section I to read: ‘...The SPD will ensure that any prospective developments on these sites are sensitive to the significance of the historic landscape

of the Park and the features it contains whilst supporting the important recreational and sporting community activities within it.’

- 3.3 Whilst recognising the approach to implementation and delivery set out in Section 6 of the document, we very much hope that in due course the Council’s Supplementary Planning Document will be complemented by the preparation and publication of a coherent management plan for the Park for potential adoption by the Crown Estate as freeholder and all the lessees including the Council, providing for the realisation of opportunities for the enhancement of the Park and the effective maintenance and repair of its historic features and structures. Such a document should usefully draw upon Kim Wilkie Associates’ still highly relevant *Old Deer Park, Richmond, The Crown Estate Landscape Strategy*, published in September, 1999.

4. THE BOUNDARY OF THE AREA COVERED IN THE SUPPLEMENTARY PLANNING DOCUMENT

- 4.1 We note and recognise the logic of the boundary of the Supplementary Planning Document covering the same boundary as the presently designated Old Deer Park Conservation Area. However, we would urge the inclusion of a statement within either Section 1 or 2 of the document drawing attention to the fact that anomalously, some areas of the historic Park have been excluded from the Old Deer Park Conservation Area – such as the entire area to the south-east of the railway viaduct and embankment adjacent to Old Palace Lane, including the allotments, and the small area at the north-western end of Old Deer Park Gardens. Whilst, the entire area to the south-east of the railway viaduct and embankment falls within the boundary of the Richmond Riverside Conservation Area and, in part, within the boundary of the formally registered Historic Park, we would suggest that the areas presently and anomalously falling outside the boundary of the Old Deer Park Conservation Area should be embraced within the Supplementary Planning Document.

5. DETAILED POINTS FOR ATTENTION

- 5.1 **Section 2 – The Site and its surroundings – Historic context – The evolution of the Old Deer Park – (page 8) – first paragraph, sixth line: ‘Shene’ NOT ‘Sheen’.**
- 5.2 **Section 2 – The Site and its surroundings – Historic context – The evolution of the Old Deer Park – (page 8) - second paragraph, third line: ‘King’s’ NOT ‘Kings’.**
- 5.3 **Section 2 – The Site and its surroundings – Historic context – The evolution of the Old Deer Park – (page 8) - fourth paragraph, seventh line: ‘Commissioners of Woods and Forests’ NOT ‘Commissioner of Woods’.**

- 5.4 **Section 2 – The Site and its surroundings – Historic context – The evolution of the Old Deer Park – (page 8) - fifth paragraph, seventh and eighth lines:** ‘...and Athletic Association’ NOT ‘...Athletics Association’; ‘...Athletic Ground’ NOT ‘Athletics Ground’.
- 5.5 **Section 2 – The Site and its surroundings – Historic context – The evolution of the Old Deer Park – (page 8) - sixth paragraph, sixth line:** ‘...the Richmond Athletic Association Ground’ NOT ‘...the Richmond Athletics Association Ground’.
- 5.6 **Section 2 – The Site and its surroundings – Historic context – The evolution of the Old Deer Park – (page 8) - seventh paragraph:** Add: ‘The renowned Richmond Royal Horse Show flourished until 1967’.
- 5.7 **Section 2 – The Site and its surroundings – Historic context – The evolution of the Old Deer Park – (page 8) - eighth paragraph, second and seventh lines:** ‘...the Athletic Ground’ NOT ‘...Athletics Ground’; ‘...Richmond Athletic Association’ NOT ‘...Richmond Athletics Association’.
- 5.8 **Section 2 – The Site and its surroundings – Historic context – Heritage assets - (page 8):** ‘The King’s Observatory (previously known as Kew Observatory) NOT ‘Kew Observatory’; ‘Three obelisks’ NOT ‘Obelisks’.
- 5.9 **Section 2 – The Site and its surroundings – Historic context – Figure 3: Heritage assets - (page 9):** The listed obelisk located close to The King’s Observatory within the Royal Mid-Surrey Golf Club course (one of the two, listed obelisks within the course) has been omitted from the map. Instead the small, unlisted obelisk within the publicly accessible part of the Park has been shown. We very much hope that it can be identified as a ‘Building of Townscape Merit’ and added to the *National Heritage List* in due course.
- 5.10 **Section 2 – The Site and its surroundings – Historic context – Landscape views and open space - (page 10) - Third paragraph:** Reference is made to the Council’s *Local Plan Proposals Map* of July, 2015. As the group has argued at the recent hearings into the *Draft Local Plan*, NO amended *Proposals Map* has been published and made subject of consultation with the latest version of the *Local Plan*. The Working Group remains firmly of the view that the anomalous boundaries of Metropolitan Open Land and Public Open Space shown in the *Proposals Map* of July, 2015 which exclude the Pools-on-the-Park complex need to be corrected.
- 5.11 **Section 2 – The Site and its surroundings – Historic context – Figure 5: Transport and accessibility - (page 11):** Anomalously, the two sets of bus-stops close to Richmond Station which serve no less than twelve bus-routes, and which those wishing to access the Park would use, have been omitted. The bus-stops on the south-eastern side of Kew Road opposite the Lion Gate into Kew Gardens, opposite the Old Deer Park Sports Ground and further south-westwards along the road have been omitted.

Richmond Station is wrongly annotated 'Richmond Rail Station' and no reference is made to its being served by South Western Railway, London Underground and London Overground trains, and by a taxi rank. Anomalously, a number of the long-established pedestrian access-points into the Park are omitted. These include the access from the south-western end of Park Lane, the several access points along Kew Foot Road, and the two entrance-points from Kew Road.

- 5.12 **Section 3 - Planning policy context – Local planning policy - (page 12) - Third paragraph, Eighth line:** Reference is made to 'The Publication Local Plan' taking 'into account responses made during the public consultation in summer 2016'. Regrettably this is not correct, given the failure of the Council to properly address the Working Group's repeated and clearly expressed concerns about the anomalous boundaries of Metropolitan Open Land and Public Open Space shown in the *Proposals Map* of July, 2015 which exclude the Pools-on-the-Park complex.
- 5.13 **Section 3 - Planning policy context – Key planning policies, Local Plan, 2017 - (pages 11 and 12):** Adjustments in wording need to be made to reflect the proposed main modifications relating to Policy LP3 and site specific allocations SA 22 and 23 (relating to The Pools-on-the-Park and the Richmond Athletic Association Ground) put forward by the Council (and currently subject to public consultation) in response to the main modifications to the *Local Plan* recommended by the Inspector further to the hearings held late last year. Further adjustments to the wording may need to be made in the light of the outcome of the public consultation on the proposed main modifications.
- 5.14 **Section 3 - Planning policy context – Other information policies – (page 14):** The Working Group considers it most regrettable that given its strategic significance, Kim Wilkie Associates' still highly relevant *Old Deer Park, Richmond, The Crown Estate Landscape Strategy*, published in September, 1999, has been relegated to the tail end of the schedule of 'Other information sources'. It is likely that J.S. Conservation Management & Town Planning Ltd's *Statement of significance: Richmond Public Baths (sic), Old Deer Park, Richmond* may require amendment before it can be adopted by the Council.

The list needs to be extended to include reference to the formal entries and descriptions for the various designated assets in the Park included in the *National Heritage List for England*.

- 5.15 **Section 4 – Analysis of the current facilities across the Old Deer Park – Wider considerations – Recreation ground (sic) - (page 16):** Reference is rightly made to the challenges posed by the use of the Park for large-scale outdoor sporting events and the problems generated by the provision of temporary access for large vehicles for setting-up and taking-down temporary structures, etc. However, as presently drafted, neither this section nor Section 5 – The future role of the Old Deer Park, provide any

clear and specific guidance on how such events together with circuses and temporary use of the landscaped area around the Pools-on-the-Park should be planned, located and managed in order to ensure that the parkland character of the area is not compromised or harmed

We note with concern the apparent absence from both Sections 4 and 5 of references to the issue of noise-generation from the Old Deer Park and the need to explore and adopt measures to mitigate the adverse impact of such noise generation on the parkland character of the areas to the north-west and south-east of the Twickenham Road.

- 5.16 **Section 4 – Analysis of the current facilities across the Old Deer Park - Outdoor sports provision – Old Deer Park Sports Ground (London Welsh Rugby Football Club) – (page 18):** There is one match pitch and two training-pitches – one of which can be floodlit.
- 5.17 **Section 4 – Analysis of the current facilities across the Old Deer Park - Indoor sports facilities – Swimming – (page 18) - First paragraph, third line:** The outdoor pool is 25 m. in length, NOT 33.3 m.
- 5.18 **Section 4 – Analysis of the current facilities across the Old Deer Park - Indoor sports facilities – Swimming – (page 18) - First bullet-point:** We note the suggestion that the age of the Pools-on-the-Park complex ‘creates concerns over its ability to meet the needs of residents in the long term’. However, we would observe that there are many listed and other historic swimming pools across the country very much older than the Pools-in-the-Park complex which continue to function successfully with or without significant upgrading.
- 5.19 **Section 4 – Analysis of the current facilities across the Old Deer Park - Indoor sports facilities – Swimming – (page 18) - Seventh bullet-point:** It is difficult to see how the provision of a 50m. pool can be accommodated on the Pools-on-the-Park Site given the conservation and other planning constraints referred to elsewhere in the document.
- 5.20 **Section 4 – Analysis of the current facilities across the Old Deer Park – Health and fitness facilities – (page 20):** Anomalously, as presently drafted, the document fails to refer to the poor design and harmful impact on the character and appearance of the Park of the existing health and fitness facility, squash courts and adjacent car-parking on the Richmond Athletic Ground and the squash courts on the Old Deer Park Sports Ground, and the need to resolve the problems.
- 5.21 **Section 4 – Analysis of the current facilities across the Old Deer Park – Community and voluntary sector uses – Old Deer Park Car-park - (page 20):** Anomalously, as presently drafted, the document fails to refer to the poor design and harmful impact on the character and appearance of the Park of the existing Council-owned voluntary

sector buildings – some now disused and derelict AND the poor condition of the Council-owned, long disused public conveniences, and the need to resolve the problems.

- 5.22 **Section 4 – Analysis of the current facilities across the Old Deer Park – Wider considerations - Royal Mid-Surrey Golf Club – (page 21) - Third paragraph – First and seventh lines:** Reference is made to ‘The service road and access located along the boundary between the Golf Course and the Royal Botanic Gardens, Kew...’.

Firstly, it is entirely misleading to refer to the vehicular access from the Kew Road just south of the Lion Gate leading to the Oxenhouse Gate to the Gardens and further beyond to the Golf Course as a ‘road’. It is effectively an un-made drive. Secondly, it isn’t located between the Golf Course and the Gardens, rather it is located between the Old Deer Park Sports Ground and the Gardens, and only continues onwards modestly into the Golf Course.

Importantly, we understand that the emerging, revised *Royal Botanic Gardens, Kew, Landscape Management Plan* no longer proposes the creation of a link between the Kew Road and the river along the southern boundary of the Gardens.

- 5.23 **Section 4 – Analysis of the current facilities across the Old Deer Park – Wider considerations - Recreation ground (sic) – (page 21):** The statement fails to refer to the parkland character and ecological interest of much of the area and the particular attractiveness of the ‘wild’ and wooded area between the Twickenham Road and the railway, used by many walkers, and along the banks of the water-filled ha-ha.

- 5.24 **Section 4 – Analysis of the current facilities across the Old Deer Park – Wider considerations – The Old Deer Park Car Park and public open space – (page 21) - First paragraph:** Reference should be made to damaging impact on the character and appearance of the Park resulting from the excessive and poorly designed signing and the lack of a co-ordinated approach to the design and finish of the street-furniture.

- 5.25 **Section 4 – Analysis of the current facilities across the Old Deer Park – Wider considerations – The Old Deer Park Car Park and public open space - (page 21) - Second paragraph:** What does ‘the public open space offer of the Park’ mean? Surely the area represents a much valued and attractive parkland area and is a major asset to the Park as a whole? Importantly, it is NOT ‘little used’. It is well used, particularly by dog-walkers.

- 5.26 **Section 5 - The future role of the Old Deer Park – (page 22) – First paragraph:** In order to strengthen the document, we would suggest adjustment in the wording of the paragraph to read: ‘There are opportunities to sustain the significance of the historic landscape of the Park and the features it contains as well as supporting its wildlife and nature conservation role, improving the existing sports, recreation and community facilities and enhancing access into and around the Park’.

5.27 **Section 5 - The future role of the Old Deer Park – (page 22) – Third paragraph:** The reference to ‘opportunities for wider enhancements’ needs clarification.

5.28 **Section 5 – The future role of the Old Deer Park – Improving the quality of the Old Deer Park – (page 22):** We would observe that there are further issues that might be listed in addition to those identified in the six bullet-points.

The section should provide a clear commitment by the Council to using its planning powers to apply rigorous control over proposals for built development encroaching into the historic Park (and on to Metropolitan Open Land) – recent examples being part of the group of porta-cabins comprising the Old Deer Park School adjacent to the Old Deer Park Car-park annexe and the porta-cabin serving the care-hire business in the Athletic Ground.

Similarly, the section should provide for a clear commitment by the Council to use its planning powers to pursue enforcement action against existing unauthorised development within the Park where it has a damaging impact on the character and appearance of the Park, and to pursue appropriate action to secure the repair of its own properties and encourage the repair of properties outside its ownership where it has damaging impact on the character and appearance of the Park.

5.29 **Section 5 – The future role of the Old Deer Park – Improving the quality of the Old Deer Park – Gateways – (page 25) - Second paragraph, fourth line:** ‘...through the side-gate of a well restored, late-Victorian gateway comprising the four, original, brick piers with modern, steel gates between’ NOT ‘...a pillared and gated entrance’. Surely, given the modest width of the pedestrian side-gate, it should not be used for cyclists – other than when dismounted.

5.30 **Section 5 – The future role of the Old Deer Park – Improving the quality of the Old Deer Park – Gateways - (page 23) - Third paragraph, third line:** ‘...surviving gate-piers of the original four’ NOT ‘surviving gate pillars’. A commitment to reinstate the two, missing gate-piers for both pedestrian safety and conservation reasons should be added. (A similar arrangement as that successfully implemented in relation to the gateway on to The Green).

5.31 **Section 5 – The future role of the Old Deer Park - Improving the quality of the Old Deer Park – Enhancements to car park areas – (page 23):** Surely there should be specific reference to address the excessive and poorly designed signing and the lack of a co-ordinated approach to the design and finish of the street-furniture and adopt an approach consistent with the Council’s own *Public Space Design Guide* of 2006.

5.32 **Section 5 – The future role of the Old Deer Park – Improving access within the Old Deer Park - Pedestrian access - (page 24):** The inclusion of one or more annotated diagrams in the document to show potential opportunities for improving and enhancing safe pedestrian access to and from the Park would be of considerable value

in advancing proposals. In particular, it would be most useful to include schematic proposals for:

- The provision of a raised, timber board-walk at the south-western end of that part of the Park between the railway viaduct and the embankment carrying the Twickenham Road and the landward-arch of Twickenham Bridge facilitating access between the two parts of the public Park when the area is flooded.
- The creation of a safe and attractive pedestrian route through the Old Deer Park Car-park linking the access from Park Lane to that part of the Park between the railway and the Twickenham Road. And
- The creation of inclined pathways set within the embankments to each side of the Twickenham Bridge approach to facilitate pedestrian access between the footways on each side of the road and the areas of the Park to each side of the road at the lower level.

- 5.33 **Section 5 – The future role of the Old Deer Park – (page 28):** The heading ‘Old Deer Sports Ground’ is missing from the top of the page.
- 5.34 **Section 5 – The future role of the Old Deer Park: Pools on the Park – (page 29) - First paragraph, second line:** ‘...with landscaped amenity areas adjacent to the outdoor pool’ NOT ‘with lawned sunbathing outdoor areas’.
- 5.35 **Section 5 – The future role of the Old Deer Park: Pools on the Park – (page 29) - Second, third, fourth, fifth, sixth, seventh and eighth paragraphs:** As noted in paragraph 5.14 above, J.S. Conservation Management & Town Planning Ltd’s *Statement of significance: Richmond Public Baths (sic), Old Deer Park, Richmond* may require amendment before it can be adopted by the Council.
- 5.36 **Section 5 – The future role of the Old Deer Park: Richmond Athletic Ground - (page 29):** As suggested in paragraph 5.20 above, as presently drafted, the document fails to refer to the poor design and harmful impact on the character and appearance of the Park of the existing health and fitness facility, squash courts and adjacent car-parking on the Richmond Athletic Ground and the need to resolve the problems.
- 5.37 **Section 5 – The future role of the Old Deer Park: Car park and community uses within the Old Deer Park – (page 30) – Twelfth paragraph:** The building presently occupied by the Royal Mail adjacent to the gateway into the Park from Park Lane comprises the former East Surrey Regiment TA Drill Hall of 1912 and its annexe of 1932 - both built on land falling within the historic park – as clearly evident from the 18th century boundary-wall to the Park which runs behind the complex. Whilst we understand that the lease on the complex granted by the Crown Estate runs until October, 2070, there is a real possibility that the Royal Mail may surrender the lease at

some earlier stage. Accordingly, consideration should be given to embracing within the document the potential future of the site for appropriate re-use and development, retaining and incorporating the architecturally and historically significant 1912 Drill Hall building. We note that anomalously, it is stated without question that the building ‘continues to be needed to support the operational requirements of the (Royal Mail) business and therefore has not been identified as part of the any wider proposals’.

- 5.38 **Section 5 – The future role of the Old Deer Park: Figure 5 (sic): Area of focus for potential change – (page 31):** This annotated map should be titled ‘Figure 6’ and references to it adjusted accordingly – ‘Figure 5: Transport and accessibility’ already exists on page 11.

As noted in paragraph 5.9 above, the listed obelisk located close to The King’s Observatory within the Royal Mid-Surrey Golf Club course (one of the two, listed obelisks within the course) has been omitted from the map. Instead, the small, unlisted obelisk within the publicly accessible part of the Park has been shown. We very much hope that it can be identified as a ‘Building of Townscape Merit’ and added to the *National Heritage List* in due course.

- 5.39 **Section 6 – Implementation and delivery – (page 32) - Tenth bullet point:** We remain unclear about the reference to London Scottish, London Welsh and Richmond Rugby Football Club working ‘with the Council to maximise the current capacity of the rugby pitches within the Recreation Ground (sic)’.

- 5.40 **Section 6 – Implementation and delivery – (page 32) - Twelfth bullet point:** In relation to the Council working with the Crown Estate, we would refer to our comments set out in paragraph 3.3 above:

‘Whilst recognising the approach to implementation and delivery set out in Section 6 of the document, we very much hope that in due course the Council’s Supplementary Planning Document will be complemented by the preparation and publication of a coherent management plan for the Park for potential adoption by the Crown Estate as freeholder and all the lessees including the Council, providing for the realisation of opportunities for the enhancement of the Park and the effective maintenance and repair of its historic features and structures. Such a document should usefully draw upon Kim Wilkie Associates’ still highly relevant *Old Deer Park, Richmond, The Crown Estate Landscape Strategy*, published in September, 1999’.

In this connection, we would suggest that Kim Wilkie should be consulted on the final draft of the present Supplementary Planning Document before its adoption.

22nd January, 2018.

Dear 

THE POOLS-ON-THE-PARK COMPLEX, OLD DEER PARK, RICHMOND - DRAFT STATEMENT OF SIGNIFICANCE

1. Many thanks for providing the opportunity of commenting informally on JS Conservation Management & Town Planning Ltd's draft *Statement of Significance: Richmond Public Baths, Old Deer Park, Richmond* of September, 2017, commissioned, I assume, by the Richmond-upon-Thames Council, and running in parallel with public consultation on the revised draft *Old Deer Park Supplementary Planning Document* launched in early December and closed today.

2. I very much welcome the preparation of the draft document and anticipate that it will also be welcomed by the Old Deer Park Working Group. In this connection, I will relay any additional comments by members of the Working Group at the earliest opportunity.

3. I particularly value the opportunity of commenting on the draft document: as a user of the pools complex since its opening in 1966; having known personally both Leslie Gooday, its architect, and Michael Brown, its landscape architect; having been directly involved in campaigning under the auspices of The Richmond Society and The Friends of Old Deer Park together with the Save Richmond Pool Action Group in 1987-1989 against proposals for its complete demolition and redevelopment as part of a vastly over-sized and poorly designed indoor skating-rink and swimming-pool complex with multi-level car-parking put forward by developer, London and Edinburgh Trust and granted Planning Permission under highly

questionable circumstances by the former SDP-Liberal Alliance Council administration in March, 1989, despite the opposition of the Royal Fine Art Commission and the local community; having been directly involved with the Friends of Old Deer Park in securing the designation of the Old Deer Park as a conservation area in June, 1990, and, up to 1993, having been involved with the Friends in securing the designation of the Park as an extension to the grade I Royal Botanic Gardens, Kew registered historic park in January, 1994; and, up to 1993, having been directly involved with The Friends of Old Deer Park in working to secure the formal listing of the existing complex in January, 1996.

4. At the outset, may I confirm that I support for the principle of addressing and assessing the potential scope for a conservation-based development of the site aimed at preserving the significant parts and features of the existing, listed pools complex and its landscaped setting whilst introducing sensitively designed improvements and appropriately scaled additions aimed at equipping the complex to meet the needs of coming years.

5. Whilst I support much of the assessment of the relative architectural and historic significance of the various parts of the existing pools complex and its landscaped setting set, both individually and cumulatively set out in limited part in Section 2 - *Statement of significance* and, anomalously, in greater detail in Section 3 – *Capacity for change*, and much of the assessment of the relative capacity for change to various parts of the existing complex and its landscaped setting set, both individually and cumulatively set out in Section 3 – *Capacity for change*, I am very disappointed by the serious omissions and other deficiencies in the *Introduction* and in Section 1 – *Understanding the heritage*, and believe that the document requires review and significant amendment before it can be properly and formally adopted by the Council.

6. I set out my specific concerns below:

THE TITLE OF THE DOCUMENT

7. The Pools-on-the-Park Complex has not been known as ‘Richmond Public Baths’ since at least 1993. Whilst the formal entry for the complex in the *National Heritage List for England* refers to the complex as ‘Richmond Baths’, the complex was appropriately rebranded as the ‘Pools-on-the Park’ at the time of its reopening after extensive refurbishment in July, 1993 and remains known as such over the years since. Up until the time of its closure for major repairs in October, 1992, the complex included twenty-four private baths for the use of those living in the area who did not have baths in their own homes. Accordingly, the term ‘Richmond Baths’ was not entirely inappropriate in past years.

8. The term ‘baths’ is used throughout the draft document, when it would be clearer and more correct to refer to ‘swimming-pools’, ‘pools’ or ‘pools complex’.

INTRODUCTION AND SECTION 1: UNDERSTANDING THE HERITAGE

9. From the considerable omissions and other deficiencies in these sections of the draft document, it would appear that the authors have neither spoken to those in the local community who have been closely involved with the pools complex over the last forty or more years nor read all the relevant publications and documentation covering those years – not least, about the controversy regarding the siting of the new pools complex in the Old Deer Park in the first place; the significant involvement of the Royal Fine Art Commission in the design of the complex (and, in later years, the campaign to secure its preservation from demolition); and the great campaign by the local community in the late-1980s and the 1990s to preserve the complex from demolition and redevelopment and to secure formal recognition of its special architectural and historic interest and that of its setting. This is a fundamental omission in relation to any proper assessment and understanding of the historic value, aesthetic value and communal value of the existing complex.

10. Throughout the draft document, particular emphasis is laid on ‘significance’ – to use the entirely non-statutory term used in the current policy document – the *National Planning Policy Framework* – and in the relevant current published guidance of Historic England. Anomalous, little if any reference is made to the inclusion of the pools complex in the *Secretary of State’s List of Buildings of Special Architectural or Historic Interest* nor to the formal inclusion of the Old Deer Park, in which the pools complex is set, in English Heritage’s *Register of Parks and Gardens of Historic Interest* as part of the grade I Royal Botanic Gardens, Kew – both designations now embraced by inclusion on the *National Heritage List for England*.

11. Similarly, anomalously, no reference is made in Section 1 to the specific entries and descriptions of the pools complex or to the Old Deer Park contained in the *National Heritage List for England*, nor importantly to the location of the complex and the Park within the formally designated Old Deer Park Conservation Area. The listing-entry for the pools complex is only attached as an Appendix, and the entry and description for the historic park is not attached at all. Only a very brief and incomplete reference is made to part of the description attached to the formal listing-entry in Section 2 – *Statement of significance* at page 17. A most serious omission from the draft document is the failure of the document to address the contribution made by the pools complex and its landscaped setting to the particular special historic interest AND significance of the registered historic park and to the character and appearance AND significance of the conservation area.

12. Similarly, no reference is made in either Section 1 – *Understanding the heritage* or, importantly, in Section 3 – *Capacity of change*, to the fundamental requirement under Section 16 of *the Planning (Listed Buildings and Conservation Areas) Act, 1990* to the fundamental requirement for the local planning authority or the Secretary of State to ‘have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses’ when considering an application for Listed Building Consent.

13. Anomalously, too, no attempt is made in Section 1 – *Understanding the heritage* to properly determine and define the extent of the curtilage of the listed pools complex and its landscaped setting and what may be properly considered as forming an integral part of the formally designated heritage asset. It is clearly essential that the boundary-walls of the landscaped setting of the pools complex and the sports changing building should be clearly shown as forming an integral part of the formally designated asset. In this connection, anomalously, no appropriately scaled map or site-plan of the entire pools complex and its landscaped setting is provided in the draft document with which to assist in a proper understanding of the extent of the curtilage. Similarly, no map is provided in the draft document to show the pools complex and its landscaped setting within the context of the Registered Historic Park or the conservation area - Figure 2 does not suffice for either purpose.

14. The absence of a detailed site-plan precludes any proper understanding of the critical role and particular and considerable special interest and significance of the boundary-walls of the landscaped setting of the pools complex, and, to a lesser extent, the role of the sports changing room. Importantly, the absence of such a site-plan means that the free-standing wall separating the pedestrian approach from the Twickenham Road to the main entrance from the adjacent car-park adjacent which was such an important feature of the original architectural and landscape design of the complex and which was only removed in recent years has been left entirely without comment. Similarly, the absence of a detailed site-plan also means that the regrettable subdivision of the once entirely unified landscaped setting of the pools complex in recent years is left entirely without comment.

15. Most regrettable is the absence of any meaningful references in the draft document to the boundary-wall to the landscaped setting of the pools complex which forms such a highly significant part of Michael Brown's design, and to the regrettable loss of the solid, slate copings to the wall which formed part of their particular special interest.

16. Quite extraordinarily, the draft document contains no plans or photographs of the pools complex and its landscaped setting as first completed in 1966. This is a major omission, which could be easily remedied by appending a copy of the 13-page, detailed and well-illustrated account of the complex published in the 1st November, 1967, issue of *The Architects' Journal* - 'Swimming baths in Old Deer Park, Richmond, Surrey'.

17. Similarly and extraordinarily, the draft document contains no decent architectural plans of the complex as it presently exists or any photographs of the external elevations of the complex as it presently exists. Such plans could be easily prepared by adjustments to the plans published in the 1st November, 1967, issue of *The Architects' Journal* - 'Swimming baths in Old Deer Park, Richmond, Surrey', assuming that the Council has mislaid copies of the original architects' drawings submitted in support of the application for Planning Permission and for other approvals.

18. The inclusion of such plans and photographs of the complex as first completed and as existing are essential to ensuring a clear and full understanding of the character and quality of the pools complex and its landscaped setting as first completed and the extensive changes that have been effected since - both externally and internally.

19. Such changes have included the most regrettable loss of the original, finely detailed patinated copper-sheet cladding of the upper part of the pools hall and lesser parts of the complex – the patination of the copper-sheet having been specifically intended by the architect and supported by the RFAC - and the substitution of non-patinating copper cladding with crudely-detailed parapet copings; the very damaging subdivision both horizontally and vertically of the once lofty, well-proportioned and impeccably-detailed main entrance-hall; the proliferation of unsightly unauthorised M +E plant on the roofs of the pools hall and lesser parts of the complex; and the introduction of unattractive sodium-source lighting in the pools hall. None of these issues are picked-up in the draft document, nor recognition expressed of the desirability for their effective remedy, except for and commendably, the potential reinstatement of the full height of the entrance hall.

20. On page 6, it is stated misleadingly that 'The Old Deer Park is much more 'built-up than the Royal Botanic Gardens to which the parkland adjoins...'. Whilst this may be true in respect of the public park to each side of the Twickenham Road (as leased by the Council from the Crown Estate) it would be an exaggeration to apply this to the Old Deer Park as a whole. The suggestion that 'The parkland is... very well vegetated, particularly around the boundaries' is a curious statement. Is it really intended to omit reference to the many fine trees in the Park? Curious too, is the complete absence from the document of any reference to Kim Wilkie Associates' highly relevant *Old Deer Park, Richmond, The Crown Estate Landscape Strategy* of September, 1999, which provides an authoritative account of the landscape history and character of the Park. This omission should be remedied.

21. Surprisingly, the authors of the document fail to include any references to Powell and Moya's listed Putney Swimming Pools and Dryburgh Hall of 1968 in Section I – *Understanding the heritage* which is a close contemporary of the pools complex in the Old Deer Park designed to meet the similar needs of the residents and others in the context of a south-west London suburb.

22. Surprisingly, too, is the absence of any reference to the significant involvement of the Royal Fine Art Commission in the design of the complex (and, in later years, the campaign to secure its preservation from demolition). Similarly, it is quite extraordinary that the highly relevant and extensive citation relating to the swimming pools complex under the *Civic Trust Awards* of 1967 is not quoted on page 13 of the draft document, nor, indeed the similarly relevant and extensive appraisal published in the 1st November, 1967 issue of the *Architects' Journal*.

23. Is the suggestion on page 14 that 'The building also incorporates large swathes of glass curtain walls, steel, concrete and copper roofing which is a very fine example of 1960's

vernacular’ really a sound reflection of the character and quality of the building? Surely, this is not ‘1960s vernacular’. Such a term is surely very much more applicable to the 1960s work of renowned local housing architects Darbourne and Darke?

24. No mention is made of the fact that the ill-conceived, unsightly and highly damaging ‘Wild Waters’ flumes facility thankfully removed in its entirety as part of the refurbishment of the pools complex in 1992-1993 was added in 1985 despite local opposition and seriously detracted from the operation and amenity of the pools complex.

25. Of considerable concern is the omission of any reference to the major, public controversy generated by the proposals for the demolition and redevelopment of the pools complex and its landscaped setting as part of a vastly over-sized and poorly designed indoor skating-rink, indoor bowling facility and swimming-pool complex with multi-level car-parking put forward by developer, London and Edinburgh Trust between 1987 and 1989; the campaign by The Richmond Society and The Friends of Old Deer Park together with the Save Richmond Pool Action Group in 1987-1989 against the proposals; and the granting of Planning Permission by the former SDP-Liberal Alliance Council administration in highly questionable circumstances in March, 1989, despite the opposition of the Royal Fine Art Commission and the local community. Similarly, no mention is made of the most fortunate aborting of the approved scheme resulting from the failure of the Council to secure the recover the sub-lease granted to the operator of the ‘Wild Waters’ flumes facility by a specific deadline as required under the legal agreement between the Council and the prospective developer, and the consequential abandonment of the scheme by the developer and the payment instead of a substantial financial sum to the Council by way of compensation – later used to support the funding of the refurbishment scheme.

26. These important aspects of the history of the pools complex and its landscaped setting are essential to a clear and full understanding of why the pools and its landscaped setting still survive today and their omission from the draft document precludes any proper assessment and understanding of the historic value, aesthetic value and communal value of the existing complex and its landscaped setting.

27. The reference on page 16 to the suggestion that ‘much of the external appearance still exhibits the original detailing needs to be qualified. See paragraph 19 above.

SECTION 2 – STATEMENT OF SIGNIFICANCE

28. I am unclear why the five-part scale of ‘significance’ with definitions given on pages 17 and 40 of the draft document – the source of which it is not stated – is different to the four-part scale of ‘significance’ and the definitions given on page 25 and 36 - which is stated as being sourced from a publication by the Prince’s Regeneration Trust of 2009. This scale, together with the four-part scale of ‘capacity for change’ and the definitions would appear to be the extract from a sample report printed on page 15 of *How to write conservation reports*,

published by The Prince's Regeneration Trust in 2009 rather than the five-levels of significance printed on page 25 of the same document.

29. It is assumed that the reference to 'neutral significance' in the 'Scale of significance' given on pages 17 and 40 of the draft document and in the levels of significance printed on page 25 of the Trust's publication, is to be construed as an absence of any special architectural or historic interest or any heritage significance.

30. It is to be regretted that the plans and sections published in published in the 1st November, 1967, issue of *The Architects' Journal* - 'Swimming baths in Old Deer Park, Richmond, Surrey' have not been used, with adjustments as necessary, as the base diagrams on pages 26 to 37. This would facilitate a clear and full understanding of the assessments given on each page.

31. Anomalously, the assessments of the comparative levels of significance of the listed complex and its respective parts are contained in Section 3 – *Capacity for change*, rather than in Section 2 – *Statement of significance*.

SECTION 3 – CAPACITY FOR CHANGE

32. As noted in paragraph 12 above and most importantly, no reference is made in either Section 1 – *Understanding the heritage* or, importantly, in this section to the fundamental requirement under Section 16 of *the Planning (Listed Buildings and Conservation Areas) Act, 1990* to the fundamental requirement for the local planning authority or the Secretary of State to 'have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses' when considering an application for Listed Building Consent – only reference is made to Section 66 of the Act relating to the fundamental requirement for the local planning authority or the Secretary of State to 'have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses' when considering an application for Planning Permission.

COMMENTS ON THE ASSESSMENTS GIVEN ON PAGES 26 TO 37

33. Asset no. 1: 'Considerable significance' agreed; 'High capacity' for internal change only agreed providing that this serves to reverse the very damaging subdivision both horizontally and vertically of the once lofty, well-proportioned and impeccably-detailed main entrance-hall. I very much welcome the suggestion that 'consideration should be given to reinstating the experience of the full height' of the space. I would suggest that the capacity for external change is 'Very low'.

34. Asset no. 2: 'Considerable significance' for the ground floor of the two-storey, former private baths, offices and flat block not agreed; I would suggest that it is of only 'Some significance'; 'High capacity for change' agreed.
35. Asset no. 3: 'Considerable significance' agreed; 'High capacity' for internal change only agreed. I would suggest that the scope for external change is 'moderate' rather than 'high'.
36. Asset no. 4: 'Exceptional significance' agreed; 'Very low capacity' for change agreed.
37. Asset no. 5: 'Exceptional significance' agreed; 'Very low capacity' for change agreed.
38. Asset no. 6: 'Exceptional significance' agreed; 'Very low capacity' for change agreed.
39. Asset no. 7 – including the boundary-walls: 'Exceptional significance' agreed; 'Moderate capacity for change' not agreed; suggest 'Very low capacity for change'.
40. Asset no. 8: 'Exceptional significance' agreed; 'Very low capacity' for change agreed.
41. Asset no. 9: 'Exceptional significance' agreed; 'Very low capacity' for change agreed.
42. Asset no. 10: 'Considerable significance' agreed, but only in respect of the upper part of the former entrance hall; I would suggest that the upper floor of the two-storey former private baths, offices and flat block is of only 'Some significance'; 'High capacity for change' only agreed in relation to the upper floor of the two-storey former private baths and offices and flat block, and for internal change in respect of the upper part of the former entrance hall providing that this serves to reverse the very damaging subdivision both horizontally and vertically of the once lofty, well-proportioned and impeccably-detailed main entrance-hall. I very welcome the suggestion that 'consideration should be given to reinstating the experience of the full height' of the space. I would suggest that the capacity for external change of the former entrance hall element is 'Very low'.
43. Entirely missing from the series of 'assets' and the assessments of their comparative significance and capacity for change are the Sports changing room and the hard-paved landscape and car-park to the immediate north-west of the pools complex which clearly form part of the curtilage of the listed asset, be they of lesser special interest and significance of the overall site.
44. Overall significance and overall capacity for change (not 'to change'): Amazingly, missing from these assessments are the landscaped setting to the pools complex, including the integral boundary-walls and the sports changing room and the hard-paved landscape and car-park to the immediate north-west of the pools complex which clearly form part of the curtilage of the listed asset.
45. From what is shown in the diagrams (see paragraph 42 above) I agree with the assessment of the relative significance of the areas identified as of 'Exceptional and considerable significance', except for the inclusion of both the upper and lower floors of the

two-storey, former private baths, offices and flat block not agreed; I would suggest that the block is of only 'Some significance'; 'High capacity for change' agreed.

46. From what is shown in the diagrams (see paragraph 42 above) I agree with the assessment of the comparative capacity for change (not 'to change') of the areas identified as offering 'Very low capacity' but would question the identification of the single-storey 'changing rooms and studio areas and the 'foyer' (both levels) as offering 'High capacity' for change. I would suggest these areas should be identified as offering 'Moderate capacity for change'. However, as reflected in my comments above, I fully agree with the identification of the two-storey 'gym and health suite' block as offering 'High capacity for change'.

47. In relation to the bibliography and list of references, I note the absence of the following:

- The 1st November, 1967, issue of *The Architects' Journal* - 'Swimming baths in Old Deer Park, Richmond, Surrey';
- The highly relevant and extensive citation relating to the swimming pools complex under the Civic Trust Awards of 1967;
- The correspondence between English Heritage and the Friends of Old Deer Park, The Twentieth Century Society and the Civic Trust relating to requests for the listing of the pools complex - Historic England's Designation Team should retain copies, and the relevant reports of English Heritage's Listing Team;
- The entry and accompanying description in the *National Heritage List for England* relating to the inclusion of the Old Deer Park as an extension to the grade I registered Royal Botanic Gardens, Kew Historic Park of 1987/January, 1994
- *Listing of Richmond Baths – Pools-on-the-Park – Appendix I: Evidence for widespread public support – Compiled by The Friends of Old Deer Park*, January, 1995 – Historic England's Designation Team should retain a copy;
- 'Richmond Baths' extension threatened by listing', *The Architects' Journal*, 7th September, 1995; and
- *Old Deer Park, Richmond, The Crown Estate Landscape Strategy* Kim Wilkie Associates, September, 1999 – the Council should have one or more copies.

CONCLUSION

48. In relation to the structure and format of the draft document, I would suggest that in order to assist in easy and ready use by stakeholders, the public and others and the

effective application of the guidance it contains, the ordering of the sections and sub-sections should be reviewed and amended and the paragraphs numbered.

49. Finally, I would very willing to sit down with you and the authors of the document to run through and clarify my comments insofar as this may be helpful, and to share copies any documentation from my files on the Old Deer Park and the Pools-on-the Park complex and its landscaped setting in particular which the authors may not have located from other sources.

Kind regards,

Paul

PAUL VELLUET, M.Litt., RIBA, IHBC, CHARTERED ARCHITECT

LONDON BOROUGH OF RICHMOND-UPON-THAMES LOCAL PLAN

A STATEMENT BY CHARTERED ARCHITECT AND BOROUGH RESIDENT, PAUL VELLUET, REGARDING SITE-SPECIFIC PROPOSAL SA 19 – RICHMOND STATION, RICHMOND, FOR PRESENTATION AT THE RELEVANT HEARING SESSION OF THE INSPECTOR'S EXAMINATION, SEPTEMBER, 2017

I. INTRODUCTION

- I.1 I am submitting this statement in an entirely independent capacity as a locally-based architect, as resident of the Borough since 1948 and as regular user of Richmond Station since September, 1962. I am a former Chairman of The Richmond Society and have recently been appointed as President of the Richmond Local History Society. I am a member of the RIBA's Awards Group and a former member of the RIBA's Planning Group. From 1991 until 2004, I worked as Regional Architect and Assistant Regional Director of English Heritage, London. In past years I have served on the Executive Committee of the Richmond Society and on the Richmond-upon-Thames Council's Conservation Areas Advisory Committee. I attach fuller particulars of my qualifications and experience in Appendix A.
- I.2 In this statement I convey my serious concern regarding the soundness of specific aspects of the Council's final (published) version of the *Richmond-upon-Thames Local Plan* relating to Richmond Station and its future – Site specific Proposal SA 19. My statement focuses on those aspects of the Council's *Plan* which I consider to be insufficiently robust in providing the Council, as local planning authority and the local community with effective control over development affecting the particular architectural, historic interest and significance of Richmond Station as 'a non-designated heritage asset', and the character, appearance and significance of the Central Richmond Conservation Area as 'a designated heritage asset' (in the terms commended in the relevant parts of the *National Planning Policy Framework*). My statement takes account of the formal advice on 'soundness' as explained in paragraph 182 of the *National Planning Policy Framework*.
- I.3 In Section 3 of this Statement, I set out my concerns about the soundness of specific aspects of the *Plan* relating Site-specific Proposal SA 19 - Richmond Station, Richmond. I explain the reasons for my concerns, and put forward my suggestion as to the potential means of addressing the weaknesses of the *Plan* as presently submitted and securing amendment which will contribute to providing a sounder definition of the Proposal insofar as is necessary to ensure that the particular interest and significance of Richmond Station as a non-designated heritage asset and the character, appearance and significance of the Central Richmond Conservation Area as a designated heritage asset will be assured. In setting forward these concerns, I would stress that I see no

objections to the incorporation of wording in the proposal statement referring to the provision of improved public transport interchange facilities on the site or to the potential redevelopment of the various post-war buildings to the immediate north and south of the original station-complex subject to the satisfactory scale and design.

2. THE BACKGROUND TO MY STATEMENT

- 2.1 This statement follows my representations in response to the Council's consultation on the final (publication) version of the *London Borough of Richmond-upon-Thames Local Plan* in relation to Site-specific Proposal SA 19 – Richmond Station, Richmond, submitted to the Council in February, 2017 – see copy attached as Appendix B. This, in turn, followed my formal response to the Council's consultation on *The First Draft of the London Borough of Richmond-upon-Thames Local Plan (Pre-publication version)* in relation to Site-specific Proposal SA 18, submitted to the Council in August, 2016 – see copy attached as Appendix C. A summary of this response was set out, with added comments by Council officers, in the Council's *Summaries of responses received in relation to the Local Plan policies and site allocations and Council's response*, reference 437.
- 2.2 The original frontage building of Richmond Station facing Kew Road containing the generously proportioned, upper concourse together with the circulation areas, platform-buildings and platform-canopies comprise a well-designed and coherent complex of sufficient special architectural and historic interest to merit statutory listing. Completed in 1937 the station complex was designed for the Southern Railway by the company's Architects Department under the direction of James Robb Scott (1882-1965) and connects sensitively to the surviving and very fine, 19th century platform-canopies serving island-platforms 4 and 5 and 6 and 7. The same architectural team designed the almost contemporary, grade II* listed Surbiton Station. Although parts of the station, in particular, the upper concourse, have lost some of their original features and detailing, sufficient original fabric and features remain to make full reinstatement entirely feasible. This would enable the original architectural integrity of the building to be recovered to leave the station in a similar condition as the fully restored listed station at Surbiton.
- 2.3 Having used the Station almost continuously since the early-1960s, together with many other Borough residents and visitors to Richmond, I value the distinctive architectural character and significance of the complex, its efficient layout, and above all, the platforms being day-lit and open to the sky and naturally ventilated.
- 2.4 Any new development spanning across and above some or all of the existing tracks and platforms of the station would not only seriously damage the architectural integrity of the existing station complex but would destroy the amenity presently

enjoyed by the travelling public. In addition and importantly, having been directly and professionally involved at the planning stages of the major development proposals above Victoria Station and Charing Cross Station, approved and implemented during the 1980s; in the development proposals above Fulham Broadway Station, approved and implemented in the 1990s; in the thankfully aborted development proposals above Paddington Station put forward in the 1990s; and, most recently, in the development proposals above the eastern Farringdon Cross-Rail/London Underground Interchange Station on Smithfield, now being implemented, I am entirely familiar with the issues raised by proposals for development above railway stations and of the impact of such developments when approved and implemented. I am also entirely familiar with the operational, logistical and cost challenges involved in seeking to develop above railway running-tracks and platforms, and of the potential need to provide significant commercial and other floor-space in such development in order to justify the additional costs incurred and to achieve a viable and profitable development for the prospective developer and the railway freeholder. Accordingly, in the light of such extensive and diverse experience, I view with particular concern the potentially damaging impact of seeking to span across the running-tracks and platforms at Richmond Station with substantially scaled development, as well as the other implications of redeveloping the station site.

- 2.5 I note that Richmond Station was rightly recommended for statutory listing by the Richmond Society in May, 1976, December, 1988, April, 1989 and 1998. (A copy of three pages of the 40-page report prepared by the Society in 1998 is attached as Appendix D). I am not aware that the case for listing has been addressed by English Heritage or Historic England since then, despite the significant changes to listing criteria since that time. Ironically, had the station complex been listed at this time, then many of the features and details that have been lost or adversely altered in the years since under the terms of 'permitted development' would have survived.
- 2.6 I also note that in July, 1997, English Heritage wrote to the architects for a potential redevelopment scheme for the entire station complex and adjoining sites further to a 'Planning Weekend' public consultation exercise recalling that two of the key principles which enjoyed overall support from those attending were the retention of the existing station frontage building and its effective integration into any new development; and the maintenance of full daylighting down to platform-level across all platforms, possibly within a fully glazed enclosure.
- 2.7 In my response to consultation on the *Draft Local Plan* in August, 2016, I suggested that the site specific proposal needed to be fundamentally reviewed and redrafted to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms. I note that in a submission to the Council by The

Twentieth Century Society, the group expressed great concern that the *Draft Local Plan* promoted the Station site for 'comprehensive redevelopment', stating that 'given the architectural and historic importance of the building, as well as its clear townscape value within a conservation area... the draft as it stands runs counter to the guidance of the *NPPF* and to the guidance set out in the *Central Richmond Conservation Area Statement*, which specifically identifies development pressure as a problem, and which promotes the preservation, enhancement and reinstatement of architectural quality', and urged that site-specific proposal SA 18 should be redrafted 'in a way which encourages only conservation-led development which explicitly safeguards the retention and restoration of the 1937 station building'.

3. MY PARTICULAR CONCERNS

- 3.1 Whilst the addition of references to the location of the Station within a conservation area and to its designation as a *Building of Townscape Merit* in the relevant section of the Council's final (publication) version of the *Local Plan* is to be welcomed, no justification whatsoever is provided for the Council's assertion that 'the Station is a key development site' and that 'there is a need for comprehensive redevelopment' in order to deliver transport interchange improvement.
- 3.2 Importantly, the Council has failed to provide any assessment of the potential impact on the retail and business health of the remainder of the Town, on the amenity of its residents and visitors, and on the viability of existing cinemas in the Town that would result from providing 'approximately 10 000 square metres of retail floor-space', 'substantial provision of employment floor-space, particularly BI offices', 'other uses, such as for community, leisure and entertainment' and 'housing in (sic) upper floors'. Similarly, the Council has failed to provide any assessment of the potentially damaging impact on the character and appearance of the conservation area and on traffic movement and car-parking in the Town that would result from the essential servicing requirements of such a vast multi-use development. Such omissions render the proposal as presently worded entirely unsound and unsustainable and in fundamental conflict with other policies of the Local Plan.
- 3.3 The statement that 'any redevelopment (sic) proposal must be of the highest quality in character and respond positively to the Conservation Area' is entirely inadequate in setting the necessary parameters for development of the site' given the failure to refer to the need to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms, and the need to ensure that any new development should either preserve or enhance the character and appearance of the conservation area and sustain its significance.

- 3.4 Finally and importantly, as presently drafted, there is a failure to distinguish between the purpose-built railway station, which is clearly of particular architectural, historic and townscape significance and contributes to the particular character, appearance and significance of the Central Richmond Conservation Area, and the later, post-War, commercial buildings fronting The Quadrant and the Kew Road to each side of the main Station frontage (Westminster House and the shops below to the immediate north and Gateway House and the adjacent shops to the immediate south) and the multi-storey car-park on the southern side of the station complex, accessed from Drummond's Place, none of which possess any such significance and none of which contribute to the character, appearance or significance of the conservation area.
- 3.5 As presently drafted, the proposal reflects an alarming lack of recognition and understanding by the Council of the particular challenges and implications of designing, funding and delivering new development above railway running-tracks and platforms, and of the distinctive architectural and townscape interest and significance of the existing station-complex.
- 3.6 In the interests of clarity and consistency with the conservation and other relevant policies contained in the *National Planning Policy Framework*, the *London Plan*, and the emerging *Local Plan* and the need for a sound and sustainable statement of planning and conservation policy, I urge the Inspector to require the Council to fundamentally review and re-draft the existing the site-specific proposal, to take account of the key issues referred to above.

4. ADDITIONAL NOTE

- 4.1 I remain entirely willing to provide copies to the Inspector of any details about the history and development of the station and to clarify any of the issues I have raised in this submission. In addition, I would wish to encourage the Inspector to undertake a site inspection of the Station and its immediate setting in order to appreciate its considerable architectural and historic interest and significance as anon-designated heritage asset, and to recognise the need to ensure that sound policies are in place to ensure that such interest and significance will be effectively sustained in accordance with the relevant policies of the *National Planning Policy Framework*.
- 4.2 Finally, I would confirm that I recognise that the station was the subject of a Planning Brief drafted and adopted by the Council in March, 2002 and Site Specific Proposal R 6 in earlier local plans. However, I would observe that these contained significant and fundamental deficiencies similar to those contained in the emerging Local Plan.

Paul Velluet

7th September, 2017.

APPENDIX A – PAUL VELLUET, QUALIFICATIONS AND EXPERIENCE

Paul Velluet is a chartered architect - a member of both the RIBA and the Institute of Historic Building Conservation - with experience drawn from over thirty-five years working in both private practice and the public sector specialising in building conservation and development in historic areas. He holds B.A. Honours, B. Arch. Honours and Master of Letters degrees from the University of Newcastle-upon-Tyne.

Since 2005, he has headed an independent consultancy specialising in the provision of professional and technical advice to property owners, prospective developers and other planning and building professionals on projects involving new development in historic areas and the conservation, alteration and extension of historic buildings, particularly at the critical pre-planning and planning stages. The consultancy undertakes work for commercial, educational, residential, cultural, diplomatic, church, health-sector, hospitality-sector, urban and rural-estate and local planning authority clients, including the City of London Corporation and the City of Westminster Council. Clients have also included historic building trusts and local amenity and community groups in addition to the historic London estates.

Paul Velluet's professional experience includes working as a project architect with architects Manning Clamp + Partners, Richmond, Surrey, 1972-1975; as a Principal Urban and Design and Conservation Officer in Westminster City Council's Department of Planning and Transportation, 1976-1991; as Regional Architect and Assistant Regional Director, English Heritage London Region, 1991-2004; and as Senior Associate, Conservation and Planning, with the major Central London commercial practice HOK Architects, 2005-2011. During these years, he has been professionally responsible for projects which have been recognised with a *European Architectural Heritage Year (Civic Trust) Award*, a *Commendation under the R.I.B.A. Awards*, and awards and commendations under local awards schemes in south-west London. He has also been an exhibitor in the Architecture Room of the Royal Academy of Arts Annual Summer Exhibitions.

Currently he serves as a member of the RIBA's Awards Group; a member of the Archdiocese of Westminster Historic Churches Committee; and a member of the Guildford Cathedral Fabric Advisory Committee. In past years he has served on the Executive Committee of the Society of Architectural Historians of Great Britain, the RIBA's Planning Group, the Royal Fine Art Commission's Thames Landscape Strategy Panel, the Cathedrals Fabric Commission for England, the Cathedrals Fabric Commission's Technical Group, and the Richmond Society's Executive Committee. For twenty years he served as a Trustee of the Covent Garden Area Trust, and for five years as an assessor for the RIBA/Crown Estate's Annual Conservation Awards.

He has been a contributor to various publications, journals and guidance including: *Context: New buildings in historic settings* (The Architectural Press, 1998); *The Buildings of England, London 2: South* (1983), and *The Buildings of London, London 6: Westminster* (2003); *The Architects' Journal*, *Planning in London*, *Urban Design Quarterly*, *English Heritage's Conservation Bulletin*, *Church Building* and *Ecclesiology Today*; and diverse policy and guidance documents for Westminster City Council and English Heritage.

APPENDIX B

CONSULTATION ON THE FINAL VERSION OF THE LONDON BOROUGH OF RICHMOND-UPON-THAMES LOCAL PLAN (PUBLICATION)

REPRESENTATION BY PAUL VELLUET, CHARTERED ARCHITECT, IN RELATION TO SITE-SPECIFIC PROPOSAL SA 19 - RICHMOND STATION, RICHMOND

FEBRUARY, 2017

This representation follows my formal response to consultation on *The First Draft of the London Borough of Richmond-upon-Thames Local Plan (Pre-publication version)* in relation to Site-specific proposal SA 19 – Richmond Station, Richmond, submitted in August, 2016. A summary of my response is set out in the Council's *Summaries of responses received in relation to the Local Plan policies and site allocations and Council's response*, reference 437.

This representation takes account of the formal advice on 'soundness' as explained in paragraph 182 of the *National Planning Policy Framework*.

In my response to consultation on the *Draft Local Plan* last August, I stated:

'The original frontage building of the Station facing Kew Road containing the generously proportioned upper concourse together with the circulation areas, platform-buildings and platform-canopies comprise a well-designed and coherent complex of sufficient special architectural and historic interest to merit statutory listing. Completed in 1937 the station complex was designed for the Southern Railway by the company's Architects Department under the direction of James Robb Scott (1882-1965) and connects sensitively to the surviving and very fine, 19th century platform-canopies serving island-platforms 4 and 5 and 6 and 7. The same architectural team designed the almost contemporary, grade II* listed Surbiton Station.

Having used the Station almost continuously since the early-1960s, together with many other Borough residents and visitors to Richmond, I value the distinctive architectural character and significance of the complex, its efficient layout, and above all, the platforms being day-lit and open to the sky and naturally ventilated. Any development taken across and above some or all of the existing tracks and platforms would not only seriously damage the architectural integrity of the existing station complex but would destroy the amenity presently enjoyed by the travelling public. Accordingly, the proposal as presently envisaged under SA 18 is not only totally unacceptable, but runs against the relevant policies contained in the *National Planning Policy Framework* and the Council's existing and emerging conservation and other policies.

I should add the Station was rightly recommended for statutory listing by The Richmond Society in May, 1976 and again in December, 1988 and April, 1989. I am not aware that the case for listing has been addressed by English Heritage or Historic England since then. In July, 1997, English Heritage wrote to the architects for a potential redevelopment scheme for the entire station complex and adjoining sites in further to a 'Planning Weekend' public

consultation exercise recalling that two of the key principles which enjoyed overall support from those attending were the retention of the existing station frontage building and its effective integration into new development; and the maintenance of full daylighting down to platform-level across all platforms, possibly within a fully glazed enclosure.

In my response to consultation on the *Draft Local Plan* last August, I suggested that the project needed to be fundamentally reviewed and redrafted to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms. I note that in a submission to the Council by The Twentieth Century Society, it expressed great concern that the *Draft Local Plan* promoted the Station site for 'comprehensive redevelopment', stating that 'given the architectural and historic importance of the building, as well as its clear townscape value within a conservation area... the draft as it stands runs counter to the guidance of the *NPPF* and to the guidance set out in the *Central Richmond Conservation Area Statement*, which specifically identifies development pressure as a problem, and which promotes the preservation, enhancement and reinstatement of architectural quality', and urged at site-specific proposal SA 18 should be redrafted 'in a way which encourages only conservation-led development which explicitly safeguards the retention and restoration of the 1937 station building'.

Whilst the addition of references to the location of the Station within a conservation area and to its designation as a *Building of Townscape Merit* is to be welcomed, no justification whatsoever is provided for the Council's assertion that 'the Station is a key development site' and that 'there is a need for comprehensive redevelopment' in order to deliver transport interchange improvement. The Council has not provided any assessment of the potential impact on the retail and business health of the remainder of the Town, on the amenity of its residents and visitors, and on the viability of existing cinemas in the Town that would result from providing 'approximately 10 000 square metres of retail floor-space', 'substantial provision of employment floor-space, particularly BI offices', 'other uses, such as for community, leisure and entertainment' and 'housing in (sic) upper floors'. Similarly, the Council has not provided any assessment of the potentially damaging impact on the character and appearance of the conservation area and on traffic movement and car-parking in the Town that would result from the essential servicing requirements of such a vast multi-use development. Such omissions render the proposal as presently worded entirely unsound and unsustainable.

The statement that 'any redevelopment (sic) proposal must be of the highest quality in character and respond positively to the Conservation Area' is entirely inadequate in setting the necessary parameters for development of the site' given the failure to refer to the need to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the

platforms, and the need to ensure that any new development should either preserve or enhance the character and appearance of the conservation area and sustain its significance.

Finally and importantly, as presently drafted, there is a failure to distinguish between the purpose-built railway station, which is clearly of particular architectural, historic and townscape significance, and the later, post-War commercial buildings fronting The Quadrant and the Kew Road to each side of the main Station frontage and the multi-storey car-park on the southern side of the station complex which possess no such significance.

In the interests of clarity and consistency with the conservation and other relevant policies in the *National Planning Policy Framework*, the *London Plan*, and the emerging *Local Plan* and the need for a sound and sustainable statement of planning and conservation policy, the existing the site-specific proposal needs to be fundamentally reviewed and redrafted.

Paul Velluet

15th February, 2017.

PAUL VELLUET, M.Litt., RIBA, IHBC, CHARTERED ARCHITECT

APPENDIX C

LONDON BOROUGH OF RICHMOND-UPON-THAMES DRAFT LOCAL PLAN: PRE-PUBLICATION VERSION FOR CONSULTATION

A RESPONSE FROM PAUL VELLUET, CHARTERED ARCHITECT AND RESIDENT OF ST MARGARET'S

SITE ALLOCATIONS – SA 18 RICHMOND STATION, RICHMOND

AUGUST, 2016

I write as a locally-based architect, a resident of the Borough since 1948 and as a former Chairman of The Richmond Society. I am a member of the RIBA's Awards Group, a former Assistant Director of English Heritage London Region and a former member of the Richmond-upon-Thames Council's Conservation Areas Advisory Committee.

I wish to raise fundamental objections to proposal SA 18 as presently drafted.

The original frontage building of the Station facing Kew Road containing the generously proportioned upper concourse together with the circulation areas, platform-buildings and platform-canopies comprise a well-designed and coherent complex of sufficient special architectural and historic interest to merit statutory listing. Completed in 1937 the station complex was designed for the Southern Railway by the company's Architects Department under the direction of James Robb Scott (1882-1965) and connects sensitively to the surviving and very fine, 19th century platform-canopies serving island-platforms 4 and 5 and 6 and 7. The same architectural team designed the almost contemporary, grade II* listed Surbiton Station.

Having used the Station almost continuously since the early-1960s, together with many other Borough residents and visitors to Richmond, I value the distinctive architectural character and significance of the complex, its efficient layout, and above all, the platforms being day-lit and open to the sky and naturally ventilated. Any development taken across and above some or all of the existing tracks and platforms would not only seriously damage the architectural integrity of the existing station complex but would destroy the amenity presently enjoyed by the travelling public. Accordingly, the proposal as presently envisaged under SA 18 is not only totally unacceptable, but runs against the relevant policies contained in the *National Planning Policy Framework* and the Council's existing and emerging conservation and other policies.

The project needs to be fundamentally reviewed and redrafted to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms.

RICHMOND STATION
Southern Railways 1937

Extract from working drawing for Richmond Station

An Illustrated Architectural and Historical View of the station
prepared in 1998 by

THE RICHMOND SOCIETY

The objectives of this report are:

To provide a brief history of the station and to illustrate the details of architectural interest in the building.

The report compares the station with other railway examples designed and constructed between the wars (1918 - 1939)

Contents

Introduction to the Report	5

Plan of Station dated 1936
Elevations and Sections extracted from the original drawings
Notes and Photographs from The Builder and
The National Railway Museum Archive.

Introduction to the Report

This report has been prepared by the Richmond Society as a factual historical and architectural appraisal of Richmond Station. It has been made as comprehensive as possible by reference both to direct archival material and to the wider context of other contemporary examples which influenced its design.

The instigation of this study has been prompted by the scheme proposals from Railtrack PLC and their first appointed partnership developer to redevelop the whole of the Station's five hectare site. The nub of Railtrack's initial invitation brief to developers was that an improved station environment and integrated transport interchange were to be supported by a major commercial, retail and office development.

As regards the existing station buildings, it appears from the outset that their retention was not envisaged. The brief from Railtrack stated that the provision of a new station concourse including station retail, ticket and travel office would be a "likely" element of the targeted major development scheme.

The plan subsequently prepared by the Trevor Osborne Group indeed adopted a "clean sweep" approach. Any suggestions that (e.g.) the Booking Hall entrance building might be considered for incorporation in a redevelopment were flatly turned down.

The Richmond Society believes evaluation of the existing buildings to be an essential factor in any consideration of plans for the Station site and that this has not been done. The purpose of this report is to remedy this omission and provide to all concerned with the context of present or future schemes for the site, a factual account of the historical and architectural development of the station buildings. An appreciation of the worth and significance of the station is, we believe, essential to recommendations for its future.

Respondent 30 - Jon Rowles on behalf of OBO Friends of Heathfield Recreation Ground and Environs

In relation to Question 11 - In addition to our existing approaches of directing larger scale development to the borough's town centres, and expecting the majority of development on brownfield sites, where should we direct new growth in the borough?

In relation to Question 17 Can you suggest any other ways we could accommodate future growth and new development, ensuring support for sustainable communities?

Result of lack of bin storage for new flats; squalor.
Location: Bridge Way entrance to service road to Whitton High Street

In relation to Q 28 - What other ways could help deliver more affordable housing, in the right locations, given land values and property prices in the borough, and recognise the wider community benefits it brings?

Red Box shows where empty loft space could be converted into new units. This example is Andover Road in Twickenham.

In relation to Question 77 - Do you have any other suggestions on how planning can promote or contribute to creating places and an environment that is conducive to weight loss and active lifestyles?

Arden Close in Whitton – and example of lack of pavements discouraging exercise

Respondent ref. no.	Name / Organisation	Detailed comments
2.	CBRE on behalf of LGC Teddington	<p>We write on behalf of our client LGC Ltd. (hereafter referred to as 'LGC') in response to consultation on the Local Plan Direction of Travel Document and Call for Sites.</p> <p>LGC is the UK National Measurement Laboratory and Designated Institute for chemical and biomeasurement. It has also been home to the UK Government Chemist function for more than 100 years. The company's headquarters is located on Queens Road in Teddington (hereafter referred to as 'the site'). A site plan is enclosed (see Appendix 1).</p> <p>On behalf of our client, we write to revive and reinforce our previous advocacy for redevelopment of the site for a mix of employment and residential uses. Over three years have now passed since our last correspondence on this matter and the importance of bringing forward enabling development on part of the site has never been more crucial.</p> <p>This consultation response follows previous representations submitted to London Borough Richmond upon Thames (LBRuT) on behalf of LGC, in respect of the now adopted Local Plan (July 2018 and March 2020). Previous representations presented to the Council on behalf of LGC were dated 15th February 2017, 18th August 2016 and 28th January 2016. These representations supported a mixed-use allocation at the site, most importantly for a modern, fit-for-purpose headquarters premises, alongside much needed housing, including affordable housing.</p> <p>Since the submission of our previous representations, LGC existing facilities in Teddington have become increasingly unsustainable, obsolete and outmoded. In part, this is due to far reaching changes to customer requirements and continuing evolution and miniaturisation of scientific techniques.</p> <p>Due to the original design and construction methods used, the building has a significantly higher operating cost than any other UK LGC site. In addition, the mechanical and electrical equipment (plant) that had already reached the end of its sustainable lifespan at the time of our previous representations, has now continued to operate for an additional three years. It is evident that the buildings are wholly unsustainable into the medium term. Further, increasingly high operating costs and inefficiencies are in large part due to the facility originally being designed and built for wet chemistry laboratory operations. Over time, substantial changes to scientific methods are evident, particularly with the introduction of instrument based analytical methods (e.g. liquid & gas chromatography and mass spectrometry etc). The site in its current form is now fundamentally constraining LGC's operating model in Teddington, contrary to facilitating the delivery of the LGC's wider business objectives and crucial national and global roles in measurement science.</p> <p>The site remains an important facility to LGC with its skilled local workforce. It is LGC's intention to retain the site as its group headquarters and part of its UK laboratory operations. However, the cost of upgrading the facilities is extremely high and a large portion of the site is surplus to LGC requirements.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>The adopted Local Plan clearly sets out the Council’s broad support for LGC. As stated in paragraph 10.1.4 of the adopted Local Plan – “The borough is home to nationally important scientific institutions such as... the head office of the Laboratory of the Government Chemist (LGC). Scientific, innovation and research, provision of incubator units and laboratories will be supported.”</p> <p>A land-use allocation for mixed-use enabling development would go much further than simply providing a new, high-quality, fit-for-purpose facility to sustain LGC in the borough into the long-term. The site is currently under-developed, under-used and under-occupied. The effective use of this sustainable brownfield site would be assured through the development of a significant quantum of new Grade A office space, separate to that developed for LGC’s new headquarters building. New, much needed employment floorspace would serve to provide accommodation for a range of occupiers including start-ups and expanding/relocating businesses within LBRuT. Enabling development as part of the site through the building of new homes must also form part of any mixed-use allocation. New homes would not only serve to subsidise quality new commercial development on site, but also provide an appropriate means of delivering much needed homes and affordable homes for the borough.</p> <p>Housing and Employment Policy:</p> <p>The adopted Local Plan currently protects the site for employment use through its designation as ‘Locally Important Industrial Land and Business Parks’. We respectfully urge the Council to explore with LGC how the existing net employment floorspace can be successfully re-provided on site, whilst also allowing for the delivery of a substantial number of new homes for the borough. The critical matter of housing land supply and delivery of homes is explored further below.</p> <p>Notwithstanding Policy LP40 (1) of the adopted Local Plan seeks the broad protection of employment land, stating “land in employment use should be retained in employment use for business, industrial or storage purposes”, the policy continues by making an allowance under exceptional circumstances for mixed-use redevelopment. Policy LP40 (4) states “mixed use development proposals which come forward for specific employment sites should retain, and where possible enhance, the level of existing employment floorspace”.</p> <p>The supportive context of Policy LP40 for mixed-use redevelopment is reflected at national policy level. The National Planning Policy Framework (NPPF) actively seeks to promote effective use of land. Paragraph 118 directs that planning policies and decisions should encourage multiple benefits from both urban and rural land, including through mixed use schemes; give substantial weight to the value of using suitable brownfield land within settlements; and promote and support the development of under-utilised land and buildings, especially if this would help to meet identified needs for housing where land supply is constrained and available sites could be used more effectively. A mixed-use allocation would truly serve to optimise the use of this highly sustainable brownfield site.</p> <p>Policy LP34 states a borough target of 3,150 homes for the period 2015-2025, equating to 315 per annum. Crucially, the Council commits to exceeding this minimum strategic dwelling requirement, where this can be achieved in accordance with other Local Plan policies.</p> <p>The London Plan – Intend to Publish (ItP) version (December 2019) should be offered substantial weight given it is now in the final stages of preparation, where it has not been challenged by the Secretary of State. The London Plan ItP version provides for an increased housing</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>land supply requirement for LBRuT of 4,110 over a 10-year period, or 411 units per annum. This represents an increase of 960 units over a 10-year period. At a strategic level, the London-wide Strategic Housing Market Assessment (SHMA) has identified a need for 66,000 additional homes across London per annum.</p> <p>Borough's should be identifying and seeking to enable additional development capacity to supplement targets, thereby realising the true potential of brownfield housing capacity. The London Plan ItP version makes it clear that making the best use of land means directing growth towards the most accessible and well-connected places. Intensification of existing places will be required, including in outer London. Policy GG2c specifically directs the proactive exploration of potential to intensify the use of land to support additional homes and workspaces. This would involve the promotion of higher density development, particularly in locations that are well-connected to jobs, services, infrastructure and amenities by public transport, walking and cycling.</p> <p>Crucially, the very recent (13 March 2020) written response prepared by Secretary of State for Housing, Communities and Local Government to the Mayor of London in respect of the Intention to Publish version of the London Plan, was deeply critical of the response to housing delivery and affordability. The Secretary of State was clear that the approach for the ItP version of the London Plan was "inconsistent with the predevelopment stance we should be taking" and "the necessary decisions to bring more land into the planning system had not been taken". In addition, the Secretary of State reinforced that the "plan must be brought to the minimum level [he] would expect to deliver homes to start serving Londoners in the way they deserve" specifying that site density must be optimised, and development is brought forward to maximise site capacity. Finally, Rt Hon Robert Jenrick MP, in respect of future housing delivery in London, goes on to advise the Mayor of London to make a commitment to "maximise delivery in London, including through taking proactive steps to surpass the housing requirement in [the] plan".</p> <p>At the local level, the LBRuT Local Plan Housing Annual Monitoring Report 2018/19 (13 September 2019) serves to report on the borough's performance in respect of housing land delivery. The AMR states that the Borough performed well in 2018/19 overseeing the completion of 419 dwellings. However, if the average annual housing completions are taken over the 10-year period from 1st April 2009 through to 31st March 2019, it is evident that at 374 units per annum, the number would be insufficient to meet the proposed 411-unit target as stated in the London Plan ItP version.</p> <p>As such, a 5-year housing land supply could not be demonstrated, especially when including an additional buffer of 5% to ensure choice and competition in the market for land, as required by the NPPF. Taking the average annual delivery over the past 10 years and applying that across a 5-year period would equate to 1,869 dwellings, falling short of the London Plan ItP target of 2,055 completions across a 5-year period. When adding a 5% buffer this 5-year housing land supply target increases to 2,158 across a 5-year period.</p> <p>Notwithstanding the above, the reality of the evidence as presented in the Council's AMR 2018-19 represents far more of a challenge. Table 4 of the 2018/19 AMR details the sources of the current 5-year housing land supply. The Council has identified a potential 1,474 units over the 5-year period, 684 units short of the London Plan ItP target plus 5% buffer.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Policy H1 of the London Plan ItP version clearly states that boroughs should prepare delivery focused Development Plans which allocate an appropriate range and number of sites that are suitable for residential and mixed-use development and intensification.</p> <p>Crucially, given the mixed-use nature of LGC's proposal, the London Plan ItP version continues by encouraging the intensification and effective use of land through Policy E1. Policy E1(A) supports improvements to the quality, flexibility and adaptability of office space through new office provision, refurbishment and mixed-use development.</p> <p>In our strong view, the site lends itself well to a mix of employment and residential uses. The site can provide for a comprehensively masterplanned sustainable mixed-use development that retains LGC in the borough, provides new employment space for new, expanding and relocating businesses and delivers much need homes. Importantly, it is clear from the recent under-delivery of affordable housing that the site could serve as a productive and effective contributor to the Council's affordable housing land supply over the forthcoming plan period. It is considered that practical aspects such as car parking and site security can be comprehensively addressed and there is no barrier to delivering a mixed-use scheme in accordance with the National Planning Policy Framework.</p> <p>A new, fit-for-purpose building that meets the current and future needs of this modern, high-technology, knowledge-based employer is vital. LGC attracts highly skilled employees in the life sciences sector. It is broadly accepted that a borough's 'stock' of high skilled workers is one of the key determinants of its economic performance. Thriving local economies require a local workforce with high levels of employability. It should be that employment and skills are drivers of local economic growth. A motivated, flexible, and skilled workforce attracts employers and boosts productivity.</p> <p>Aside from the demonstrable economic benefits there are also a broad number of social and demographic benefits. Indeed, without opportunities for skilled work, the local authority will risk an ageing workforce as young people will ultimately relocate from such an area in search of higher skilled work, training and other benefits elsewhere.</p> <p>It is evident that LGC contribute economically to LBRuT, however, it is not solely the economic value that is important, but also the global reputation of scientific excellence that it provides within the life sciences sector, which is directly associated with Teddington.</p> <p>There is a compelling case for enabling development in this instance, whereby LGC can continue to reside and operate its headquarters from the borough for many years to come, retaining highly skilled employees within a renowned and growing business of both national and global significance.</p> <p>In summary, a proportion of the site is surplus to LGC requirements, whilst the headquarters facility requires substantial modernisation including redevelopment. A sustainable mixed-use allocation including for both employment and residential use would be both suitable and appropriate enabling development, allowing LGC to have a continuing presence in Teddington for the long term. Any mixed-use development proposal for the site would actively seek to make effective use of land, re-providing net existing employment floorspace whilst providing for significant housing delivery, including much needed affordable housing.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>We would be grateful if you could confirm receipt of this letter and confirm that these representations will be duly considered when assessing the strategic direction of the forthcoming local plan. Given the importance of this matter we would welcome a meeting with officers to discuss this proposal in more detail.</p> <p>The Council's support would be strongly welcomed, helping to secure LGC within the borough whilst simultaneously protecting Teddington's rich scientific heritage long into the future.</p> <p><i>[See Appendix for site plan]</i></p>
3.	Katie Parsons, Historic England	<p><u>Call for Sites</u> Historic England has no sites to put forward for consideration. We would however like to draw your attention to the need to consider the historic environment at this stage of the plan making process. Heritage assets and their setting should be included within the assessment of sites which are submitted for consideration as part of the Local Plan process and other planning policy work and, should also consider the impact of sites on heritage assets in adjoining local authority areas.</p> <p>We advocate a wide definition of the historic environment which includes not only those areas and buildings with statutory designated protection but also those which are locally valued and important, as well as the landscape and townscape components of the historic environment. The importance and extent of below ground archaeology is often unknown, although information in the Historic Environment Record (HER) will indicate areas of known interest, or high potential where further assessment is required before decisions or allocations are made.</p> <p><u>Assessing Sites</u> Our advice note 3 on site allocations in local plans (see link below) sets out a suggested approach to assessing sites and their impact on heritage assets. It advocates a number of steps, including understanding what contribution a site, in its current form, makes to the significance of the heritage asset/s, and identifying what impact the allocation might have on significance. This could be applied to the assessment and selecting of sites within a plan.</p> <p>In assessing sites it is important to identify those sites which are appropriate for development and also to assess the potential capacity of the site in the light of any historic environment (and other) factors. This should be more than a distance based criteria but rather a more holistic process which seeks to understand their significance and value. Whilst a useful starting point, a focus on distance or visibility alone as a gauge is not appropriate.</p> <p>All potential sites will need to be appraised against potential historic environment impacts. It is imperative to have this robust evidence in place to ensure the soundness of the Plan. We recommend that the appraisal approach should avoid merely limiting assessment of impact on a heritage asset to its distance from, or inter-visibility with, a potential site. Site allocations which include a heritage asset (for example a site within a Conservation Area) may offer opportunities for enhancement and tackling heritage at risk, while conversely, an allocation at a considerable distance away from a heritage asset may cause harm to its significance, rendering the site unsuitable. Cumulative effects of site options on the historic environment should be considered too.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>The following broad steps might be of assistance in terms of assessing sites:</p> <ul style="list-style-type: none"> • Identify the heritage assets on or within the vicinity of the potential site allocation at an appropriate scale. • Assess the contribution of the site to the significance of heritage assets on or within its vicinity • Identify the potential impacts of development upon the significance of heritage asset • Consider how any harm might be removed or reduced, including reasonable alternatives sites • Consider how any enhancements could be achieve and maximised • Consider and set out the public benefits where harm cannot be removed or reduced <p>If a site is allocated, we would expect to see reference in the policy and supporting text to the need to conserve and seek opportunities to enhance the on-site or nearby heritage assets and their setting, the need for high quality design and any other factors relevant to the historic environment and the site in question. Site allocations which include a heritage asset (for example a site within a Conservation Area) may offer opportunities for enhancement and tackling heritage at risk.</p>
8.	Sharon Jenkins, Natural England	<p>Thank you for your consultation request on the above Strategic Planning Consultation, dated 24th February, 2020. Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development. Natural England have no comments to make on this consultation.</p>
11.	Surrey County Council	<p>Thank you for consulting Surrey County Council s the Minerals and Waste Planning Policy team and Spatial Planning team on the Local Plan Direction of Travel consultation and Call for sites. We do not have any specific comments to make on this consultation, but please keep us informed of any future consultations.</p>
13.	Heather Archer, Highways England	<p>Your consultation is also asking for land to be identified for development. The Secretary of State for Transport does own and manage land within some areas of District Councils and a list of land available for sale is publicly available as identified below. Please therefore be advised that land that has been identified, that is already available for sale can be found on My Government Space website using the following link: https://www.gov.uk/find-government-property</p>
19.	DP9 Ltd on behalf of London Square Developments	<p>Call for Sites – Site allocation</p> <p>It is put forward that the Site is allocated within the new Local Plan for residential development on the basis that this is an appropriate brownfield site for this use. The site is immediately available for development and is located within a residential area. The requirement to re-provide the employment floorspace should not be included in this instance due to the site constraints and accessibility as outlined in detail above that make the site inappropriate for continued employment useA site plan is submitted denoting the proposed site allocation and ownership in red.</p> <p><i>Continued Employment Use</i></p> <p>There are significant Site constraints associated with the Site within the residential area which make it inappropriate for continued commercial use. The Site constraints are well documented within the London Borough of Richmond Employment Sites and Premises Study (2017) which identifies that “The site is bounded by residential uses. Crane Road is primarily residential road which means that operating hours, types of industrial activity and access are constrained. The current use experiences issues with HGV access”. The Site is identified as</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>having poor compatibility with surrounding neighbours and poor access via residential roads with resident's parking on both sides. Furthermore, The LBRuT Employment Sites and Premises Study (2017) sets out that <i>"The departure of Greggs presents an opportunity to redevelop a large site. However, the layout and location of the site has a number of constraints including access, hours of operation and the types of industrial activity permitted limiting the amount of employment floorspace that could be delivered. Redevelopment of the site would realistically be through a mixed use scheme. The northern part of the site, fronting the River Crane, is the most suitable area for employment use."</i></p> <p>It was noted by Officers that the Peter Brett Associates Report (2017) was produced before the GLA undertook a revision of the industrial land release benchmark. As such the draft London Plan sought to retain industrial capacity within the London Borough of Richmond, however as outlined above, the SoS has found this approach unsound. The Site was therefore protected in line with the London Plan aspirations on the basis that all employment Sites should be retained disregarding the evidenced site constraints that make the Site inappropriate for continued employment use.</p> <p>As identified by LBRuT, the use of the Site by Greggs as a bakery generated a significant level of daily HGV movement on the local highway. The streets surrounding the Site are narrow residential streets and are often heavily parked on both sides. The presence of HGVs on the residential street resulted in severe highways impacts including damage to parked cars. There is also evidence of damage to footways and kerbs where HGVs have had to mount the pavement. This also presents a safety risk for other road users and pedestrians. Local complaints of noise and poor air quality as a result of the presence of HGVs accessing the Site have also been reported. Greggs Bakery benefits from an unrestricted consent, meaning deliveries and servicing to and from the Site took place throughout the day including early in the morning and late in the evening.</p> <p>As demonstrated in the Site's planning history, there have been a number of attempts to ameliorate the noise amenity impacts of the bakery operation on the neighbours over the years. Specifically, an application (ref. 08/3145/FUL) was approved in November 2008 for the installation of a noise barrier to the rear of 20-22 Crane Road. The officer report for this application identified that the benefits of the proposed barrier were not <i>"limited to the activities around the waste storage but beyond this area where there is a high degree of noise and disruption from vehicular movements from Greggs and other delivery vehicles, noise and chatter amongst workers and rivers and other such activities within the site."</i></p> <p>A prior application (ref. 85/1756) for <i>"The erection of noise baffle sidewall sheeting and roof to covered van closing area together with screen"</i> was approved on 13th February 1986. This demonstrates the longstanding incompatibility issues associated with the use of the Site as a bakery in close proximity to residential dwellings. Despite the careful management of the bakery by Greggs and the acoustic measures implemented, the uses were not considered to be neighbourly uses and contributed to the vacation of the Site by Greggs to relocate to a purpose-built facility in a more accessible and appropriate location.</p> <p>Paragraph 120 of the NPPF identifies that <i>"Planning policies and decisions need to reflect changes in the demand for land. They should be informed by regular reviews of both the land allocated for development in plans, and of land availability. Where the local authority considers there to be no reasonable prospect of an application coming forward for the use allocated in a plan:</i></p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p><i>a) they should, as part of plan updates, reallocate the land for a more deliverable use that can help to address identified needs (or, if appropriate, deallocate a site which is undeveloped); and</i></p> <p><i>b) in the interim, prior to updating the plan, applications for alternative uses on the land should be supported, where the proposed use would contribute to meeting an unmet need for development in the area.”</i></p> <p>In line with the requirements of the NPPF and as demonstrated, there is no reasonable prospect of the site coming forward for the use allocated in the current plan. On this basis, it is considered that a site allocation for residential-led use which meets an unmet need in the Borough should be brought forward in accordance with NPPG paragraph 120.</p> <p><i>Office Use</i></p> <p>In accordance with the adopted Local Plan Proposals Map, the site is located within the Key Office Area – West Twickenham Cluster. Adopted policy encourages new office development within designated Key Office Areas. While the Site may be appropriate for minor provision of office space as part of mixed-use development, it is our consideration that the Site should not be allocated for office-led development.</p> <p>Paragraph 86 of the NPPF directs main town centre uses, such as office use, to existing town centres. Policy E1 of the draft London Plan seeks to consolidate and extend office markets in outer London, focusing new development in town centres and existing office clusters, having regard to Table A1.1 which sets out centres with greatest potential to accommodate office development. The aforementioned table identifies the nearest town centre, Twickenham, as having potential to accommodate mixed-use office development. Representations submitted to Richmond Council from the GLA (dated 20 March 2020, ref. LDF22/LDD16/LP02/HA01) echoes this approach. This approach is important to ensure the vitality and viability of existing town centres. As the Site is not located within a town centre nor an existing cluster of office use, the Site is not appropriate for continued allocation as a Key Office Area.</p> <p>Moreover, the GLA’s representations state that Richmond should differentiate its approach towards industrial and office development. We agree with this consideration as it is evident that there is some overlap in the allocations of Locally Important Industrial Land and Key Office Locations, including the West Twickenham Cluster Key Office Area. Again, office development should be directed to town centres and existing office clusters.</p> <p>The Site is not located near any town centre nor the amenities required to support a significant commercial workforce. The 175 sqm of floorspace proposed as part of application ref. 19/0646/FUL is considered to be the maximum viable level that can be sustained in this location. A local demand report by Milestone Commercial was submitted in support of the aforementioned application which confirms that there is no demand for a significant level of office floorspace in this residential location outside of a centre and as such development of a significant level of offices in this location would come with a high risk of vacancy. It is identified that there are high vacancy rates of offices and falling rents within the surrounding area and Milestone’s opinion is that a fully commercial scheme would not be viable or sustainable due to the lack of demand.</p> <p><i>Brownfield Site</i></p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Paragraph 118 of the NPPF (July 2018) sets out that planning policies and decisions should “give substantial weight to the value of using suitable brownfield land within settlements for homes and other identified needs, and support appropriate opportunities to remediate despoiled, degraded, derelict, contaminated or unstable land.” The proposals accord with these objectives whilst enhancing the character and appearance of the Site and surrounding area.</p> <p>Policy 3.3 of the London Plan identifies the potential to realise brownfield housing capacity, including for mixed use redevelopment, especially with surplus commercial capacity.</p> <p>The importance of utilising brownfield Sites is maintained in the Draft London Plan and the supporting text of draft London Plan Policy GG4, which identifies that “Reusing large brownfield sites will remain crucial, although vacant plots are now scarce, and the scale and complexity of large former industrial sites makes delivery slow.”</p> <p>Planning policies at all levels encourage the effective use of previously developed land. The proposed allocation of this brownfield Site would accord with this objective.</p> <p><i>Residential Use</i></p> <p>The Site has potential to deliver at least 116 residential dwellings over a mix of unit sizes and tenures. This provides an opportunity to contribute to strategic objectives for delivery of housing, including family housing and affordable housing.</p> <p>Redevelopment of the brownfield Site, which currently comprises outdated industrial buildings, will benefit the predominantly residential character of the area. Redevelopment will remove an unneighbourly industrial use and its associated HGV trips on residential streets. The Site also provides an opportunity to open up access to the River Crane at its northern edge.</p> <p>There is a clear justification and significant benefits to be gained in the redevelopment of the Site for residential accommodation which is appropriate within the surrounding residential context. The proposed residential use is supported in line with national objectives to increase the housing supply across the capital, the London Plan aspirations to deliver new homes across London and the Local Plan requirements to deliver a significant level of new homes specifically within West Twickenham.</p>
21.	Lucy Wakelin, Transport for London Commercial Development	<p>TfL CD owns two sites within the borough which are suitable for residential development. Optimisation of both sites through residential-led development would align with Intend to Publish London Plan Policies H1 and D3, proposal 97 of the Mayor’s Transport Strategy and paragraph 122 of the National Planning Policy Framework, which seek to ensure the efficient use of land (particularly housing delivery) through maximising development potential. As requested, we provide details of the two sites below.</p> <ul style="list-style-type: none"> • Twickenham Bus Stand, Station Yard, TW1 4LG <p>Twickenham Bus Stand is owned freehold by Transport for London. At present this site has ongoing operational requirements however, TfL CD recognises that Twickenham Bus Stand has the potential for future residential development should a suitable and feasible alternative site be found to accommodate the ongoing operational requirements. This is also recognised by site allocation TW 2 – Station</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Yard in the Twickenham Area Action Plan (2013) which covers Twickenham Bus Stand and the adjacent, privately owned site. A planning application was recently submitted on this adjacent site and is currently pending a decision (ref: 19/3616/FUL).</p> <ul style="list-style-type: none"> • Fullwell Bus Garage, TW2 5NX <p>Fullwell Bus Garage is owned freehold by Transport for London. This site has the capacity for a significant mixed-use redevelopment, including re-provision of the bus garage. Redevelopment of this site has the potential to provide a substantial number of new homes and aligns with Intend to Publish London Plan Policy H1 which states that boroughs should <i>'optimise the potential for housing delivery on all suitable and available brownfield sites through their Development Plans'</i>. TfL CD also has freehold ownership of the LIDL site and would look to engage with RATP and the GLA about the opportunity for a comprehensive redevelopment of the wider site. For clarity, we have provided two separate red line boundaries; one to show the TfL owned site and one to show the potential comprehensive red line, including RATP and third party ownership.</p> <p>[See Appendix for site plans]</p>
22.	Jimmy Wallace, Richmond Athletic Association	<p>Call for Sites Consultation</p> <p>The Site & Site Allocation</p> <p>The Richmond Athletic Ground is the subject of a Site Allocation (SA 23) in the adopted Local Plan (July 2018). We therefore submit to the Call for Sites Consultation that a Site Allocation should be carried forward to the emerging Local Plan but that it should be amended to better reflect the redevelopment aspirations for the Athletic Ground.</p> <p>Whilst there will be future opportunities to comment on the detailed wording of the future Site Allocation as the Local Plan progresses through its various consultation stages, we set out below some of the key requirements which we believe should be included in the Site Allocation.</p> <p>The current Site Allocation text states the following: <i>"The Council supports the continued use of this site for sports uses, including improvements and upgrading of existing facilities. Additional associated leisure facilities and other complementary uses could be incorporated provided they have been fully justified as being necessary to support the continued sporting uses on the site, that they demonstrate meeting identified needs, do not detract from the main use of the site as a sports ground, and have been developed to take account of the Metropolitan Open Land (MOL) and historic designations."</i></p> <p>The emerging Site Allocation text should be updated as follows: <i>"The Council supports the continued use of this site for sports uses, including improvements and upgrading of existing facilities. Additional associated leisure facilities and other complementary enabling uses, including residential, could be incorporated provided they have been fully justified as being necessary to support the continued sporting uses on the site, that they demonstrate meeting identified needs, do not detract from the main use of the site as a sports ground, and have been developed to take account of the Metropolitan Open Land (MOL) and historic designations."</i></p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>We provide our initial justification for these proposed amendments below. Clearly, we reserve the ability to comment in much greater detail once the emerging Local Plan, including the proposed Site Allocation, is issued for formal consultation.</p>  <p style="text-align: right;"><i>Site Location Plan</i></p> <p>Potential Type of Development</p> <p>As set out in the introduction to this correspondence, the RAA is in the early stages of developing a revised masterplan for the Athletic Ground involving improved facilities including enhanced sport facilities and proposals for better public access and enabling uses to fund the delivery of the proposed development.</p> <p>The RAA anticipates that pre-application planning discussions with LBRuT, the Greater London Authority (GLA) and other key stakeholders will be commenced in the short term. This follows a period of ongoing project review which has sought to develop the optimum proposals for the site to guarantee the delivery of this significant project.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Whilst further discussions will take place in formal pre-application meetings and wider consultation, the current preferred approach for the redevelopment of the site is broadly comprised of the demolition of a number of the existing buildings on the site and the provision of a new Grandstand with associated uses (e.g. bar, gymnasium, changing rooms, function rooms), a new Sports Hall with community access, refurbishment of the existing Grade II listed Pavilion building, a new groundsman building together with associated ground works, enhanced playing pitches (both grass and artificial), and new floodlighting. In addition to the proposed sports uses, it is proposed that up to 100 residential units (across a range of tenures including affordable housing) will be delivered as an enabling element of the wider masterplan to cross-subsidise the delivery of the proposed new sports facilities. Whilst details including proposed drawings outlining the proposals will be provided as discussions progress, it will be clearly demonstrated how the proposed masterplan will significantly enhance the overall character and appearance of the site delivering key benefits both in terms of significantly enhanced sporting facilities but also other landscape improvements. The proposed residential component will be located on existing brownfield land within the site and will constitute a very small component of the overall site.</p> <p>Timescales & Delivery</p> <p>In terms of the availability of the site for redevelopment, the RAA envisages that the pre-application planning and engagement process will commence later this year and that subject to securing the necessary planning permissions and approvals, the development could commence by late 2021 / early 2022, albeit clearly working around the constraints of the rugby calendar. Therefore, the emerging Local Plan and Site Allocation should consider the site to be deliverable in the first 5 years of the plan period.</p> <p>We are not aware at this stage of any barriers or physical constraints that would preclude the future redevelopment of the site. The site is designated as Metropolitan Open Land (MOL). The existing Pavilion building is Grade II listed and the site lies within a Grade I Historic Park and Garden and Conservation Area as well as within the Royal Botanic Gardens, Kew World Heritage Site buffer zone. These designations are all highly relevant to the acceptability to any future redevelopment of the site and would be fully assessed during both the pre-application stages and as part of any future planning application for the site.</p> <p>We trust that our initial representations will be taken into account in preparing the detailed draft of the new Local Plan. We commend the borough for commencing this early stage engagement and review of the adopted Local Plan to ensure that Local Plan policies are developed that are fit for purpose. The RAA is very keen to engage with LBRuT at the earliest opportunity and wishes to continue to be involved in further consultations on the Local Plan process moving forward.</p>
24.	Paul Velluet	<p>3.1 As noted above [See respondent no.24 in the Direction of Travel Responses Schedule], I welcome the opportunity of putting forward a number of significant issues relating to the future of Richmond Station for consideration in the preparation of a new <i>Local Plan</i> given the failure of both the Council and the Inspector to properly or adequately consider and respond to such issues which I put forward in the consultations and submissions leading to the adoption of the <i>Richmond-upon-Thames Local Plan</i> in July, 2018. The preparation of a new Local Plan provides the opportunity to review and resolve these particular anomalies and omissions.</p> <p>3.2 As noted in the Introduction to my <i>Statement regarding Site-specific Proposal SA 19 – Richmond Station, Richmond</i> of September, 2017 (see copy attached) [See Appendix], I was, and remain, seriously concerned regarding the soundness of specific aspects of the <i>Richmond-</i></p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p><i>upon-Thames Local Plan</i> relating to Richmond Station and its future – Site specific Proposal SA 19 – given that they are insufficiently robust in providing the Council as local planning authority and the local community with effective control over development affecting the particular architectural and historic interest and significance of Richmond Station as ‘a non-designated heritage asset’, and the character, appearance and significance of the Central Richmond Conservation Area as ‘a designated heritage asset’ (in the terms commended in the relevant parts of the <i>National Planning Policy Framework</i>).</p> <p>3.3 In Section 3 of my <i>Statement</i>, I set out my concerns about the soundness of specific aspects of the <i>Plan</i> relating to Site-specific Proposal SA 19 - Richmond Station, Richmond explaining the reasons for such concerns, and putting forward my suggestion on the potential means of addressing the weaknesses of the <i>Plan</i> as then submitted and securing amendment which would contribute to providing a sounder definition of the Proposal insofar as was necessary to ensure that the particular interest and significance of Richmond Station as a non-designated heritage asset and the character, appearance and significance of the Central Richmond Conservation Area as a designated heritage asset could be sustained. In setting forward these concerns, I stressed that I saw no objections to the incorporation of wording in the proposal statement referring to the provision of improved public transport interchange facilities on the site or to the potential redevelopment of the various post-war buildings to the immediate north and south of the original station-complex subject to the satisfactory scale and design.</p> <p>3.4 Regrettably, the Inspector failed to recognise or adequately recognise the significant issues about the inherent weakness Site-specific Proposal SA 19 raised in my <i>Statement</i> in his <i>Report of the Examination of the Richmond upon Thames Local Plan</i> of the 26th April, 2018 (at paragraphs 146 to 148). Accordingly, the wording of Site-specific Proposal SA 19 in the present <i>Local Plan</i> remains unduly weak and inadequate in relation to conservation issues, but importantly, potentially damaging to the survival of the existing retail role of George Street, The Quadrant, King Street and Hill Street at the heart of Richmond given the stated objective of accommodating a substantial quantum of retail floor-space on the site.</p> <p>3.5 Regrettably, despite the advice given by planning officers to the <i>Local Plan</i> hearing in September, 2017, that a revised planning brief for the Station site was being prepared to supersede that of March, 2002 and that officers were in discussion with Network Rail about the future development of the Station, and a written request to the Council’s Principal Planner in July, 2018, for an update on the position, the highly deficient <i>Richmond Station Planning Brief</i> of March, 2002 remains on the Council’s planning policy web-site and is still referred to in the present <i>Local Plan</i> – be it now referred to a ‘development brief’.</p> <p>3.6 Many aspects of the present <i>Planning Brief</i> not only pose substantial threats to the architectural and historic significance of the existing station as a locally listed complex and the Central Richmond Conservation Area through references to potential ‘comprehensive redevelopment’ and the creation of a ‘landmark building’, but importantly, but also substantial threats to the vitality and viability of the long- established retail roles of George Street, The Quadrant, King Street, Hill Street and other parts of the heart of Richmond (and its existing cinemas) by actively encouraging the establishment of a substantially scaled, mixed-use development above the tracks including retail and leisure uses.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>3.7 Importantly, a particular threat posed by comprehensive redevelopment of the Station site as envisaged in both the <i>Local Plan</i> of 2018 and the <i>Planning Brief</i> of 2002 is reinforced by the site being identified as offering potential for the development of 'tall buildings' in the Council's <i>Borough-wide Sustainable Urban Development Study</i> of September, 2008 (at paragraph 4.2.2.).</p> <p>3.8 I attach a copy of my <i>Statement regarding Site-specific Proposal SA 19 – Richmond Station, Richmond, for presentation at the relevant hearing session of the Inspector's examination</i> of September, 2017. [See Appendix for copy of earlier submission]</p>
26.	Hannah Lukacs	<p><i>[Note for context: London Square Developments sent letters to residents in the area notifying them about the Council's Call for Sites and encouraging them to provide feedback on the type of development they would like to see on the site]</i></p> <p>I was surprised by your recent letter, you quoted many figures regarding the public engagement supporting for the principle of redeveloping the site.</p> <p>Can I ask where these figures were collected from?</p> <p>I live in Crane Road and am aware that we have as a whole street presented many concerns with regards to this potential development. Whilst I understand the need for more housing in the borough, the development only appears to consider this as a factor and no other. ie school places are already at a premium, buses in the morning are packed out and many times refuse to let me on, our drains are always blocking, parking around here despite residential parking remains difficult, old peoples support and facilities are minimal. Personally I believe part of this site needs to be left as green space - not a token amount, realistic thought into the impact on local transport, school places, drainage etc etc continues to need to be considered.</p> <p>If you want family homes then this should minimally be a one side of road development to ensure parking, adequate gardens, and minimise the impact on local transport schools etc.</p> <p>Overall we continue to be anxious about any change to the site as an already packed with terraced houses cannot sustain more. I believe there are many people in Crane Road with similar concerns, we have had plans put to us with regards to housing but no options or considerations about other possible businesses, eg offices etc have been put forward, hence this appear a one horse race.</p>
31.	Tim Catchpole on behalf of the Mortlake with East Sheen Society	<p>SA24 Stag Brewery – need to review?</p> <p>SA25 Mortlake and Barnes Delivery Office – why include?</p> <p>SA27 Telephone Exchange and 172-176 URRW – comprehensive redevelopment still required</p> <p>SA28 Barnes Hospital – detailed planning still to come</p> <p>Mortlake Station – was included before and needs to be included again</p> <p>Richmond Park Academy – need to consolidate to ensure 6th form viability</p> <p>Christ's School – ditto</p>
33.	Tim Catchpole on behalf of the Mortlake Brewery Community Group	<p>Response from Mortlake Brewery Community Group</p> <p>SA24 Stag Brewery</p> <p>On 25 Jan. 2020 the Planning Committee recommended approval of (A) redevelopment for 813 housing units and various mixed uses and (B) development of a secondary school and all-weather pitch on the playing fields but refused (C) the reconfiguration of Chalkers Corner to service (A) and (B). At the time of writing there has been no news of the s106 agreement which needed to be finalized before all three applications are referred to the Mayor for decision. It remains to be seen whether the Mayor will insist on a larger affordable housing element which can only be achieved if the development were to lose some of its costly basement carpark and become more car free.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Meanwhile the ONS population projections for the Borough based partly on the 2018 birth rate data were published on 24 March 2020. This shows the 5-year olds (most being the state primary school intake population) as continuing to decline for the next 15 years while the 11 year olds (most being the secondary school intake) are shown as peaking in 2021 and then declining for the next 15 years. The picture is the same in the neighbouring boroughs of Wandsworth, Hounslow and Kingston except that the secondary school intake population peaks in 2023 before declining. This supports the finding of the Mortlake Brewery Community Group that, using the latest available data and adjusting for cohort shrinkage in the primary schools, <i>the Borough's own model</i> predicts that secondary demand in the north-east <i>including demand from children in neighbouring boroughs</i> will peak in 2021 at about 660, requiring three extra forms, and decline thereafter until at least 2025, when the demand will be about 595, requiring less than one extra form (there were no primary data to justify a prediction beyond 2025 when this finding was published). On this basis we cannot see the need for another secondary school in the east of the Borough and we urge the Council to consider once again the consolidation of the existing secondary schools in the north-east and the relocation of Thomson House School from its highly dangerous site at the Mortlake Station level crossing to the site shown in the original Planning Brief for the Brewery development.</p> <p>If the primary school is relocated then there is no need for the all-weather pitch. The playing fields should be retained, as in the original Planning Brief, with a possible upgrading of the grass turf. They are a designated OOLTI and a visual, as well as recreational, asset; they also provide a much needed soft surface serving as a soakaway in the extreme rainy conditions which are becoming more common-place in the new era of Climate Change.</p> <p>Thus, the decision on the Brewery development has not been finalized and there are still details to be submitted pursuant to planning permissions being granted. So we would like to see this site retained in the update of the Local Plan.</p> <p>We would like to add two more: Richmond Park Academy If the final decision on the Stag Brewery Site is for a Primary rather than a Secondary School then RPA will need expansion to 8-form entry. This will enable greater viability for its 6th form. There is scope to allow further expansion without encroaching onto existing spaces which are designated OOLTI and without detriment to the Buildings of Townscape Merit on the site. The Council will need to negotiate necessary funding from the DfE. We would therefore like to see this site included in the update of the Local Plan.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		 <p>Mortlake Station</p> <p>This site, including its surrounds, featured in an earlier Local Plan but not in the current version. While we are all supportive of our local timber yards and builders’ merchants remaining in the area, these are currently sited on both sides of the station and, it has to be acknowledged, do not provide the ideal ‘gateway’ for visitors arriving at the station and heading for the prestigious Brewery development to the north and Richmond Park to the south. In addition they attract sometimes dangerous HGV movements adjacent to the level crossing and also the movement of forklift vehicles amongst pedestrians accessing the station. The current situation is already dangerous but with the additional pressure due from the STAG site development would clearly become even more unacceptable without major intervention. The Brewery development is expected to generate significantly more vehicular, and especially cycling and pedestrian traffic over the level crossing. The current footways and footbridge are completely inadequate. A detailed study is required of this whole site and the scope for development and/or enhancement and funding explored.</p> <p>We would therefore like to see this site included in the update of the Local Plan. We suggest it encompasses a small portion of Mortlake Green (as may be required to accommodate a safer crossing scheme), both the timber yards, the car showroom, the builders’ merchant and the car park sufficient to provide a high quality solution to the crossing. We are also extremely concerned about the current location of Thomson House Primary School immediately adjacent to the crossing and urge the Council and the school to consider an alternative location.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>In addition we would like to see the following development site outside our area included:</p> <p>Christ's School If the final decision on the Stag Brewery Site is for a Primary rather than a Secondary School then RPA will need expansion to 6-form entry. This will enable greater viability for its 6th form. There is scope to allow further expansion with only minimal encroachment onto MOL. The Council will need to negotiate necessary funding from the DfE. We would therefore like to see this site included in the update of the Local Plan.</p> 
34.	DP9 Ltd on behalf of Harlequin Football Club Limited	<p>1. Introduction 1.1 The recently published London Borough of Richmond Upon Thames Local Plan Direction of Travel Consultation document includes a request for landowners to identify sites in the borough that may be suitable for future development. 1.2 The following representations identify the Harlequin Football Club site (also known as the Twickenham Stoop) and the adjacent Twickenham Central Depot site as a major mixeduse redevelopment opportunity. Harlequin Football Club has been in dialogue with the Council regarding this opportunity for a number of years.</p> <p>2. Site Description</p>

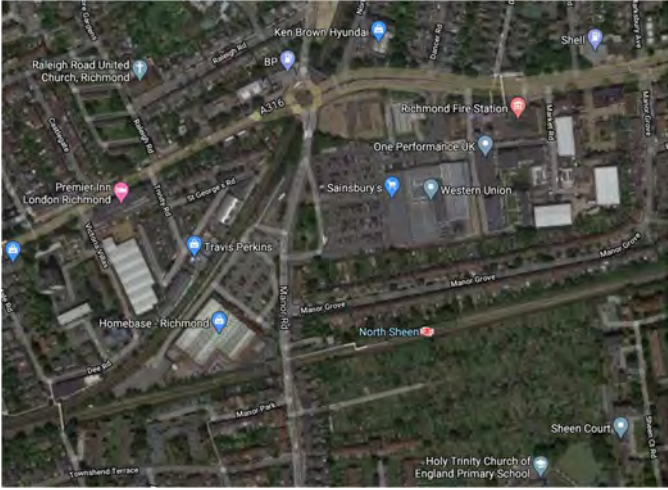

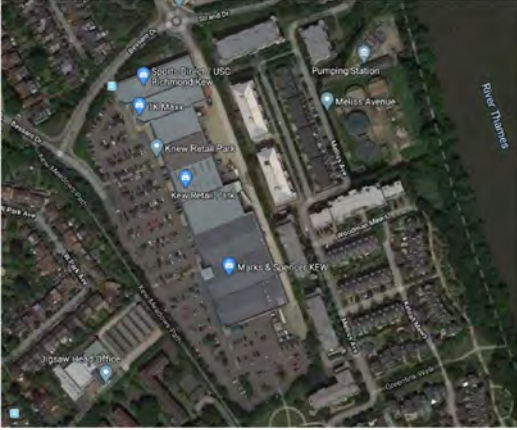

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>2.1 A site location plan is included as Appendix A, and a detailed description of both sites is set out below. The combined total area of both sites is 9.7 hectares, which represents one of the largest and most important strategic redevelopment opportunities in the entire borough.</p> <p>Harlequin's Site</p> <p>2.2 Harlequin Football Club Limited, the site owner, is located on a triangular parcel of land to the south of the A316. The Site is bounded to the west by the "Duke of Northumberland River" and beyond that by the large Rosebine car park and an estate of residential properties which form part of the Rosecroft Gardens Conservation Area. Richmond Upon Thames College is located to the east of the site, itself going through a major redevelopment.</p> <p>2.3 The stadium comprises four stands, the Eastern Stand was constructed in 1996 and has a capacity for circa 4,042 spectators, with accommodation at ground and first floor level which is utilised for corporate hospitality and entertainment on match days and corporate events / meetings and private functions on non-match days. The southern end of the ground was redeveloped in 2006, with the demolition of the existing uncovered stand and the installation of a temporary Southern Stand which holds a capacity for circa 4,100 spectators, with ancillary educational facilities beneath.</p> <p>2.4 The Western end of the ground was redeveloped in 2005, with the demolition of the previous Western Stand and groundman's house and installation of a covered stand with a capacity for 3,881 spectators along with ancillary features including, players and officials facilities, club offices, club shop, a Members bar, 13 corporate hospitality boxes, an Executive club and two lounges.</p> <p>2.5 To the east of the Eastern Stand lies a triangular parcel of accessible open land, which had previously been utilised by the club for training along with hospitality events. In 2005, planning permission was granted for the development of a four-storey block of flats (67 units) on a portion of the open land as enabling works to fund the development of the Western Stand. The residential block includes both social and private housing and is known as "Challenge Court". The remaining area of open land has been retained as publicly accessible open space.</p> <p>2.6 Substantial open car parking facilities are provided on site between the stadium and the A316, providing approximately 400 on site car spaces.</p> <p>2.7 A Nuffield Health Gym is located on the eastern boundary of the Site and is within the land ownership of Harlequin Football Club.</p> <p>2.8 Vehicular access to the Site is provided via the A316, with a left turn into / out of the A316. The access road also serves the Twickenham Central Depot, with a branch route into the College Site, for use as an emergency access route by the club. The College has a right of access to use Langhorn Drive to serve its site. This junction is being significantly upgraded in the summer of 2020 to provide a traffic light left and right turn junction and new street level crossing.</p> <p>2.9 The Duke of Northumberland River forms the western boundary of the Site, with the Twickenham Central Depot and area of green open space located to the south of the Site.</p> <p>Twickenham Central Depot Site</p> <p>2.10 The Depot Site, owned by Richmond Upon Thames Council, is located immediately to the south of the Harlequin's stadium. The Site is bounded by the Richmond Upon Thames College Site to the north-east, and the Craneford Way recreation area with playing fields and children's playground to the east. The western edge of the Site lies along the path of the Duke of Northumberland River, with residential properties at Rose Croft Avenue beyond, and the main London to Reading railway line to the south.</p> <p>2.11 The West London Waste Plan (2015) identifies that the Site has been used for the following purposes:</p>

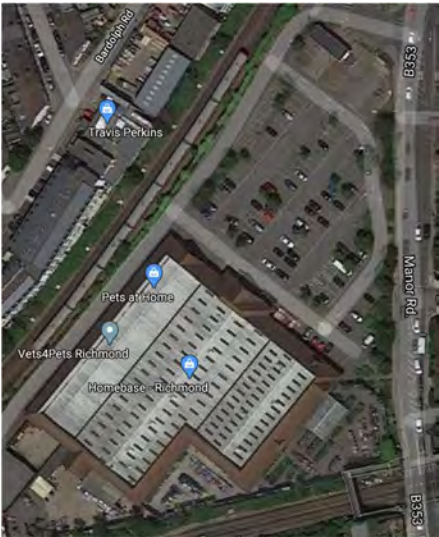

Respondent ref. no.	Name / Organisation	Detailed comments
		<ul style="list-style-type: none"> • for the parking of refuse and recycling vehicles; • material recovery facility (MRF); and • bulking facilities to support municipal recycling services, for a continuous period over the last 10 years. <p>2.12 There are a few structures currently onsite, including a two-storey residential property, prefabricated offices, a redundant Victorian brick building also known as the former pumphouse, bulking bays, workshops and covered vehicle storage.</p> <p>3. Housing Need [as under Respondent no. 34 in the Direction of Travel Responses Schedule]</p> <p>3.1 The Local Plan Direction of Travel Consultation document identifies housing delivery and meeting the housing targets set out in the London Plan as one of the key reasons why a new Local Plan is required.</p> <p>3.2 The Intend to Publish version of the London Plan (December 2019) provided Richmond with a new housing target which was substantially higher than the target set out in the adopted London Plan. The ten-year delivery target for the period from 2019/20 to 2028/29 is 6,440 new homes, which equates to 644 units per annum. The Direction of Travel Consultation document states that 315 new homes per annum will be delivered in the borough between 2015 and 2025, which highlights a major shortfall.</p> <p>3.3 To compound this particular issue, publication of the Local Plan Direction of Travel Consultation has been followed by a letter from the Secretary of State for Housing, Communities and Local Government to the Mayor of London, directing him to make changes to the new draft London Plan before it can be adopted. A relevant extract from the letter states: <i>“I had expected you to set the framework for a step change in housing delivery, paving the way for further increases given the next London Plan will need to assess housing need by using the Local Housing Need methodology. This has not materialised, as you have not taken the tough choices necessary to bring enough land into the system to build the homes needed.”</i></p> <p>3.4 Taking account of the above, one can expect that housing targets for individual boroughs will further increase in the short term. Through the new local plan process, it is therefore imperative that the Council seeks to promote the consolidation and intensification of large underutilised sites in the borough and targets the least constrained sites for higher density development. It is our strong view that redevelopment of the Harlequin’s site and the Twickenham Central Depot site can make a significant contribution to achieving these targets, whilst at the same time easing the pressure on other more sensitive parts of the borough.</p> <p>3.5 As suggested in the Direction of Travel consultation document, we support the undertaking of a borough wide Urban Design Study as a tool to help identify redevelopment opportunity sites and quantify the appropriate scale of development on individual sites.</p> <p>4. Potential Land Uses</p> <p>4.1 Through a well-designed Masterplan, and allowing for densities to increase on this important strategic site, we believe that it is capable of accommodating a wide range of uses, including the following:</p> <ul style="list-style-type: none"> • A significant quantum of new homes, including affordable homes, with a mix of tenures and sizes • A new sports stadium, subject to demonstrating long term viability • A consolidated multi-function Council Depot • Workspace, conference and exhibition space, including incubator space for start-up businesses • Hotel

Respondent ref. no.	Name / Organisation	Detailed comments
		<ul style="list-style-type: none"> • Student accommodation • Health and Leisure facilities • Retail, including bars and restaurants within the stadium <p>5. Site Opportunities</p> <p>5.1 Redevelopment of the site to deliver such uses offers significant opportunities at a local, regional and national level for the reasons set out below.</p> <p>1. Making More Efficient Use of Land - The existing site as a whole and particularly the existing Twickenham Central Depot is inefficient, uses more land than it needs and requires investment. A phased mixed-use redevelopment will make more efficient use of this important site in accordance with the National Planning Policy Framework and draft London Plan.</p> <p>2. A Masterplan led, Mixed Use Neighbourhood - A thoughtfully-designed, residential and mixed-use neighbourhood that promotes health and well-being for all, including local convenience retail.</p> <p>3. Contribute Significantly to Meeting Housing Need – Redevelopment of the site would contribute significantly to meeting Central, Regional and Local Government housing targets. There is significant marriage value of more homes from coordinated development of the depot site and the Stoop site together. A masterplan delivering significant numbers of homes of varying size and tenure would generate a substantial New Homes Bonus to Richmond, and of course significant CIL and S106 contributions.</p> <p>4. New Leading-Edge Sustainable State of the Art Stadium for Harlequins – A viable overall scheme incorporating a new Harlequin’s home 25,000 seat stadium and associated enabling development will generate multiple economic and social benefits for the borough, and secure the long-term future of Harlequins in this location.</p> <p>5. A Safe and Sustainable Community - Creating a place that enables community ownership and participation; a place with identity where you know your neighbours and your neighbourhood.</p> <p>6. Creating a Well Connected & Easy to Navigate Neighbourhood - A people-focused neighbourhood which prioritises pedestrians, cyclists and public transport connections, underpinned by a simple and easy to navigate network of streets and routes.</p> <p>7. Designing for the Future Residents of Richmond - A leading edge sustainable development, with the aspiration to deliver a highly sustainable stadium better than anything done before as well as zero carbon housing and utilising new technologies, serving as an exemplar for development projects in the borough.</p> <p>8. Delivering New Public Open Space - A series of landscaped public spaces with their own individual character creating considerate transitions between the scale of areas around the new neighbourhood and the stadium.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>9. Protecting and Enhancing the Existing Landscape & Ecological Assets - Using the site's natural assets to actively inform the design of the neighbourhood and connect to wider green and blue networks to enhance local biodiversity and public amenity.</p> <p>10. A Collaborative Approach to Working with Stakeholders - Working with the Council together with the local resident and business community in a fully collaborative way to develop shared goals and ensure that investment benefits the local population, and specifically working with Friends of the River Crane Environment (FORCE) to genuinely improve the river corridor.</p> <p>11. Cross Pollination with Richmond College – A redevelopment of the site would facilitate the strengthening of ties with the regenerated Richmond College and create cross-over with their education syllabus and the professional training needs at Harlequins.</p> <p>12. Investment in Richmond - Harlequins currently makes a significant financial contribution to the Borough. Independent assessments of Gross Value Add (GVA) demonstrate the Club's contribution equates to £34 million per annum. Using the same methodology, a new stadium with associated enabling development could increase Harlequin's GVA contribution to circa £95 million per annum.</p> <p>6. Masterplan Concept</p> <p>6.1 Harlequins needs to invest in its club for many reasons including:</p> <ul style="list-style-type: none"> • Customer expectations from sporting experiences; • The changing nature of rugby for example women's rugby; • Competitors improving their facilities; • The ability to bring the existing training facility on site; • To remain competitive; and crucially • The ability to remain financially sustainable. <p>6.2 All of the above mean that doing nothing is not an option for the club. If comprehensive redevelopment is not achievable at the Stoop, Harlequins will be forced to relocate.</p> <p>6.3 Harlequin Football Club Limited has engaged the services of a full professional design team to pursue redevelopment proposals for the site, led by Populous Architects and Karakusevic Carson Architects. The images overleaf give an early visual indication as to what could be achieved on this important site.</p> <p>7. Next Steps</p> <p>7.1 Our team will continue to discuss our proposals with the Council and seek to engage with the local community. In the meantime, we trust that the Local Plan team will keep us informed as the consultation process progresses.</p> <p><i>[See Appendix for site plan and sketch views, along with site location plan]</i></p>
35.	Alice Roberts, CPRE London	ANNEX 1: appropriate sites for intensification for residential, commercial or mixed-use development

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Fulwell - Sites around the Bus garage, including supermarket car parks, could be redeveloped to meet housing demand. The site has a PTAL rating of 3. Several bus stops surround the site. Fulwell Railway Station is adjacent. The site can be developed car-free (with car club parking provision only) to maximise use of space and accommodate people who don't have access to a car (including older people, younger people and those on low incomes).</p> <p>There should be <u>no</u> development on any areas shown which are MOL or Green Belt.</p>  <p>North Sheen - Near to North Sheen Station there are a number of large buildings and large open car parks for example, at Homebase and Sainsbury's near Manor Road. The site has a high PTAL rating of 5. The site can be redeveloped car-free to accommodate people who don't have access to a car.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		 <p>Kew Retail Park - This site could be re-developed to move away from car-dependent retail and /or reduce surface car parking (moving towards car club parking) to intensify the site for both residential and commercial space.</p>  <p>Homebase North Sheen - The car park and Homebase site at North Sheen can be intensified for mixed-use development</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		 <p>Richmond Station – car parking at Richmond Station could be replaced with commercial and/or retail development which would also serve to discourage car trips</p>  <p>Sainsbury's Hampton This site is a concern because it ought never have been turned over to car park, being MOL as it is. In the circumstances, there could be a compromise which helps to reduce car dependency and increase housing in the borough, while returning some of the MOL back to green</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>space (along the river, to support nature and wildlife). The low rise retail unit and part of the car park could be redeveloped for a new car-free, mixed-used neighbourhood while reducing car dependency, car-trips, pollution, congestion and road danger.</p>  <p>Oldfield Road light industrial site - This site could be intensified either for mixed use or to increase commercial space in the borough</p>  <p>Stanton Avenue – various surface car parks – space could be used to increase commercial space in the borough</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		 <p data-bbox="566 839 2067 906">Lower Teddington Road - There is also some space which could be better used, currently given to what appears to be garages and surface car park, in the area to the east of Lower Teddington Road, to the south of the railway line.</p> 

Respondent ref. no.	Name / Organisation	Detailed comments
46.	Joan Gibson	<p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Whitton Community Centre and car park. Percy Road, Whitton. This is owned by the council and is an old inefficient (in emission terms) building. Site is large</p> <p>Type of Development: Leisure & Housing</p> <p>the Local plan wants to use sites more efficiently. You can car-lite build housing on this site with a car park in the basement for the community and medical centre (next door). The community centre can occupy the ground floor - this rebuild will make it carbon neutral. The location is excellent with good train services (buses need improving), schools, NHS services and the High Street shopping centre all in walking distance. The area can be greened as it is mostly tarmac at the moment to add to biodiversity.</p> <p>Potential scale of development: 4 storey 32-50 flats.</p> <p>Site availability: It belongs to you - can be available anytime</p> <p>Potential constraints: The key community centre courses and such things as the food bank can be moved to next door Twickenham school out of school hours and Whitton youth zone during school hours.</p> <p>Barriers to delivery: No</p> <p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Anywhere there is a large supermarket and car park or business park. Short list is: Sainsburys, Homebase and MacDonalds - St Clares Rugby road business parks and Tescos. There are a lot more large supermarkets and business parks in Richmond</p> <p>Type of Development: Retail, Leisure, Office, Warehousing & Housing</p> <p>These are large sites mostly tarmaced over. you can build on these sites by placing car parks underground, making sure public transport is right for car-lite developments, offices, leisure facilities and shops on the ground floor. Flats covering the site of the shop / office / warehouse and car park. Space can also be allocated to green the sites as they are currently bereft of greenery.</p> <p>Potential scale of development: 100+ flats on each site</p> <p>Site availability: Must ask the owners - Tesco and Sainsburys are already open to development of this sort - gives them more customers on site. Other businesses will be open to having more customers and employees on their doorstep and modern efficient premises.</p> <p>Potential Constraints: The business will need to keep going whilst development happens. This however is achieved all the time in other developments.</p> <p>Barriers to delivery: Yes. I assume you will have to upgrade sewers, water etc.</p> <p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Old Deer Car Park Richmond (and many other council car parks)</p> <p>Type of Development: Office & Housing</p> <p>You can build car-lite developments over your car parks. The car park can be moved underground with office / cultural space on the ground floor. Old Deer Park is perfect location with good transport links etc. The car park is also large so you can green parts of what is a large tarmaced space.</p> <p>Potential scale of development: Very large - multiple 100s of flats in a popular location</p> <p>Site availability: You own it so it can be available now</p> <p>Potential Constraints: Needs to be very much car-lite</p>

Respondent ref. no.	Name / Organisation	Detailed comments
55.	Jon Rowles	<p>Barriers to delivery: Yes. Large site sewers etc.</p> <p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Bridge Farm Nursery, Hospital Bridge Road, Twickenham, TW2 6LH</p> <p>Type of Development: Other & Housing</p> <p>This site could be used as either: a) A site to relocate Bishop Perrin School. Currently, it is a small school with only one form of entry. Relocating the school across the road would allow it to be enlarged and help meet the need of extra school places – without further enlarging the alternative schools in the area which are already on the large size. (b) It could be used as a site for an alms-house so there is affordable housing for old people in perpetuity</p> <p>Potential scale of development: The site will in the shadow of a huge standard schools block – though a primary school are typically single-story and thus would not be intrusive. The site currently has a mixture of warehouses, sheds and greenhouses so the developed footprint could be less than there is currently.</p> <p>Site availability: The site was reserved burial land for Hounslow Council, but since the majority of the reserved land has been leased to the ESFA for the building of Turing House School – the area occupied by Kingston Landscape Group has become detached from Borough Cemetary. Hounslow Councils new cemetery strategy shows they have removed this site from their list of reserved sites which indicates they may dispose of it.</p> <p>Potential Constraints: It will be next to a large secondary school with shared access – so there will be safety concerns.</p> <p>Barriers to delivery: Yes. Site access.</p> <p>[See Appendix for site map]</p>
72.	Andrew Weeks	<p><u>Windfall development land in Hampton</u></p> <p>I am a long-standing resident of Hampton at [full address details removed for data protection] and my work takes me all over Richmond Borough. You have made a ‘call for sites’ that local residents consider suitable for development, particularly for new homes in the light of Richmond’s Housing crisis. I would recommend that consideration should be given as a ‘windfall site’ for new housing on a small pocket of wasteland on Lower Hampton Road, Hampton, immediately west of Thames Water’s Sunnyside reservoir:-:</p> <p>1/ The land lies south of the road, between Sunnyside reservoir and the access road to Armadale villa, Birkholme villa & Garden Cottage. It is surrounded by Garden Cottage to the South and two new- build houses immediately to the west. Essentially it is part of Lower Sunbury riverside settlement, rather than Hampton.</p> <p>2/ Previously it was part of Thames Water’s operational land. It was sold-off around 10 years ago into private ownership and has been apparently virtually unused since, apart from occasional materials storage in some old sheds and shipping container, and on the concrete hard standing. The open land is treeless with just rough grass and brambles. It has no public access.</p> <p>3/ There is existing drop-kerb access from Lower Hampton Road – still in occasional use by Thames Water’s lorries to their reservoir for maintenance.</p> <p>4/ To my knowledge it has never been subject to flooding and @ 500 metres from a bus stop on the frequent 216 Kingston to Staines route.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>5/ In early 2017 (I think February) your officers ran a Public consultation at Tangle Park, Hampton on the proposed Hampton SPD future plan where this pocket of land was neither shown as being in a Conservation Area nor designated as Green Belt on the detailed consultation map. If I recall correctly, the Green Belt boundary appeared to follow the reservoir embankments clearly <u>excluding</u> this pocket of waste land. That same map was adopted as policy by Richmond Cabinet in June 2017 and is now consolidated in Richmond's final, current 2018 Local Plan.</p> <p>6/ It is a notable recent precedent that two substantial houses are approaching completion on an almost identically-sized plot of previously neglected land immediately to the west of this 'windfall' site – photo attached. If this adjacent land was considered suitable for residential development, surely this v similar small infill site should be equally suitable? At least one, potentially two new substantial homes in Hampton; replacement of a long-standing derelict eyesore by (hopefully) some new-housing that reflects the style of the neighbouring Armadale and Birkdale Villas; a small but worthwhile to Richmond's sustainable housing. I commend this windfall site to your review. <i>[Note no photo attached to the response, however sufficient details of the site have been provided]</i></p>
73.	Pegasus Group on behalf of Sheen Lane Developments	<p>On behalf of Sheen Lane Developments we wish to submit representations to the London Borough of Richmond upon Thames "Call for Sites", in respect of the car park formerly associated with the St Margaret's Business Centre, Moor Mead Road, Twickenham, TW1 1JS. Sheen Lane Developments are a residential developer in agreement to purchase the site from the freehold owners of the Business Centre, PPF Real Estate Nominee 2 Limited. For the reasons detailed within this submission, we consider the site is suitable, available and deliverable for residential purposes.</p> <p>The Site As shown on the accompanying Site Location Plan (Dwg No. L192301-D09-001), the site being submitted as part of this "call for sites" comprises land formerly used as surface car parking associated with the St Margaret's Business Centre, which adjoins the site to the south-west. The car park is surplus to the requirements, and soon to form separate ownership from, the St Margaret's Business Centre, which comprises of 7no. industrial units served by adequate parking within forecourts directly to the front of the units.</p> <p>The site is largely square and measures approximately 0.06 hectares in size. The site is bound to the north by Godstone Road and Winchester Road to the east, which are characterised by 2-storey terraced and semi-detached residential properties. The site is located within a sustainable location being 250m to the west of St Margaret's Railway Station and the adjoining shops and services.</p> <p>The adopted Local Plan allocates the St Margaret's Business Centre as a "Locally Important Industrial Land and Business Park", however the site falls outside of this designation being physically separated from it. Accordingly, the site is not currently designated for development being "white land". Since the grant of planning permission in 1982 for the Business Park (Ref. 82/0457), the site has always been used intermittently for overflow car parking and has never assumed an employment use.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>The site does not lie within a Conservation Area and none of the buildings within immediate vicinity are statutory Listed. According to the Environment Agency indicative flood maps, the site is wholly located within Flood Zone 2, which has a medium probability of flooding (between a 1 in 100 and 1 in 1,000 annual probability of river flooding).</p> <p>Whilst the site is predominately hard standing, there is vegetation on the site's perimeter, with the mature trees protected by a group Tree Preservation Order, made on 17th October 2019 (Ref. T1049 A1).</p> <p>Assessment</p> <p>The aforementioned site represents a brownfield site which, in our view, is suitable for residential development and should be considered as part of this "call for sites" process.</p> <ul style="list-style-type: none"> • The site measures 0.06 hectares in size and is capable of supporting 4-8 dwellings (66-133dph), depending on whether townhouse or flatted configuration. The site has been subject of pre-application discussions with LB Richmond upon Thames, where initial design options were considered (Annexed to this submission); • The site is 'suitable' for residential development, with the existing car park use being surplus to the requirements of the adjoining Business Park. The site is not in employment use and the residential development of the site would make efficient use of this underutilised site; • The site is 'available' for development being in single ownership (PPF Real Estate Nominee 2 Limited) which is under purchase agreement by Sheen Lane Developments; and • The site is 'deliverable'. Subject to the grant of planning permission, the site can be delivered in the short-term. <p>The main constraint from a planning perspective is the site's location within Flood Zone 2, however the nearby River Crane benefits from flood defences at the closest point to the site. The site also benefits from mature trees which are subject to a recent Tree Preservation Order. Appropriate layout design will seek to retain those trees of arboricultural value where possible, with any replacement planting forming part of a comprehensive landscaping solution for the site.</p> <p>Based upon the site's credentials described within this letter, it is our view that the site would benefit from designation for residential purposes as part of the emerging Local Plan. The site can make a valuable contribution towards the delivery of housing in the Borough, as is currently under-used and serves no meaningful purpose for either car parking or employment use. The site is previously developed land located in a sustainable residential area.</p> <p>Should you require any further information then please do not hesitate to contact me, otherwise I trust the above site will be considered as part of the "call for sites" process.</p> <p><i>[See Appendix for 'Design Constraints and Opportunities', 'Townhouse Sketch Proposals (4 units)', 'Flatted Sketch Proposals (8 units) and site location plan]</i></p>
74.	Savills on behalf of Thames Water	<p>Thames Water consider that the following sites are suitable for residential or mixed-use development:</p> <p>1. Land to West of Stain Hill West Reservoir, Hampton Water Treatment Works, Upper Sunbury Road:</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Site area: approximately 3.58 hectares (refer to enclosed location plan). Current use: vacant. Proposed use: residential or mixed use development. Likely availability: 1-5 years.</p> <p>The site is currently within the Green Belt, but is very well contained and sandwiched inbetween the Stain Hill West Reservoir to the east and residential development along Kenton Avenue with Upper Sunbury Road forming the northern boundary and Lower Hampton Road forming the southern boundary. The site does not perform strongly in Green Belt terms and should therefore be assessed and removed from the Green Belt under the forthcoming Green Belt Review.</p> <p>2. Hydes Field, Land to North of Hampton Water Treatment Works, Upper Sunbury Road:</p> <p>Site area: approximately 21.18 hectares (refer to enclosed location plan). Current use: mixed use. Proposed use: residential or mixed use development. Likely availability: 1-5 years.</p> <p>This site is currently within the Green Belt, but is also well contained and sandwiched between development along Oldfield Road and Kempton Racecourse with Upper Sunbury Road forming the southern boundary and the railway line to the north. The site does not perform strongly in Green Belt terms and should therefore be assessed and removed from the Green Belt under the forthcoming Green Belt Review.</p> <p>The above sites are currently retained operational land but are included in a review that Thames Water is carrying out of its landholdings to establish whether the site can be released for redevelopment. There may also be other landholdings within the locality that may be suitable for development and Thames Water would be pleased to discuss the potential for making these sites available further with the Borough.</p> <p><i>[See Appendix for site plans]</i></p>
75 (a)	David Taylor	<p><u>LB Richmond Call for Sites. March 2020: LAND at HAMPTON</u></p> <p>1. Respondent's role I live in the local area and own a developable site in Hampton</p> <p>Name & address David Harvey Taylor <i>[full Teddington address details removed for data protection]</i></p> <p>2. Site location</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<ul style="list-style-type: none"> - A pocket of land on Lower Hampton Road lying between two new-build houses to the West, Garden Cottage to the South and the operational Sunnyside reservoir to the East. Post code TW16 5PR. - Copy of Land Registry title map No TGL394983 attached. [See Appendix for site plan] <p>3. Suggested development</p> <ul style="list-style-type: none"> - Residential Housing - The land was formerly owned by Thames Water for industrial material storage. The land was sold into private ownership in 2014 with the existing sheds & shipping container continuing to be used for materials storage; after brief use to graze goats, the residual open land has been derelict since 2015. - It is a sustainable location, above the flood plain that Environment Agency confirm only has a likelihood of flooding of 1:1000 years. There is a bus-stop on the high-frequency Staines – Kingston 216 bus route about 500m away. There are no trees on the land and v limited bio-diversity (probably due to activity of previous owner’s goats!). Mains water and power is available on-site but there is no local mains drainage: the site is large enough to contain a foul water drainage field (as neighbouring properties have). <p>4. Potential scale</p> <ul style="list-style-type: none"> - The 0.13 hectare site is slightly larger than the immediately adjacent site to the West (in Spelthorne BC) on which 2x new-build 4-bed houses are nearing completion. - The neighbouring, detached Victorian Villas to the South (Armada) and West (Birkholme) are substantial, imposing 3-storey properties. - There is existing dropped-kerb access into Lower Hampton Road - Comparatively large gardens are needed for a private foul-water drainage field system. <p>5. Availability Currently available</p> <p>6. Potential constraints on development</p> <ul style="list-style-type: none"> - LB Richmond continues to claim that the pocket of land is Green Belt, but it does NOT meet the criteria for such designation and was never so-designated whilst administered by Spelthorne BC until 1995. Under Spelthorne’s custody the local GB boundary followed the ‘permanent’ Reservoir embankments, in line with PPG3 guidelines – as shown on attached plan. - Richmond’s 1996 UDP (1st after inheriting custody of the site) EXCLUDES the land from its GB Policy statement ENV4 and from two supporting, defining maps Nos 3 & 4 illustrating the limited expansion of GB designation over other parts of nearby Hampton land concurrently inherited administratively from Spelthorne. The same UDP contains a ‘proposals’ map, without any justifying commentary, that shows Richmond’s GB boundary now following the Borough’s new Administrative boundary, rather than the reservoir embankments, and colours the site as GB – again see attached plan.

Respondent ref. no.	Name / Organisation	Detailed comments
		<ul style="list-style-type: none"> - LB Richmond have no evidence of implementing the necessary due process required of public consultation, proposal and policy approval to amend the GB boundary to have included my land – now simply saying <i>‘it was owned by Thames Water’</i> : ownership has never been a valid PPG3 yardstick for GB designation. - The 2005 LP simply duplicates the erroneous 1996 UDP summary map and states, correctly, that there was no change to Borough’s GB boundaries at that time. - In February & March 2017 Richmond held local public consultation meetings on the Hampton SPD village future plan with a Green Infrastructure map that showed my land EXCLUDED from GB designation. That map was adopted unchanged by Richmond Cabinet on 13.June 2017 and then consolidated into the current 2018 Richmond LP. - Also in 2017, LBRUT’s current Cabinet Member for Environment & Planning, after personally reviewing the land’s chronology, recommended that Officers <i>‘should give serious consideration to conceding that the site is not legally designated as GB’</i>. No action taken by Council officers. - Concluding the EiP of Richmond’s 2018 LP, and despite being INSTRUCTED by Council not to review the Borough’s GB, the SoS Inspector’s Report published on 26.4.2018 (now an integral part of the current 2018 LP) contains the following statement <i>‘it is for the Council to satisfy itself that the established GB boundary is accurately identified on policies map should the Council identify that the previous depiction is inaccurate, it has the ability to correct it AS A MATTER OF FACT’</i>. He added a codicil confirming that his comment specifically referred to what is my pocket of land. - Previously at the meeting on 13.12.2016 under item 450, resolution 4b LBRUT Cabinet had agreed that <i>‘authority be delegated to the Planning Policy and Design Team Manager to agreeminor amendments to the final version of the (2018) Plan as are necessary to make it sound following the public consultation period’</i>. No such corrections were made in response to the Plan’s EiP Inspector’s concerns identified in his Report about Richmond’s claimed GB designation of my land. - The 2020 London Plan observes in Paragraph 455 that <i>‘some brownfield (GB) land is derelict and unsightly and does not provide significant benefits. In any event it is implausible to insist that the GB is entirely sacrosanct’</i>. - The ‘Green Infrastructure and protecting of our Open land’ section of Richmond’s ‘Direction of Travel’ document states <i>‘There could however be a small number of sites or pockets of land that could benefit from a thorough assessment against the relevant policy criteria for (GB) designation. In the event that a very small number of sites no longer meet the criteria for Green Belt They could be considered for providing land to address our unmet needs for Housing.’</i> <p>7. Infrastructure constraints</p> <ul style="list-style-type: none"> - None
75 (b)	David Taylor (online response)	<p>In what capacity are you responding to this consultation: I live in the local area and owns potentially develop-able land in the Borough</p> <p>Site Location: Land adjacent to West of Sunnyside Reservoir, Lower Hampton Road, Hampton. Registered at Land Registry title number TGL394983- copy attached. [See Appendix for site plan]</p> <p>Type of Development: Housing</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>- The brownfield site immediately abuts the location of a pair of new-build houses currently approaching completion on an almost identical, but slightly smaller plot of land to the West. Spelthorne BC approved construction of these new-builds under delegated planning approval Ref:18/00659/FUL</p> <p>- Formerly owned by Thames Water for industrial storage, the site has been derelict for over 5 years: there are 3 derelict sheds and hard standing on the land.</p> <p>- There are no trees and minimal bio-diversity on the site; land was used by a previous owner as goat pasture.</p> <p>Potential scale of development: Potentially a similar scale development to the two 4-bed houses nearing completion on the immediately adjacent site.</p> <p>- one of the houses would be constructed as a self-build.</p> <p>- the site already has existing drop-kerb access onto Lower Hampton Road.</p> <p>- the site is less than 600m from a bus stop on the high-frequency 216 Staines – Kingston route.</p> <p>Site availability: Currently available</p> <p>Potential Constraints: The site does not meet the Green Belt criteria required under NPPF and was never so designated whilst administered by Spelthorne BC until 1995.- LB Richmond 1996 UDP EXCLUDES the site from it's GB Policy statement ENV4 & two defining maps Nos 3&4 expanding GB designation over parts of the land transferred from Spelthorne. The same UDP contains a 'proposals' map, without any commentary, that erroneously colours the site as GB.- the 2005 LP simply duplicates the erroneous 1996 map and states there will be no change to the Borough's existing GB designations.- in 2017 LBRUT's Cabinet Member for Environment & Planning, after reviewing the land's chronology, recommended that Officers should 'give serious consideration' to conceding that the site is not legally designated as GB.- despite the SoS Inspector being INSTRUCTED by LBRUT Officers not to Review Richmond's existing GB boundaries, his EiP Report (now an integral part of the final approved 2018 LP) contains the following statement ' it is for the Council to satisfy itself that the established GB boundary is accurately identified on policies map..... should the Council identify the the previous depiction is inaccurate, it has the ability to correct it AS A MATTER OF FACT'. He added in the LP that this comment specifically referred to this particular piece of land adjacent to Sunnyside Reservoir. LBRUT made no correction to their draft plan.- Para 70 of the Inspector's EiP Report in current 2018 LP also states, concerning Hampton Treatment Works, that 'application of (latest) national policy will enable due consideration to be given to development proposals on ANY site and their justification'.</p> <p>Barriers to delivery: No</p>
76.	Henry Clive	<p>I'd like to register my objection to the development of the old Greggs factory into residential units. I would strongly prefer an amazing community space such as a wildlife park/green space, and my second choice would be development into an underground station for an extension to the District Line. If neither of these are achievable, and if a residential development has to go ahead, then it must not be allowed to go ahead as per London Square's current planning, which I have already objected to during the previous consultation.</p>
77.	Jennifer Farrell	<p>I'm writing regarding the Local Plan Call For Sites 2020 Consultation, in particular regarding the former Greggs Bakery site in West Twickenham.</p> <p>I am a local resident.</p> <p>London Square will be submitting an application for residential development on this site and I would like my objection to this noted.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Previously I was open to the idea of residential development but having seen the density of their many proposals, even after they scaled them down, I am fully against this and would prefer the site to stay as industrial.</p> <p>I bought my home here 16 years ago and more and more pressure has been put on over the years. New apartment blocks have been built, a school has been added and this small network of roads can't take much more congestion, especially not a dense new development of multiple homes. It's unrealistic and unfair to keep adding more and more people per square metre to this small area.</p> <p>I ask you to please take the many existing residents into consideration.</p>
78.	Graham Green	<p>In what capacity are you responding to this consultation: I live in the local area and work/study in the local area Site Location: Greggs Bakery, Gould Road, Twickenham Type of Development: Office & other Application 19/0646/FUL seeks a fully residential redevelopment of this former employment site. The developer maintains that poor access and other constraints make the site unsuitable for continued commercial use. I do not agree. The site remains suitable for employment uses such as office, light industry, studio/workshop or similar non-polluting uses which can be carried out adjacent to residential property without seriously harming residential amenity.</p>
79.	Max Hampton	<p>Site Location Land to the Rear of 271 Hanworth Road, Hampton, TW12 3ER.</p> <p>271 Hanworth Road's very long rear garden provides the potential to accommodate development. Similar properties along Hanworth Road have had infill developments built, as can be seen in the attached aerial image. This site particularly lends itself to development, as it runs alongside a private road. This road forms part of the adjoining site, Glenmill, which is a block of flats owned by Richmond Housing Partnership (RHP) housing association. The land to the rear of the adjoining property, 273 Hanworth Road, also has the potential to be incorporated into the development, which would maximise the potential of the site.</p> <p>The site is well located, with local shops (a parade of shops next to Hampton High and a Sainsbury's), primary school (Buckingham Primary School), secondary schools (Hampton High, Hampton School and Lady Eleanor Holles) and a park (Hampton Common) all within a short walking distance. The site is also close to the larger Sainsbury's on Hampton Road and is well served by public transport, with Hanworth Road being a main bus route.</p> <p>Type of Development The land is suitable for residential development, with the potential to accommodate different tenures, types and needs.</p> <p>Scale of Development On its own, the site has the potential to accommodate a single new dwelling. There is the potential for a more substantial development, if the land to the rear of 273 Hanworth Road is incorporated and the development is integrated with the adjoining Glenmill site. This would provide the opportunity to create a mews, with a terrace of two or three storey houses or flats. The new dwellings would sit on the land to the rear of no. 271 and their gardens would be on the land to the rear of no. 273. Incorporating the development with the Glenmill site</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>would provide the opportunity to turn the access road into a mews, with the new dwellings facing Glenmill. From an urban design perspective, the development would define the new street and provide a greater sense of enclosure. The development would also provide the opportunity to make improvements to the surrounding area, such as new street trees and cycle parking. Attached is an example of how such a development could accommodate six houses (two storey/three bedrooms/approx. 95sqm), although there is the potential for the buildings to be three storeys and to accommodate flats.</p> <p>Creating a mews, with buildings facing Glenmill, would integrate the development and positively contribute to the wider area, as well as minimise the loss of green space. The development could also include measures to improve biodiversity and mitigate flood risk & climate change. For example, by including the planting of new trees and designing the houses/flats to have a green roof.</p> <p>It is also considered that the wider Glenmill site has the potential for further development. The garages and area at the back of the site could be replaced with another terrace of properties that, in combination, would create a good number of new homes.</p> <p>Site Availability As owners of the land to the rear of 271 Hanworth Road, we are happy to make the site available for development immediately. The owner of the adjoining property, 273 Hanworth Road, is also interested in seeing the sites developed together and has submitted a separate consultation response.</p> <p>Constraints to Development The full development potential of the site would require the involvement of multiple land owners. I have had very positive discussions with the owner of 273 Hanworth Road, but what would help bring the site forward for development is greater certainty about gaining planning permission. I am a town planner and believe that the site has the potential to be developed and that the proposal, as described above, would create a high quality development that would provide new housing and positively contribute to the wider area. It would be extremely helpful if the Local Plan could allocate the site for development and/or have a positive policy that is supportive of this type of development.</p> <p>[See Appendix for site location plan, aerial photograph and a sketch]</p>
80.	Lira Cabatbat	<p>In what capacity are you responding to this consultation: I live in the local area Site Location: Land at the back of 102 Sheen Road and adjacent to 2 Sheen Park, Richmond Type of Development: Housing The area / land is presently unused. It has not been used as a garden or green space for as long as records show. The land is located between 102 Sheen Road (rear) and 2 Sheen Park Richmond. Potential scale of development: A detached family house constructed to be very similar to 2 Sheen Park, a red brick Victorian property. Site availability: Available now subject to planning permission Potential Constraints: Richmond council has previously raised concerns at pre-application process. Barriers to delivery: No. It is submitted that any concerns / constraints raised are unwarranted.</p>

Respondent ref. no.	Name / Organisation	Detailed comments
81.	Dawn Roads	<p>In what capacity are you responding to this consultation: Company Director of company which owns land/site in the London Borough of Richmond upon Thames</p> <p>Site Location: Arlington Works 21-27, Arlington Road, Twickenham, Middlesex TW1 2BB</p> <p>Type of Development: Other</p> <p>Mixed use - residential and commercial/industrial/office</p> <p>Potential scale of development: 24 residential unit minimum of 5 commercial/industrial/office</p> <p>Site availability: 3 months</p> <p>Potential Constraints: Planning is currently going to appeal as refused by Richmond Council in September 2019</p> <p>Barriers to delivery: No</p>
82.	Campbell Brown	<p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: An approximately 47m x 20m L-shape made up of two (two adjoining garden lands) alongside Glenmill roadway, off Hanworth Rd., Hampton, TW12 3EF. It is brownfield land currently forming the extended rear gardens of No's 271/273 Hanworth Rd. There are no significant trees or existing buildings on the land. RHP's 3-storey block of flats are on the Eastern side of Glenmill roadway; the 3-storey Victorian villas No's 271/273 lie to the North of the land. A comparatively recent single storey house abuts the land to the West.</p> <p>Type of Development: Housing</p> <p>Residential housing. Attached sketch shows the potential site in RED. The GREEN overlay illustrates a possible location for 3 two-storey houses, with required on-site parking at A,B,C. The logical pedestrian & vehicular access would be via RHP's existing roadway - this favoured access shown in YELLOW. This is a potentially fully sustainable site with suitable amenity space, no on-site trees, no risk of overlooking of existing properties, possible on-site parking for each house (marked A/B/C. Hanworth Rd had an existing 24hours 111 bus route Kingston/Heathrow plus frequent R70 route to Richmond. One of the 3 possible houses could be provided under 'Shared-Ownership' rules.</p> <p>Potential scale of development: A possible terrace of 3 / 6m 2/3 bedroom houses.</p> <p>Site availability: As part owner the combined garden land could possibly be available in the near future.</p> <p>Potential Constraints: Development of the land would require successful negotiation of a Wayleave access agreement with RHP, as shown, for vehicles and pedestrians. RHP have confirmed that granting such an agreement would not conflict or constrain their future plans for their Glenmill flats or their currently under-utilised land - BLUE on plan. There is an obvious opportunity to form a partnership with RHP to develop RHP's under-utilised Glenmill land, but we understand that any such development plans by RHP of their land are currently in abeyance.</p> <p>Barriers to delivery: No. However, there is a public sewer running across our land (without manholes)- marked. A Thames Water build-over agreement would be required.</p> <p>[See Appendix for sketch]</p>
83.	Chris O'Rourke	<p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Greggs Bakery site</p> <p>Type of Development: Other</p> <p>A low density development, considerate to the local area with a limited number of residential sites and commercial space for local businesses.</p> <p>Potential scale of development: The development should be low rise, not higher than the current building profile. The development should be self contained for parking needs and open space. The development should take into consideration local traffic and public transport</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>constraints. The development should also facilitate additional access opportunities with bridges and pathways to the parks and reserves located on the other side of the river.</p> <p>Site availability: The site is ready for development now.</p> <p>Potential Constraints: Road access in the area is constrained and this needs to be considered by the development. Parking is also restricted and space for residents must be provided on site. Public transport is limited and the additional burden this will place on local infrastructure needs to be addressed. The development cannot be out of place with the local character in terms of visual appeal and also size. The area has a history of mixed business and residential premises, this should be continued.</p> <p>Barriers to delivery: Don't know</p>
84.	Natasha Waithe	<p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Greggs Bakery</p> <p>Type of Development: Housing</p> <p>Potential scale of development: the amount of flats and people area concern as we have a sever lack of parking and the streets are very narrow. I am concerned that the traffic increase will be too great for the all the narrow roads to handle. Also there doesn't appear to be any green space on the proposed plans.</p> <p>Site availability:</p> <p>Potential Constraints: I am concerned about the height of the flats. We were hoping to get rid of the looming factory towers from Green bakery but disappointingly the height of the proposed flats is worse.</p> <p>Barriers to delivery: Don't know. HGV access has already been already been stated as a restraint but the building work for 2 + years will mean a high increase of HGV's on the narrow surrounding streets.</p>
85.	Malcolm Hay	<p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Greggs Bakery site</p> <p>Type of Development: Housing</p> <p>Housing, and especially affordable housing, is in drastically short supply throughout the UK and the number of people being housed away from permanent homes is growing when it should be reducing. The Government has for many years had a target of 300,000 homes to be built per year and has fallen consistently short every year. Richmond must play its part.</p> <p>Barriers to delivery: Don't know</p>
86.	Hester Huttenbach	<p>In what capacity are you responding to this consultation: I live in the local area</p> <p>Site Location: Greggs Bakery site, Colne Road</p> <p>Type of Development: Leisure and Housing</p> <p>I approved the plans submitted but would like to see as much space left open as possible to trees, grass and shrubs. Maybe a small children play space.</p> <p>Potential scale of development: Living on the opposite side from the site I would not be affected by heights but i appreciate that the odd numbers are concerned about being overlooked. As the new houses would have a small garden it should not create a problem as these roads have always been back to backs and a certain lack of privacy has never been an issue (I have lived her for 35 years)</p> <p>Site availability: Hopefully the development will get the go ahead as it has been vacant for some considerable time.</p> <p>Barriers to delivery: Don't know</p>
87.	Clarissa Louise Angus	<p>In what capacity are you responding to this consultation: I live in the local area</p>

Respondent ref. no.	Name / Organisation	Detailed comments
		<p>Site Location: Green spaces Type of Development: Leisure Barriers to delivery: don't know</p>
88.	Defence Infrastructure Organisation on behalf of the Ministry of Defence	<p>In what capacity are you responding to this consultation: landowner Site Location: Kneller Hall, Kneller Road, Twickenham TW2 7DU Type of Development: Retail, Leisure, Cultural, Office, Housing & Other The site is the subject of Policy SA14 in the adopted Richmond Local Plan and is also the subject of a site specific development brief, the Kneller Hall Development Brief 2020. The site is suitable for a number of uses including residential. The site should be included in the new local plan. Potential scale of development: The potential development is described in Policy SA 14 and the potential scale of development and the amount of development and range of uses that the site can accommodate is described further in the development brief for the site. Site availability: Currently it is planned that the site will be available for development in 2021. Barriers to delivery: No. Not aware of any currently.</p>

LONDON BOROUGH OF RICHMOND-UPON-THAMES LOCAL PLAN

A STATEMENT BY CHARTERED ARCHITECT AND BOROUGH RESIDENT, PAUL VELLUET, REGARDING SITE-SPECIFIC PROPOSAL SA 19 – RICHMOND STATION, RICHMOND, FOR PRESENTATION AT THE RELEVANT HEARING SESSION OF THE INSPECTOR'S EXAMINATION, SEPTEMBER, 2017

I. INTRODUCTION

- I.1 I am submitting this statement in an entirely independent capacity as a locally-based architect, as resident of the Borough since 1948 and as regular user of Richmond Station since September, 1962. I am a former Chairman of The Richmond Society and have recently been appointed as President of the Richmond Local History Society. I am a member of the RIBA's Awards Group and a former member of the RIBA's Planning Group. From 1991 until 2004, I worked as Regional Architect and Assistant Regional Director of English Heritage, London. In past years I have served on the Executive Committee of the Richmond Society and on the Richmond-upon-Thames Council's Conservation Areas Advisory Committee. I attach fuller particulars of my qualifications and experience in Appendix A.
- I.2 In this statement I convey my serious concern regarding the soundness of specific aspects of the Council's final (published) version of the *Richmond-upon-Thames Local Plan* relating to Richmond Station and its future – Site specific Proposal SA 19. My statement focuses on those aspects of the Council's *Plan* which I consider to be insufficiently robust in providing the Council, as local planning authority and the local community with effective control over development affecting the particular architectural, historic interest and significance of Richmond Station as 'a non-designated heritage asset', and the character, appearance and significance of the Central Richmond Conservation Area as 'a designated heritage asset' (in the terms commended in the relevant parts of the *National Planning Policy Framework*). My statement takes account of the formal advice on 'soundness' as explained in paragraph 182 of the *National Planning Policy Framework*.
- I.3 In Section 3 of this Statement, I set out my concerns about the soundness of specific aspects of the *Plan* relating Site-specific Proposal SA 19 - Richmond Station, Richmond. I explain the reasons for my concerns, and put forward my suggestion as to the potential means of addressing the weaknesses of the *Plan* as presently submitted and securing amendment which will contribute to providing a sounder definition of the Proposal insofar as is necessary to ensure that the particular interest and significance of Richmond Station as a non-designated heritage asset and the character, appearance and significance of the Central Richmond Conservation Area as a designated heritage asset will be assured. In setting forward these concerns, I would stress that I see no

objections to the incorporation of wording in the proposal statement referring to the provision of improved public transport interchange facilities on the site or to the potential redevelopment of the various post-war buildings to the immediate north and south of the original station-complex subject to the satisfactory scale and design.

2. THE BACKGROUND TO MY STATEMENT

- 2.1 This statement follows my representations in response to the Council's consultation on the final (publication) version of the *London Borough of Richmond-upon-Thames Local Plan* in relation to Site-specific Proposal SA 19 – Richmond Station, Richmond, submitted to the Council in February, 2017 – see copy attached as Appendix B. This, in turn, followed my formal response to the Council's consultation on *The First Draft of the London Borough of Richmond-upon-Thames Local Plan (Pre-publication version)* in relation to Site-specific Proposal SA 18, submitted to the Council in August, 2016 – see copy attached as Appendix C. A summary of this response was set out, with added comments by Council officers, in the Council's *Summaries of responses received in relation to the Local Plan policies and site allocations and Council's response*, reference 437.
- 2.2 The original frontage building of Richmond Station facing Kew Road containing the generously proportioned, upper concourse together with the circulation areas, platform-buildings and platform-canopies comprise a well-designed and coherent complex of sufficient special architectural and historic interest to merit statutory listing. Completed in 1937 the station complex was designed for the Southern Railway by the company's Architects Department under the direction of James Robb Scott (1882-1965) and connects sensitively to the surviving and very fine, 19th century platform-canopies serving island-platforms 4 and 5 and 6 and 7. The same architectural team designed the almost contemporary, grade II* listed Surbiton Station. Although parts of the station, in particular, the upper concourse, have lost some of their original features and detailing, sufficient original fabric and features remain to make full reinstatement entirely feasible. This would enable the original architectural integrity of the building to be recovered to leave the station in a similar condition as the fully restored listed station at Surbiton.
- 2.3 Having used the Station almost continuously since the early-1960s, together with many other Borough residents and visitors to Richmond, I value the distinctive architectural character and significance of the complex, its efficient layout, and above all, the platforms being day-lit and open to the sky and naturally ventilated.
- 2.4 Any new development spanning across and above some or all of the existing tracks and platforms of the station would not only seriously damage the architectural integrity of the existing station complex but would destroy the amenity presently

enjoyed by the travelling public. In addition and importantly, having been directly and professionally involved at the planning stages of the major development proposals above Victoria Station and Charing Cross Station, approved and implemented during the 1980s; in the development proposals above Fulham Broadway Station, approved and implemented in the 1990s; in the thankfully aborted development proposals above Paddington Station put forward in the 1990s; and, most recently, in the development proposals above the eastern Farringdon Cross-Rail/London Underground Interchange Station on Smithfield, now being implemented, I am entirely familiar with the issues raised by proposals for development above railway stations and of the impact of such developments when approved and implemented. I am also entirely familiar with the operational, logistical and cost challenges involved in seeking to develop above railway running-tracks and platforms, and of the potential need to provide significant commercial and other floor-space in such development in order to justify the additional costs incurred and to achieve a viable and profitable development for the prospective developer and the railway freeholder. Accordingly, in the light of such extensive and diverse experience, I view with particular concern the potentially damaging impact of seeking to span across the running-tracks and platforms at Richmond Station with substantially scaled development, as well as the other implications of redeveloping the station site.

- 2.5 I note that Richmond Station was rightly recommended for statutory listing by the Richmond Society in May, 1976, December, 1988, April, 1989 and 1998. (A copy of three pages of the 40-page report prepared by the Society in 1998 is attached as Appendix D). I am not aware that the case for listing has been addressed by English Heritage or Historic England since then, despite the significant changes to listing criteria since that time. Ironically, had the station complex been listed at this time, then many of the features and details that have been lost or adversely altered in the years since under the terms of 'permitted development' would have survived.
- 2.6 I also note that in July, 1997, English Heritage wrote to the architects for a potential redevelopment scheme for the entire station complex and adjoining sites further to a 'Planning Weekend' public consultation exercise recalling that two of the key principles which enjoyed overall support from those attending were the retention of the existing station frontage building and its effective integration into any new development; and the maintenance of full daylighting down to platform-level across all platforms, possibly within a fully glazed enclosure.
- 2.7 In my response to consultation on the *Draft Local Plan* in August, 2016, I suggested that the site specific proposal needed to be fundamentally reviewed and redrafted to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms. I note that in a submission to the Council by The

Twentieth Century Society, the group expressed great concern that the *Draft Local Plan* promoted the Station site for ‘comprehensive redevelopment’, stating that ‘given the architectural and historic importance of the building, as well as its clear townscape value within a conservation area... the draft as it stands runs counter to the guidance of the *NPPF* and to the guidance set out in the *Central Richmond Conservation Area Statement*, which specifically identifies development pressure as a problem, and which promotes the preservation, enhancement and reinstatement of architectural quality’, and urged that site-specific proposal SA 18 should be redrafted ‘in a way which encourages only conservation-led development which explicitly safeguards the retention and restoration of the 1937 station building’.

3. MY PARTICULAR CONCERNS

- 3.1 Whilst the addition of references to the location of the Station within a conservation area and to its designation as a *Building of Townscape Merit* in the relevant section of the Council’s final (publication) version of the *Local Plan* is to be welcomed, no justification whatsoever is provided for the Council’s assertion that ‘the Station is a key development site’ and that ‘there is a need for comprehensive redevelopment’ in order to deliver transport interchange improvement.
- 3.2 Importantly, the Council has failed to provide any assessment of the potential impact on the retail and business health of the remainder of the Town, on the amenity of its residents and visitors, and on the viability of existing cinemas in the Town that would result from providing ‘approximately 10 000 square metres of retail floor-space’, ‘substantial provision of employment floor-space, particularly BI offices’, ‘other uses, such as for community, leisure and entertainment’ and ‘housing in (sic) upper floors’. Similarly, the Council has failed to provide any assessment of the potentially damaging impact on the character and appearance of the conservation area and on traffic movement and car-parking in the Town that would result from the essential servicing requirements of such a vast multi-use development. Such omissions render the proposal as presently worded entirely unsound and unsustainable and in fundamental conflict with other policies of the Local Plan.
- 3.3 The statement that ‘any redevelopment (sic) proposal must be of the highest quality in character and respond positively to the Conservation Area’ is entirely inadequate in setting the necessary parameters for development of the site’ given the failure to refer to the need to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms, and the need to ensure that any new development should either preserve or enhance the character and appearance of the conservation area and sustain its significance.

- 3.4 Finally and importantly, as presently drafted, there is a failure to distinguish between the purpose-built railway station, which is clearly of particular architectural, historic and townscape significance and contributes to the particular character, appearance and significance of the Central Richmond Conservation Area, and the later, post-War, commercial buildings fronting The Quadrant and the Kew Road to each side of the main Station frontage (Westminster House and the shops below to the immediate north and Gateway House and the adjacent shops to the immediate south) and the multi-storey car-park on the southern side of the station complex, accessed from Drummond's Place, none of which possess any such significance and none of which contribute to the character, appearance or significance of the conservation area.
- 3.5 As presently drafted, the proposal reflects an alarming lack of recognition and understanding by the Council of the particular challenges and implications of designing, funding and delivering new development above railway running-tracks and platforms, and of the distinctive architectural and townscape interest and significance of the existing station-complex.
- 3.6 In the interests of clarity and consistency with the conservation and other relevant policies contained in the *National Planning Policy Framework*, the *London Plan*, and the emerging *Local Plan* and the need for a sound and sustainable statement of planning and conservation policy, I urge the Inspector to require the Council to fundamentally review and re-draft the existing the site-specific proposal, to take account of the key issues referred to above.

4. ADDITIONAL NOTE

- 4.1 I remain entirely willing to provide copies to the Inspector of any details about the history and development of the station and to clarify any of the issues I have raised in this submission. In addition, I would wish to encourage the Inspector to undertake a site inspection of the Station and its immediate setting in order to appreciate its considerable architectural and historic interest and significance as anon-designated heritage asset, and to recognise the need to ensure that sound policies are in place to ensure that such interest and significance will be effectively sustained in accordance with the relevant policies of the *National Planning Policy Framework*.
- 4.2 Finally, I would confirm that I recognise that the station was the subject of a Planning Brief drafted and adopted by the Council in March, 2002 and Site Specific Proposal R 6 in earlier local plans. However, I would observe that these contained significant and fundamental deficiencies similar to those contained in the emerging Local Plan.

Paul Velluet

APPENDIX A – PAUL VELLUET, QUALIFICATIONS AND EXPERIENCE

Paul Velluet is a chartered architect - a member of both the RIBA and the Institute of Historic Building Conservation - with experience drawn from over thirty-five years working in both private practice and the public sector specialising in building conservation and development in historic areas. He holds B.A. Honours, B. Arch. Honours and Master of Letters degrees from the University of Newcastle-upon-Tyne.

Since 2005, he has headed an independent consultancy specialising in the provision of professional and technical advice to property owners, prospective developers and other planning and building professionals on projects involving new development in historic areas and the conservation, alteration and extension of historic buildings, particularly at the critical pre-planning and planning stages. The consultancy undertakes work for commercial, educational, residential, cultural, diplomatic, church, health-sector, hospitality-sector, urban and rural-estate and local planning authority clients, including the City of London Corporation and the City of Westminster Council. Clients have also included historic building trusts and local amenity and community groups in addition to the historic London estates.

Paul Velluet's professional experience includes working as a project architect with architects Manning Clamp + Partners, Richmond, Surrey, 1972-1975; as a Principal Urban and Design and Conservation Officer in Westminster City Council's Department of Planning and Transportation, 1976-1991; as Regional Architect and Assistant Regional Director, English Heritage London Region, 1991-2004; and as Senior Associate, Conservation and Planning, with the major Central London commercial practice HOK Architects, 2005-2011. During these years, he has been professionally responsible for projects which have been recognised with a *European Architectural Heritage Year (Civic Trust) Award*, a *Commendation under the R.I.B.A. Awards*, and awards and commendations under local awards schemes in south-west London. He has also been an exhibitor in the Architecture Room of the Royal Academy of Arts Annual Summer Exhibitions.

Currently he serves as a member of the RIBA's Awards Group; a member of the Archdiocese of Westminster Historic Churches Committee; and a member of the Guildford Cathedral Fabric Advisory Committee. In past years he has served on the Executive Committee of the Society of Architectural Historians of Great Britain, the RIBA's Planning Group, the Royal Fine Art Commission's Thames Landscape Strategy Panel, the Cathedrals Fabric Commission for England, the Cathedrals Fabric Commission's Technical Group, and the Richmond Society's Executive Committee. For twenty years he served as a Trustee of the Covent Garden Area Trust, and for five years as an assessor for the RIBA/Crown Estate's Annual Conservation Awards.

He has been a contributor to various publications, journals and guidance including: *Context: New buildings in historic settings* (The Architectural Press, 1998); *The Buildings of England, London 2: South* (1983), and *The Buildings of London, London 6: Westminster* (2003); *The Architects' Journal*, *Planning in London*, *Urban Design Quarterly*, *English Heritage's Conservation Bulletin*, *Church Building* and *Ecclesiology Today*; and diverse policy and guidance documents for Westminster City Council and English Heritage.

APPENDIX B

CONSULTATION ON THE FINAL VERSION OF THE LONDON BOROUGH OF RICHMOND-UPON-THAMES LOCAL PLAN (PUBLICATION)

REPRESENTATION BY PAUL VELLUET, CHARTERED ARCHITECT, IN RELATION TO SITE-SPECIFIC PROPOSAL SA 19 - RICHMOND STATION, RICHMOND

FEBRUARY, 2017

This representation follows my formal response to consultation on *The First Draft of the London Borough of Richmond-upon-Thames Local Plan (Pre-publication version)* in relation to Site-specific proposal SA 19 – Richmond Station, Richmond, submitted in August, 2016. A summary of my response is set out in the Council's *Summaries of responses received in relation to the Local Plan policies and site allocations and Council's response*, reference 437.

This representation takes account of the formal advice on 'soundness' as explained in paragraph 182 of the *National Planning Policy Framework*.

In my response to consultation on the *Draft Local Plan* last August, I stated:

'The original frontage building of the Station facing Kew Road containing the generously proportioned upper concourse together with the circulation areas, platform-buildings and platform-canopies comprise a well-designed and coherent complex of sufficient special architectural and historic interest to merit statutory listing. Completed in 1937 the station complex was designed for the Southern Railway by the company's Architects Department under the direction of James Robb Scott (1882-1965) and connects sensitively to the surviving and very fine, 19th century platform-canopies serving island-platforms 4 and 5 and 6 and 7. The same architectural team designed the almost contemporary, grade II* listed Surbiton Station.

Having used the Station almost continuously since the early-1960s, together with many other Borough residents and visitors to Richmond, I value the distinctive architectural character and significance of the complex, its efficient layout, and above all, the platforms being day-lit and open to the sky and naturally ventilated. Any development taken across and above some or all of the existing tracks and platforms would not only seriously damage the architectural integrity of the existing station complex but would destroy the amenity presently enjoyed by the travelling public. Accordingly, the proposal as presently envisaged under SA 18 is not only totally unacceptable, but runs against the relevant policies contained in the *National Planning Policy Framework* and the Council's existing and emerging conservation and other policies.

I should add the Station was rightly recommended for statutory listing by The Richmond Society in May, 1976 and again in December, 1988 and April, 1989. I am not aware that the case for listing has been addressed by English Heritage or Historic England since then. In July, 1997, English Heritage wrote to the architects for a potential redevelopment scheme for the entire station complex and adjoining sites in further to a 'Planning Weekend' public

consultation exercise recalling that two of the key principles which enjoyed overall support from those attending were the retention of the existing station frontage building and its effective integration into new development; and the maintenance of full daylighting down to platform-level across all platforms, possibly within a fully glazed enclosure.

In my response to consultation on the *Draft Local Plan* last August, I suggested that the project needed to be fundamentally reviewed and redrafted to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms. I note that in a submission to the Council by The Twentieth Century Society, it expressed great concern that the *Draft Local Plan* promoted the Station site for 'comprehensive redevelopment', stating that 'given the architectural and historic importance of the building, as well as its clear townscape value within a conservation area... the draft as it stands runs counter to the guidance of the *NPPF* and to the guidance set out in the *Central Richmond Conservation Area Statement*, which specifically identifies development pressure as a problem, and which promotes the preservation, enhancement and reinstatement of architectural quality', and urged at site-specific proposal SA 18 should be redrafted 'in a way which encourages only conservation-led development which explicitly safeguards the retention and restoration of the 1937 station building'.

Whilst the addition of references to the location of the Station within a conservation area and to its designation as a *Building of Townscape Merit* is to be welcomed, no justification whatsoever is provided for the Council's assertion that 'the Station is a key development site' and that 'there is a need for comprehensive redevelopment' in order to deliver transport interchange improvement. The Council has not provided any assessment of the potential impact on the retail and business health of the remainder of the Town, on the amenity of its residents and visitors, and on the viability of existing cinemas in the Town that would result from providing 'approximately 10 000 square metres of retail floor-space', 'substantial provision of employment floor-space, particularly BI offices', 'other uses, such as for community, leisure and entertainment' and 'housing in (sic) upper floors'. Similarly, the Council has not provided any assessment of the potentially damaging impact on the character and appearance of the conservation area and on traffic movement and car-parking in the Town that would result from the essential servicing requirements of such a vast multi-use development. Such omissions render the proposal as presently worded entirely unsound and unsustainable.

The statement that 'any redevelopment (sic) proposal must be of the highest quality in character and respond positively to the Conservation Area' is entirely inadequate in setting the necessary parameters for development of the site' given the failure to refer to the need to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the

platforms, and the need to ensure that any new development should either preserve or enhance the character and appearance of the conservation area and sustain its significance.

Finally and importantly, as presently drafted, there is a failure to distinguish between the purpose-built railway station, which is clearly of particular architectural, historic and townscape significance, and the later, post-War commercial buildings fronting The Quadrant and the Kew Road to each side of the main Station frontage and the multi-storey car-park on the southern side of the station complex which possess no such significance.

In the interests of clarity and consistency with the conservation and other relevant policies in the *National Planning Policy Framework*, the *London Plan*, and the emerging *Local Plan* and the need for a sound and sustainable statement of planning and conservation policy, the existing the site-specific proposal needs to be fundamentally reviewed and redrafted.

Paul Velluet

15th February, 2017.

APPENDIX C

LONDON BOROUGH OF RICHMOND-UPON-THAMES DRAFT LOCAL PLAN: PRE-PUBLICATION VERSION FOR CONSULTATION

A RESPONSE FROM PAUL VELLUET, CHARTERED ARCHITECT AND RESIDENT OF ST MARGARET'S

SITE ALLOCATIONS – SA 18 RICHMOND STATION, RICHMOND

AUGUST, 2016

I write as a locally-based architect, a resident of the Borough since 1948 and as a former Chairman of The Richmond Society. I am a member of the RIBA's Awards Group, a former Assistant Director of English Heritage London Region and a former member of the Richmond-upon-Thames Council's Conservation Areas Advisory Committee.

I wish to raise fundamental objections to proposal SA 18 as presently drafted.

The original frontage building of the Station facing Kew Road containing the generously proportioned upper concourse together with the circulation areas, platform-buildings and platform-canopies comprise a well-designed and coherent complex of sufficient special architectural and historic interest to merit statutory listing. Completed in 1937 the station complex was designed for the Southern Railway by the company's Architects Department under the direction of James Robb Scott (1882-1965) and connects sensitively to the surviving and very fine, 19th century platform-canopies serving island-platforms 4 and 5 and 6 and 7. The same architectural team designed the almost contemporary, grade II* listed Surbiton Station.

Having used the Station almost continuously since the early-1960s, together with many other Borough residents and visitors to Richmond, I value the distinctive architectural character and significance of the complex, its efficient layout, and above all, the platforms being day-lit and open to the sky and naturally ventilated. Any development taken across and above some or all of the existing tracks and platforms would not only seriously damage the architectural integrity of the existing station complex but would destroy the amenity presently enjoyed by the travelling public. Accordingly, the proposal as presently envisaged under SA 18 is not only totally unacceptable, but runs against the relevant policies contained in the *National Planning Policy Framework* and the Council's existing and emerging conservation and other policies.

The project needs to be fundamentally reviewed and redrafted to provide for the retention and restoration of the entire Southern Railway station complex as completed in 1937 together with the surviving 19th century platform-canopies serving platforms 4 to 7, and the retention of the daylighting and natural ventilation of all the platforms.

Notes and Photographs from The Builder and
The National Railway Museum Archive.

Introduction to the Report

This report has been prepared by the Richmond Society as a factual historical and architectural appraisal of Richmond Station. It has been made as comprehensive as possible by reference both to direct archival material and to the wider context of other contemporary examples which influenced its design.

The instigation of this study has been prompted by the scheme proposals from Railtrack PLC and their first appointed partnership developer to redevelop the whole of the Station's five hectare site. The nub of Railtrack's initial invitation brief to developers was that an improved station environment and integrated transport interchange were to be supported by a major commercial, retail and office development.

As regards the existing station buildings, it appears from the outset that their retention was not envisaged. The brief from Railtrack stated that the provision of a new station concourse including station retail, ticket and travel office would be a "likely" element of the targeted major development scheme.

The plan subsequently prepared by the Trevor Osborne Group indeed adopted a "clean sweep" approach. Any suggestions that (e.g.) the Booking Hall entrance building might be considered for incorporation in a redevelopment were flatly turned down.

The Richmond Society believes evaluation of the existing buildings to be an essential factor in any consideration of plans for the Station site and that this has not been done. The purpose of this report is to remedy this omission and provide to all concerned with the context of present or future schemes for the site, a factual account of the historical and architectural development of the station buildings. An appreciation of the worth and significance of the station is, we believe, essential to recommendations for its future.

Design process

3.1 Design constraints

Key:

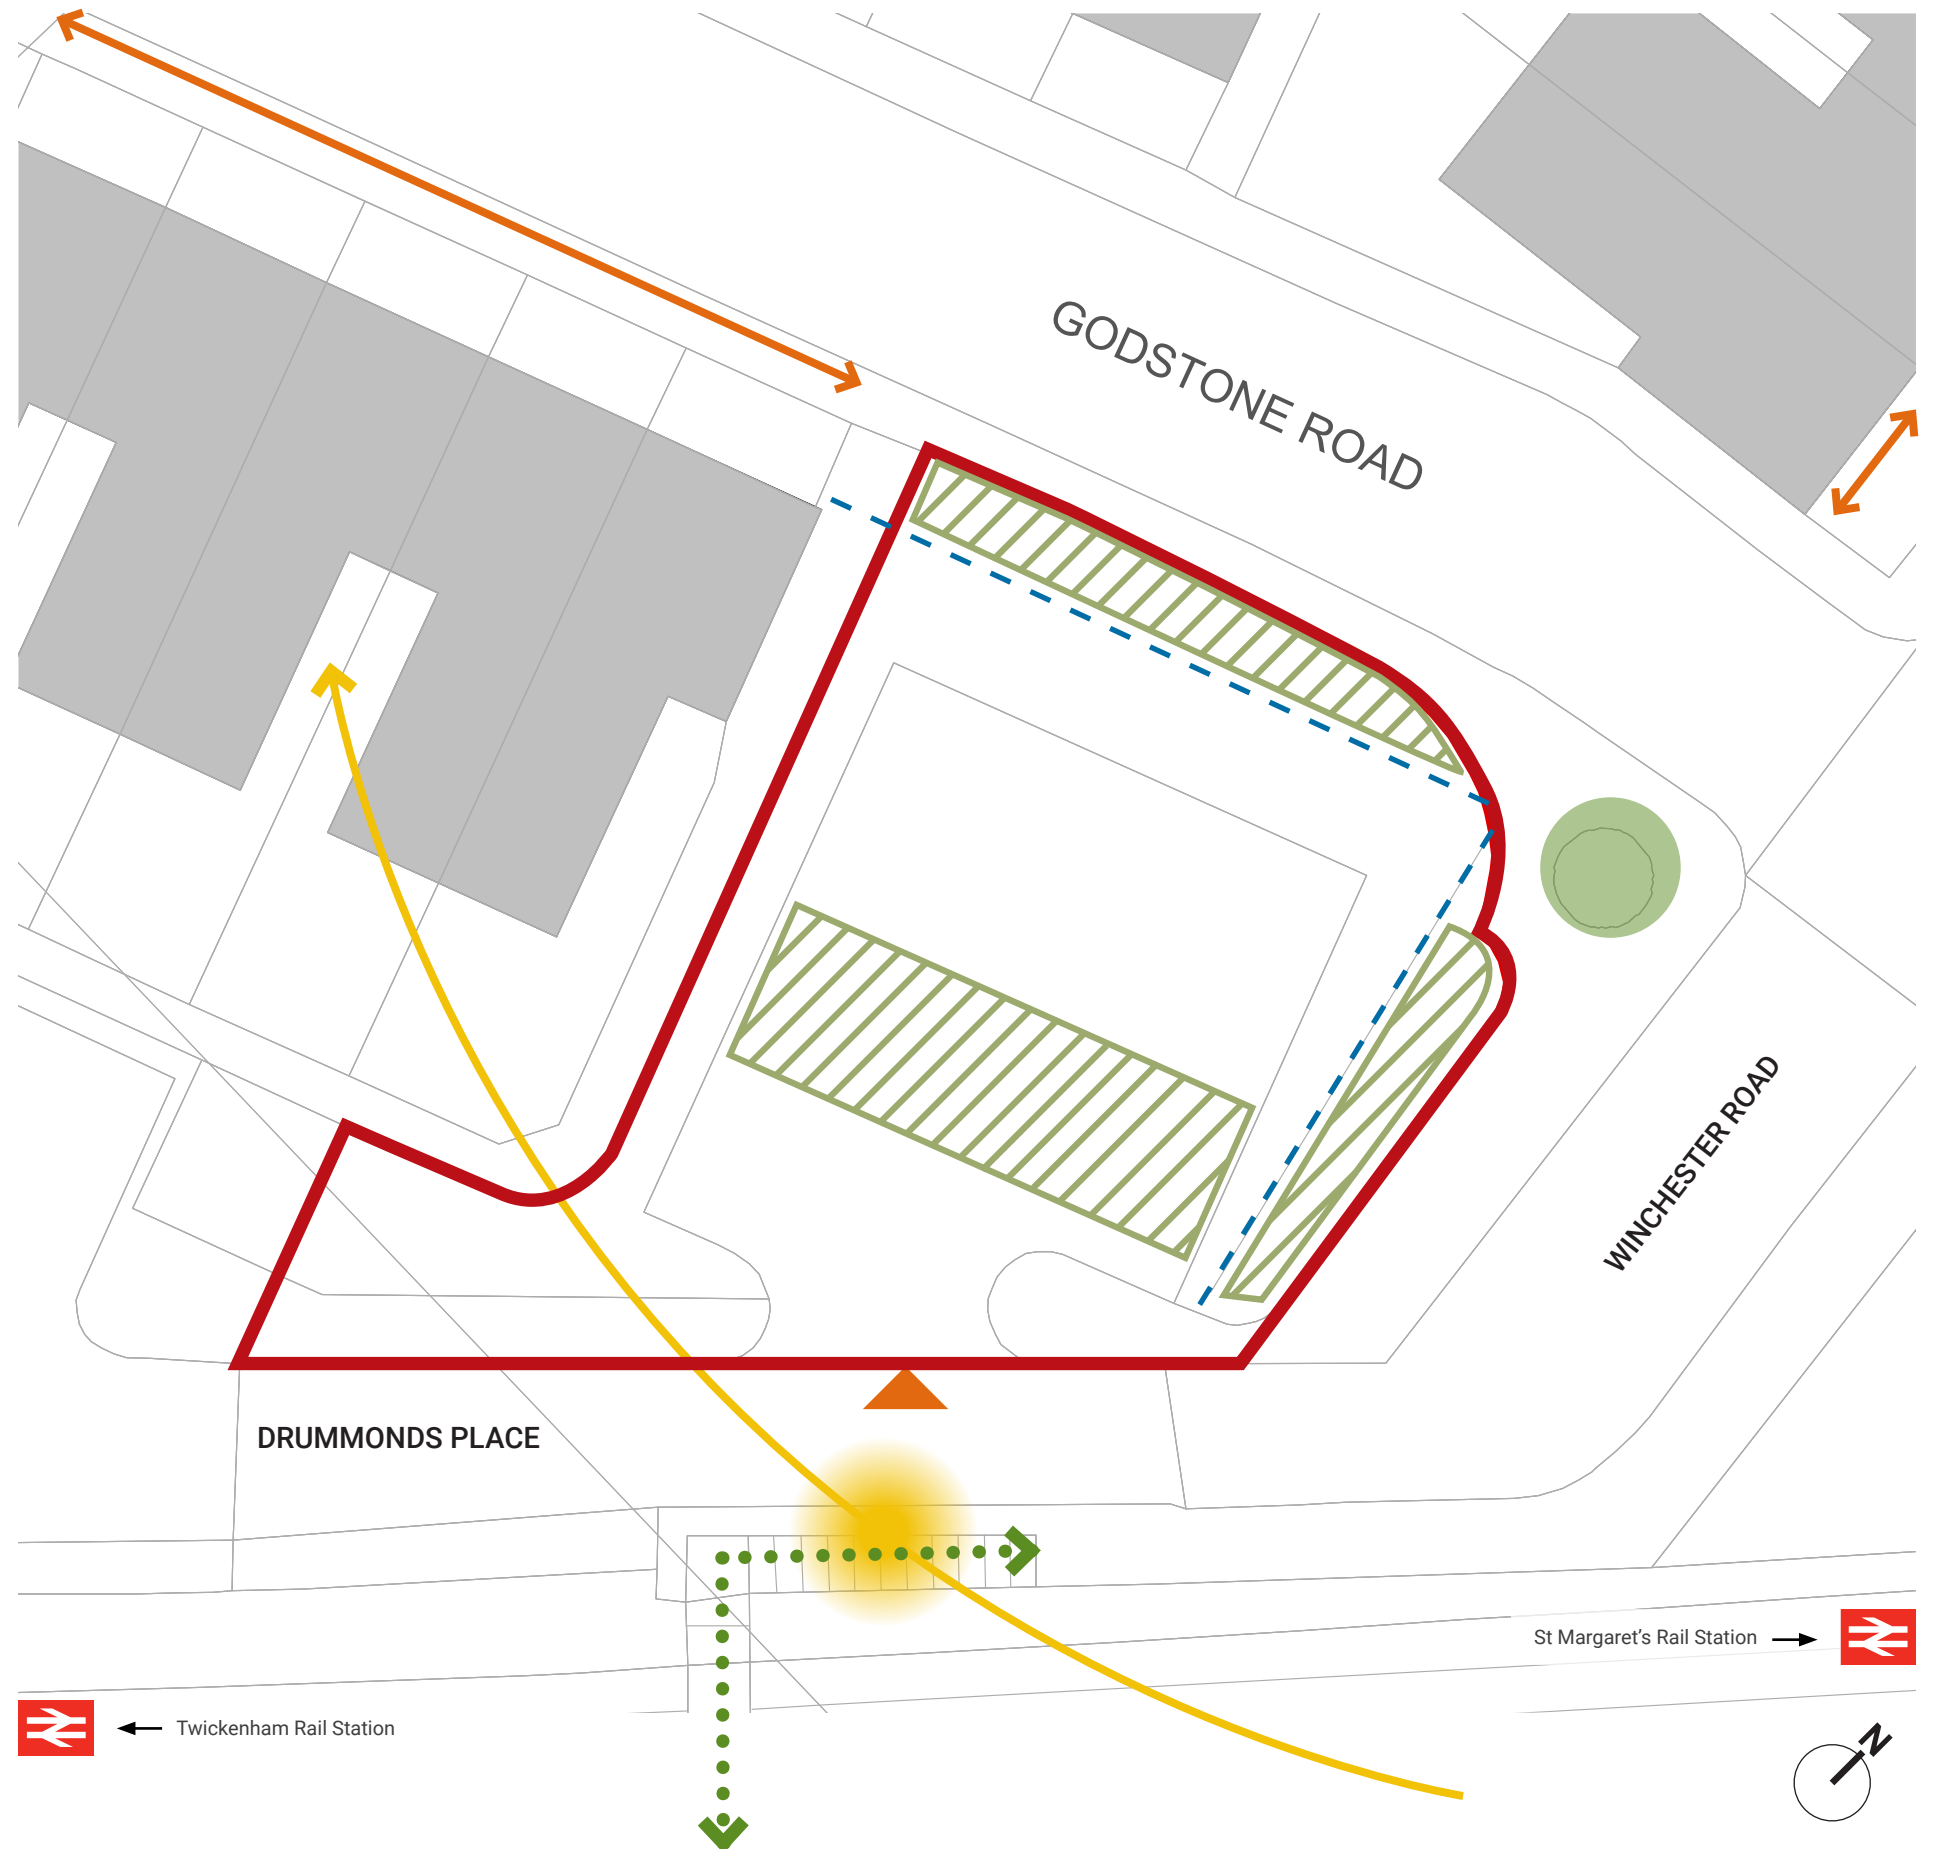

-  Site boundary
-  Surrounding building heights (2–3 storey housing)
-  Sun path
-  Proximity
-  Overlooking
-  Pedestrian link to rail station
-  Railway lines
-  Existing crossover
-  Mature planting
-  Existing footpath
-  Existing BT telecoms box
-  Flood zone 2

3.2 Design opportunities

Key:

- Site boundary
- ← Sun path
- - Opportunity to continue existing building line
- ↔ Maisonettes
- ↔ Pedestrian link to rail station
- ▲ Retain existing site access
- Mature planting
- ▨ Opportunity for garden space
- 🚉 Direction of rail station

ANNEX 2

TOWNHOUSE SKETCH PROPOSALS (4 UNITS)

PLANNING | DESIGN | ENVIRONMENT | ECONOMICS

10 Albemarle Street | London | W1S 4HH

T 020 3897 1110 | W www.pegasusgroup.co.uk

Birmingham | Bracknell | Bristol | Cambridge | Cirencester | East Midlands | Leeds | Liverpool | London | Manchester

Pegasus Group is a trading name of Pegasus Planning Group Limited (07277000) registered in England and Wales
Registered Office: Pegasus House, Querns Business Centre, Whitworth Road, Cirencester, Gloucestershire, GL7 1RT

4.1 Summary of housing schemes

Total units

Houses	4
Parking spaces	2
Cycle spaces	8

Mix

3 Bed house	1 (25%)
3 Bed wheelchair adaptable house	1 (25%)
4 Bed house	2 (50%)

Gross areas

Residential NIA	529 sqm (5,694 sqft)
Residential GIA	540 sqm (5,812 sqft)
Residential GEA	625 sqm (6,727 sqft)

Massing and height

- All houses are at 3 storey with a mansard roof at the second floor. The massing reflects the frontages along Godstone Road, providing small front gardens and larger south facing gardens to the rear.
- The 3 bed dwellings' roofs step back to mirror heights along Godstone Road, whereas the 4 bed houses react to the 3 storey corner arrangement opposite.

Considerations

- Root protection zone for mature tree outside of site boundary to be considered.
- Retention of existing mature trees to be considered if viable - arboricultural survey to advise
- Opportunity for on site parking is limited to 2 spaces to maximise south facing gardens. One space per dwelling is called off within the draft London plan. Could additional spaces come forward with the wider proposals for St Margaret's Business Centre or permits be used for residents? Current Godstone Road residents parking is on street.
- Existing cross-over remodelled.
- Red line boundary is based on the marketing brochure provided by CBRE. To be confirmed if study is taken further.
- A measured site survey will be required
- The scheme meets the Richmond amenity space guidance as set out in Supplementary Planning Document Residential Development Standards 2010.

Registered Office: Pegasus House, Querns Business Centre, Whitworth Road, Cirencester, Gloucestershire, GL7 1RT

4.2 Summary of apartment scheme

Total units

Apartments	8
Parking spaces	5
Cycle spaces	16

Mix

1 Bed units	3 (38%)
2 Bed units	4 (50%)
2 Bed Wheelchair accessible unit	1 (12%)

Gross areas

Residential NIA	511 sqm (5,500 sqft)
Residential GIA	587 sqm (6,318 sqft)
Residential GEA	680 sqm (7,319 sqft)

Massing and height

- A lower two storey element responds to the existing streetscape along Godstone Road.
- The massing steps up to three storeys on the corner, mirroring the height of the pitched roof corner building opposite.

Considerations

- Root protection zone for mature tree outside of site boundary to be considered.
- Opportunity for on site parking is limited. One space per dwelling is called off within the draft London plan. Could additional spaces come forward with the wider proposals for St Margaret's Business Centre?
- Existing cross-over remodelled.
- Red line boundary is based on the marketing brochure provided by CBRE. To be confirmed if study is taken further.
- A measured site survey will be required
- The scheme meets the Richmond amenity space guidance as set out in Supplementary Planning Document Residential Development Standards 2010.

Layouts shown were supplied by a 3rd party; Workman LLP therefore take no responsibility for the accuracy or information taken from them.

NB Responsibility is not accepted for errors made by others scaling from this drawing. All construction information should be taken from figured dimensions only

□ Development site ⋯ Freehold ownership

271/273 HANWORTH ROAD

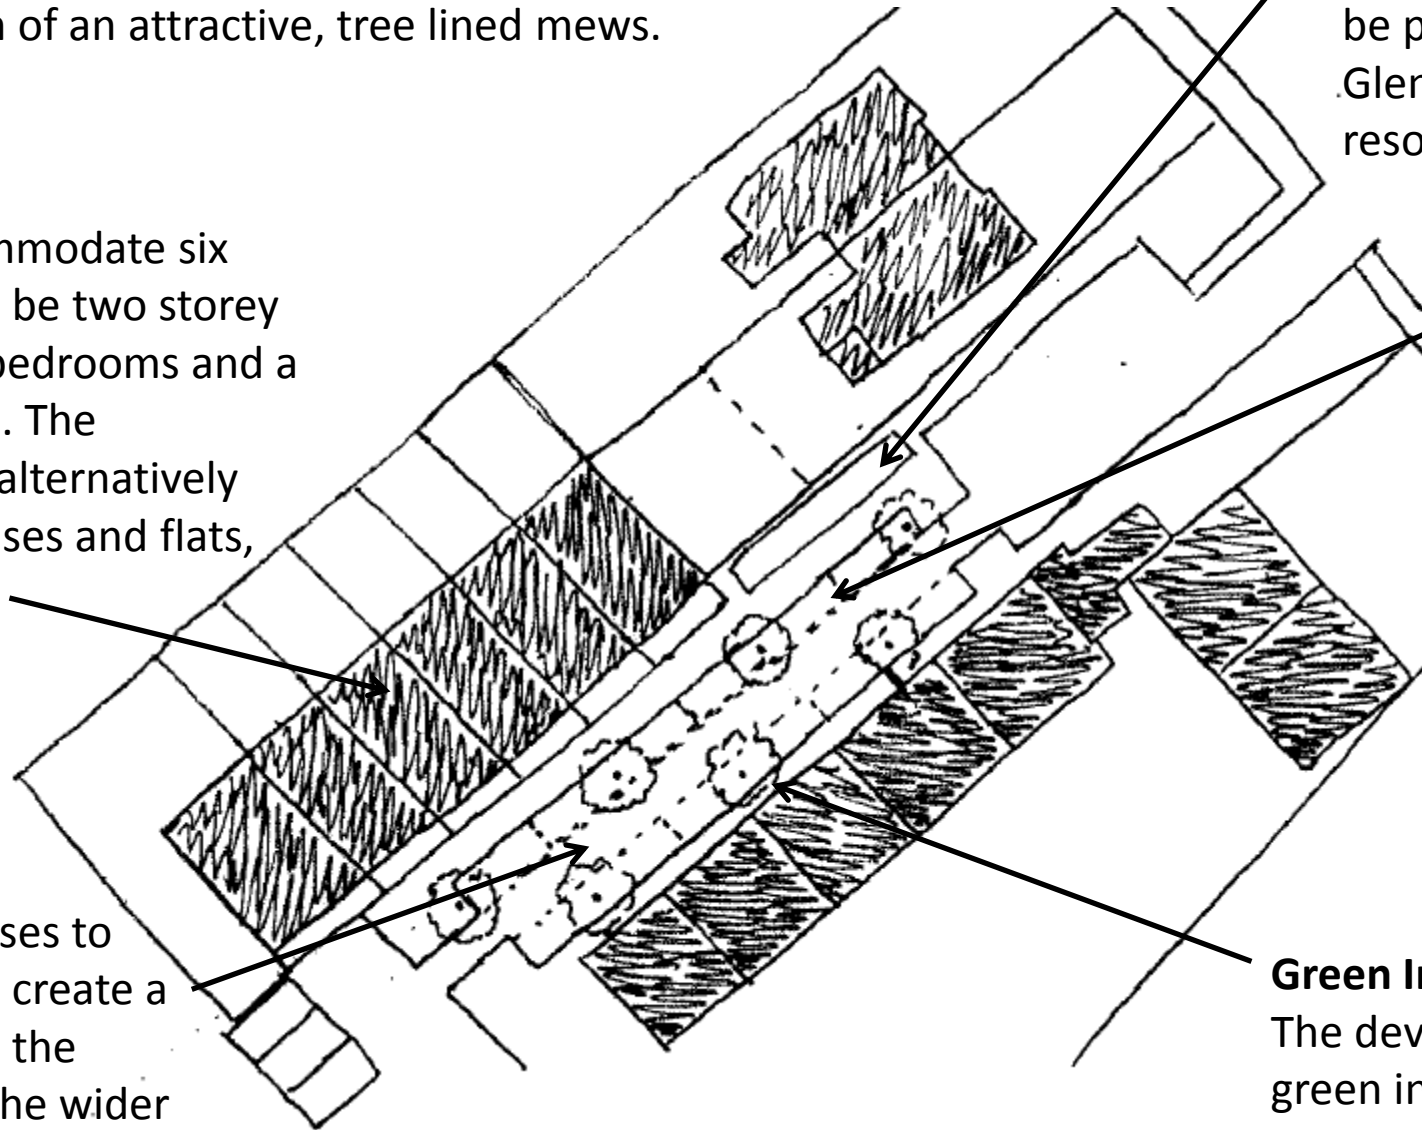

Development of a two/three storey terrace of houses or flats and creation of an attractive, tree lined mews.

Housing

The site could accommodate six houses. These could be two storey houses, with three bedrooms and a floor area of 95 sqm. The development could alternatively include a mix of houses and flats, as well some three storey elements.

Layout

Orientating the houses to face Glenmill would create a mews and integrate the development with the wider area.

Communal Facilities

Bin storage and cycle parking could be provided within the wider Glenmill site, as a communal resource.

Car Parking

Cars could be sympathetically incorporated within the development, by widening the carriageway to create six additional on-street car parking spaces.

Green Infrastructure

The development could incorporate green infrastructure, such as street trees and SUDS, to enhance biodiversity and soften the street.

Potential residential development site: 271/273 Hanworth Road

47m x 20m. Possible 3-house overlay

Published by LBRuT November 2020

Please note, the responses below are exactly as received from the respondents and have not been edited by the Council. They are not alphabetically ordered or in any other order of priority.

Respondent reference no.	Name / Organisation
3.	Katie Parsons, Historic England
13.	Heather Archer, Highways England
17.	Hannah Bridges, Spelthorne Borough Council
19.	DP9 on behalf of London Square Developments

Table 1: All respondents to the engagement

Detailed comments as received:

Respondent ref. no.	Name / Organisation	Detailed comment
3.	Katie Parsons, Historic England	<p>As you will be aware under the provisions of Article 5(1) of the SEA Directive there is a requirement to assess the likely significant effects which the Policies and proposals of a Plan might upon “cultural heritage including architectural and archaeological heritage”. In terms of the historic environment, whilst we would many aspects of the Appraisal, we have the following comments to make:</p> <ul style="list-style-type: none"> • Plans, Policies, and Programmers: there are a number of other relevant plans and programmes that should be included in section 2.2: • UNESCO World Heritage Convention • European Landscape Convention • The European Convention on the Protection of Archaeological Heritage • Convention for the Protection of the Architectural Heritage of Europe • Planning (Listed Buildings & Conservation Areas) Act 1990 • Ancient Monuments & Archaeological Areas Act 1979 • The Royal Botanic Gardens Kew World Heritage Site Management Plan • The local level is also important in setting the appropriate context for the scoping report, which could helpfully draw on Richmond’s existing characterisations studies, local lists, Building of Townscape Merit SPD, Conservation Area Appraisals etc. Aspects of the emerging plan have the potential to impact upon the wider historic environment across administrative boundaries. It may be necessary to use local documents from neighbouring boroughs as part of the SA’s baseline evidence where relevant. <p>Section 3.24 – Historic Environment: This section is locally specific, detailed and comprehensive. We are pleased to see that cross boundary issues are being taken into consideration.</p> <p>Sustainability issues page 88 – we welcome that the conservation of the historic environment is recognised as sustainability issue. Column 3 should be expanded upon to make reference to the Kew World Heritage Site and to the borough’s Registered Parks and Gardens. Issues related to traffic congestion, air quality, noise pollution and other problems can affect the historic environment and detract from the setting of heritage assets and so it would be useful if this was also identified as an issue.</p> <p>SA objectives page 101 – this section should make reference to the Kew World Heritage Site and should reference the objectives set out in the WHS Management Plan.</p>

Respondent ref. no.	Name / Organisation	Detailed comment
		Method for Generation of Alternatives – The historic environment should be a factor when considering a method for the generation of alternative proposals. The impact of proposals on the significance of heritage assets should be taken into consideration at an early state. In terms of sites, this should be based on more than just measuring the proximity of a potential allocation to heritage assets. Impacts on significance are not just based on distance or visual impacts, and assessment requires a careful judgement based on site visits and the available evidence base.
13.	Heather Archer, Highways England	Of growing concern to Highways England is air quality and the impact of development traffic contributing to emissions from traffic on the SRN. We shall be paying particular attention to air quality matters and stress the need for appropriate monitoring. It is noted that the document does make reference to the SRN and highlights that there are high levels of traffic in the borough in the morning and evening peaks. However, no reference has been made to how the borough plans to reduce the impact of this (i.e. it should make reference to the car-free or car-lite proposals stated in the Local Plan Direction of Travel Consultation document). We recommend that this document should therefore ensure it identifies ways to reduce peak hour flows on the SRN.
17.	Hannah Bridges, Spelthorne Borough Council	The SA should be a key factor in the determination of the strategy pursued through the new Local Plan. This should be an iterative process and should seek to minimise the adverse impacts arising through the Plan.
19.	DP9 on behalf of London Square Developments (regarding the Greggs Bakery site)	Sustainability Appraisal – p. 6 The approach to considering environmental, social and economic sustainability in plan-making is supported. Environmental impact arising from pollution is particularly relevant to the subject Site. Its current industrial use has the potential to generate high levels of commercial vehicle traffic and therefore significant air quality impacts to surrounding residential uses. As part of the approach to promoting environmental sustainability, consideration must be given to protecting established residential communities from poor air quality.

Dear Sir/Madam,

**London Borough of Richmond upon Thames – Local Plan Pre-Publication
(Regulation 18) Consultation 10 December 2021 to 31 January 2022**

Following our consultation in spring 2020 on the Direction of Travel, we have now prepared the first draft of the Local Plan, known as the ‘Pre-Publication Local Plan’.

We are consulting on the first draft of the Local Plan, which sets out a 15-year strategic vision, objectives and the spatial strategy. The draft Plan includes place-based strategies covering the whole borough, along with accompanying site allocations, as well as the thematic planning policies that will guide future development in the borough. It will inform how growth will be accommodated across the borough. The draft Plan seeks to address future challenges including climate change, health, affordability and liveability.

The draft Plan has been informed by a number of evidence base studies including an Open Land Review (Green Belt, Metropolitan Open Land, Local Green Space and Other Open Land of Townscape Importance), a review of nature conservation sites, an Urban Design Study, assessments of future needs for housing, retail and leisure, and employment land and premises.

The draft Local Plan, the accompanying Sustainability Appraisal, and other documents and evidence that support the draft Local Plan, are all available on our website.

The consultation is open to everyone. We would like to hear your thoughts and views on the draft Local Plan, and we are particularly keen to hear from our local communities, businesses as well as landowners and other key organisations in the borough. We have produced a response form, containing a number of questions, which we hope will help you in responding.

We will also hold a number of themed virtual events in January 2022, which will explain more about the draft Local Plan and provide an opportunity to discuss topics – more details, including how to register, will be on our website by the end of the year.

Where to view the documents and how to respond by 31 January 2022

The documents can be viewed as follows:

- Read the consultation documents at:

https://www.richmond.gov.uk/draft_local_plan_pre_publication_version and through our Consultation Portal at: <https://richmond-consult.objective.co.uk/kse>

- View the consultation material at the Civic Centre, 44 York Street, Twickenham, TW1 3BZ and in the Borough's main libraries.

Please contact us should you have problems accessing or printing the documents.

You can respond by:

- Completing the **online response form** through our Consultation Portal <https://richmond-consult.objective.co.uk/kse>
- Completing the word or pdf version of the **response form** available from https://www.richmond.gov.uk/draft_local_plan_pre_publication_version and sending it by
 - **email** to **LocalPlan@richmond.gov.uk** or
 - **post** to Spatial Planning and Design, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ

We would prefer all comments to be made electronically. Please note that the **deadline for comments is Monday 31 January 2022**, and responses will not be treated as confidential.

What happens next

Following this consultation, we will consider and analyse all responses received and make changes to the Plan, where appropriate. There will be a further round of public consultation on our final version of the Local Plan (so called 'Publication' or 'Regulation 19' version) later in 2022. This will be the version that we will submit – together with the representations received – to the Secretary of State for independent examination in public. The Local Plan is anticipated to be adopted in Autumn 2024.

You have received this notification as you have previously engaged with the Richmond Planning Policy and Design team or we have identified you as a stakeholder. The Council is committed to ensuring that personal data is processed in line with the General Data Protection Regulation (GDPR) data protection principles including keeping data secure. The Council's Privacy Notice is published on the webpage www.richmond.gov.uk/data_protection. We hope that you or your organisation will continue to take an interest in, and contribute to, future planning policy and design policy. If you'd like to continue hearing from us, then you do not need to do anything to respond to this. If, however, you would prefer not to receive notifications regarding planning policy and design matters from us, then please notify us, preferably by email to LocalPlan@richmond.gov.uk

Yours faithfully

Andrea Kitzberger-Smith
Spatial Planning and Design Team Manager

Draft Local Plan: Pre-Publication version

About the consultation

This is an important stage in the process in developing a new Local Plan, known as the 'Pre-Publication' or 'Regulation 18' stage. We are consulting to 31 January 2022.

This first draft of the Plan sets out a strategic vision, objectives and spatial strategy, with place-based strategies and thematic policies and guidance to manage growth and guide development across the borough over a 15-year period.

Its development has been informed by a [Direction of Travel](#) public consultation which was undertaken in spring 2020.

We would like to hear your thoughts and views on the draft Local Plan, and we are particularly keen to hear from our local communities, businesses as well as landowners and other key organisations in the borough.

Participate in Local Plan virtual events

We are holding a number of virtual events in January 2022 to provide an opportunity to discuss the Local Plan. Find out [more about the sessions and how to take part](#).

Consultation documents

The key consultation documents are:

- 'Pre-Publication' Draft Local Plan (Regulation 18) (December 2021)
 - [PDF version - low resolution](#)  (pdf, 19.3 MB)
 - [PDF version - high resolution](#)  (pdf, 31.3 MB)
 - [Online version](#)
- [Sustainability Appraisal of the Pre-Publication Local Plan \(December 2021\)](#)  (pdf, 3.8 MB) (includes a non-technical summary)

These key consultation documents can also be viewed at the Civic Centre, 44 York Street, Twickenham, TW1 3BZ and in the borough's main libraries (from 17 December 2021).

Supporting documents

The 'Pre-Publication' Draft Local Plan is also informed by other supporting documents:

- [Equality Impact and Needs Analysis \(December 2021\)](#)  (pdf, 381 KB)
- [Habitats Regulation Assessment \(December 2021\)](#)  (pdf, 5.6 MB)

- [Health Impact Assessment \(December 2021\)](#) (pdf, 379 KB)
- [Flood Risk and Development Sequential Test \(December 2021\)](#) (pdf, 75mb)
- [Direction of Travel Consultation Responses Summary Report \(November 2020\)](#) (pdf, 1.5 MB)

The following documents have also been produced and may assist anyone responding to this consultation:

- [A summary of the place-based strategies with site allocations and policies \(December 2021\)](#) (pdf, 530 KB) - sets out some of the main changes when compared to the adopted Local Plan
- [Schedule of sites not taken forward as Site Allocations in the new Draft Richmond Local Plan \(December 2021\)](#) (pdf, 169 KB)

Evidence base

There are a number of research and studies forming the Local Plan [evidence base](#). The following have recently been updated. Further phases and additional studies are due to be undertaken in early 2022, to inform the final version of the Plan.

- [Open Land Review \(Green Belt, MOL, LGS and OOLTI\)](#) (2021)
- [Review of Sites of Importance for Nature Conservation](#) (2021)
- [Urban Design Study](#) (2021)
- [Employment Land and Premises Needs Assessment \(December 2021\)](#)
- [Local Housing Needs Assessment \(stage 1\)](#) (July 2021)
- [Retail and Leisure Needs Study \(phase 1\)](#) (July 2021)
- [Strategic Flood Risk Assessment and groundwater investigation](#)

How to take part

Online

Submit an online response through our [consultation portal](#).

Email

Email a response form to localplan@richmond.gov.uk:

- [Response form](#) (pdf, 202 KB)
- [Response form](#) (MS Word, 305 KB)

Post

Post a hard copy of the response form to Spatial Planning and Design, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ.

All responses must be received by **Monday 31 January 2022**. Please note responses will not be treated as confidential.

What happens next

Following this consultation, we will consider and analyse all responses received and make changes to the Plan, where appropriate. There will be a further round of public consultation on our final version of the Local Plan (so called 'Publication' or 'Regulation 19' version) later in 2022. This will be the version that we will submit - together with the representations received - to the Secretary of State for independent examination in public.

The Local Plan is anticipated to be adopted in Autumn 2024.

Contact

If you would like to be kept informed of future progress on the Local Plan, you can opt-in to our Local Plan database by emailing your contact details to localplan@richmond.gov.uk.

If you would like more information, please contact the Local Plan team at the same email address.

Draft Local Plan Pre-Publication Consultation

From 10 December 2021 to 31 January 2022

RESPONSE FORM

The Council is inviting comments on the first draft of the Local Plan.

The draft Local Plan sets out a 15-year strategic vision, objectives, place-based strategies and the overall spatial strategy for the borough as well as the planning policies that will guide future development in the borough. It looks ahead to 2039 and identifies where the main developments will take place, and how places within the borough will change, or be protected from change, over that period. In addition, the draft Local Plan sets out the site allocations that are considered to assist with the delivery of the vision and strategy of the Plan. This is of particular importance for ensuring there is sufficient land for employment, retail, housing and social infrastructure.

We would like to hear the views from our local communities, businesses and other key organisations on the draft Plan.

How to respond

Please read the consultation documents and other background information made available on the Local Plan website. To view the draft Local Plan and take part in the consultation, visit https://www.richmond.gov.uk/draft_local_plan_pre_publication_version

You can respond on the consultation documents in the following ways:

- Online response form through our **consultation portal** <https://richmond-consult.objective.co.uk/kse>
- Email to **LocalPlan@richmond.gov.uk** this response form (a PDF and Word version of the form can be found on the Council's website at https://www.richmond.gov.uk/draft_local_plan_pre_publication_version). In the form in 'Word' format you can type in your response and return it as an email attachment
- Post a hard copy of the form to Spatial Planning and Design, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ.

All responses must be received by Monday **31 January 2022**.

This form has three parts:

- Part A – Personal details and about you
- Part B – Your general views
- Part B – Your detailed response

Part A: Personal Details		
	1. Personal Details *	2. Agent's Details (if applicable)
Title		
First name		
Last name		
Job title (where relevant)		
Organisation (where relevant)		
Address		
Postcode		
Telephone		
E-mail address		

*If an agent is appointed, please complete only the title, name and organisation boxes but complete the full contact details of the agent.

Part A: About You...		
3. Please tell us about yourself or who you are responding on behalf of...(tick all which apply)		
Do you live in the borough?	Yes <input type="checkbox"/>	No <input type="checkbox"/>
Do you work in the borough?	Yes <input type="checkbox"/>	No <input type="checkbox"/>
Do you run a business in the borough?	Yes <input type="checkbox"/>	No <input type="checkbox"/>
Are you a student in the borough?	Yes <input type="checkbox"/>	No <input type="checkbox"/>
Are you a visitor to the borough?	Yes <input type="checkbox"/>	No <input type="checkbox"/>

Data protection

The Council is committed to ensuring that personal data is processed in line with the General Data Protection Regulation (GDPR) data protection principles including keeping data secure.

The Council's Privacy Notice is published on the webpage www.richmond.gov.uk/data_protection

All responses will be held by the London Borough of Richmond upon Thames. Responses will not be treated as confidential and will be published on our website and in any subsequent statements; however, personal details like address, phone number or email address will be removed.

Part B: Your General Views

4. Do you agree or disagree with the Strategic Vision? (section 3)

Strongly Agree Agree Neither Agree/Disagree Disagree Strongly Disagree

Any comments:

5. Do you agree or disagree with the Strategic Objectives? (section 3)

Strongly Agree Agree Neither Agree/Disagree Disagree Strongly Disagree

Any comments:

6. Do you agree or disagree with Policy 1. Living Locally and the 20-minute neighbourhood? (section 4)

Strongly Agree Agree Neither Agree/Disagree Disagree Strongly Disagree

Any comments:

7. Do you agree or disagree with Policy 2. Spatial Strategy: Managing change in the borough? (section 4)

Strongly Agree <input type="checkbox"/>	Agree <input type="checkbox"/>	Neither Agree/Disagree <input type="checkbox"/>	Disagree <input type="checkbox"/>	Strongly Disagree <input type="checkbox"/>
---	--------------------------------	---	-----------------------------------	--

Any comments:

8. Do you agree or disagree with the place-based strategies? (sections 6 to 14)

Strongly Agree <input type="checkbox"/>	Agree <input type="checkbox"/>	Neither Agree/Disagree <input type="checkbox"/>	Disagree <input type="checkbox"/>	Strongly Disagree <input type="checkbox"/>
---	--------------------------------	---	-----------------------------------	--

Any comments:

Part C: Your Detailed Response

9. To which parts of the draft Local Plan does your response relate to?

Please indicate the documents **and** the specific paragraph numbers, policy or site allocation numbers and names, maps or tables you are commenting on.

Documents		Sections	
Draft Local Plan	<input type="checkbox"/>	Page number(s)	
		Paragraph number(s)	
		Policy no./name	
		Place-based strategy	
		Site Allocation(s) no./ name	
		Maps	
		Tables	
Sustainability Appraisal Report	<input type="checkbox"/>	Page number(s)	
		Paragraph number(s)	
Other (for example an omission or alternative approach, or in relation to another supporting document/evidence base)	<input type="checkbox"/>		

10. Please give details below to set out your representation.

Please make it very clear to which document your comments relate to by indicating policy/place-based strategy/site reference, name and number, and/or paragraph number.

Please continue on a separate sheet / expand box if necessary.

11. Please set out what change(s) you consider necessary, why these changes should be made and what your supporting evidence is.

--

Please continue on a separate sheet / expand box if necessary.

Please note your detailed response should cover succinctly all the information, evidence and supporting information necessary to support / justify the response and the suggested change.

Following the consultation on the draft Local Plan, we will consider and take account of all responses received. There will be a further opportunity to view and comment on the final draft version of the Local Plan later in 2022, before it will be submitted in 2023 to the Secretary of State for examination in public by an independent planning inspector.

12. If you are not on our consultation database and you respond to this consultation, your details will be added to the database. This allows us to contact you with updates on the progression of the Local Plan and other planning policy documents.

If you do not wish to be added to our database or you would like your details to be removed, then please tick this box, complete Part A: Personal Details of this form and return it to us as appropriate.

Signature:

For electronic responses a typed signature is acceptable.

 - **email** to LocalPlan@richmond.gov.uk or
 - **post** to Spatial Planning and Design, LB Richmond upon Thames, Civic Centre, 44 York Street, Twickenham, TW1 3BZ

We would prefer all comments to be made electronically. Please note that the **deadline for comments is Monday 31 January 2022**, and responses will not be treated as confidential.

What happens next

Following this consultation, we will consider and analyse all responses received and make changes to the Plan, where appropriate. There will be a further round of public consultation on our final version of the Local Plan (so called 'Publication' or 'Regulation 19' version) later in 2022. This will be the version that we will submit – together with the representations received – to the Secretary of State for independent examination in public. The Local Plan is anticipated to be adopted in Autumn 2024.

Andrea Kitzberger-Smith
Spatial Planning and Design Team Manager

* The document applies to the whole borough and has been prepared in accordance with the Planning and Compulsory Purchase Act 2004 (as amended) and Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended). Note the Area Action Plan (AAP) for Twickenham, which was adopted in 2013, will be superseded by this new Local Plan. However, the Ham and Petersham Neighbourhood Plan (2019) and the West London Waste Plan (2015) will remain as existing.

With industry-leading tech, our digital marketing solutions deliver local businesses results in today's challenging environment.

Insights from more than 1,000* UK clients put to work for your business.

[December 2021](#)

Have your say on the new Local Plan to help shape the borough's development

16 December 2021

Richmond Council has published the first draft of the new Local Plan, which sets out a 15-year strategic vision to guide development and place-making across the borough.

When finalised, the Local Plan will be the main document against which planning applications are assessed, and residents, businesses and other key organisations are invited to [share their feedback](#).

At the heart of the draft Local Plan is the concept of a 20-minute neighbourhood – the idea that our places should be complete, compact, and connected neighbourhoods where most of the things we need for shopping or visiting are an easy walk or cycle away. This concept enables our communities and residents to 'live locally', which will not only improve the quality of life, but will also bring many other benefits such as healthier lifestyles, cleaner air, stronger local economies and a better resilience against climate change.

The Local Plan is supported by a large amount of research and numerous studies, which form the basis for a holistic understanding of the borough's qualities, constraints and capacity for growth, and assessing future needs.

The draft Local Plan is based around ten key themes:

- Responding to the climate emergency and taking action
- Delivering new homes and an affordable borough for all
- Shaping and supporting our town and local centres as they adapt to changes in the way we shop and respond to the pandemic
- Increasing jobs and helping business to grow and recover from the impacts of the pandemic
- Protecting what is special and improving our areas (heritage and culture)
- Increasing biodiversity and the quality of our green spaces and waterway
- Improving design, delivering beautiful buildings and high-quality places
- Reducing the need to travel and improving the choices for more sustainable travel
- Securing new social and community infrastructure to support a growing population
- Creating safe, healthy, and inclusive communities

The draft Local Plan takes a stronger approach to addressing the Climate Emergency, including setting requirements for new development on small sites to contribute to urban greening and biodiversity. It also takes a stronger approach to implementing requirements for affordable housing alongside all new homes.

Each place in the borough has a vision and plans for how it might be expected to change; the Council wants to hear from residents who know those places best as to whether this reflects what they would want to see for the future. There are also eight new key site allocations flagged for potential development including Teddington Police Station and former House of Fraser in Richmond Town Centre.

The consultation is open to everyone until 31 January 2022. Once it closes, Richmond Council will make changes to the Local Plan, taking account of the feedback where appropriate. There will be a further consultation, and, following examination by an independent Inspector, it is expected that the new Local Plan will be adopted in 2024. Visit the website for more information and to [share your comments](#).

Cllr Julia Neden-Watts, Chair of the Environment and Sustainability Committee, said:

“The COVID-19 pandemic has shown us just how important the concept of ‘local’ is. The new draft Local Plan aims to build on this by enhancing local places, whilst still protecting their unique character. It outlines how the borough will change and so it is important that you share your feedback and ensure your voice is heard. We want to set out ambitious policy requirements for new development to ensure it plays a role in responding to future challenges including climate change, affordability, health and wellbeing. Please visit the consultation page and share your comments - your responses will be used to shape the next version of the Plan.”

Residents are invited to attend collaborative and informative workshops to help share their feedback on the Draft Local Plan. The events will take place on Zoom on 18 January, 19 January and 25 January. More information will be shared soon.

‘Pre-Publication’ Draft Local Plan (Regulation 18) Consultation Responses

Planning

June 2023

About the consultation

The [consultation](#) was undertaken 10 December 2021 to 31 January 2022. Comments could be made through a [response form](#) (online, by email or post).

A number of virtual events were held in January 2022. There is a separate [engagement event report](#) about those events including the comments made, and where relevant the issues raised have been integrated into the summaries below from section 3 onwards.

The appendix to this report is a schedule of all the responses in full, along with the Council's officer response to each comment.

About the respondents

Comments were received from 311 respondents. Some responses were to the draft Local Plan, and/or the supporting documents including the Sustainability Appraisal, Habitats Regulation Assessment, and/or other evidence base reports.

Respondents included a range of residents and amenity groups, landowners, organisations and statutory consultees. Part A of the [response form](#) asked 'about you' or who you are responding on behalf of. Of respondents who answered this question (with any duplicate responses removed), 168 said they live in the borough, 63 work in the borough, 36 run a business in the borough, 1 is a student in the borough, and 5 are a visitor to the borough (respondents could select as many as apply to them).

2. General Views

Part B of the [response form](#) asked about general views on the strategic vision, strategic objectives, Policy 1 'Living Locally and the 20-minute neighbourhood', Policy 2 'Spatial Strategy: Managing change in the borough?', and the place-based strategies. The following charts show the total number of respondents (with any duplicate responses removed).

Do you agree or disagree with Policy 1. Living Locally and the 20-minute neighbourhood? (section 4)

■ Strongly Agree ■ Agree ■ Neither Agree/Disagree ■ Disagree ■ Strongly Disagree

Do you agree or disagree with Policy 2. Spatial Strategy: Managing change in the borough? (section 4)

■ Strongly Agree ■ Agree ■ Neither Agree/Disagree ■ Disagree ■ Strongly Disagree

Do you agree or disagree with the place-based strategies? (sections 6 to 14)

■ Strongly Agree ■ Agree ■ Neither Agree/Disagree ■ Disagree ■ Strongly Disagree

3. Summary of all main issues raised during the Pre-Publication consultation

<i>Summary of all main issues raised</i>	<i>Summary of how issues raised have been dealt with</i>
<i>General/Introduction</i>	
<ul style="list-style-type: none"> • Some comments did not agree with the order of the Plan. • Some comments raised issues that had not been covered in the strategic context and trends, such as on health inequalities or Heathrow. • A few comments related to the supporting documents to the Plan – the Sustainability Appraisal, the Habitats Regulation Assessment, and the Sequential Test Report. • Some comments collated against the general/introductory parts of the Plan raised broad issues, such as on infrastructure. 	<ul style="list-style-type: none"> • Specific references have been added to the strategic context and trends section on health inequalities and carers. • The supporting Sustainability Appraisal, Habitats Regulation Assessment, and the Sequential Test report have all been updated to accompany the Regulation 19 Plan. • The update to the Infrastructure Delivery Plan also covers some of the general issues raised, where they are within the remit of the Local Plan.
<i>Vision and Strategic Objectives, Spatial Strategy, Place-Based Strategies and Site Allocations</i>	
<ul style="list-style-type: none"> • General support for the vision. Some support for the emphasis including on climate change and responding to change. Some suggestions for areas to improve and issues to address. A few over-development concerns. Some felt could be meaningless without measurable targets and could be bolder. The Mayor of London comment the themes and objectives align well with the London Plan ‘Good Growth’ policies. • Some general support for the strategic objectives, or support for some of them but not all. While some support for particular emphasis, should acknowledge competing objectives and some suggestions the climate emergency should take priority. Some suggestions for detailed issues to address across most of the themes. • There was broad support for the concept of ‘living locally’ (Policy 1), although some concerns about how it would be implemented, the need to address public transport and the need to provide for the transport needs of those less mobile (elderly, disabled etc). Comments highlighted the need for clarification, and to ensure a range of infrastructure and facilities. • There was broad agreement with the spatial strategy (Policy 2), although some concerns about the challenges and high-rise/high density development, with some suggestions for specific issues to be raised. • Many respondents agreed with the overall approach to the place-based strategies and Site Allocations. The Ham & Petersham Neighbourhood Forum support the vision that builds on the Neighbourhood Plan. Some respondents disagreed with the separation into ‘places’, and felt issues were inconsistent or not addressed. Some comments about 	<ul style="list-style-type: none"> • The vision now reflects the Council’s commitment to a borough wide net zero target of 2043. Some specific references have been added to emphasis improvements to public transport, and cover additional issues, including flood risk, and health inequalities. • The strategic objectives refer to further detailed issues including dark spaces for biodiversity, engaging with local community groups invested in blue and green assets, flood storage, climate resilience in development, safer use of spaces, and health and care services. • There is clarity to how the Living Locally (Policy 1) is intended to be implemented, addressing those with reduced mobility and explain the geography does not have any fixed zones or boundaries. • The context for the spatial strategy (Policy 2) is updated, to refer to new and updated evidence base. • Three new Site Allocations added - Hampton Telephone Exchange, Homebase at Hampton and Fulwell Bus Garage; two site allocations have been removed, i.e. Hampton Delivery Office and Twickenham Police Station. The boundary to the Site Allocation for Hampton Square is amended to remove the small portion of OOLTI/POS. A number of the Site Allocations have been updated, and all of the Site Allocations have been re-formatted in the Regulation 19 Plan to aid clarity.

the Urban Design Study and a couple of comments related to overdevelopment. There were individual comments on specific places/sites, and some new sites suggested on the basis of their similarity to existing Site Allocations.

- A comment the Site Allocation for **Hampton Square** is an implicit threat to build on the part of the site designated as OOLTI. Sainsbury's comment the Site Allocation for the **Carpark for Sainsburys, Uxbridge Road, Hampton** allocation for 100% affordable housing is not justified. A significant number of comments were received on the Site Allocation for **Teddington Police Station**, from Park Road Surgery and patients and individuals supporting its allocation, asking the Local Plan to require the Surgery to be relocated there; the Met Police also commented the Site Allocation was unreasonable and inflexible. Harlequins Rugby Football Club raised the Site Allocation for **The Stoop** should include land to the east and has potential to accommodate 7 stories or more. The RFU comment on the Site Allocation for **Twickenham Stadium** that the stadium's role as an entertainment venue should be recognised. The Met Police comment on the Site Allocation for **Twickenham Police Station** as it will be retained for policing and should be removed from the Plan. The Whitton Community Association comment the Site Allocation for Whitton Comm Centre should reflect a wider opportunity to create a masterplan and consider the needs-based community spaces. St George Plc and Marks & Spencer comment on the Site Allocation for **Kew Retail Park** seeking clarification on acceptable amount of retail and suggest the building heights are not backed up by robust evidence base. A number of comments from various parties were received on the Site Allocations for **Twickenham Riverside, Kneller Hall, Ham Close, Richmond Station, Homebase East Sheen, Sainsburys Lower Richmond Road, Stag Brewery, and Barnes Hospital**. The Department for Education support the allocations for schools at the Stag Brewery and Barnes Hospital. A number of detailed comments were received across the Site Allocations – from agencies such as TfL and Thames Water, to local groups such as Habitats & Heritage, and from individuals. A number commented on sites or uses that had been omitted from the Site Allocations, suggesting sites that could contribute to delivery or the landowner suggesting their site – Richmond Cricket Club, building next to the BP garage on Lower Mortlake Road, former car garage east of land on Sandycombe Road, Hanworth Homebase, Molesey Telephone Exchange, car park at Richmond Station/above Richmond Station, Fulwell Bus Garage and Lidl, above Sainsburys Uxbridge Road, detailed assessment of all town centres, Land to West of

- The rationale behind the inclusion of Site Allocations is considered to be sound and justified. No amendments to their inclusion, the principle for which is considered to be justified.

<p>Stain Hill West Reservoir, Upper Sunbury Road, Hydes Field Upper Sunbury Road, Richmond Park Academy, Christ's School, Mortlake Station area, LGC site, Arlington Works, Greggs bakery and the sports ground at Teddington Lock.</p>	
<p>Theme: Responding to the climate emergency and taking action</p>	
<ul style="list-style-type: none"> • Overall general support for the emphasis given to climate change and pollution from organisations (reflecting their ambitions) and individuals, although some comments raise how this interacts with other issues and requirements, such as fuel poverty and the biodiversity crises, and particularly around implementation including in historic buildings, Conservation Areas and applicability across wider sites and non-residential refurbishment and conversion. • Detailed comments on tackling the climate emergency (Policy 3) raise specific issues – decentralised energy networks, water management and flood storage. Comment about new development being a main area of planning control, and whether energy efficiency programmes on existing stock could be advanced. • General support for the measures to minimise greenhouse gas emissions and promote energy efficiency (Policy 4), including from the Mayor of London although should reflect the BeSeen energy monitoring guidance. However, a number of comments about the impact on costs and deliverability, going beyond London Plan standards for on-site carbon reduction and ahead of the Government's gradual transition, and particularly that the proposed carbon offset amount was too high, without flexibility and an evidence base to justify the approach. • On energy infrastructure (Policy 5), comment about requirement developments to contribute to future networks. • Some developer comments on the high sustainable construction standards (Policy 6), going beyond the London Plan, as onerous and costly, and about reliance on BREEAM. Specific comments on water stress and modular construction. • On waste and the circular economy (Policy 7), the Mayor of London supports the policy approach to whole life-cycle carbon assessments, safeguarding of existing waste sites and noting the West London Waste Plan/London Plan policies to assess proposals; the waste apportionment over the lifetime of the Plan should be accounted for. The EA comment on Construction Environment Management Plan for using the river to transport construction waste, and on preventing waste management activities causing 	<ul style="list-style-type: none"> • Updates to reflect the Council's ambition for a net-zero borough by 2043, and to reflect the Council's Net Zero Carbon study which supports the ambitious policy targets and specific standards. • Amends to reference flood storage along with flood risk (Policy 3). • Amends to reference the Building Regulations including on overheating and ventilation, reduce the threshold requirement for net zero minimum on-site carbon emission reductions from 500sqm to 100sqm for non-residential development, and requirement to disclose space heating demand over at least the 5 years of operation (Policy 4). Further supporting text recognises there is no one-size fits all solution to sustainable energy measures in the historic environment, it should not be presumed it cannot be found and will be assessed case-by-case. • Amends to clarify development of 500sqm or more of non-residential floorspace does include conversions, refurbishments, and major developments (Policy 5). • Amends to require evidence if a development is unable to achieve the Outstanding BREEAM rating and to apply to shell and core developments, and reduce the threshold requirement with regards to fabric efficiency standards from 500sqm to 100sqm (Policy 6). Added a summary table including all the climate change requirements for different types of developments. • Amends to add reference to Construction Management Plans for river transportation of construction materials and waste reference, the Refuse and Recycling: Storage and Access Requirements SPD, application of policies in the West London Waste Plan, and the Mayor's Whole Life-Cycle Carbon Assessment London Plan Guidance 2022 (Policy 7). • Amends to technical requirements with reference to sequential approach on specific sites, flood risk mitigation and resilience, sewer

<p>pollution and emissions. Comment safeguarding Arlington Works conflicts with the London Plan.</p> <ul style="list-style-type: none"> • On flood risk and sustainable drainage (Policy 8), specific issues raised relating to development including the setback of developments to the tidal river, Rewilding Arcadia project, approach to the islands, and risks of sewer flooding and storm surges and rising sea levels. The majority of comments are technical issues raised by the EA including on the sequential test and the sequential approach to the layout of sites, the approach to flood defences and flood storage, and recommend use of the ‘central’ scenarios for climate change allowances in line with Government advice. • On water resources and infrastructure (Policy 9), comments focused on water stress, water quality status, and wastewater networks. These raise issues of demand and supply planning including Water Resource Management Plans, the responsibilities for network connections and capacity, achieving good ecological status/potential requirements, connections between foul and surface water networks and impacts on combined sewage outfalls, guidance for bank protection works and for construction sites considering dewatering and run-off, and support for water efficiency measures. 	<p>flooding, separate fluvial and surface water flood risks, flood storage, functional floodplain, setbacks, basements, and a change from ‘upper end’ to ‘central’ climate change allowances (Policy 8).</p> <ul style="list-style-type: none"> • Amends to clarify on responsibilities around water supply, drainage and wastewater infrastructure for new development and improvements to water quality (Policy 9).
<p><i>Theme: Delivering new homes and an affordable borough for all</i></p>	
<ul style="list-style-type: none"> • Acknowledgement of the commitment to the borough’s housing target, to exceed as a minimum. A need to roll forward the target beyond 10 years. The broad locations for housing delivery (Policy 10) were queried by some residents/groups including identifying the impacts on existing infrastructure, while some developers felt the numbers were too low and the details were not clear, and particularly that employment land could provide a role. • The Mayor of London raises the approach to affordable housing (Policy 11) is likely to be an issue of general conformity with the London Plan, as the threshold approach to viability should be reflected in policy. There was largely support for the aims of delivering genuinely affordable housing, but concerns about clarity and delivery. A number of issues raised around implementation, including the lack of a Whole Plan Viability Assessment, approach to small sites and for public sector portfolio, almshouses, First Homes, listed buildings, and the tenure split. • A number of comments queried that the need for specialist older’ persons housing should reflect the London Plan benchmark (Policy 12). Some comments raised the need for other specific types of housing - particularly for people with multiple and complex 	<ul style="list-style-type: none"> • Updates have been made to reflect the latest Housing AMR 2021/22, the Whole Plan Viability Assessment and Local Housing Needs Assessment Update. • There is clarification on future housing delivery, particularly on the net housing target and unconstrained need figures, details added of the latest housing trajectory and rolling forward of the ten-year target (Policy 10). • There is additional reference to the inclusion of key workers in the Council’s latest affordability criteria and priority allocation for Intermediate Housing in the supporting text, and to clarify aspects of implementation of the policy such as evidence of RP discussions (Policy 11), • Amends have been made to clarify the policy approach for specialist and older persons housing, with reference to current housing priorities (Policy 12).

<p>physical and health needs, for older/less mobile to downsize, and students, and understanding impacts on infrastructure was raised. Query on the type of new housing the policy applies to and clarity on the application of legal agreements and higher standards.</p> <ul style="list-style-type: none"> • A few comments seeking clarity on the space standards particular around open space (Policy 13). • No comments on the dealing with loss of housing (Policy 14). • The Mayor of London comment there is no need to demonstrate parking is no longer needed on Infill and Backland Development (Policy 15). Two comments about protecting back garden land. • On small sites (Policy 16) a few comments about the types of development and its impact. The policy was supported by the Mayor of London. 	<ul style="list-style-type: none"> • Amends have been made to reference overheating, and the specific standards for inclusive access and supported housing (Policy 13). • Amends have been made to clarify environmental considerations and the impact of loss of housing (Policy 14). • On the approach to infill and backland development, amends for clarification on assessment of loss of parking and to reference modular construction and updated guidance (Policy 15). • Amends have been made to clarify the approach in areas beyond those identified for incremental intensification, and other guidance (Policy 16).
<p><i>Theme: Shaping and supporting our town and local centres as they adapt to changes in the way we shop and respond to the pandemic</i></p>	
<ul style="list-style-type: none"> • Specific issues were raised around support for the borough centres (Policy 17), with some reference to Class E, approach to other uses such as beauty salons and fitness studios, public realm and public toilets, and that the evidence base was not up to date. The Mayor of London supports the approach towards diversifying and repurposing centres. A comment the policy should include reference to major retail and leisure development also being directed to Site Allocations. Some place-specific comments, including defining the limits outside the secondary frontage of East Sheen, supporting a diversification of uses at Kew Gardens Station, beauty salons and fitness studios meeting community need such as Sandycombe Road and smaller centres, and that restricting convenience goods at Kew Retail Park is not supported by evidence. • Specific issues were raised in terms of development in centres (Policy 18) including reference to Class E, that more pro-active initiatives are needed in relation to empty premises, frontages only defined where they can be justified, dealing with out of centre development, not acknowledging trip generation of visitor attractions such as Twickenham Stadium, and that the evidence base is missing or piecemeal with particular concern the character of Richmond Town will be harmed by an imbalance in floorspace. Ideas put forward for a broad consideration of cultural activities or uses and highlighting of local assets. • General support for managing impacts (Policy 19) including consideration of the impact on residents, and on health and well-being, with suggestions to mention other specific 	<ul style="list-style-type: none"> • Significant amends to the retail policy approaches (Policies 17 and 18), to reflect further the Council’s research and the Retail & Leisure Needs Study phase 2. This retains a town centre first with a key focus on diversifying town centres. Primary Shopping Areas (replacing designated frontages) are defined for the larger centres with a comparison shopping role, where it is important to retain a compact retail core, and boundaries are defined for all centres and parades in the centre hierarchy within which commercial/community uses will be retained where possible. • Amends to updated capacity projections, the centre hierarchy, reference Primary Shopping Areas and Site Allocations, and the approach to refurbishment or redevelopment of vacant units (Policy 17). Twickenham Green is moved from a local shopping parade to a Neighbourhood Centre, and local shopping parades are renamed as Important Local Parades. • Amends to reference updated capacity projections, Primary Shopping Areas, resisting the loss of essential shops and services across the borough, markets, and to provide clarity on the sequential test (Policy 18).

<p>uses in terms of overconcentration, although some noted the Government’s flexibility and effect of Use Class E. The Mayor of London note the policy aligns with the London Plan on the Agent of Change principles. A comment opposing support for a night-time economy in Richmond Town, and a comment from McDonalds that the restrictive approach to hot food takeaways is not supported by evidence.</p> <ul style="list-style-type: none"> • On local shops and services (Policy 20) a comment supporting approach to pubs and a comment about business rates. 	<ul style="list-style-type: none"> • Amends for clarity on approach to overconcentration of uses and application to bars, including removal of specified frontages/areas subject to specific restrictions of public houses, bars and hot food takeaways, reference the Agent of Change principle, and update reference to the Council’s Licensing Policy (Policy 19). • Amends to add the definition of essential shops and services and clarify approach to implementation, including application to bars (Policy 20).
<p><i>Theme: Increasing jobs and helping business to grow and bounce back following the pandemic</i></p>	
<ul style="list-style-type: none"> • Some support for the principles of supporting the local economy and identified sectors (Policies 21 and 22), although others raised the policy does not recognise other sectors – leisure and tourism, and the voluntary and community sector. • Overall, some comments seeking flexibility and the recognition that some employment floorspace is not suitable for adaption/upgrade and/or not viable, including listed buildings, with some comments referring to the impact of pandemic (Policies 21 to 24). A comment the approach does not reflect the London Plan and should recognise some floorspace is no longer viable. The Mayor of London supports the focus of new office development in town centres, and the approach to industrial as supported by the London Plan. • A number of comments agreed with the overall principles but were suggesting sector and/or site-specific conditions necessitated a different policy approach in these cases, including on Platts Eyot, Greggs Bakery, St Clare Business Park, Onslow Hall, LGC, Shurguard, and Arlington Works. • General support for securing affordable, flexible and managed workspace (Policy 25), with some comments about the detailed implementation in terms of policy thresholds and targets, and viability. • General support for the approach to visitor economy (Policy 26) and the particular references to RBG Kew and Ham House. Some comments about existing facilities, in terms of travel and whether in sustainable locations. Comments requested references to particular issues/places including to provide support for infrastructure for the Royal Parks, expanding this area around East Sheen/Stag Brewery and Richmond Park, and Twickenham Stadium for appropriate development which complements the sporting and entertainment use. 	<ul style="list-style-type: none"> • Updates have been made to reflect the confirmed Article 4 Direction (Class E to C3), and the Employment Land and Premises Needs Assessment Update 2023, to reflect the updated employment needs for office floorspace, seeking to avoid any net loss (Policies 21 and 23, and Site Allocations where relevant). • Amends have been made to reference the voluntary and community sector (Policies 21 and 22), logistics hubs supporting last mile delivery (Policy 22), active travel (Policy 23). • The Sandycombe Centre, Sandycombe Road, Kew has been removed as a designated Locally Important Industrial Land and Business Park as it has been redeveloped for non-industrial uses (Policy 24). • On the visitor economy, amends have been made to refer to the refresh of the Visit Richmond Strategy and updated hotel accommodation projections (Policy 26).

<ul style="list-style-type: none"> • Support for the approach to telecommunications and digital infrastructure (Policy 27), with some comments on the details of assessments particularly the visual impact. 	
<p><i>Theme: Protecting what is special and improving our areas (heritage and culture)</i></p>	
<ul style="list-style-type: none"> • Some support for the policy approach to local character and design quality (Policy 28) or specific aspects it addresses such as shopfronts, lighting. Historic England consider the Plan provides a strong basis for conservation and enhancement of the historic environment. A number of comments on specific issues – seeking reference to enhancing where appropriate, following Secured by Design and early engagement with the Met Police on major development, the protection of the Royal Parks, Conservation Areas as well as the Urban Design Study places and character areas, healthy places and the requirements of health organisations, gated developments, banners, and digital advertising. • Some support for the policy approach to designated heritage assets (Policy 29). Specific details raised – wording around change of use, dealing with substantial harm, threat of climate change and the balance with sustainability and other needs, and issuing enforcement notices. Comment policy not compliant with the NPPF, and too specific wording around reinstatement of historic features • Specific issues raised on non-designated heritage assets (Policy 30) – no reference to historic industrial sites and watercourses, issuing enforcement notices, and historic walls. Comment the policy not consistent with the NPPF and should refer to significance and a balanced judgement. • General support for the approach to Local Views and Vistas (Policy 31), and the importance of CGI and 3D modelling to assess visual impacts. Historic England and the Mayor of London seeking detailed wording. Interest in the forthcoming Local Views SPD and some comments on specific views – importance in the Royal Parks and opportunities in the River Crane corridor, and threats from outside the borough. Comment the policy is too prescriptive and should be redrafted in line with the London Plan. • Support for the policy on Royal Botanic Gardens, Kew World Heritage Site (Policy 32) with detailed comments from Historic England, RBG Kew and the Mayor of London on specific aspects, including RGB Kew seeking a degree of balance in dealing with the management of the WHS. • On archaeology (Policy 33), comment on allowing time for field investigations. 	<ul style="list-style-type: none"> • Amends to clarify developments should maximise opportunities to enhance the local environment and character, and to reference Secured by Design (Policy 28). • Amends to clarify in relation to total loss of or substantial harm to a listed building and the optimum viable use (Policy 29). • Amend to reference the borough’s historic industrial sites and water courses in the supporting text (Policy 30). • Further to the Council’s consultation on the draft Local Views SPD in 2022, added a list of ‘new’ local views for designation. Amends to reference harm to quality of views and vistas/setting of a landmark, provision of Accurate Visual Representations, and how non designated views are assessed (Policy 31), • Amends to reference current site management plan for Royal Botanic Gardens, Kew World Heritage Site, (Policy 32). • Amends to reference the updated Archaeological Priority Areas (Policy 33).

<p><i>Theme: Increasing biodiversity and the quality of our green and blue spaces, and greening the borough</i></p>	
<ul style="list-style-type: none"> • Overall general support for protecting and recognising the value of green and blue spaces, with emphasis on the multi-functional network and the acknowledgement of pressures, including by the Royal Parks, FORCE, the PLA, the EA and Habitats & Heritage. The Royal Parks suggest a stand-alone policy due to the importance of the Parks. • There are broad supportive comments and some detailed issues raised on blue and green infrastructure (Policy 34) – including dark corridors used by bats and other species, green corridors, wildlife corridors, impact of artificial lighting, invasive species and dogs, larger sites and their connectivity, significance of the Crane Valley, the public open space hierarchy, attenuating flooding by naturalising the River Crane below the Mereway Weir, and naturalising riverbanks, inappropriate tree planting and barriers to enhancements. • Some support for the protection of open land designations (Policy 35) including by the Mayor of London. Detailed comments relate to cycle storage and accessibility for disabled persons, exceptional circumstances, visual impacts of developments on sites in proximity, flood storage areas, and the policy wording should match the London Plan and NPPF. The Local Green Space (LGS) sites proposed are supported generally by Habitats & Heritage, with specific support for Udney Park Playing Fields to be retained as LGS. Additional designations as new sites/removals are suggested – Teddington Library Gardens as an additional LGS; Mortlake playing fields should be designated as LGS; Putney Town Rowing Club should be an additional MOL; David Lloyd Club should be removed from MOL; Petersham Nurseries should be removed from MOL; RFU eastern edge should be removed from MOL; Hampton Water Treatment Works should be removed from the Green Belt; removal of and the MOL assessments for Fulwell Golf Club and Longford E & Schools contain inaccuracies; retitle the MOL assessments for Little Green and Thames Old Deer Park and queries the details of the Old Deer Park MOL assessment; the former Thames Water Operational land adjacent to west of Sunnyside Reservoir, Lower Hampton Road should not be in the Green Belt. • Comments on Other Open Land of Townscape Importance (OOLTI) (Policy 36) related to the nature conservation criterion, re-provision and defining openness, quantum and timing. Support for the Ellerman Avenue becoming OOLTI. • General support for the approach to public open space (Policy 37), including by Sport England noting the evidence base is being kept up to date, and by the Mayor of London 	<ul style="list-style-type: none"> • Amends to clarify approach to non-designated sites, measurable enhancements, green corridors and natural riverbanks (Policy 34). • Removal of one site from MOL, with two other minor changes to MOL boundaries; and 6 proposed new Local Green Space designations, along with amends to refer to improving accessibility and cycle storage (Policy 35). • Designation of the OOLTI at Ellerman Avenue (Policy 36). • References are added to the emerging Playing Pitch and Outdoor Sports Strategy, and future Action Plan Updates, and to add the Public Open Space (POS) deficiency mapping to reflect the updated Open Spaces Assessment. Amends to reference active environments, catchment mapping, updated accessibility standard distances, community use agreements and artificial 3G pitches, and extend the POS designation at Heathfield Recreation Ground (Policy 37). • Amends to reference biodiverse green roofs (Policy 38). • Updates to reflect the Nature Conservation Sites Review, along with amends to reference importance of ecological corridors, dark environments and swift bricks, and clarify the mitigation hierarchy for non-designated sites and SINCs and the application of policy including emphasis on a measurable net gain for biodiversity (Policy 39) • Amends to promote the link between protecting and enhancing river corridors for design reasons as well as biodiversity, flood risk benefit, improvements to public spaces, add reference that riverside access should be at all times, drowning prevention measures and supporting de-culverting (Policy 40). • Amends to reference biodiversity of waterbodies (Policy 41). • Amends for clarity and to reference historic parkland, support for hedgerows, increasing tree canopy cover and the Council’s future Tree Planting Strategy (Policy 42).

for play and informal recreation. Support for improving underutilised spaces and securing wider community needs through community use agreements. Detailed comments relate to active environments, impacts of excessive wear-and-tear, increasing green space, biodiversity, and encouraging the Council to take responsibility for maintenance. Site-specific comments relate to the Royal Parks, Udney Park Playing Fields, Heathfield Recreation Ground.

- Comments on urban greening (Policy 38) only relate to the benefits of urban greenspace, and the details around the policy implementation including relating only to major development, no evidence to justify the restrictive 70% requirement, and the ways it can be supported.
- General support for the policy approach to biodiversity (Policy 39) including the 20% BNG beyond Government requirements, although comments also raise whether this is feasible and viable without evidence. A number of comments related to dark corridors and/or dark spaces, with suggestions for areas for restrictions of light pollution. Detailed issues raised include biodiversity potential as a baseline, measurable BNG and DEFRA metric 3.0 the mitigation hierarchy, offsite contributions, submitting data to GiGL, riverside areas, reducing deficiencies in access to nature, integrated nest boxes, buildings-based species, management by site owners, and geodiversity. A number of site-specific comments were raised (analysed against Appendix 4) in support of proposed designations/upgrading including Udney Park, Fulwell and Twickenham Golf Courses, Twickenham Junction Rough, Portlane Brook and Meadow, Richmond Park and Associated Areas, Bushy Park and Home Park, Longford River in Richmond, and all the candidate Sites of Importance for Nature Conservation (SINCs). Some comments specified that parts of the sites should not be included. Comment objecting to upgrade of Hampton Water Treatment Works and Reservoirs. Some comments on Barn Elms.
- Detailed comments on rivers and river corridors (Policy 40), including water quality and undeveloped buffer zones, the multiple benefits of protecting river corridors, river-related industry and protection of slipways, securing public access, ambitions applicable to the River Crane, GLA's Green Grid, groundwater hydraulic flow systems, barriers to movement, drowning prevention, cross-borough working to gain benefit along the river, covered rivers, the overlap with Marine Planning, and site-specific conditions at Platts Eyot.

- Amends to reference need to demonstrate no unacceptable harm in an application, reference to importance of dark environments and to current technical guidance (Policy 43).

<ul style="list-style-type: none"> • Detailed comments on moorings and floating structures (Policy 41), in relation to riverside structures, enforcement action, limited powers regarding appearance of boats, approach to new or extensions to houseboats, moorings and piled bank protection methods causing shading. • Comments on trees, woodland and landscape (Policy 42), a policy approach welcomed by the Woodland Trust, related to details on ancient and veteran trees, increasing canopy cover, source of stock, and protection of hedgerows. • On floodlighting and other external artificial lighting (Policy 43), most of the comments raise concern about the impact of lighting on biodiversity and how the policy will be implemented, although Sport England consider the positive benefits of sports lighting. Specific issues raised – how harm can be demonstrated, a precautionary approach, existing baseline and temporary installations, need for lighting, newer forms of LED lighting, reducing light spill, and protection of dark corridors. 	
<p><i>Theme: Improving design, delivering beautiful buildings and high-quality places</i></p>	
<ul style="list-style-type: none"> • Comments around the subjective nature of design, some raised it was not clear how proposed developments would be assessed including for smaller developments and who is involved (Policy 44). The virtual event feedback considered what was important to ‘good design’ including materiality, sense of connection and community, and sustainability. • Comments were mixed about the tall and mid-rise building zones (Policy 45). Some felt the policy should not set maximums and is too prescriptive; the Hillingdon judgement was referred to as making it clear tall buildings can be found to be acceptable in areas that are not identified where they meet the London Plan. Some respondents felt the Urban Design Study was flawed, including the character assessments and sensitivity, and should not be used to reference acceptability of tall and mid-rise buildings, and while some agreed with the principles, they felt it lacked detail in the supporting evidence to underpin specific zones. Historic England support the policy and provides appropriate criteria to positively manage the conservation of the historic environment and consideration of local character, with comments on where to improve including to avoid harm to vistas and views; the Royal Parks, RBG Kew and the National Trust also comment on assessing the impact on views and heritage assets. RBG Kew request further information and justification on heights for zones in proximity to Kew Gardens. The EA raise the biodiversity of setting tall buildings back from the river, and FORCE 	<ul style="list-style-type: none"> • Amends for clarification, which have increased emphasis on early engagement with the Council, and inclusion of the London Plan fire safety requirements during design stage (Policy 44). • Amends have been made to refer to the setting of heritage assets and fire safety requirements (Policy 45). • Amends have been made to the Urban Design Study, to the character area profiles and design guidance, in the form of an updated 2023 version, with enhanced graphics to aid usability. This includes: <ul style="list-style-type: none"> ○ Profile area for Teddington Town Centre amended to identify poor quality existing developments and lack of legibility, and design quality review for Informer House updated to reflect built scheme. Additional wording has been added to the Teddington Railway Side Mid-Rise Building Zone, to reference heights of recent/existing developments and to state that proposed buildings should respond to surrounding context, stepping down in scale where appropriate to lower prevailing context. In Teddington Residential views from Bushy Park added as particularly sensitive. ○ Twickenham, Strawberry Hill and St Margarets Area the overall sensitivity to change has been amended from medium to high. Design

<p>would like the criteria applied to the River Crane, recognising the impact of tall buildings on adjacent open spaces.</p> <ul style="list-style-type: none"> • A number of site-specific concerns were raised (analysed against Appendix 3) commenting on the scope for a higher number of storeys/wider scope (often the landowner) on Greggs, Kew Retail Park, LGC site, and The Stoop, or that there should be a lesser maximum height/scope of the zones (often residents) on Kew Retail Park, Stag Brewery, Richmond Station, North Sheen (Lower Richmond Road), Teddington (railway side), and The Stoop. • Impact on neighbour amenity and overlooking from first floor terraces raised, as implied not normally acceptable yet the assessment is subjective and permitted in a specific case (Policy 46). 	<p>guidance for Twickenham Residential has been expanded to refer to Twickenham Stadium.</p> <ul style="list-style-type: none"> ○ Amended wording to the Ham Close Mid-Rise Building Zone to consider impacts on views and settings of Ham House as well as demonstrating positive benefits in terms of townscape and local context. ○ Amended design brief for Richmond Town Centre & Riverside to emphasise Conservation Areas. Amended wording to the Richmond Station Tall and Mid-Rise Building Zone to clarify the importance of the BTM and to provide flexibility for a comprehensive redevelopment of the site. Amended character strategy for North Sheen Residential to enforce opportunity to create a local centre. The Tall and Mid-rise Building Zone at North Sheen (Lower Richmond Road) has been amended to set the buildings further back from the railway line and to sufficiently take account of the BTMs and prevailing heights, with the wording amended to refer to need for a detailed townscape, visual and heritage assessment of impacts including on Kew WHS. ○ Features contributing to sensitivity updated for wider context of Kew WHS. Negative qualities section of character profile for East Kew Mixed Use updated. Added wording to Tall Building Zone to need for views from Kew WHS to be assessed. ○ Corrected typo in the Stag Brewery Tall Building Zone to 7 storeys. Added wording to the Mid-Rise Building Zone to require buildings step down sensitively to the riverside and respect the local character. • Reworded to separate the different types of amenity impact and clarify the unacceptable impacts on neighbours' dwellings as a whole. Added cross-reference to the agent of change, along with a new section on noise and plant equipment and update to the (Policy 46).
<p><i>Theme: Reducing the need to travel and improving the choices for more sustainable travel</i></p>	
<ul style="list-style-type: none"> • General support for the policy approach to reducing the need to travel and improving choices for sustainable travel (Policy 47). A number of suggestions for improvements/issues to address, particularly to support cycling and walking, including: 	<ul style="list-style-type: none"> • There are additional references to clarify cycle standards, vulnerable road users and accessibility, coaches, and approach to safeguarding land and refuelling stations (Policy 47).

<p>safeguarding existing transport infrastructure; bus operations can be made more efficient; mitigation informed by a multi-modal assessment; inclusive mobility; impact of traffic and associated air pollution on designated sites and priority habitats; taxis; coach parking; congestion and highway safety; standards for cycling proposals; the walking and cycling network; river corridor opportunities for active travel including River Crane and DNR; need to consider cross-borough active travel links.</p> <ul style="list-style-type: none"> • Highways England confirm policies and allocations will have no boundary issues related to the Strategic Road Network, but along with TfL consider exploration of borough-wide assessment and modelling would be useful in understanding impacts. • TfL welcome the intention to adopt London Plan parking and cycling standards and encourage car-free development (Policy 48). A number of comments on specific areas relating to how the policy would be operated, including excessive paving, the approach to car clubs, car-free development, electric vehicle charging and parking, delivery and servicing, cycle parking and storage, Controlled Parking Zones and disabled parking spaces. 	<ul style="list-style-type: none"> • Further work has been undertaken to assess the trip generation arising from the potential Site Allocations in the Plan, as the Habitats Regulation Assessment identified that a potential negative effect on the protected Wimbledon Common Special Area of Conservation (SAC) could not be ruled out without an assessment of the in-combination air pollution effects. This assessment has now been undertaken, using TfL models which confirmed that the changes in traffic on local roads are significantly less than the 1,000 AADT screening criteria. Therefore, in the updated Habitats Regulation Assessment the air quality impacts have now been screened out, with no further / appropriate assessment required. • Amends for clarification around electric vehicle charging points, cycle parking, car clubs, delivery and servicing plans, construction management plans, and crossovers (Policy 48).
<p><i>Theme: Securing new social and community infrastructure to support a growing population</i></p>	
<ul style="list-style-type: none"> • Providers raise comments on how policy requirements (Policy 49) apply to their service needs/estates, seeking flexibility for alternative uses such as residential, and from the Met Police seeking contributions to cover policing infrastructure. • Education provision (Policy 50) raised in terms of identifying sites/admission priority including for the Stag Brewery. 	<ul style="list-style-type: none"> • The approach to Local Employment Agreements has been clarified (Policy 50).
<p><i>Theme: Creating safe, healthy and inclusive communities</i></p>	
<ul style="list-style-type: none"> • General support for the policy approach to health and wellbeing (Policy 51). Some comments raised about the impacts of the ageing population including their ability to walk and cycle and how impacts are assessed. Some issues raised that are not covered in detail – community safety, housing standards, and public toilets, healthy food neighbourhoods and school super zones. • On allotments (Policy 52) support for their retention but issues raised about investment, their statutory designation, and waiting lists. • On local environmental impacts (Policy 53), detailed comments were mostly from the Port of London Authority, Thames Water and the Environment Agency, raising clarification around implementation including odour impact assessment, sensitive receptors, groundwater impacts, and waste sites. 	<ul style="list-style-type: none"> • There are additional references to healthy housing and reflect the current context for health bodies and strategies, with additional details on community safety and supporting safer neighbourhoods (Policy 51), • Amends to update the context for allotments with reference to the Council’s updated Allotment Strategy (Policy 52). • Amends for clarity including to reference the agent of change applies to noise and other nuisances, consideration of risk to water quality, and mitigation of groundwater from contamination (Policy 53). • Amends to cross-reference protection from sewer flooding covered by Policy 8 (Policy 54).

<ul style="list-style-type: none"> On basements and subterranean developments (Policy 54), detailed matters raised on demonstrating a scheme will not puncture/degrade a sealed/isolated aquifer or increase/exacerbate flood risk, and installation of a pumped device where there is a waste outlet from a basement. 	
<i>Implementation, Delivery and Monitoring</i>	
<ul style="list-style-type: none"> The impacts on particular infrastructure raised by The Royal Parks and the Clinical Commissioning Group (CCG). 	<ul style="list-style-type: none"> The section has been expanded to address the implementation of the Plan and to reflect the update to the Council’s Infrastructure Delivery Plan.

4. Summaries of responses received in relation to the strategic vision, strategic objectives and the Council’s response

(Taken from the detailed comments in Table 1 to Q4 on the response form)

<i>Summary of responses</i>	<i>Summary of Council’s response</i>
Strategic Vision	
<ul style="list-style-type: none"> Some general support for the vision, as appropriate for the borough and its population. Some support for particular emphasis in vision, including on climate change and responding to change, the 20-minute neighbourhood, heritage and culture, affordable housing, green infrastructure. Some suggestions for improvement and issues to address – sustainable energy sources, sustainable drainage, changing age profile, work-location preference of residents, accessible open spaces, adult education and training, our role in London, small/local business opportunities, inward investment, flood risk, waste, community services, broadband connectivity, unviable office space, urban greening, variety of shops, wildlife and dark corridors, inclusive access, air quality, noise pollution. Some felt the 20-minute neighbourhood was not clear, including on public transport and concerns about accessibility (<i>see also summary below against Policy 1</i>). A few comments around housing density and types, over-development concerns etc. 	<ul style="list-style-type: none"> Add reference to reducing flood risk in the vision in relation to responding to the climate emergency. Reflect the Council’s commitment to a borough wide net zero target of 2043. Add reference to improvements to public transport. Add a reference to health and care services and a contribution to reduced health inequalities.

<ul style="list-style-type: none"> • Some criticisms that it is too light, rings hollow, meaningless without measurable targets, and could be bolder; while others felt this section of the Plan difficult to comprehend. • Other issues also noted – whether will be fairly experienced across the borough, whether proper consultation on detailed schemes, about enforcement of policies (on particular site proposals), taking direct landlord responsibility, issues around particular sites. 	
--	--

(Taken from the detailed comments in Table 2 to Q5 on the response form)

Summary of responses	Summary of Council's response
Strategic Objectives	
<ul style="list-style-type: none"> • Some general support for the strategic objectives, or support for some of them but not all. • Some support for particular emphasis, including on climate change, the 20-minute neighbourhood, heritage and culture, affordable housing, increasing biodiversity, accessible green spaces, active travel, and partnership working and role of the voluntary sector. Suggestions the climate emergency should take priority over other policies (including protecting heritage), but also a suggestion standards should align with the London Plan and consider as part of the planning balance when determining applications. Mayor of London notes the themes and objectives align well with the London Plan Good Growth policies. • A few comments around need to recognise the existing context, existing housing stock and limitations of new development. Need to be clear on what accommodating growth means, with concerns around development impacts and the need to safeguard existing occupiers. • Some criticisms that it is too light/vague/woolly, rings hollow, not measurable, could be contradictory and need to acknowledge competing objectives, out of date since the pandemic. A suggestion focusing on wrong things and ignoring what is important for residents. Others felt this section of the Plan difficult to comprehend, a suggestion the details should be moved out into SPDs so they can be updated more often as the context changes. 	<ul style="list-style-type: none"> • Add reference to the importance of dark spaces for some species in relation to protecting and enhancing biodiversity. • Add reference to engaging with local community groups who are invested in the protection and enhancement of local green and blue assets. • Add reference to flood storage as one of the multi-functional benefits in relation to rivers. • Add reference to climate resilience in relation to high quality development. • Add reference to opportunities for safer use of spaces in relation to our environments. • Add reference to health and care services in relation to health as a cross cutting priority. • Clarify the reference to amenity impacts is also those living, working or visiting the surrounding area. • Remove some references to the pandemic.

- Some suggestions for detailed issues to address (*grouped here by the themes*):
 - *Climate Emergency*: more specific on measurable commitments from the Climate Change Emergency strategy, address energy efficiency, address river pollution, strategies for surface flooding, refer to retro-fitting heat pumps, reducing flood risk and natural flood management techniques with reference to the requirements under the Water Framework Directive, link the climate change and biodiversity loss crises.
 - *New homes*: more emphasis on affordable housing, issue of vacant properties and property as in investment, integrate flats with need for family homes, reflect London Plan requirement to optimise.
 - *Town/local centres*: (none noted)
 - *Jobs/businesses*: focus on refurbished/viable office space, consider workplace parking levies.
 - *Heritage and culture*: wasteful energy use in digital billboards.
 - *Green and blue spaces*: obligations around preventing adverse air/water/noise pollution on nature conservation sites, issue of impact of street lighting on insect populations, importance of green spaces that are safe, use of river for transporting goods, prioritise natural spaces over man-made spaces (e.g. astroturf pitches), recognise flood storage.
 - *Design*: refer to resilient to climate change.
 - *Travel*: mention VisionZero and pedestrian safety, need to recognise transport needs of elderly and less mobile residents, target for reducing car ownership per household, need to increase levels of walking and cycling, charging points for electric vehicles.
 - *Social infrastructure*: identify shortfalls in infrastructure and community facilities and find places for those identified needs, ensure adequate facilities to support new development, prioritise facilities for youth needs.
 - *Communities*: reduce impact of air/noise/light/odour pollution, mention new allotments, support development that promotes healthy lifestyles and reduces health inequalities, emphasis on development that does not have a negative impact on health etc.

- Other issues also noted – need for disaster planning and allocation of resources, issues around particular sites, and some specific issues that are beyond the remit of planning policy.

5. Summaries of responses received in relation to Policies 1 and 2 and the Council’s response

(Taken from the detailed comments in Table 3 to Q6 on the response form, along with the engagement events report)

(See also section 7 for the detailed response form comments on Policies 1 and 2)

Summary of responses	Summary of Council’s response
Policy 1. Living Locally and the 20-minute neighbourhood	
<ul style="list-style-type: none"> • Broad support for the concept in principle, recognising benefits including encouraging walking and cycling to enable a modal shift, making it easier to be physically active, and improving accessibility/connectivity of green infrastructure. • Many respondents raised concern about the elderly, those with disabilities, those less mobile/able to walk or cycle for 20 minutes – which should be addressed in the policy. A comment people may also just not wish to walk or cycle; a comment about being able to carry grocery shopping for example. Concerns about the risk of social isolation. A comment that space is needed in new development for vehicles to drop off/collect less elderly/mobile; a comment about carers who need a vehicle. A comment that not everyone who is mobility limited has a blue badge. A comment about downsizing and doing more to encourage housing suited to older residents. A comment that not everyone is able to cover the same distance in 20 minutes, particularly those with pain/exhaustion, concerns about falling over, crime, accidents etc. and the condition of roads and pathways to be improved, well-lit and maintained, with seats, accessible toilets, more time at crossings, to enforce the ideal of ‘pavements for people’ – a suggestion to seek the views of Disability charities/organisations. • Many respondents raised public transport – buses and trains – which should be addressed in the policy. A suggestion should be a commitment to 20 minute bus rides, a smaller fleet of electric buses running at high frequency 	<ul style="list-style-type: none"> • Consolidate some of the core concepts of the living locally policy under part B to aid clarity. • Add reference in the policy to people who experience reduced mobility to the policy. • Add further reference in the policy to expectations for a mix of uses, across areas and on sites. • Add an information box for the Regulation 19 consultation to clarify the policy is not seeking to restrict movement. • Add reference in the supporting text to how the 800m relates to the borough, but this is not measured as an absolute geography, and there are no fixed zones or boundaries. • Add a paragraph detailing where applicants can demonstrate compliance with Criteria C. • Add a paragraph to the supporting text on mixed uses. • Add a paragraph to the supporting text on people with reduced mobility.

on all major roads. A comment raised the protection of rail services, with cuts to Fulwell undermining efforts to reduce car use. A comment that as most locations are within 800m walking distance of a train/tube and the few areas beyond are feasible to walk/cycle, every area of the borough should be considered for housing.

- Some expressed concerns, including that this is idealistic, that people should make their own decisions about where they live, and it should not become parochial given the outside investment brought by visitors and tourists. A comment that the policy risks creating 'islands' with the Council's ability to make investments limited, but the Council can help by reducing business rates. A number of respondents raised that as part of living in London people will travel elsewhere for jobs, culture etc. into London or Surrey, although a comment that post pandemic people may still stay local e.g. for leisure. A comment that changes in behaviour for the past 2 years were forced. A comment that the approach is a town centre first vision and should be named a 15-minute city approach. Some concern it should be about 10 minute one-way trips, but this has been doubled. A comment that offering 30 minutes free parking undermines the objective, and the bays could be used for public realm (parklets, tree planting, cycle parking). A comment that car-free development leads to parking elsewhere, and car use is often required e.g. to reach large supermarkets, for family-orientated transport.
- Some comments related to the infrastructure and services, and clarification around facilities needed. A number of comments highlighted that the offerings in the smaller centres and parades should be improved, and protect corner shops, another suggestion about provision of banks. Comments also about good access to health and education. A couple of comments about whether low-rise residential or high density etc. with a comment noting there needs to be a large enough population to support the concept. The Richmond CVS comment that development should demonstrate their understanding and awareness of voluntary and community sector provision locally and how investment in existing community buildings, spaces and infrastructure will support living locally. The CCG wish to raise what it means for healthcare services and models of

care, with opportunities for the NHS to become directly involved in the high street – running health services and the design of healthy places. A comment that the policy does not incentive local living or less car-use, and needs to set out what services are needed and what new hubs need to be set up. A comment about the need for analysis of facilities provide to achieve the range and quality.

- Other specific comments also noted. A suggestion to provide more local jobs and discovery of other areas in the borough. A comment should provide mixed-use development including workspaces like artist studios, workshops. A comment this is merging the urban villages to create bigger town planning units. A comment that those commuting into central London earn more, and encouraging local employment will affect financial security and retirement incomes and ultimately lead to a higher social care bill. A comment about isolation and widening gap between rich and poor. A need for affordable housing to avoid gentrification. Map under 4.1 should be done on actual walking distances. A comment that post-pandemic local employers find staff leave for better paid jobs in central London. A comment on managing green infrastructure accessibility in a way that does not impact on biodiversity, particularly avoiding lighting that has a negative impact on nocturnal wildlife. A comment there needs to be sufficient green space and amenities e.g. public toilets. A comment developers should show how plans for large development have designed out crime. A comment that proposals must demonstrate how they will improve local walking and cycling routes in all PTAL levels. A comment to include the ‘Healthy Streets’ Transport Assessments for major developments (10+ residential, non-res of 500sqm+). A comment about high rates of bike theft. A comment also about needing safe and secure bicycle storage e.g. subsidised bike lockers, a valet cycle hub/repair/hire service. A comment on improving walking and cycling routes, including cut-throughs in new development. A comment that the needs of pedestrians and public transport users and drivers should not be deprioritised. A comment that more is needed on how to link walking/cycling to the rail/tube network i.e. secure cycle storage.

<ul style="list-style-type: none"> • Some comments received about particular areas and sites. A concern about the western fringe of the borough becoming more isolated for older people. A comment that Whitton isn't well served by public transport so the policy doesn't tie in. Royal Botanic Gardens Kew comment that while encouraging visitors and staff to travel by walking, cycling and public transport it is not possible to enforce, and applications for temporary events and installations may not be able to deliver improvements to support living locally. RFU comment there should be exclusions for Twickenham Stadium. A comment on the opportunity to increase and diversify the area of Twickenham Green. A comment the Arlington Works site has the potential to contribute towards the 20-minute neighbourhood of St Margarets. Ham and Petersham Neighbourhood Forum note the parallels with neighbourhood planning and the constraints and context for residents of Ham and Petersham. A comment on encouraging a better mix of shops in Teddington – greengrocer, butcher, clothing. A comment about Kew and the impact of losing the retail park shops, leaving only corner shops, leaving residents to travel to larger supermarkets. A comment that in Kew the distance to the station and bus stops for older people can be daunting. A comment also that in Kew the thriving local parade is weighted towards coffee shops for tourists. A comment that the East Twickenham public realm improvements should be replicated – to improve the pedestrian environment on all High Streets, including Broad Street as a potential priority area, and noting issue of free car parking and narrow footways along Hampton Hill Street. A comment that the Elleray Hall replacement is a less convenient location than present building. There were also comments supporting Park Road Surgery to move (Site Allocation 9) for the benefit of living locally. • <i>Virtual event feedback:</i> There was also general support for the 20 minute neighbourhood policy. 	
---	--

(Taken from the detailed comments in Table 4 to Q7 on the response form)

Summary of responses	Summary of Council's response
-----------------------------	--------------------------------------

Policy 2. Spatial Strategy: Managing change in the borough	
<ul style="list-style-type: none"> • Some broad agreement with the policy. Some respondents identified particular aspects of the policy they agreed with – brownfield land, embodied carbon, protecting open spaces, the biodiversity crisis, infrastructure, affordable housing, and accessibility. • A few noted the challenge and competing issues. Some differing views towards development. A number commented did not agree with high-rise/high density development and felt the area is already overpopulated. Some individual comments the approach is not reflected in relation to a particular site – Twickenham Riverside, Stag Brewery. Some reference to sensitivity to design and character, and impact on views. Some responses raised there are places and existing development outside of centres which do not have good public transport connections. • A number of particular issues were raised – the conflict between retrofit and historic buildings/Conservation Areas, reduction in train services, need for health and social care facilities locally, avoid development in areas that would encourage motor vehicle use, taking into account e-cycles, retail forecasts given on-line shopping, urban hedgerows and nature-connected neighbourhoods, oases of nature, open space deficiency areas, affordable housing forcing poorer families into spaces a fraction of the size of others, risk of maladaptation from presumption in favour of refurbishments, and using sites/buildings for shared use. 	<ul style="list-style-type: none"> • Update the supporting text to reflect the new and updated evidence base. • Update the Key Diagram to reflect updates to other map designations. • Delete the Alternative Policy Options to the Spatial Strategy, as that section was included in the Regulation 18 Plan to inform consultees of the issues being considered, and stated it would be removed.

6. Summaries of responses received in relation to the Place-based strategies and Site Allocations and the Council's response

(Taken from the detailed comments in Table 5 to Q8 on the response form)

Summary of responses	Summary of Council's response
<ul style="list-style-type: none"> • Many respondents agreed with the overall approach to the place-based strategies and Site Allocations. The Ham & Petersham Neighbourhood Forum support the vision that builds on the Neighbourhood Plan and references the policies and community proposals. Some comments picked out particular points that they agreed with including the River Thames, habitat corridors, reducing 	<ul style="list-style-type: none"> • Added as new Site Allocations Fulwell Bus Garage Homebase, Hanworth and Molesey Telephone Exchange as they are a similar type of site to other allocations. • Update the Key Diagram to reflect updates to other map designations.

<p>car dominance, mixed use development, routes for walking and cycling, pedestrian permeability, high street pedestrianisation, and interchanging with/promoting bus and train use.</p> <ul style="list-style-type: none"> • Some respondents disagreed with the separation into ‘places’, with a comment it could lead to division with areas protecting own interest, a comment that places don’t exist in isolation and would I be banned from somewhere more than 20mins walk, a comment that means the Council is moving away from liveable neighbourhoods and disadvantaged areas such as Heathfield and Hampton North are likely to lose out. A comment areas of outer London are suffering decline as many young people prefer to live in central London and this has skewed the demographics, and would expect to see more details on how different areas will be regenerated. A comment Twickenham Stadium and surrounds should form part of its own character area or specific exceptions referenced to properly enhance the sporting role. A comment the strategies have been put together using old information and engagement and research has not taken place. A comment on the key diagram that areas for intensification should not overshadow MOL and Green Belt. • Some felt there was inconsistency in how some measures had been included in the place-based strategies or what had been mentioned in Site Allocations e.g. cycling and walking. Some respondents raised issues not mentioned – biodiversity, residents needs for access to GP and police, a report on reducing car dominance in Hampton – Hampton Hill, outdated/unviable office accommodation could be converted to other more viable uses, and public transport improvements including the benefits of Crossrail 2. • Some comments specifically relating to the Urban Design Study, including a query about its status and relationship to existing Conservation Area Appraisals, and some comments about sensitivity. A comment about overdevelopment of the town centres. A comment the proposals for key sites replicate the aspirations of developers facilitating approval of their proposals. • Additional sites were suggested: <ul style="list-style-type: none"> ○ Hanworth Homebase for mixed use residential with affordable housing/commercial (as a large element of surface car parking, and as seen 	<ul style="list-style-type: none"> • Proposed change to boundary to remove the small portion of OOLTI/POS from Site Allocation Hampton Square. • A number of comments relate to broader issues which have been covered in other parts of the Plan, or in responses to other comments, or matters beyond the remit of the Local Plan. Some points are covered by the updated Infrastructure Delivery Plan. • It is considered that the character areas and places have been informed by the Urban Design Study and are an appropriate geography. Aspects including design guidance and sensitivity to change for particular areas have been updated in the Urban Design Study 2023 to reflect comments raised. • It is considered the place-based strategies and Site Allocations set out an appropriate level of detail to guide future development, without being overly prescriptive, and signpost where further work such as a masterplan or site development brief may be developed.
--	--

on other Homebase sites in Richmond and in Kingston there is desire of the landowner to convert the sites).

- Molesey Telephone Exchange in Hampton (as other telephone exchanges that may be disposed are included).

- Some comments on specific places/sites:

- Richmond: devil in the detail getting the right balance between attracting visitors but not to the detriment of residents. Piloting clean air zone good in principle; the biggest polluters are the heavy goods vehicles and buses.
- Richmond College: are we happy the artificial grass pitch (3G) mentioned is appropriate, given importance for good drainage, whether the extra revenue or maintenance cost savings justify in an area liable to flood.
- A flood channel parallel to the Thames upstream from Richmond was recommended in 2010 but still not approved – is this Plan the place to address that? (partnership with EA, Thames Water Utilities and TfL)
- Teddington Weir mentioned in the SFRA as an asset that needs improving – what's the plan?
- Fulwell: strategy is unclear and poorly developed (in Hampton Hill area), what might be enacted and can have more explanation on the vision?
- Hampton Square: contains an implicit intention to develop the part that is designated as OOLTI and contains a much-used children's playground.
- Cassel Hospital: in line with the Site Allocation should reflect that potential redevelopment for residential uses could be considered.
- Stag Brewery: disagree with move from a primary to second school and sixth form, and cumulative impact of land uses will not contribute to the new village heart for Mortlake and will not protect green open space or reduce level crossing risk.
- Twickenham Green: poor access in surrounding housing areas with many schools and few amenities. Green space/infrastructure should be supported before plans to build.
- Twickenham Town Centre and Green: high sensitivity to change and require naturalising as much as possible because of packed terraced houses.

<ul style="list-style-type: none"> ○ Twickenham, Strawberry Hill & St Margarets: agree with reference to Twickenham Film Studios. Arlington Works should be designated as a 'Locally Significant Industrial Site'. ○ Twickenham, Strawberry Hill & St Margarets: map is inaccurate as it does not differentiate between St Margarets Local Centre and St Margarets Residential. The Local Centre and its immediate surroundings are mixed use in nature and should recognise have the potential to further develop a mixed use nature. Arlington Works could support a mixed use (commercial and residential) regeneration scheme on a key site within the area, however it has been discounted, and do not understand or agree with the rationale. ○ Kew World Heritage Site: would like a strategy for how to ensure the WHS will be protected and enhanced, particularly in light of construction in Hounslow that would impact negatively on its outstanding universal value. ○ Kew Retail Park: would like to see protection against inappropriate height (i.e. 7 storeys or more) and density of redevelopment, given adjacent Kew Riverside are, with one exception, five storeys or less. ● <i>Note detailed comments against each Place-based strategy and Site Allocation are also set out in Table 6 to Q9/10/11 on response form.</i> 	
--	--

7. Summaries of responses received in relation to the Local Plan policies and the Council's response

(Taken from the detailed comments in Table 6 to Q9/10/11 on response form, along with the engagement events report)

Summary of responses	Summary of Council's response
General	
<ul style="list-style-type: none"> ● The Royal Parks acknowledge the inclusion of reference to the importance of Richmond Park and Bushy Park, which aligns with the Royal Parks' own objectives, but would like the Plan to go further by including a stand-alone Royal Parks policy. The importance of the Parks would justify such an inclusion. The Royal Parks would like to work with the Council to capture the value of development around the Parks, and for support in protecting, maintaining and enhancing these sites of key green infrastructure. Both dense development on our Park boundaries and taller developments that impact on the sightline are 	<ul style="list-style-type: none"> ● The name and order of the Plan is considered logical; it is inevitable that some parts are at the end, but a user can navigate their way around the document. ● A number of comments were for information or setting the context of organisations who have responded or for the Duty to Cooperate, which do not require any amends to the Plan. ● A number of comments relate to broader issues which have been covered in other parts of the Plan, or in responses to other comments, or matters beyond

potentially detrimental to these listed landscapes and intrusive to visitors. Suggest a policy could be similar to Policy 32 (Royal Botanic Gardens, Kew WHS) and could refer to the Royal Parks Management Plan, and refer to /cross reference with other key relevant policies, to give the Parks the protection and support which they require. Development in the borough, particularly new residential development, benefits significantly from what the Royal Parks provide but also increases pressure upon them, through increase and intensification of visitor numbers, and the Royal Parks would like to work with the Council to capture the value of relevant development to support the Royal Parks in their work to protect, maintain and enhance the Parks, potentially through S106/CIL contributions.

- Historic England is keen to ensure that the protection of the historic environment is taken fully into account at all stages and levels of the planning process. In summary the Plan represents the historic environment well and considers it consistently and appropriately throughout. Main concerns relate to the detail associated with site allocations, and some areas where the Plan can be improved to ensure the historic environment is conserved and managed sustainably. Would be helpful to have clarification on site allocations and quantum of development, densities etc. as important sites with heritage sensitivities are carefully considered. In general the Urban Design Study findings could be better transposed into policy objectives, particularly within the site allocation policies, where specific findings have already been drawn in the evidence; the future development of guidance leaves a gap and risks. The Plan provides a strong basis for conservation and enhancement of the historic environment, and welcome attention paid to climate change, focus on a designed approach to site capacity, as well as standalone policies on non-designated assets, views, shopfronts, and regular reference to the Urban Design Study.
- A comment the Plan launches almost immediately into the spatial strategy and the nine areas and then the borough-wide policies, whereas the current Local Plan sets the borough-wide policies first leading to the spatial strategy at the end, and wonder why there has been this change. The start of the 'batting order' with climate change, follows with housing, town centres etc. is sensible but fail to understand why concludes with the design process, tall buildings,

the remit of the Local Plan. Some points are covered by the updated Infrastructure Delivery Plan.

- It is considered that the place-based strategies and Site Allocations set out an appropriate level of detail to guide future development, without being overly prescriptive, and signpost where further work such as a masterplan or site development brief may be developed.

local environmental impacts and basements that seem to have been tagged on like after-thoughts, whereas they belong to the section on local character and design quality as in the current Plan. The plans in the spatial strategy sections need to be clearer and the ratings polygon diagrams are illegible and the data would be better presented as tables. The Summary supporting document has been useful.

- Spelthorne Borough Council note there are no Site Allocations in close proximity to the boundary of the two authorities, and look forward to continuing engagement as both Local Plans are taken forward.
- TfL Location Enquiries have no comments and note the London Underground Infrastructure Protection need to be consulted as statutory consultees on any planning application within London Underground zones of interest, and notified of intended works in the highway.
- The EA support the strategic objectives on responding to the climate emergency, biodiversity and green and blue spaces, and reducing the need to travel and improving choices for sustainable travel. Provided detailed comments on key environmental issues and opportunities, Site Allocations, and the Sustainability Appraisal and Sequential Test Report. Encourage full use of the Duty to Cooperate and cross-boundary and collaborative working when addressing climate change, flood risk, waste management, habitat and biodiversity enhancement, watercourse protection and improvement, water and waste resources.
- The Mayor of London comment all Development Plan Documents must be in general conformity with the London Plan, which forms part of the development plan. The comments draw our attention to the Mayor's nine pandemic recovery missions, including high streets for all, enabling resilient communities and digital access for all, which may be useful in helping develop the spatial strategy further. The Plan sets a clear plan for growth and addresses many important policy areas such as responding to climate change and delivering new homes through incremental intensification in well-connected locations. However, the current approach to affordable housing in Policy 11 is likely to be an issue of general conformity.
- Natural England have no comments to make on this consultation.

- A comment looks like a very progressive plan and would have liked more time to read and comment.
- A comment raising mental health and the issue that people are not listening and the problem is poverty.
- Crane Valley Partnership, an unincorporated association of public, private and third sector organisations, whose aims are around managing and improving the design and management of the River Crane and its tributaries. CVP is the formally recognised Catchment Based Approach (CaBa) partnership for the Crane catchment. Members of CVP will submit their responses accordingly if they wish to engage. FORCE is a member of CVP and there is nothing in there response that I would disagree with, and urge the Council to take note of and act on the issues raised to assist in the process of refining the Local Plan in relation to the protection and enhancement of the Borough's river corridors and associated open spaces. Reinforce FORCE's comment the Local Plan should be informed by the [Colne and Crane Valleys Green Infrastructure Strategy \(2019\)](#) which identifies a range of river corridor enhancement and active travel opportunities in the borough. River corridors and the many people who use them for travel and recreation, cross borough boundaries so a coordinated pan-borough approach to green infrastructure provision is required and the Plan should clearly acknowledge this. The CVP has commissioned Sustrans to undertake a footpath and cycleway audit along the river corridors of the Crane Valley and it would be beneficial to feed the future findings into the Local Plan.
- National Grid Electricity Transmission plc (NGET) owns and maintains the electricity transmission system; National Grid Gas plc (NGG) owns and operates the high-pressure gas transmission system. Identified the National Grid assets in the Plan area for electricity transmission – 275Kv underground cable route: Ealing – Laleham 1. An illustrative plan provided and guidance on development close to National Grid assets.
- Marine Management Organisation (MMO) as the marine planning authority, responsible for preparing marine plans for England inshore and offshore waters. At its landward extent the Marine Plan boundaries extend up to the level of the mean high water spring tides mark (which includes the tidal extent of any rivers), there will be an overlap with terrestrial plans which generally extend to

<p>the mean low water springs mark. Marine plans will inform and guide decision makers on development in marine and coastal areas. Planning documents may wish to make reference to the MMO's licensing requirements and any relevant marine plans. The South East Marine Plan is of relevance (adopted 2021). Public authorities taking authorisation or enforcement decisions that affect or might affect the UK marine area must do so in accordance with the South East Marine Plan, or the UK Marine Policy Statement (MPS) unless relevant considerations indicate otherwise. May also wish to refer to the MMO's online guidance, Explore Marine Plans and the Planning Advisory Service soundness self-assessment checklist. A marine licence is required for certain activities carried out within the UK marine area, which can range from mooring private jetties to nuclear power plants and offshore windfarms. Suggest the policies from the South East Inshore Marine Plans that are most relevant, but are provided only as a recommendation - SE-INF-1, SE-INF-2, SE-HER-1, SE-SCP-1, SE-EMP-1, SE-CC-1, SE-CC-2, SE-CC-3, SE-AIR-1, SE-ACC-1, SE-TR-1, SE-BIO-1, SE-BIO-2, and SE-BIO-3.</p> <ul style="list-style-type: none"> • Two comments the title of the Plan should be Richmond-upon-Thames Local Plan and not simple Richmond Local Plan. There is no pagination in the document. The lists of page numbers in the un-headed list of contents and the headed list of policies should be headed as such. 	
Introduction	
<ul style="list-style-type: none"> • Two comments neither section 2 nor section 15 refer to a Policies Map. Referring to 'Policies Map for the Local Plan Review, 2015-2018' which states the Policies Map will be updated in 2020 to reflect the adopted Plan. However, to date this has not been done. There is no published Policies Map beyond that published in 2015. • A comment delivery requires interventionist action by the Council which will not happen. Experience has shown that the ideological reliance, shared by Conservative and Liberal Democratic politicians, on the free market's ability to provide will fail again. Find a complacency in the relative prosperity of the borough pervades the preamble. A fairer share of income and wealth requires the 'no more business as usual' change to a national Labour Government, but the Richmond Labour Party suggest local Government can play its part. 	<ul style="list-style-type: none"> • Add references in the section on strategic context and trends to health inequalities and residents on lower incomes, and paid and unpaid carers. • Further work undertaken to assess trip generation arising from the potential Site Allocations in the Plan, using TfL models which confirmed that the changes in traffic on local roads are significantly less than the 1,000 AADT screening criteria. Therefore, in the updated Habitats Regulation Assessment the air quality impacts have now been screened out , with no further / appropriate assessment required. • The Habitats Regulation Assessment accompanying the Regulation 19 Plan has also been updated to reflect the qualifying feature of the Richmond Park SAC and how the impacts with regard to noise, vibration and light pollution, air pollution, and recreation have been assessed.

- | | |
|--|--|
| <ul style="list-style-type: none"> • Two comments much in the Local Plan derives from questionable analysis and recommendations in the Arup’s Urban Design Study, and in more limited part the MOL Annex Report. These need to be firmly challenged. • Historic England comment on the SA Scoping Report, under the SEA Directive there is a requirement to assess the likely significant effects which the Policies and proposals of a Plan might have upon “cultural heritage including architectural and archaeological heritage”. Suggest a number of plans, policies and programmes that should be included. The historic environment should be a factor when considering a method for the generation of alternative proposals – more than just measuring the proximity of a potential allocation to heritage assets, and not just based on visual impacts, as assessment requires a careful judgement based on site visits and available evidence. • The Ham & Petersham Neighbourhood Forum comment on the Sustainability Appraisal – include reference to construction waste (63% of all landfill) and reducing embodied energy, reference circular economy; 82% of buildings built today will be here in 2050, need to meet net zero now to avoid need for retro fit prior to 2050, include reference to reducing greenhouse gas emissions in retro-fits and refurbishments. • Natural England comment on the Sustainability Appraisal and Habitats Regulation Assessment (after their attention was drawn to, in relation to Duty to Cooperate). Broadly in agreement with the HRA conclusions. Support the strengthening of Policy 37 to encourage visitors towards greenspaces outside of those which are Habitat Sites, and recognise the need for further traffic modelling to be able to inform the impacts of the plan in terms of air quality. Would be happy to be reconsulted on the HRA once this modelling has been completed to assess whether we agree with the conclusions, and whether adverse air quality impacts on a Habitat Site can be ruled out or whether there is a need for mitigation. • The Royal Parks comment on the Habitats Regulation Assessment in terms of Richmond Park SAC. On noise, vibration and light pollution, there is no consideration of the potential impact on invertebrates such as stag beetle, which may alter their behaviour or be more vulnerable to predation as a result of artificial lighting. On air pollution, there is no consideration of through traffic | <ul style="list-style-type: none"> • The Sustainability Appraisal accompanying the Regulation 19 Plan has been updated to reference the natural environment features, along with the updated Flood Risk and Development Sequential Test. • A number of comments relate to broader issues which have been covered in other parts of the Plan, or in responses to other comments, or matters beyond the remit of the Local Plan. It is considered appropriate that the short introductory sections of the Plan do not need to exhaustively cover all issues or reference other strategies. • The reference to the adopted Plan and the existing Policies Map is considered adequate, as an updated Policies Map has since been published. • A policy on Heathrow is not considered appropriate because the airport does not lie within the borough boundary. |
|--|--|

and the potential for associated air pollution to impact stag beetles, through impacts on trees or soil chemistry; nor is there consideration of the impact which local developments or transport policies may have on levels of traffic through the park. On recreation, impacts are discounted solely on the basis of site management, however as per the discussion for Wimbledon Common which is screened in for further assessment partly on the basis of its draw to visitors), Richmond Park is subject to extremely high visitor numbers and would likely be impacted by increased development to a greater degree given location and accessibility. Visitor pressure is at such a high level that even with extensive resources allocated to tree management, the tree population suffer from compaction and erosion, vandalism and fire, whilst deadwood habitats are subject to significant disturbance by visitors. It is therefore not appropriate to screen the site out from further assessment.

- The EA welcome the Sequential Test Report to support the Site Allocations, and look forward to working with us/reviewing the Level 2 SFRA which will also support the Site Allocations. Refer to Section 8.2 of the Level 1 SFRA.
- The EA comment on the Sustainability Appraisal and Sequential Test Report. Note the SA assessments of the Plan objectives show they have a largely positive effect when compared to the SA Framework, and no noteworthy policy gaps were identified, and no significant negative effects established that required mitigation. There are, however, instances where there are uncertainties or potential tensions amongst objectives. One of the key areas where this arose is the impacts on heritage and the natural environment. It states due to the large areas of protected open land and historic settlements it may limit development opportunities; other natural environmental features such as river corridors and areas of high flood risk may also limit where sustainable development can be delivered. The SA objectives are appropriately selected and represent the key environmental issues and opportunities; however wish to comment on specific SA objectives and policies to highlight where further opportunities are missed or where the significance/magnitude of the effects have not been accurately predicted. SA objective on climate change: disagree with the conclusion that delivering new homes/affordable borough for all would have a neutral/uncertain effect - the draft Site Allocations has a

number of potential sites within Flood Zone 2 or 3, and new development in town and local centres may not be required to apply the Sequential Test, potentially delivering a significant number of new homes in areas of flood risk. Refer to the current SFRA to identifying known effect of the policies – developments are required to pass the Exception Test in line with the national PPG, for example unless a change of use application. It would appear certain types of development would not be required to pass the Exception Test and thus this local Sequential Test would be contrary to the NPPF. Seek clarification that the proposed sites that have been deemed to not require the Exception Test are exempt in accordance with the NPPG. In addition, policy framework around town/local centres deemed not to be applicable to this SA objective, but would recommend it is tested given the potential flood risk in tow and local centres. Agree with the conclusion biodiversity/blue and green spaces will have a very positive effect. On the Sequential Test Report, recommended paragraph 1.1.1 refers to the risk of fluvial flooding from other tributaries of the River Thames as well. Support paragraph 4.2.1 regarding islands and flood risk (*see other comments against Policy 8*) and should refine wording in the Sequential Test Report as well. SA objective on reduce pollutions/minimise impacts of development: welcome inclusion of this objective and agree will have a very positive effect on the borough's biodiversity and green and blue spaces. Agree with positive effective from the climate emergency policy framework. Welcome policies 3, 7 and 9 which address potential pollution and other negative environment impacts. Agree with conclusion; however feel there is opportunity for the policy framework to provide a much greater positive effect. SA evidence base: welcome draft revised SA Scoping which includes the strategies and plans we highlighted in our last consultation responses; the SEA/SA section requires updating and recommend the following plans and strategies are added to the SEA/SA process and demonstrate how they have been considered to inform the development of the new Local Plan – EA2025 Action Plan, Natural Flood and Coastal Erosion Risk Management Strategy for England (2020), The Water Environment (Water Framework Directive) (England and Wales) Regulations 2017, Resources and waste strategy for England (December 2018), Serious and

organised crime: 2018 review, and Water Drainage and Wastewater Management Plans (DWMPs).

- The CCG note a HIA has been prepared. The draft Plan responds to the key challenges and trends, including the longer-term impact of the Covid-19 pandemic, the climate emergency and population change, that will have an impact on healthcare services and wider health and wellbeing.
- The CCG note paragraph 2.24 refers to the borough as prosperous, safe and healthy, however there is a difference in life expectancy; health inequalities have been exacerbated during the Covid-19 pandemic. In comparison to other London boroughs, Richmond is relatively less deprived but there are pockets of deprivation.
- Richmond CVS comment that at paragraph 2.26 in addition to an ageing population it is important to highlight high numbers of unpaid carers across the age ranges. Set out under the Care Act the local authority must ensure residents have services/support, and that the pandemic has further highlighted support needs the local authority must consider the needs in relation to access to employment, education, and access to local services.
- The CCG support the reference at paragraph 2.26 to ensure health and care services respond to a changing and ageing population.
- Richmond CVS comment paragraph 2.27 refers to high employment rates but these divert attention from the employment challenges and skills gaps for a number of targeted groups and risk increasing inequalities for these groups. Challenges for those who lack digital skills, with low educational attainment, recent graduates, people aged 50+ seeking work, professions adversely impacted by the pandemic, young people claiming universal credit/Job Seekers Allowance and with SEND. Government initiatives are short term funding. The employment skills gap and priority groups in Richmond need to be recognised in the Plan, and where possible expectations made within the planning process that will generate opportunities for skills-based learning and employment for targeted groups.
- A comment ask we also declare a nature emergency – the ecological crisis is often overlooked and there is a danger of a carbon land grab, which would see biodiversity displaced for offsetting and mitigation.

- The Royal Parks welcome paragraphs 2.33 and 2.39 which recognise that additional residential development and population growth will likely bring more access pressure to the borough's parks and open spaces and make trampling and erosion potential issues. However, additional issues of air pollution and light pollution should also be included.
- A comment delighted the Council declared a climate emergency and making this underpinning the draft Plan, however concerned this is not strong enough where the Climate Emergency conflicts with other policies and I think that the priority around climate emergency should be made explicit in the Plan. It is not unusual for policies to conflict and my experience as a Trustee of Richmond Charity Almshouses has shown there is a danger of priority being given to aesthetic and historical considerations in developments in Conservation Areas and of listed buildings. Application to instal photovoltaics on Candler's Amshouses, Amyand Park Road 21/3000/HOT turned down, by reason of its combined siting and design resulting in an incongruous, prominent and cluttered form of development that would impact on the unaltered roofscape and important unified composition of the former almshouses and thus fail to preserve or enhance the setting, character and appearance of the Conservation Area. The decision flies in the face of the declaration of the climate emergency and contributed to higher costs of the residents in social housing.
- The EA suggest the Thames Estuary 2100 Plan should be referred to in the section 'Responding to a changing environment' (Paragraph 2.33 to 2.40). Recommend the council include a summary of the issues and opportunities highlighted on page 82 of the [TE2100 plan](#).
- A comment on paragraph 2.36 commend the borough on the reduction in emissions made so far and look forward to progress. Ask planning embeds a requirement to move to renewables – possibly incentivising heat pumps and solar and eliminating dependence on gas.
- Richmond CVS comment on paragraph 2.36 inevitably those who need to upgrade their energy efficiency most are those who can least afford it. There have been Council run green energy grant and initiatives targeted these households – what is the data telling us and is there learning to take forward.

- A comment on paragraph 2.39 support the protection of biodiversity and the plan to extend green spaces. One of the key aspects is connectivity – one of the core ideas behind Nature-Connected Neighbourhoods – so I welcome moves towards urban greening e.g. urban hedgerows - space at the back of Squires on Wellington Road is filled with bird life. Perhaps businesses offering quality (and biocide-free) space for nature could receive a reduction in business rates.
- A comment on paragraph 2.40 support an increase in active travel and the idea of the 20 minute neighbourhood sounds promising. Would like to see further measures towards significant reduction in car journeys to schools, such as School Streets – perhaps could be extended to all side roads with school entrances residents and access only.
- A comment support paragraph 2.42 and the Corporate Plan objectives.
- A comment support paragraph 2.44 and opposition to expansion of Heathrow airport; such plans have no place in a climate emergency.
- A comment support paragraph 2.44 and Council’s objections to any further expansion of Heathrow. No other major city has a main airport which adversely affects many of its residents because of the flight paths as London and Heathrow. It’s the most significant factor reducing quality of life in the Kew region.
- Two comments propose Heathrow noise be given much more weight in the Local Plan, especially in response to the re-allocation of flight paths from Airspace Modernisation and the introduction of air taxis and drones. The Development Control for Noise Generating and Noise Sensitive Development 2018 is substantially deficient. The airspace is an important "asset" above Richmond (not only for Heathrow traffic but increasingly for air taxis, drones, etc). The ICAO set of rules for noise management is the Balanced Approach and sets the priorities – starting with reduction of noise at source, followed by land use, operations and finally restricting traffic movements. Land use is about not developing housing and vulnerable uses and/or mitigating noise where there is significant noise impact on health and well being from overflight. Other national noise policies could be deployed to deal with Heathrow noise. At the moment the Noise England Statement on Noise 2010 uses a threshold of 51 decibels (Laeq) for daytime; Heathrow aircraft noise levels in Richmond borough are at

least 60 dbA in some places; WHO Guidance threshold levels are 45 dbA day and 40dbA night. Recommend the Council develop a planning approach and policy to deal with housing and other developments exposed to noise from Heathrow aircraft and the emerging air taxis and drones. A number of developments, such as at Manor Road and Stag Brewery would be significantly affected by aircraft noise, especially on arrivals under the Heathrow landing flight paths, and Airspace Modernisation will affect the whole borough potentially and while the 4 year process takes place there will be uncertainty and blight.

Vision and Strategic objectives

- Richmond CVS highlight the value and contribution of the VCS to community development and sustainability, the needs of the sector as employers, service providers and owners/leaseholders of community buildings, and to create opportunities for investment; we are equal partners in future plans for the borough with particular reference to 20 minute neighbourhoods.
- RHP and Hill Residential support the strategic objectives, including for affordable housing and responding to the climate emergency, which redevelopment of Ham Close will support.
- The Mayor of London comment the themes and objectives align well with the London Plan Good Growth policies.
- The EA recommend the vision also refers to ‘reducing flood risk’ when referring to the challenges of climate change and taking action, as large parts of the borough are impacted by flood risk.
- The EA comment on the strategic objectives relating to climate change, that the climate emergency and biodiversity crisis are inextricably linked and must be tackled together. Consideration should be given to using Nature Flood Management (NFM) techniques where possible, allied with protection and enhancement of river and river corridors – re-naturalising the river, encouraging soft engineering approaches to riverbank protecting and an undeveloped buffer zone. This is aligned with requirements under the Water Framework Directive (WFD) that should be mentioned here – local authorities have a statutory duty to deliver WFD objectives and much can be achieved

- Add reference to reducing flood risk in the vision in relation to responding to the climate emergency.
- Add reference in the strategic objectives to flood storage as one of the multi-functional benefits in relation to rivers.
- Add reference in the strategic objectives to climate resilience in relation to high quality development.
- Add reference in the strategic objectives to health and care services in relation to health as a cross cutting priority.
- Clarify the reference to amenity impacts is also those living, working or visiting the surrounding area.
- Remove some references to the pandemic.
- Add references in section 2 to the Joint Health and Wellbeing Strategy and to the section on strategic context and trends to health inequalities.

through the planning system, see the [Catchment Data Explorer](#) for further information on the WFD status of waterbodies in the borough.

- The EA comment on the strategic objectives relating to green and blue spaces, recommend include ‘as flood storage’, to recognise the multi-beneficial outcomes that protecting and naturalising our rivers can achieve.
- The EA comment on the strategic objectives relating to high quality places, recommend include ‘resilient to climate change’, to demonstrate to applicants it is key to consider from the beginning of the design process, such as finished floor levels.
- A comment recognise the need to respond to the climate emergency and the principles supported. Advocate the need to meet high standards for sustainable design, increased urban greening and tackle biodiversity loss – these standards need to align with those in the London Plan, and considered as part of planning balance and applied flexibly where specific site circumstances or competing considerations mean that minor deviations are necessary. Support aspiration to deliver new homes and affordable provision in line with the London Plan. Note the LHNA need for 1,123 homes per annum and the objective could be realised with brownfield and larger sites, such as the former Greggs bakery, being allocated for residential or mixed use development (put forward by London Square as landowner). Support the objectives to increase jobs and achieve business growth, but do not support the blanket approach to protecting the borough’s Key Business Areas and industrial land and business parks. Note the NPPF paragraph 122. The Greggs site has been out of operation and marketed since February 2018 without interest from potential occupiers. Due to specific site constraints relating to highways, access and amenity issues and no planning application for continued employment use has been put forward since the closure of the bakery. There is no reasonable prospect of an application coming forward for a solely employment use and the site should be reallocated to a more deliverable use. Due to the surrounding residential context, the site provides opportunities to contribute to meeting the housing target. A more flexible and site-specific approach would align with the London Plan Policy E7.
- The Royal Parks welcome the prominence of climate change, culture and heritage and biodiversity within the strategic objectives.

<ul style="list-style-type: none"> • Tfl Commercial Development (commenting in capacity as a landowner) support the strategic vision and the objectives to meet housing targets and maximise affordable housing delivery, and to provide a pathway to zero-carbon. Tfl Commercial Development is committed to delivering 50% affordable housing (by habitable room) across its portfolio, and has published its sustainable development framework. • The CCG suggest reference is made to the Joint Health & Wellbeing Strategy and the Richmond Health & Care Plan under a new section perhaps titled 'A healthier borough'. Support the vision and references to social and community infrastructure and safe, healthy, and inclusive communities. Suggest additional wording in the strategic objectives 'to ensure that health and care services and infrastructure are provided to support and growing and changing population'. Suggest additional wording in the strategic objectives to 'to support development that promotes healthy lifestyles and reduces health inequalities'. Suggest additional wording to clarify health and wellbeing impacts of development extend beyond environmental issues and impacts, refer to impact on 'those living or working in the surrounding area'. 	
Spatial Strategy, Place-based Strategies and Site Allocations	
<ul style="list-style-type: none"> • The Mayor of London welcome the overarching aim to direct new higher density development to sites in town centres or places that are well connected by public transport, walking and cycling to jobs, services, infrastructure and amenities, which aligns with London Plan GG2, SD6 and SD7. Support the 20-minute neighbourhood and 'living locally' concept, which aligns with the Healthy Streets Approach and London Plan T2, GG1, and GG2. Policy 2 is welcomed particularly part B for prioritising previously developed land and support for refurbishment over demolition, which aligns with London Plan D3 and circular economy principles. Support reference to the London Plan's Good Growth objectives in paragraph 4.17. • A comment there are many plots of land not included and question why some are included when others are not. For example – Richmond Athletic Club is included but Richmond Cricket Club is not. Should consider building next to the BP garage on the Lower Mortlake Road, North West of Manor Circus roundabout – unused for a decade and now a car wash, needs a vision to get 	<ul style="list-style-type: none"> • New Site Allocations have been added for Hampton Telephone Exchange, Homebase Hanworth and Fulwell Bus Garage. • It is not considered necessary to make Site Allocations to include a broader range of types of infrastructure, as there is emphasis in the Plan on multi-use spaces and the flexibility of Class E, and may be beyond the scope of the Plan. The Infrastructure Delivery Plan identifies future infrastructure and service needs. • It is considered that further to work to inform the London Plan, the Urban Design Study has, alongside other evidence base work, assessed capacity for growth in the borough, with key sites identified as Site Allocations in the Plan. • It is not considered appropriate to designate other sites for Site Allocations, for example for mixed use development, where the site is a safeguarded waste site, where there is a need to protect/reprovide employment use, existing MOL, existing education, sites for station improvements (Arlington Works, LGC, Land

back into use for residential or commercial; and Plot of east land on the Sandycombe Road, was a old second hand car garage and remained derelict for many years.

- *A comment against the place-based strategies the Hanworth Homebase and Molesey Telephone Exchange should be included.*
- A comment there are additional sites. For example the car park at Richmond railway station could be converted/demolished and replaced by commercial property. The whole of Richmond railway station could be configured with development across the top by building upwards.
- CPRE London comment the borough does not appear to have carried out a rigorous study to unearth all the opportunities available to meet unmet need. For example: Mayor of London's Fulwell landholding is next to a railway station and the parts used for a single storey supermarket, DIY store and surface parking should be redeveloped with air-rights housing; Uxbridge Road Sainsbury's (Site Allocation 5 could have air-rights housing above the main store too; Hanworth Homebase on Staines Road could be redeveloped for air-rights housing; there needs to be a detailed assessment of all town centres to establish housing potential and infrastructure needs.
- A comment offering ideas for consideration missing in the space allocation proposal. Plan to allocate space for: NHS surgeries; pre-school Sure Start nurseries; Local Police and CS04 outposts; a Richmond Magistrates Court; two hands-on experience centres for primary and secondary pupils e.g. future skills in robotics, VR, renewable energy, net zero jobs; Green homes adaptation work spaces along the value chain including manufacture; public transport hubs for 10 seat hail and ride Evs in underserved 'long walk' wards; EV street charging points; increasing social housing provision in redevelopment sites beyond current proposals which allocate the incremental homes to expand private buy to let sector market sales.
- Thames Water (as statutory water supply and sewerage undertaker for the borough) use the information in Local Plans to estimate when upgrades to water supply/wastewater infrastructure will be required, and need to be kept informed of numbers and delivery to avoid delays in infrastructure delivery. Where offsite upgrades are required to serve development, they will be

to West of Stain Hill West Reservoir, Hydes Field, Richmond Park Academy, Christ's School, Mortlake Station area).

delivered and funded by Thames Water using infrastructure charges. Site-specific comments are provided from desktop assessments on water supply, sewerage/waste water network and waste water treatment infrastructure, but more detailed modelling may be required to refine requirements. Early engagement between developers with Thames Water would be beneficial. The time to deliver upgrades should not be underestimated, can take 18months – 3 years; in some cases a condition may be appropriate to ensure development doesn't outpace upgrades. Recommend Thames Water advice is attached to planning applications so the Council and public are assured matters are being addressed. If developers do not engage with Thames Water prior to submitting an application, more likely to lead to the recommendation that a Grampian condition is attached. Thames Water are in the process of creating long term drainage and wastewater management plans (DWMP) with objectives that overlap with those for Richmond, such as sustainable drainage and water management. Support for sustainable surface water drainage and addressing sewer flooding risk, to mitigate misconnections into the foul and surface water sewers.

- Thames Water (landowner) comment on Land to West of Stain Hill West Reservoir, Hampton Water Treatment Works, Upper Sunbury Road as disagree with the Green Belt review and consider the site does not perform strongly in Green Belt terms. Unclear which settlement sprawl is referred to. Consider the site should be removed from the Green Belt. Thames Water (landowner) comment on Hydes Field, Land to North of Hampton Water Treatment Works, Upper Sunbury Road as disagree with the Green Belt review and consider the site does not perform strongly in Green Belt terms. Unclear which settlement sprawl is referred to. Consider the site should be removed from the Green Belt. London's water needs are the key drivers for the strategic resource options programme and this site is a large landholding strategically located near key existing sewage treatment sites and reservoirs and therefore critical to support this strategic development; exceptional circumstances exist to release this site from the Green Belt to ensure the delivery of critical infrastructure is made more straightforward within the planning system, and should be allocated as a future infrastructure development site for water and/or wastewater

infrastructure provisions. There may be other landholdings suitable for development and Thames Water would be pleased to discuss the potential opportunity to contribute towards landscape and biodiversity enhancement, supported by allowing some essential infrastructure development.

- A concern the Stag Brewery Site Allocation is taken forward including a new secondary school, disagree with this element of the site allocation. *Suggested sites Richmond Park Academy and Christ's School to expand educational use.*
- A comment the Mortlake Station area is excluded [in the Council's Schedule of Sites not being taken forward] due to fragmented ownership; do not agree with this. The station area is a dangerous and unwelcoming area. Much of the land that holds the key to a comprehensive improvement is owned by Network Rail and is let on short leases.
- LGC Ltd (landowner) disappointed after a long period of Local Plan engagement the wide-ranging benefits of a mixed-use development in this location have not translated into an allocation. The site lends itself well to a mix of employment and residential uses, that retains LGC in the borough, provides new employment space for new, expanding and relocating businesses and delivers much needed homes. Could contribute to affordable housing land supply, activate the street scene, provide new high-quality publicly accessible green spaces, enhance permeability and promote active travel, be outward facing and connect with the local urban design vernacular. A new, fit for purpose building that meets current and future needs is vital as LGC attracts highly skilled employees in the life sciences sector, and can contribute to the local economy. There is a compelling case for Enabling development where LGC can continue to reside and operate its headquarters from the borough for many years to come. A proportion of the site is surplus to LGC requirements, and a sustainable mixed-use allocation would be appropriate, to make efficient use of land, re-providing and enhancing net existing employment floorspace while providing for significant housing deliver including affordable housing.
- Sharpe Refinery Service Ltd comment on Arlington Works (landowner), that the contribution that the site could make to the area has been dismissed and does not accord with the NPPF paragraph 16. There are factual inaccuracies in the Council's Schedule of Sites not being taken forward, as the site is not a

<p>designated Locally Important Land and Business Park in the adopted Local Plan (it includes Twickenham Studios within the list but does not include Arlington Works. The supporting evidence would not meet the tests of soundness; the Schedule of Sites not being taken forward does not provide a relevant or accurate evidence upon which to base a site allocations policy.</p> <ul style="list-style-type: none"> • TfL Commercial Development are supportive of the place-based strategy for Twickenham, Strawberry Hill & St Margarets, and have two significant landholdings in the area. Disappointed the TfL land at Fulwell Bus Garage and Lidl has not been allocated despite TfL promoting this site. Disagree with the reasons in the Council’s Schedule of Sites not being taken forward. The bus garage would be re-provided and there would be potential to incorporate the BTM into a wider scheme, with significant benefits that a redevelopment could bring to the area, particularly in terms of permeability and accessibility, public realm, new homes and jobs. TfL own the freehold of Fulwell Bus Garage and the Lidl site, and look to engage with the bus operator (RATP) and the GLA about the opportunity for a comprehensive development of the wider site, which a Site Allocation would help to facilitate. <i>Support against Site Allocation 15 for including the TfL landholding.</i> 	
<p>Policy 1. Living Locally and the 20-minute neighbourhood (Strategic Policy) (See also Section 5 for the general response form comments on this policy)</p>	
<ul style="list-style-type: none"> • A comment agree with the logic. • Richmond CVS raise the borough’s long history of an active and supportive voluntary and community sector, that promotes health and wellbeing, own or lease community buildings, and is a significant employer. Ability to mobile and adapt to meet needs of the local community highlighted by the pandemic, provide early intervention and network to reach the most vulnerable, acts as buffer for both health, community, and social care services, and other activities, increasingly recognised as social capital with an associated value. Voluntary and community sector organisations provide services and hubs that support many of the intended outcomes of 20-minute neighbourhoods, yet the vision relating to the 20-minute neighbourhood makes no direct reference to the role of the voluntary sector in enabling that vision, nor does the Plan reflect the support and investment that the VCS needs, alongside businesses, to be sustainable and promote growth. Suggest adding a bullet point to Policy 1 that all development 	<ul style="list-style-type: none"> • Consolidate some of the core concepts of the living locally policy under part B to aid clarity. • Add reference in the policy to people who experience reduced mobility to the policy. • Add further reference in the policy to expectations for a mix of uses, across areas and on sites. • Add an information box for the Regulation 19 consultation to clarify the policy is not seeking to restrict movement. • Add reference in the supporting text to how the 800m relates to the borough, but this is not measured as an absolute geography, and there are no fixed zones or boundaries. • Add a paragraph detailing where applicants can demonstrate compliance with Criteria C. • Add a paragraph to the supporting text on mixed uses.

should “demonstrate their understanding and awareness of the VCS provision locally and how investment in existing community building, spaces and infrastructure will support the living locally concept”.

- RFU support the living locally approach, however Policy 1 applies to all development, except householder applications, and needs to clarify exclusions for Twickenham Stadium as an internationally significant sporting and entertainment venue. Suggest part C is redrafted to specifically exclude Twickenham Stadium and its linked uses as a sporting and entertainment venue. Any development on the site would still be required to meet relevant London Plan and Local Plan policies promoting sustainable transport, healthy streets, and measures to improve biodiversity and air quality.
- CPRE London comment the 20-minute neighbourhood concept, as defined, does not incentivise local living / less car-use. Appears to define as 20 minute one way on foot or cycle, when the appropriate definition defines as 10 mins outward and 10 mins back by foot only – should re-define as 10 minute walk to and 10 minute walk from. More is needed to set out services needed and what new hubs need to be set up. More is needed on how to link walking/cycling to the rail / tube network i.e. secure cycle storage by all stations.
- The CCG support the policy which will enable healthier lifestyles. One of the adjustments needed to respond to Covid1-9 and climate change is to enable people to live locally and a renewed focus on high streets and local centres as destinations. Welcome the opportunity to discuss what the concept means for healthcare services and models of care; it is recognised the NHS has a role in supporting the regeneration of town centres, as research outlines opportunities for the NHS to become directly involved with running health services from vacant property, including vaccination programmes, broadening range of services provided within communities and supporting health places.
- A comment looks impressive but in reality needs to include analysis of the facilities provided too. Example of my local area around Kew Gardens station, a thriving local parade but a tourist hot spot heavily weighted towards coffee shops. In determining whether ‘20-minute neighbourhood’ is achieved the range and quality of the facilities needs to be included.

- Add a paragraph to the supporting text on people with reduced mobility.

<ul style="list-style-type: none"> • A general comment relating to cycle infrastructure across all boroughs. Need safe and secure storage to prevent theft of bicycles in all shopping areas, not just shelters, a rack nor CCTV. Could the Council consider subsidised bike lockers or a Council run bike valet/repair service (empty shops in Kingston and Richmond would be suitable). Would be prepared to pay for bike to be safely stored, whilst I shop. Not having secure bike storage is not encouraging me to get out of my car, along with not feeling safe on the road. 	
Policy 2. Spatial Strategy: Managing change in the borough (Strategic Policy) (See also Section 5 for the general response form comments on this policy)	
<ul style="list-style-type: none"> • A comment agree with the logic, but it leads into the spatial strategies for the nine areas and wonder why these should appear upfront and not at the end of the document. • National Grid infrastructure crosses land that is being brought through the planning process, due to the increasing pressure for development. National Grid advocates high standards of design and sustainable development, and understands contemporary planning and urban design agenda require a creative approach to new development around high voltage overhead lines, underground gas transmission pipelines, and other National Grid assets. To ensure Policy 2 is consistent with national policy, require addition of part E “Proposals will take a comprehensive and co-ordinated approach to development including respecting existing site constraints including utilities situated within sites”. • The EA refer to their duty to promote conservation and enhancement of habitats and species dependent on aquatic environments, linked to the quality of the water environment and the requirement of the Water Framework Directive to achieve “good” ecological status in all WFD waterbodies by 2027. Pleased to see it is a strategic aim of Policy 2 to deliver sustainable growth, while tackling the climate emergency and biodiversity crisis. • The CCG note the Plan aims to meet the needs of local communities and businesses through the provision of housing, employment, schools, community services, social infrastructure, leisure and other local services. Suggest reference is made to the Infrastructure Delivery Plan to ensure growth is delivered with sufficient supporting infrastructure. 	<ul style="list-style-type: none"> • Update the supporting text to reflect the new and updated evidence base. • Update the Key Diagram • Delete the Alternative Policy Options to the Spatial Strategy, as that section was included in the Regulation 18 Plan to inform consultees of the issues being considered, and stated it would be removed.

<ul style="list-style-type: none"> • Two comments that responded to the Direction of Travel consultation in 2020, wherein questioned the need and advisability of replacing the Local Plan 2018 so soon. One of the Council’s reasons given was population growth, but the Retail & Leisure Needs Study (2021) estimates the borough population to grow by only 2.8% in 2039, with a decrease in Richmond Town and surrounding area. The absence of population growth feeds through into housing, retail, leisure, employment uses. Believe it is important to emphasise improvement as well as growth. Even without population growth, expected there will be increasing prosperity and disposable income and therefore growth in the uses of Richmond Town. 	
Places	
<ul style="list-style-type: none"> • Habitats & Heritage support the need to provide new open space in all new developments expressed in many of the site allocation proposals. • The CCG note the high-level ‘places’ with key sites as site allocations, many of which have been rolled forward from the adopted Local Plan and Twickenham Area Action Plan; the CCG has responded to individual masterplans and planning applications for some of these key sites. • Richmond CVS comment it is notable the area profiles, beyond reference to Kew Gardens and Hampton Court, do not identify any of the community and voluntary sector infrastructure that contribute to the health, well-being and sense of place of that area, nor is there a mapping of the community assets that provide community centres and spaces. The same is true of demographic and economic profile – most of the information in the area profiles is heavily weighted in perpetuating that Richmond is a leafy green borough with the majority of residents employed in highly skilled professional jobs. We know this is not the case, and the pandemic has created a level of instability in social economic groups not previously seen in services. Pressures on unpaid carers and needs of children with Special Educational Needs, particularly to transition into adulthood including employment and housing, are expressed in the SEND Futures Plan. For there to be a joined-up approach it is essential to have an accurate and balanced profile of each area which maps the community assets, highlights the demographic and particular age profiles that may be relevant, and is clear in its expectations relating to investment and improvement of 	<ul style="list-style-type: none"> • The reformatted Site Allocations include a ‘Context’ section, within which greater detail of the constraints of the site and surrounding area has been provided. • See Policy 44 for amended supporting text on community engagement. • It is not considered necessary to generally add more details to area profiles or community mapping, with references to the community and voluntary sector added in other parts of the Plan and the Infrastructure Delivery Plan setting out the future needs of providers.

existing infrastructure. An example is Barnes – the area profile ignores Castelnau is an area of relative deprivation with extreme affluence neighbouring poor. The Barnes Fund research highlights the challenges residents face and the experience of isolation, limited public transport, no affordable shops, situation with Hammersmith Bridge, lack of local services. They value community provision such as Castelnau Community Centre and the Barnes Community Association. London Sustainable Development Commission Report highlights tangible benefits for local communities of a social value approach, using public bodies' purchasing power and decision making to increase the benefit to the community by requiring actions and activity that will contribute to growth, employment, resilience and environmental sustainability.

- Richmond CVS set out research that a social value approach helps identify what's important to communities and the likely impact of changes made to their neighbourhoods. Asset Based Community Development is an approach to sustainable driven development which would lend itself to development of the 20-minute neighbourhood. The Plan gives little indication how the community voice will be invited, heard and involving in planning and ongoing community development, and there are no suggested measures in the monitoring that will capture social impact of the 20-minute neighbourhoods, the difference it is making in terms of quality of life and the experience of living in Richmond. The Plan emphasis, particularly in relation to green and blue infrastructure, on community education and stewardship and many targets relating to the climate emergency rely on engaging residents. Plan would benefit from a clear set of expectations in relation to the community voice, engaging with and involving the seldom heard, and encouraging the involvement of young people in neighbourhood development.
- Historic England provided comments on a number of sites. All of the allocated sites are developable in principle, it is a matter of to what extent relative to where the sensitivities lie. Important a design-led approach is taken when allocating development capacity to ensure it can be accommodated within a site while avoiding harm to the historic environment in the first instance, or with appropriate mitigation. The allocations could include more details to reflect the findings of the Urban Design Study. Important to ensure all heritage

<p>assets are identified in allocations policies, and better reference should be made to archaeology. These sites will need more intervention and advice from GLAAS, with desk based assessments required to inform site capacity, mitigation and design – 10 St Mary’s University, 18 Twickenham Riverside, 20 Kneller Hall, 22 Ham Close, 22 Cassell Hospital, 27 American University, 34 Stag Brewery.</p>	
<p>Place-based Strategy for Hampton & Hampton Hill</p>	
<ul style="list-style-type: none"> • The Royal Parks comment should include reference to protection of open space, to reflect risk with increased recreational pressure. • A comment the Hanworth Homebase should be added as a potential mixed use residential/commercial intensification site allocation, as there is a desire by the landowner to bring this type of site to residential. The existing out of town retail does not add to the viability of the town centre, and encourages care use. A comment the Molesey Telephone Exchange should be included, as other telephone exchanges are included across the borough. Suggest adding these two sites would add consistency and provide opportunity for affordable housing on brownfield land. • A comment the acute shortage of school places is not being addressed and many families in Hampton cannot get into local schools, and the Council will need to identify a new secondary school site in Hampton and see how existing schools can increase their pupil numbers. A comment Hampton Nurserylands has high levels of social need and the Plan hasn’t acknowledged or put in place a policy to help people improve their quality of life. 	<ul style="list-style-type: none"> • Added reference to the protection of open spaces in the place-based strategy. • Added as new Site Allocations Homebase, Hanworth and Molesey Telephone Exchange as they are a similar type of site to other allocations. • It is not considered necessary to refer to a shortage of school places in Hampton, as the School Place Planning Strategy is kept under review and evidences there is sufficiency of places overall. It is considered other parts of the plan, particularly around ‘Living Locally’ support improvement of Hampton Nurserylands.
<p>Site Allocation 1: Hampton Square, Hampton</p>	
<ul style="list-style-type: none"> • TfL comment should state car parking should be minimised as part of any redevelopment, consistent with objectives to reduce car dominance and should not exceed maximum parking standards. • A comment disagreeing with the proposal, as it contains an implicit threat to build on part of the site that is designated as Other Open Land of Townscape Importance because it would be cheaper. Notes the OOLTI review assesses the site as meeting the criteria strongly, and nibbling away at it would matter to children and users who appreciate the green lung. Suggest the proposal should 	<ul style="list-style-type: none"> • Removal of reference to Area of Mixed Use as this designation is not being taken forward in the new Plan. • Added clarification that car-parking provision should be to London Plan standards. • Proposed change to boundary to remove the small portion of OOLTI/POS from the Site Allocation.

<p>exclude the OOLTI from potential redevelopment or redraw the boundary so there is no overlap.</p>	
<p>Site Allocation 2: Platts Eyot, Hampton</p>	
<ul style="list-style-type: none"> • Port Hampton Estates (landowner) consider a positive framework for regeneration on the island. Suggest a requirement to reinstate the listed buildings as they were before the fire should be reworded to refer to reinstate through an appropriate scheme of restoration. • EA comment that the sequential test report considers the allocation will be less vulnerable and if there is potential 'more vulnerable' residential use the sequential testing should be re-assessed. Suggest make it clear in the policy any development must comply with flood risk policy as new development should be outside of the functional floodplain. Suggest clarification that any access and egress works must not impact on flood defence maintenance access or a loss of riparian habitat or flood storage. • Elmbridge Council comment, as the site is along our shared boundary, caution to any intensification which could increase flood risk and impact flow routes of the functional floodplain. 	<ul style="list-style-type: none"> • Reference to new Plays Eyot Pedestrian Bridge added. • Reference to restoration of listed buildings to pre-fire standard removed and reference only to their appropriate restoration. • The new Site Allocations format identifies the flooding constraints for each site. Flood risk / SuDS matters are covered in Policy LP 8 of this Plan and it is therefore not considered necessary to set out the requirements of developers for this in the Site Allocations. • An update to the Sequential Test report for the site includes a 'more vulnerable' residential use.
<p>Site Allocation 3: Hampton Traffic Unit, 60-68 Station Road, Hampton</p>	
<ul style="list-style-type: none"> • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage, noting the site is within 15 metres of a strategic sewer. • Habitats & Heritage support a link to the Beveree site and would seek a contribution towards managing/improving biodiversity of the site which is a mix of the football pitch, parking and the designated nature conservation site which community groups have worked on in the past. 	<ul style="list-style-type: none"> • Removal of reference to Area of Mixed Use as this designation is not being taken forward in the new Plan. • The new Site Allocations format identifies the flooding constraints for each site. Flood risk / SuDS matters are covered in Policy LP 8 of this Plan and it is therefore not considered necessary to set out the requirements of developers for this in the Site Allocations. • No changes to reference to Beveree site as Policy 36 'Other Open Land of Townscape Importance' is clear that improvement and enhancement of OOLTI is encouraged, thus a financial contribution could be sought as part of this policy, if appropriate.
<p>Site Allocation 4: Hampton Delivery Office, Rosehill, Hampton</p>	
<ul style="list-style-type: none"> • No comments received on this Site Allocation. 	<ul style="list-style-type: none"> • Development on the site has now been completed, so the Site Allocation has been removed from the Plan.
<p>Site Allocation 5: Carpark for Sainsburys, Uxbridge Road, Hampton</p>	

<ul style="list-style-type: none"> • Sainsbury's (landowner) comment that while supporting the removal from MOL and re-provision of petrol station and parking for the foodstore, allocation for 100% affordable housing is not justified. The removal is the fact that it is a foodstore car park and petrol filling station, a historical quirk that needs to be justified, unrelated to tenure. Also raise concern 20% biodiversity net gain requirement will be unfeasible. • TfL comment that the allocation should make it clear that: the bus stop alongside the existing store must be retained; re-provision of parking should be minimised as part of any redevelopment; and refer to rapid charging hubs and/or hydrogen refuelling facilities in re-provided petrol stations. • A comment that re-provision will only work if a very large car park is retained for customers visiting the store, and parking facilities for the new development. • Some comments relate to supporting enhancements on the Longford River. Habitats & Heritage are concerned at the MOL release until a plan is agreed for the restoration of the important green corridor and so that relevant parts should be kept as MOL. • The CCG comment the site may generate the need for investment in healthcare infrastructure in the area. 	<ul style="list-style-type: none"> • Added reference to improved permeability for pedestrians and active travel as a benefit/expectation of new on-site Public Open Space provision requirement. • Added clarification that car-parking provision should be to London Plan standards, for consistency in wording across the Site Allocations. Added that car-parking would need to be provided as part of the new development, as well as re-provision for the Sainsbury's. Need to retain the bus stop has been added (and mentioned in the site description). Added need to incorporate sustainable refuelling options in the petrol station. • No changes to 100% affordable housing requirement as this is considered to be justified on grounds of providing an 'exceptional circumstance' for the release of the MOL. • No changes to 20% BNG requirement. The site is in an ecologically sensitive location and it is not considered unfeasible that the target could not be achieved on site. Any inability to do so would need to be fully demonstrated and justified by the applicant at planning application stage, though the Council is doubtful that this would be the case. • No changes to reference to release of MOL. The Site Allocation makes clear that ecological enhancements to the section along Longford River would be required. • No recommendation to include mention of need for healthcare infrastructure, which is covered elsewhere in the Plan.
Place-based Strategy for Teddington & Hampton Wick	
<ul style="list-style-type: none"> • A comment that the draft Plan sets out the appropriate strategy to maintain and improve the attractiveness of Teddington, but concern regarding the mid-rise zone in Teddington. The examples in Teddington are out of keeping and a mid-rise zone will encourage developers they can build 5/6 storey buildings and should be deleted. Suggest 5/6 storey buildings may be considered in appropriate settings, but against the assumption that buildings in a particular zone should be 5/6 storeys high. Consider the industrial area near Teddington Station should remain as employment. Another respondent also commented there should be no more hideous mid-rise development. • The Royal Parks comment future development plans should include reference to protection of open space, to reflect risk with increased recreational pressure. 	<ul style="list-style-type: none"> • Minor change recommended to include the protection of open spaces, as well as their improvement. • No changes recommended to the place-based approach for the borough as a strategy. • No changes recommended to the approach to identify areas which could be appropriate for mid-rise buildings, as per the findings of the evidence base of the characterisation study of the Urban Design Study. The identified mid-rise building zone for Teddington railway side covers a small part of the town centre, limited to just the area along the railway line north of Teddington Station, across the junction of Station Road/High Street. It is therefore

<ul style="list-style-type: none"> • A comment that affordable housing should not be subsidised and those unable to afford properties should go somewhere where they can afford. • A comment there is no mention of Ellera Hall, which has faced local opposition to the proposed redevelopment. 	<p>considered appropriate. However, the supporting text for the Mid-Rise Zone in the Urban Design Study has been expanded to further justify the designation.</p>
Site Allocation 6: Telephone Exchange, Teddington	
<ul style="list-style-type: none"> • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage. • Habitats & Heritage comment the green space to the front is a wildflower area and should be retained/improved as a local green hub. 	<ul style="list-style-type: none"> • Amendment to reference to convenience goods floorspace and additional food/beverage floorspace requirements to reflect updated Retail and Leisure Needs Study. • Amendment to text to refer to offices as an example of an appropriate floorspace, and addition of ‘or other commercial uses’ to create greater flexibility, with offices as one such option, in light of reduction in predicted office space needs in the updated Employment Land and Premises Needs Study evidence base. • The new site allocations format identifies the flooding constraints for each site. Flood risk / SuDS matters are covered in Policy LP 8 of this Plan and it is therefore not considered necessary to set out the requirements of developers for this in the Site Allocations. • The new site allocations format identifies areas of open space / access to nature and this piece of land has been included in the description. The developer requirements/asks section already mentions retention of this open space, but this has been amended to make clear that it is green nature of the open space which requires retention, for biodiversity and visual relief.
Site Allocation 7: Teddington Delivery Office, Teddington	
<ul style="list-style-type: none"> • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage, noting the site is within 15 metres of underground waste water assets. 	<ul style="list-style-type: none"> • Amendment to text to refer to offices as an example of an appropriate floorspace, and addition of ‘or other commercial uses’ to create greater flexibility, with offices as one such option, in light of reduction in predicted office space needs in the updated Employment Land and Premises Needs Study evidence base. • Minor amendment to the convenience good/food and beverages floorspace requirement reference to reflect the updated Retail and Leisure Needs Study. • The new site allocations format identifies the flooding constraints for each site. Flood risk / SuDS matters are covered in Policy LP 8 of this Plan and it is

	therefore not considered necessary to set out the requirements of developers for this in the Site Allocations.
Site Allocation 8: Strathmore Centre, Strathmore Road, Teddington	
• No comments received on this Site Allocation.	• Noted
Site Allocation 9: Teddington Police Station, Park Road, Teddington	
<ul style="list-style-type: none"> • The partners of Park Road Surgery comment on their urgent need to move premises, as they are accommodating 10,000 more patients than the building should and with poor access, recognised as the top priority in the CCG Estates Strategy. The Surgery ask for the Site Allocation to be strengthened specify the need for a co-located health and social care facility, and ensure any planning consent should specify the need is met, with any sale/lease of residential units conditional on occupational of the GP space. • A significant number of comments from patients and individuals were received, supporting the Surgery and asking the Local Plan to require the Park Road Surgery to be relocated there as part of any redevelopment, and that any planning consent should specify the need is met, with any sale/lease of residential units conditional on occupational of the GP space. Comments set out in detail the issues with the existing Surgery site, and the benefits of a move to new premises. • A comment that there should be a police office presence in Teddington. • The Metropolitan Police Service comment that the Site Allocation is unreasonable and inflexible, with inadequate justification. Concern that the approach is contrary to Policy 49 as policies allow flexibility to take into account the demand that exists for social and community infrastructure at the time of a planning application. Inconsistent with Policy 49 as where 100% affordable housing is proposed, other social and community use re-provision will not be required. Seek amendments to be consistent with Policy 49. • A comment supporting retention of the OOLTI on the site. 	<ul style="list-style-type: none"> • No changes proposed to the future acceptable land uses section of the Site Allocation as this already makes clear that redevelopment of the site will only be acceptable if a community/social infrastructure use is reprovided on the site, such as for a medical/health use. Policy 49 ‘Social and Community Infrastructure’ in this Plan already encourages the co-location of uses. • Whilst a police station falls within a Sui Generis Use Class, it is still considered to be a community/social infrastructure, thus it is considered to be reasonable and justifiable to include the re-provision of a community/social use on site. Should there be no demand for a social/community use / end-user, there is sufficient flexibility within Policy 49 to allow for alternative uses, thus it is not considered that the Site Allocation requirements prevent the site from coming forward for redevelopment. The Site Allocation makes clear that, as per Policy 49, where 100% affordable housing is proposed, there is not a requirement to provide the social/community use. • It would not be appropriate for planning to control the sale/lease of residential units on condition of the occupation of the GP space. Whilst the social/community infrastructure use can be protected via planning, planning cannot control which end-user ultimately occupies the space. Secondly, it is not considered that controlling the sale/lease of the residential units would meet the NPPF tests for a planning obligation. The retention of the community/social use via planning policy is considered to be appropriate. Finally, limiting the sale/lease of properties and the timing of their coming forward could have viability implications for the deliverability of the scheme overall. • No changes recommended regarding the OOLTI, as the protection and enhancement of this space is already a requirement of the Site Allocation.
Place-based Strategy for Twickenham, Strawberry Hill & St Margarets	

<ul style="list-style-type: none"> • A comment on behalf of Strawberry Hill Residents Association that no design guidance section has been provided for C4 Strawberry Hill Residential in the Overall Strategy. • A comment from Strawberry Hill Residents Association that it is unclear why Wellesley Road identified as an example for reanimating local commercial area given it is residential. • A comment that Twickenham, Strawberry Hill & St Margarets is too large to be a 20-minute neighbourhood. • A comment that the strategy is generic and not as thorough as the Twickenham Area Action Plan (TAAP); indicates that Council has not engaged as much with residents. • A comment that the viability of Eel Pie Island boatyards requires car parking on the embankment/Twickenham riverside. • Support from Twickenham Film Studios of the recognition of the Studios as an important employment location. • Support from Twickenham Film Studios for the policy criteria against which future development will be assessed. • Support from Friends of the River Crane Environment (FORCE) for protection and enhancement of riverways. • Support from FORCE for provision of public toilets in public realm. Would welcome public toilets in Shot Tower area. • Suggestion from FORCE that Council Depot may be too large for future waste site operations and that the site is opened up to the river to relieve pressures from nearby future residential development. • Comment on behalf of South West London Clinical Commissioning Group (CCG) that it is noted a number of sites area identified for residential use and the cumulative impact this could have on health infrastructure. • Comment from WSP on behalf of Sharpe Refinery Service Limited (SRSL) that the place-making strategy should be numbered/titled more clearly. • Comment on behalf of SRSL that description and mapping for St Margarets should be clearer. 	<ul style="list-style-type: none"> • Reference added which reflects the Urban Design Study design guidance. • Additional text to reference the possibility of a cycle bridge from Ham to Radnor Gardens. • Reference to public realm improvements retained though amended to refer to Wellesley Parade for clarity. • Two new Site Allocations added, both of which are identified as having potential to deliver residential (subject to other policy requirements in the Site Allocations and Plan overall). It is not recommended that any further amendments are made as part of the need to meet housing targets. • No amendments to the Twickenham, Strawberry Hill & St Margarets place-making boundary recommended, which are considered to be rational and appropriate. • No amendments to overall presentation and format of the policy in the draft Local Plan recommended, notwithstanding the reformatting of all Site Allocations and the removal of the spider diagrams. • No amendments recommended to car parking on the Embankment, which is considered to strike right balance between improving the environment of the Embankment through a reduction in car parking, and retaining some parking for the benefit of Eel Pie Island. • The Council Depot is a safeguarded waste site. • No amendments recommended to the reference to the intensification of existing employment space in Twickenham town centre. • A separate Housing Delivery Paper outlines details on past and future housing supply, therefore it is not considered necessary that Site Allocations include an indicative housing quantum for how many units could/should be delivered on site. • Greggs bakery site not recommended for inclusion as a Site Allocation for mixed-use residential development, given the need to protect/reprovide employment use on site.
--	---

<ul style="list-style-type: none"> • Comment on behalf of SRS� that sites capable of delivering residential mixed-use schemes should be identified. • Comment on behalf of SRS� that Arlington Works should be included as a Site Allocation for mixed-use residential/commercial development. • Comment from DP9 on behalf of London Square Developments (LSD) that the wider aims of providing officer floorspace and flexible workspaces are generally supported though object to blanket approach to intensification of existing employment sites which does not consider site-specific circumstances. • Comment on behalf of LDS that policy is poorly evidenced and the Council’s indicative housing targets for the area are undeliverable. • Comment on behalf of LDS that need for housing should be made more explicit in the policy and that the Site Allocations should state indicative housing capacity figures. • Comment on behalf of LDS that Greggs bakery site should be included as a Site Allocation for residential development 	
Site Allocation 10: St Mary’s University, Strawberry Hill	
<ul style="list-style-type: none"> • A comment that the University have confirmed their former plans have been abandoned and its vision now is to develop and upgrade its existing residential footprint to improve quality and capacity, to make better use of their academic buildings and improve the setting of the University. • A comment very limited expansion only acceptable. • St Mary’s University (landowner) welcome inclusion of their main campus. Propose changes to the red line boundary – rear of 11 Waldegrave Road is owned by the University and should be included. Note the allocation includes their sports ground at Teddington Lock and believe this should have its own Site Allocation. Considering options for improving this site, at present does not provide an acceptable level of student and community experience outlining problems which can only be addressed through enhancement of existing buildings and/or development of new additional buildings and provision of artificial sports surfaces to serve the University and local community. • Historic England raise the Strawberry Hill site is highly sensitive and past masterplans have raised concern regarding the potential threat to the site’s heritage significance, notably the setting of the registered landscape. Future 	<ul style="list-style-type: none"> • A minor amendment to wording to ensure visual impacts on Ham House would be a consideration, via replacement of ‘having regard to’ sensitive heritage assets to their protection and where possible enhancement. • A minor amendment to wording to add to the need to ‘improve and enhance the Metropolitan Open Land (MOL) that its openness and character must be protected and where possible enhanced. • No amendments recommended to the proposed land uses or overall masterplan for St Marys Site Allocation. • It is not considered necessary for the sports grounds to have a separate allocation. • No amendment to the boundary, as the University has confirmed that the ownership boundary matches the Site Allocation. • No amendments recommended to the reference to upgrading and/or extending the residential accommodation on site.

<p>master planning should explore how lesser quality buildings and spaces can be redeveloped, bearing in mind the benefits of reusing buildings to maximise embodied carbon. Amend the allocation to refer to advice to consider reuse as an option before new development, along with research of the historic landscape and opportunities for enhancement. Specify that parts of the site particularly benefit from its existing open quality and the need to consider this early on in the design process. Require an archaeological assessment and GLAAS should be consulted at an early stage.</p> <ul style="list-style-type: none"> • A comment agree with strategy. • The National Trust comment the site could be developed without impacting adversely on Ham House provided the height is restricted to a maximum height to that of existing buildings on site, limited to between 2-3 stories. This will have the benefit of conserving this highly sensitive area. • CPRE London comment while the Plan protects MOL, proposals for the site are very likely to involve inappropriate development, and means the Plan is unsound and contradicting. • A comment this could lead to the further loss of MOL. A master plan should be developed as part of the Plan and some of the existing building footprints returned to the MOL to compensate for previous losses. • Richmond Bat Species Action Plan Steering Group comment there should be a statement about the potential biodiversity value of the site and connectivity via the Thames to the wildlife habitat of Ham Lands/Young Mariners Club (<i>see comment on Policy 34</i>). 	<ul style="list-style-type: none"> • No amendments recommended to reference biodiversity, as enhancement requirements would already be captured as part of assessment against draft Local Plan Policy 34. Green and Blue Infrastructure.
Site Allocation 11: Richmond upon Thames College, Twickenham	
<ul style="list-style-type: none"> • A comment the college building could be repurposed rather than demolished, for school/college for drama, dance, film making, gardening and landscape skills. • Richmond upon Thames College (landowner) set out the allocation does not reflect the up-to-date position that the Technical Hub will not come forward in the form envisaged and should be removed from the allocation; as a result the College are proposing to retain the existing Sports Hall while refurbishing and extending it. 	<ul style="list-style-type: none"> • Addition of reference to need to improve coherence and sense of place. • Rewording of Site Allocation to align with the recent planning applications approved at Planning Committee, and to remove reference to the Tech Hub, which is no longer coming forward. • No amendments to the wording with reference to ecology are recommended, noting that the Site Allocation already requires protection and where possible enhancement of the River Crane corridor. • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site.

<ul style="list-style-type: none"> • A comment the text needs to be updated to reflect the development that has taken place and the remaining land is vacant college awaiting demolition and site now in the hands of a housing association. • FORCE have been engaged with the project and raised concern on the minimal enhancement so far delivered for the River Crane corridor, and risk of over-use and degradation of Craneford West Field and Kneller Gardens. Aspirations include measures to integrate Craneford West Field with the Challenge Court Meadow and for improvements to pathways serving the Duke of Northumberland’s River and the Crane. • Thames Water do identify the scale of development in this catchment is likely to require upgrades of the water supply network and recommend early liaison; do not identify any concerns but set out advice for a developer to consider the wastewater / surface water drainage, noting the site is within 15 metres of underground waste water assets. 	
Site Allocation 12: The Stoop (Harlequins Rugby Football Club), Twickenham	
<ul style="list-style-type: none"> • Harlequins Rugby Football Club comment on The Stoop (landowner) support for the inclusion of the site allocation, but objects in relation to aspects of the wording. Object to the proposed building heights and believes potential to accommodate 7 stories or more and should be an opportunity for ‘tall buildings’. Object to the extent of the allocation, as the Club owns additional land to the east which should be included and the allocation make clear there should be no loss in terms of the quantity and quality of open space so there is flexibility to be distributed through the proposed development. Object that the allocation does not include a statement that if the Council’s Depot Site to the south becomes surplus then it would be logical to extend the design brief to include this land. • TfL comment that early engagement should take place with TfL to assess potential impacts on the adjacent TfL road network. • FORCE comment the site has a long frontage on to the Duke of Northumberland River (DNR) and there should not be development to cause shading, light or noise pollution on the DNR corridor; would welcome a commitment by the Club to engage or adopt the stretch of the DNR. Concern the preparedness to consider residential development and would add to risks of imposing more 	<ul style="list-style-type: none"> • Added reference to need to include pedestrian routes where possible, and encourage active travel, for consistency of wording between the two stadium sites. • The new Site Allocations format identifies TfL road networks. No further changes to the wording are considered necessary as requirement for engagement is already referenced. • It is not recommended that the site be included as a Tall Building Zone, noting the low-rise nature of the surrounding area and nearby designated open land. • The inclusion of the designated open land within the Site Allocation boundary is not recommended, which is to be protected. • No amendments to the inclusion of the site as a Mid-Rise Building Zone. The site was found to have the potential to accommodate Mid-rise buildings as part of the modelling undertaken by Arup for the Urban Design Study 2021. • The inclusion of the Council Depot within the Site Allocation boundary is not appropriate, as this is to be retained as a safeguarded waste site. • No amendments recommended regarding the proposed land uses, which are considered to be appropriate for the site and area.

<p>crowding and wear-and-tear on Craneford West Field and Kneller Gardens which should be given equal weight to sporting and associated uses. Any further residential strengthens the case of opening up Challenge Court Meadow to public access and integrating with Craneford West Field.</p> <ul style="list-style-type: none"> • A comment do not agree with proposals re hotel and business uses and further housing, and do not agree the proposal for mid-rise buildings as would cause overdevelopment close to that already underway at Richmond College. 	<ul style="list-style-type: none"> • No amendments to the wording with reference to ecology are recommended, noting that the Site Allocation already requires protection and where possible enhancement of the River Crane corridor.
Site Allocation 13: Twickenham Stadium, Twickenham	
<ul style="list-style-type: none"> • TfL comment that although there is a need to retain sufficient parking should be rephrased to minimise as part of any redevelopment, to reduce car dominance; early engagement should take place with TfL to assess potential impacts on the adjacent TfL road network. • RFU (landowner) support the inclusion of an allocation, although the focus is on sports uses and does not acknowledge the stadium’s role as an entertainment venue, emphasising the importance of revenue generation from non-sporting events. Request specific references to food and beverage and retail that is ancillary and complementary, to allow for additional facilities to cater for visitors and generate local economic benefit. Recognise subject to a management plan, and depending on scale a retail impact assessment, demonstrating does not lead to harmful impacts on the vitality and viability of Twickenham Town Centre. Consider office space could detract from the venue and should be removed. On parking essential existing parking is retained and understand any further development subject to the relevant policies, although highlight the unique operational use of the site. On design objectives, comment on the Urban Design Study and that the stadium merits its own character area; and support acknowledgement of areas more able to accommodate growth and change and would support an approach to stepping down in massing as suggested. • FORCE comment the site has a 700m frontage onto the Duke of Northumberland River (DNR) and there should not be development to cause shading, light or noise pollution on the DNR corridor; the existing plant should be relocated and would welcome a commitment by the RFU to engage or adopt the stretch of the DNR. Concern the preparedness to consider residential 	<ul style="list-style-type: none"> • Addition of ‘and other commercial’ uses to appropriate employment generating uses, in recognition that site is outside of a town centre. • Added clarification that car parking provision should be to London Plan standards, though this is subject to further comment from Transport colleagues. • Added reference to need to improve pedestrian routes where possible and encourage active travel. • The new Site Allocation format identifies TfL road networks. A further minor amendment to further clarify requirement for partnership working. • An amendment to include food and beverage as possible appropriate additional facilities. • A separate bullet point has been included to reference recognition of the important role an entertainment use on site could play in supporting the viability of the sporting stadium. Reference added to the need to protect the local road network and neighbouring amenities. The inclusion of entertainment as a primary function, alongside sports uses, is not considered appropriate. • An additional sentence added to confirm that building heights should step down towards the boundary. • No amendments to need to consider sporting and/or employment uses prior to a residential scheme being considered. The stadium has an important sporting, cultural and employment role in Twickenham, thus these uses are to be retained/considered before a residential use might be deemed appropriate. • It is not recommended that a separate character area for Twickenham Stadium is created. The site already has its own sub area within the Urban Design Study 2021.

<p>development as no green space in the immediate vicinity and would add to risks of imposing more crowding and wear-and-tear on Craneford West Field and Kneller Gardens. Welcome condition to protect and enhance the DNR, noting new regulations require environmental enhancement and all Site Allocations should reflect this.</p> <ul style="list-style-type: none"> • A comment do not agree with supporter capacity increase, significant congestion and disruption on rugby fixture days, and fixtures have increased. Agree with improvements to hotel facilities for appropriate uses and indoor sports. • A comment that text about the new hotel, leisure centre, hospitality and conference facilities have been delivered and should be deleted. Whitton Brook runs under the site and should seek this is uncovered. 	<ul style="list-style-type: none"> • No amendments recommended to the identified appropriateness of additional facilities, as the wording is considered to make clear that these are to be complementary to the primary sporting use. • No amendments to the wording with reference to ecology are recommended, noting that the Site Allocation already requires protection and where possible enhancement of the River Crane corridor.
Site Allocation 14: Mereway Day Centre, Mereway Road, Twickenham	
<ul style="list-style-type: none"> • A comment that residents would be willing to buy part of the site to offset the cost of a local amenity. The site has been disused for many years, known for a number of issues. It would benefit from being used for public good, and as a green space (naturally extends from the Nature Reserve) and, if the preferred option of turning it into a green space is not possible, there may be low impact options for low-rise education/nursery or selling part of the land to residents. • A comment agreeing with the proposals for social and community use. • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage. • The Environment Agency are pleased to see desire to protect and enhance the River Crane, which does not achieve good ecological potential. There should be a commitment to 20% net gain for the river as part of any development, and to contribute to the aims of the Lower River Crane Restoration Strategy vision to re-naturalise. • A comment objecting to redevelopment for a social or community infrastructure use due to congested traffic/parking/dangerous junction and no possible access to public transport (same apply to affordable housing). Optimum use of the land to extend the Nature Reserve/Kneller Gardens, or a one storey nature classroom for children. Suggest changes to refer to 8m 	<ul style="list-style-type: none"> • Added reference to recently submitted planning application. • No changes recommended to the boundary of the Site Allocation, in recognition of the Council’s preference that the site comes forward for comprehensive development rather than partial. • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site. • No amendments recommending regarding the proposed appropriate land uses, which are considered to be appropriate for the site and the area. • No amendments to the wording with reference to ecology are recommended, noting that the Site Allocation already requires protection and where possible enhancement of the River Crane corridor.

<p>undeveloped corridor and LP18 and providing public access to riverside, and developments should contribute to creating a new metropolitan park that provides a link between Hounslow Heath and the River Thames.</p> <ul style="list-style-type: none"> • FORCE comment if the site is to be used for social or community infrastructure support the inclusion of a River Crane-focused element, from interpretation boards to a river garden or ecology centre. Support the reference to enhance the River Crane corridor and would like to see public access. In light of potential residential on SA 12 and SA 13, the Council could consider leaving undeveloped as a new green space. • A comment objecting to redevelopment for social or community infrastructure as traffic and parking already congested, and a dangerous junction (same apply to affordable housing). Best use to add space to Kneller Gardens/Nature Reserve. 	
Site Allocation 15: Station Yard, Twickenham	
<ul style="list-style-type: none"> • TfL welcome reference to bus standards, but the requirement should be clarified that if redeveloped or reprovided this should only be with the agreement of TfL and standing capacity (as well as drivers' facilities) must be maintained and enhanced. • TfL Commercial Development (part landowner) welcome the Site Allocation. The land has ongoing operational requirements as a bus stand on event days at Twickenham Stadium, but should a suitable replacement location be found it will enable development to come forward. • A comment that housing development could reduce possibility of using the site for freight transportation by rail in the future. • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage, noting there are easements and wayleaves running through the site and public sewers crossing/close to the development. 	<ul style="list-style-type: none"> • Amendment to make clear that bus stand redevelopment/reprovision also requires consideration of standing capacity and drivers' facilities. • No changes recommended to the identified appropriateness of a residential scheme, which is considered to be appropriate for the site and the area. • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site.
Site Allocation 16: Twickenham Telephone Exchange	
<ul style="list-style-type: none"> • A comment that the site could be purposed for housing needs as those are significant, while retail / commercial buildings are available to rent in close proximity to the site. 	<ul style="list-style-type: none"> • Replacement of refence to AMU with 'Main Town Centre' boundary. • No amendments recommended to the proposed appropriate land uses, which are considered to be appropriate for the site and the area.

<ul style="list-style-type: none"> • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage, noting the site is within 15 metres of underground waste water assets. 	<ul style="list-style-type: none"> • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site.
Site Allocation 17: Twickenham Police Station	
<ul style="list-style-type: none"> • The Metropolitan Police Service state their Estates Strategy confirms the property is to be retained and the Site Allocation should be removed from the Plan as it unnecessary and may confuse local stakeholders as to the policing strategy in the area. • A comment this should be kept as a working Police Station. 	<ul style="list-style-type: none"> • The Site Allocation has been removed from the Plan.
Site Allocation 18: Twickenham Riverside and Water Lane/King Street	
<ul style="list-style-type: none"> • A comment raising concerns about the quantity of housing and retail. The site should be about public access, and preserving/reinstating river habitat. The Plan lacks biodiversity. • TfL welcome suggesting for a comprehensive approach to servicing and delivery and exploring a reduction in parking. Suggest this could be more directly worded to expect car parking to be removed on the Embankment. • A comment that the scheme is not offering improvement/enhancement to Diamond Jubilee Gardens, the public toilets are reduced to an aspiration, and the traffic scheme is dangerous. • A comment asking for the development to be special for everyone. • The PLA support seeking to maintain the embankment as a working quay and considering the impact on Eel Pie Island. This is important given the number of operational boatyards, which should be protected in line with London Plan Policy SI15. Also support the wider policy wording for Twickenham, Strawberry Hill & St Margarets stating future development in this area is expected to contribute to the environment including the River Thames riverside and Twickenham working waterfront. • The National Trust raise it is imperative to minimise any visual impact on the wider area, including Ham House. Development should conserve key areas and vistas to nearby green space and landmarks along the river, and may require a restriction on the height of new buildings. 	<ul style="list-style-type: none"> • Note: the majority of the comments received are observations of the recent planning application, and not comments on the Site Allocation itself. • Minor amendment to include reference to consideration of local views (which would include Ham House). • Amendment to remove reference to ‘where viable’ as part of requirement for improved flood defences. • No amendments to the reference to the reduction in car parking on the Embankment is recommended. The wording is considered to strike right balance between improving the environment of the Embankment through a reduction in car parking, and retaining some parking for the benefit of Eel Pie Island. • No amendments to the proposed appropriate land uses are recommended.

<ul style="list-style-type: none"> • A comment that the site was a park/open and flats should not be built on Diamond Jubilee Gardens. The modest building will not drive footfall nor attract large numbers of visitors. The viability requires subsidy and the Council should provide detailed justification why they want to depart from the Inspector’s findings on the Twickenham Area Action Plan. • The Environment Agency comment the site is in close proximity to the Tidal Thames statutory flood defences – support the reference to improvement and upgrading works but ‘where viable’ should be removed as these works are necessary. Recommend amended wording to refer to a riverside strategy approach including natural flood management techniques. • <i>Virtual event feedback</i>: Concerns were raised about biodiversity in Twickenham Riverside and the need to protect greenspace from infill development. 	
Place-based Strategy for Whitton & Heathfield	
<ul style="list-style-type: none"> • A comment does not address the main 20-minute neighbourhood challenge facing the area – lack of local employment, resulting in vast majority of people travelling out for work and very little entertainment, culture or restaurants, making the area one of the most car-dependent in the borough. Need to explore how the three railway bridges on Hanworth Road, Hospital Bridge Road and Nelson Road can be adapted so there are reasonable pavements and cycle facilities. Note that Ham, Petersham and Richmond Park have a strategy for a new bridge and seems odd the identified need for better bridges in Whitton has not made it in the Plan. • A comment there is a document describing wards and what is important about them; the Heathfield and Whitton wards not given much praise, but a key aspect missing. The Heathfield ward is unique in the UK as it has low cost or social housing right next to parks such as Heathfield Recreation Ground and Hounslow Heath. This is key in reducing inequalities in access to green spaces, and encouraging health and wellbeing for people on low incomes. This aspect needs to be recognised, protected and used as an example for the rest of the borough. • Dukes Education Group and Radnor House School Ltd disagree with vision for Kneller Hall and references to opening up for public access, as (<i>for reasons set out on Site Allocation 20</i>) the site cannot provide a public park or be publicly 	<ul style="list-style-type: none"> • Amendment to include ‘measures to improve cycling safety’ to give greater emphasis to this element of active travel in the Policy section. • Minor amendment to reference the improvement of air quality as a policy aspiration. • No changes to identified acceptable land uses for the area. The place-based strategy is considered to be in compliance with Local Policy 1. Living Locally and strikes the right balance between ensuring local employment opportunities, promoting a cultural and leisure offer and helping meet the Borough’s housing in need. • No amendment to reference improvements to Hanworth Road Bridge, Hospital Road Bridge or Nelson Road bridges given there are no known plans at present to undertake feasibility work for their upgrade as part of a wider strategy. • No amendment to make specific reference to the location of housing, including lower-cost housing, next to recreational grounds. The areas of open space in the area are already mentioned and the importance of these, including improvements to their access and connectivity, is also identified. • No amendment to refer to a plan for all vehicles to be electric powered in the near future, noting that this is not a transport target expressed in either national, regional or local policy. There is a general policy trend to improve

<p>accessible, and any access for the community must be managed to ensure pupil safety.</p> <ul style="list-style-type: none"> • A comment that the strategy is out of date already. No mention of how intend to address the provision to realise the borough’s ambition for all cars to be electric in a very few years’ time; need to have plans for every lamp post to be converted to a charging point, because majority of roads don’t have space for parking and allocated charging points. Turing House School will have a major detrimental impact on transport in/through Whitton, yet no mention is made of alleviating this in the short-term, current road layout amendments have prettified the two junctions in Hospital Bridge Road where roundabouts would have made more sense; add provision for a transport review in the short-term. 	<p>sustainable modes of transport, and it is felt that this aspiration is already adequately reflected in the place-based strategy.</p> <ul style="list-style-type: none"> • No amendment to reference transport impacts arising from Turing House school. The scheme has already been granted planning permission and the transport impacts were already fully assessed as part of that application, with provision for further analysis enabled via a further safety audit, which was secured via Heads of Terms as part of the permission. • No amendments to the reference to Kneller Hall, with regards the appropriate land uses and aspirations identified. The vision is based on the recently adopted SPD masterplan for the site, and whilst the aspirations of current landowner of a site will be given consideration, the purpose of the place-based strategy and Site Allocation is not intended to slavishly mirror these requirements where other uses and aspirations are also deemed to be appropriate by the Council. The Council has no control over who may be a future owner or developer for the site, and needs to make sure that the place-based strategy and Site Allocation is reflective of the Council’s general vision.
<p>Site Allocation 19: Telephone Exchange, Ashdale Close, Whitton</p>	
<ul style="list-style-type: none"> • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage. • A comment require an extension to the Library Way carpark as this will enable some car parking to be decanted from the High Street and other areas, will reduce conflict and enabled increased cycle lanes. 	<ul style="list-style-type: none"> • Amendment to text to refer to offices as an example of an appropriate floorspace, and addition of ‘or other commercial uses’ to create greater flexibility, with offices as one such option, in light of reduction in predicted office space needs in the updated Employment Land and Premises Needs Study evidence base. • No amendments to reference impact on water resources and infrastructure, which can be assessed against Policy 9 of this Plan. The updated Infrastructure Delivery Plan 2023 also identifies future infrastructure and service needs for the borough. • No amendment to include a reference to provision for an extension to Library Way carpark, noting that there is opportunity for this via a comprehensive redevelopment of the site as per the Site Allocation for Kneller Hall Telephone Exchange, though it would not be appropriate at this stage to include it as a specific requirement, noting the transport testing and consultation which would be required.
<p>Site Allocation 20: Kneller Hall, Whitton</p>	

- | | |
|---|--|
| <ul style="list-style-type: none"> • Historic England note the adopted SPD was accompanied by a heritage assessment, which helps form a useful baseline. Welcome emphasis upon reuse of historic buildings within the site. Commented on the draft SPD the area currently identified for greatest potential change includes at least one building (the Band Practice Room) identified as curtilage listed building and ascribed moderate heritage significance, which could benefit from further analysis and reference to this should be made. Site is in a Tier 2 Archaeological Priority Area, a desk-based assessment and potentially pre-determination fieldwork will be required to support future development proposals, with below-ground potential and post-medieval landscape garden remains; GLAAS should be consulted at an early stage. • FORCE support the requirement to provide habitat enhancement through creation of an east-west habitat corridor; would like an explicit requirement to de-culvert and naturalise Whitton Brook, which should have temperature-cooling, flood attenuation and ecological benefits. • Habitats & Heritage support provision of public open space in the SPD linking to wider work to improve access to the Duke of Northumberland River by the Crane Valley Partnership and others; hope the recent sale will not interfere with this vision. • A comment it's out of date already, written as through the future of Kneller Hall is unknown and the Plan speculates on what the site development might be. • A comment oppose idea a residential quarter is built on the western edge, would result in pressure to build on some of the MOL in time. A clear pattern of schools having to expand as the school curriculum expands and the school will need space to adapt. Site has clear heritage value and cramming in more residential will have a negative impact on the setting of the listed Kneller Hall and listed boundary wall. • Dukes Education Group and Radnor House School Limited (landowner) acquired the freehold interest of the entire site from the MOD in quarter 3 of 2021 and preapp discussions are taking place to convert to a day school. Dukes Education have significant experience in operating schools and in listed buildings. The existing Radnor House at Pope's Villa, Cross Deep, Twickenham caters for 440 pupils, age 9 (Year 5) to 18 (sixth form), and the school wishes to expand to | <ul style="list-style-type: none"> • The reformatted Site Allocations include a 'Context' section, within which greater detail of the characteristics and constraints of the site and surrounding area has been provided, including mention of the listed Band Room, Whitton Archaeological Priority Zone and the site's candidacy as a potential SINC. • An amendment has been made to remove the sentence 'Any proposal should provide for some employment floorspace, including offices', as employment-generating uses is already cited as an appropriate land use, though a further amendment has been made to reference 'including offices'. • An amendment has been made to include 'as part of any residential scheme' in the bullet point referring to a policy-compliant level of affordable housing, to clarify that this would apply where a proposal includes a residential use, and not for every application. • An amendment has been made to remove 'any residential development' from the requirement that development is sensitive to the historic building and responds positive to the setting of the heritage asset, as this requirement applies to any development, regardless of its type. • An amendment has been made to reference the opportunity to consolidate and reprovide the current footprint within the MOL in a new building, subject to scale, massing and impact on character and openness, for consistency with the wording in the Kneller Hall SPD 2020. • No amendment to make specific reference to opportunity to remove Whitton Brook from its culvert, as this would be too detailed for the scope of the Site Allocation, and is already identified in the Kneller Hall SPD 2020 as an option as part of wider SuDS opportunities on site. The Site Allocation already makes clear the expectation that future development has regard to the vision and requirements set out in the SPD. • No amendments to remove aspirations/requirements which do not directly tally with the details of the landowner's proposals in the current planning application submitted for Radnor House School, which remains under consideration. The Site Allocation vision is based on the adopted SPD masterplan for the site, and whilst the aspirations of a potential future developer of a site will be given consideration, the purpose of the place-based strategy and Site Allocation is not intended to mirror these requirements where |
|---|--|

improve facilities and further grow the school. All pupils in Years 7 to 11 and in the sixth form will be relocated to Kneller Hall, and each year the school will grow in size with additional forms, up to a total of 750 pupils. Pope's Villa will solely be for Year 5 and 6 (junior school), growing to accommodate up to approximately 300 pupils. The two sites will be self-contained. Across the two sites a net increase of circa 80 jobs. The draft masterplan details: use of the main Grade II listed Kneller Hall, Guard Room and Band Practice Hall for education (use class F1), with demolition of some modern buildings and conversion of others to school use (use class F1), and new build to provide purpose-built buildings including sports facilities (use class F1), along with ancillary works to facilitate school use including sports facilities and Forest School programme and facilitation of managed access for local school and community groups. Details set out of an initial structural and conditions survey of the listed building and curtilage listed buildings which identified key issues and further investigations that are being undertaken, and the Mechanical and Electrical services and internal fit out and condition of the properties that must also be considered. Sets out the significant financial investment proposed to ensure the long term retention and preservation of the listed building and curtilage listed buildings, with cost consultant LXA estimate to circa £7million. The proposed use as a school is considered to be the optimum use for the building in heritage terms. Details representations on the draft site allocation, to reflect and acknowledge the significant investment and commitment associated with the restoration and enhancement of the Grade II listed building and its ongoing maintenance and upkeep, and that the Council's aspirations must be commercially realistic and acknowledge the constraints and limitations of the site. Flexibility on the potentially suitable land uses considered appropriate. It is not considered appropriate to deliver specific employment floorspace as the school needs the entire site; reference should be removed. It is not feasible or appropriate for open space to be provided; remove this reference and instead managed access to parts of the site can be provided. Should acknowledge the SPD was prepared prior to our acquisition of the site and provides one potential option, but the masterplan needs to evolve. Consider the entire site is required to meet educational requirements, so if

other uses and aspirations are also deemed to be appropriate by the Council. The Council has no control over whether a landowners aspirations could change, nor who may be a future owner or developer for the site, and needs to make sure that the place-based strategy and Site Allocation is reflective of the Council's general vision. Thus no amendments have been made with regards the following: identification of residential, employment-generating and office as appropriate land uses the Council would support; requirement for new public open space on site including improved active frontages and connectivity; identification of health uses as a possible form of appropriate social/community infrastructure on site.

- No amendment to remove residential as an appropriate land use, noting that the Site Allocation makes clear the requirement to protect the character and openness of the MOL and settings of heritage assets, and that Historic England have not raised an objection to the principle of residential uses on this basis.
- No amendment to remove office as an appropriate land use, noting that Local Plan Policy 23 allows for developments outside of town centres to provide a small amount of new office space, and the borough-wide need for this type of employment space.
- No amendment to remove requirement to provide new public open space and better connectivity, noting that land management and safeguarding matters can be weighed up and dealt with at full planning stage via a Community Management Plan.
- No amendment to reference to Kneller Hall SPD, which was adopted in 2020 and has weight in the decision-making process.
- No amendment to expected implementation timescale, noting that the full range of flexibility is included (short, medium and long) and does not conflict with the owner's aspirations for the new school to be on site by September 2023.
- No amendments to reference impact on water resources and infrastructure, which can be assessed against Policy 9 of this Plan. The updated Infrastructure Delivery Plan 2023 also identifies future infrastructure and service needs for the borough.

references to residential development are included it should be made clear this is one possible land use and is not a specific requirement. Remove the requirement for active frontages along Whitton Dene and Kneller Road, as conflicts with the requirement for listed buildings and structures to be retained and is not deliverable, nor is a visual and physical link to the existing community feasible or deliverable due to the need for pupil safeguarding. Expect the aspirations for the site can be delivered within the height development parameters. The requirement to deliver affordable housing will not be triggered, nor it is considered possible to deliver health uses apart from the wider school use. An ecologist has been appointed. It should be made clear the site is the 'former' home of military music. The existing built development within the MOL designation and the opportunity to re-provide the existing scattered built footprint within the MOL in a consolidated footprint, recognised in the SPD, should be stated in the site allocation. Increased permeability for pedestrians and cyclists through the site should be removed as it is not deliverable. The expected implementation timescale should be short and medium term. There are a number of other references where changes are not sought. In summary the main amendments to be addressed are: removal of requirements to deliver employment floorspace, public access, increased permeability and active frontages; recognise opportunity to consolidate and re-provide current built footprint within the MOL in new building(s); acknowledge SPD prepared prior to acquisition by the school; acknowledge significant financial investment required; acknowledge constraints of the site and client's proposals which limit the ability to deliver uses beyond the proposed education and associated sports facilities.

- Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage; encourage any development to utilise green SuDS solutions.
- The CCG note the update with the new owner intending to transform the building into a school. On the western part of the site remains an opportunity to create a mixed use 'quarter', incorporating social infrastructure and community uses. The adopted SPD notes the GP practice catchments and the health bodies that should be engaged at an early stage to assess and mitigate any impacts

- No amendment to reference health Infrastructure, which can be assessed against Policy 49 and would be covered in the updated Infrastructure Delivery Plan.
- No amendment to reference to retention and possible upgrade of existing playing fields, noting that issues arising from compatibility of site uses and neighbouring amenities can be assessed against other policies in this Plan.

<p>that may arise on the capacity of health services in the locality. Suggest all options are considered, including provision of space within the development or developer contributions to increase capacity of health infrastructure in the area, noting the proximity of community spaces and opportunities to provide space to co-locate a range of health and wellbeing and community services.</p> <ul style="list-style-type: none"> • Sport England pleased to note specifies the playing fields should be retained and where possible upgraded; also important to ensure that any other uses do not prejudice the playing fields. 	
<p>Site Allocation 21: Whitton Community Centre, Percy Road, Whitton</p>	
<ul style="list-style-type: none"> • A comment the Whitton Community Association (operator of the Community Centre) welcome identification as a suitable location for new development as their current building has an outdated layout, is in poor condition and not energy efficient. It is intensively used by the local community and the case for a community space in the area remains strong, within reach of a diverse neighbourhood including some of borough’s most deprived communities. A new community building at such a prominent location should contribute to place-making for Whitton and Heathfield. More than one storey would be appropriate. Would not wish the Site Allocation to narrow options for needs-based community spaces across Whitton and Heathfield as a whole. Any policy should encourage complementary uses as neighbours/co-located within the same building to support joined up services/voluntary organisations and encourage integrated and flexible community spaces fit for the long-term. More intensive and coordinated use of sites may free up sites elsewhere for new uses (likely residential). Does not appear to be evidence/analysis to show this would be a good residential site, given adjoining uses. There is an 80-year-old ‘civic campus’ at Whitton Corner (school, health centre, day respite centre and church) alongside the community centre that should be valued as a coherent non-residential zone; concerned its effectiveness could be eroded by isolated new uses (noise-sensitive residential). Draw the site boundary wider (or describe the neighbouring context) as an important opportunity to create a masterplan for development that works more efficiently and releases other sites; suggest include St Augustine’s church’s temporary buildings (at southern 	<ul style="list-style-type: none"> • The reformatted Site Allocations include a ‘Context’ section, within which greater detail of the characteristics and constraints of the site and surrounding area has been provided. Reference is made to Whitton Community Centre and the local pharmacy as being a valued community service. The site is identified as forming part of a parcel of land within which a cluster of different uses serve the local community, including Whitton Corner, Homeline Day Respite Care Centre and St Augustine of Canterbury Church. Twickenham School is identified to the east, which also contains the Whitton Sports and Fitness Centre. • An amendment to the text to reference aspiration that redevelopment of the site should explore opportunities for complementary and greater joined-up services with neighbouring community uses. • No amendments to emphasise ‘place-making’ opportunities, given the site is already identified as a potential mid-rise building zone and thus Policy 45 would apply, the details of which do not need to be repeated in the Site Allocation. • No amendments to remove reference to residential as an appropriate land use. Retention/reprovision of the existing social/community use can be assessed against Policy 49. Whilst there is provision in this policy for a 100% affordable housing scheme to come forward without the need to provide social/community use and/or marketing evidence, the Site Allocation does make clear that on this site the Council would expect a mix of both uses. Matters relating to neighbouring amenities from co-location can be assessed under Policy 46 and controlled/mitigated at planning stage, noting that co-existence as part of a mixed-se scheme is supported by policy and also that the immediate site context already comprises some residential.

<p>boundary), Twickenham School car park and Methodist Church sites along Percy Road.</p> <ul style="list-style-type: none"> • A comment oppose idea can build residential accommodation above the community centre as incompatible land uses e.g. music noise and activity at the community centre late into the evening/night. The Site Allocation threatens its long-term future, there are few other music venues in Whitton, and would have a detrimental impact on the limited cultural scene in Whitton. A similar community association building in Hampton does not intend to have housing on top of it, so question why Whitton’s centre is targeted. A better approach to keep whole site in community use and re-provide the closed Heathfield Library and extra community space. 	
Place-based Strategy for Ham, Petersham & Richmond Park	
<ul style="list-style-type: none"> • A comment the Plan reiterates the call for a pedestrian/cyclist bridge between Ham and Twickenham which have not been supported by the River Thames Society as they ignore the needs of navigation at high tide, destroying mature trees and compromising open space and the viability of Hammerton’s ferry, and should be taken out. • The Royal Parks comment should be mention of Richmond Park in the policy, when noting the network of green spaces. • The Royal Parks comment should fully recognise the need to protect Richmond Park SAC, SSSI and NNR from all impacts associated with development including increased traffic, recreational pressure and light spill. Effective measures to reduce traffic in and through the Park should be included. • A comment that Richmond Park should be considered as a separate area requiring its own place-based strategy. Mention of SSSI requires explanation, and merits a geodiversity label (<i>see comment on Policy 39</i>). Mention the Royal Parks’ current strategy for decreasing number of vehicles in the Park and initiatives to introduce shuttle buses. • A comment that residential developments must take account of the impact of an increased population in respect of new development and occupation, as the local road infrastructure does not have the capacity to accommodate significantly more cars or lorries, and people prefer to use their cars. 	<ul style="list-style-type: none"> • Replacement of word ‘viable’ with ‘suitable’ when referencing location for possible cycle bridge, for better clarity. • Minor change recommended to include aim to improve the riverside environment. • No changes recommended to the place-based approach for the borough as a strategy. It is considered appropriate for Richmond Park to remain within this ‘place’ given the physical and perceptual relationship with Ham Common which ties it more to the Ham & Petersham Place. The vision is taken from the Neighbourhood Plan and has therefore not been changed. • No changes recommended to add details which are covered by other policies in the plan, including the protection of Richmond Park and the traffic restrictions, and how transport impacts of new development are assessed. • Reference to the aspiration for a new pedestrian and cycle bridge is considered appropriate.

<ul style="list-style-type: none"> • The Environment Agency recommend the vision should include “improving the riverside environment”. 	
Site Allocation 22: Ham Close, Ham	
<ul style="list-style-type: none"> • The National Trust raise any new development higher than 4 storeys would have a negative visual impact on the setting of Ham House, as residential development between Ham House and the site is predominantly low rise at 2 storeys. Suggest the maximum building height should be 4 storeys. • Richmond Housing Partnership (landowner) are working with Hill Residential (delivery partner) and are bringing forward an application for comprehensive redevelopment. The Site Allocation boundary should be amended to include a western strip of land (to enable replacement housing and a new makers lab) and hard standing on the eastern edge to the rear of the Ashburnham Road shopping parade (to deliver the community centre), and remove the Ham Clinic medical centre, to reflect the masterplan. Support the site proposal, context and timescales. Suggest the site proposal text could include reference to Hill Residential alongside RHP. • Hill Residential (delivery partner) are working with RHP and the Council and bringing forward an application for redevelopment. The Site Allocation boundary should be amended to include a western strip of land (to enable replacement housing and a new makers lab) and hard standing on the eastern edge to the rear of the Ashburnham Road shopping parade (to deliver the community centre), and remove the Ham Clinic medical centre, to reflect the masterplan. Support the site proposal, context and timescales. • Richmond Housing Partnership (landowner) and Hill Residential (deliver partner) welcome the vision and policy direction that this site can be a landmark scheme. • Thames Water state the scale of development is likely to require upgrades of the water supply network infrastructure and recommend early liaison and consideration of phasing to ensure upgrades are delivered ahead of occupation. Thames Water do not identify any infrastructure concerns for wastewater and management of surface water should follow London Plan Policy S113. Note there may be existing sewers or rising mains crossing the site, which may require diversion (financed by developer) or assessment of width of easement. 	<ul style="list-style-type: none"> • It is not considered necessary to include the area of hardstanding to the rear of the shops, although noted this reflected the support expressed by residents during consultation on the Ham Close masterplan for the development of this area, as it is referenced in the Neighbourhood Plan and this area can be incorporated into a proposal if needed. It is not considered appropriate to further amend the boundary to include the OOLTI and playing fields to the west, noting the designations and therefore strict requirements at planning stage for development this land to be supported, though simultaneously noting that omitting an area from a Site Allocation does not preclude development from coming forward on that land. It is also not considered appropriate to remove the medical centre from the boundary, given its siting in the site. • Some minor additions to the wording relating to design and heights, to mirror the wording in the Neighbourhood Plan with regards to the need to demonstrate positive benefits in townscape and local aesthetic quality and relate well to the local context. Further minor amendment to include need to consider impacts on views and setting of Ham House. • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site.

<ul style="list-style-type: none"> • Ham and Petersham Neighbourhood Forum comment any development will need to address Neighbourhood Plan Policy H2 which states developments over 4 storeys will be acceptable if the proposal demonstrates positive benefits in terms of townscape and local aesthetic quality and relate well to the local context. • The CCG comment they and the Hounslow and Richmond Community Healthcare NHS Trust have been engaged in the proposals, noting services will continue to be provided from the Ham Clinic site. Suggest the Site Allocation boundary is amended to reflect the exclusion of the clinic site from the current proposal. There is no requirement for primary care services to be relocated within the redevelopment, although the impact of the additional demand on the Lock Road Surgery may necessitate the need for a developer contribution. 	
Site Allocation 23: Cassel Hospital, Ham Common, Ham	
<ul style="list-style-type: none"> • Richmond CVS comment given the long-term contribution of the hospital it would be appropriate to retain an element of the site as a mental health and well-being hub. • Ham and Petersham Neighbourhood Forum comment the Plan should discourage proposals that would lose the potential of opening spaces and gardens to the public, and reference the visual contribution of the buildings to the setting of Ham Common. • West London NHS Trust support the allocation of Cassel Hospital (landowner) and recognition that conversion or redevelopment for residential uses could be acceptable if it allows for the protection and restoration of listed buildings. Confirm the site is still in active use and the medium timeframe is appropriate. 	<ul style="list-style-type: none"> • A minor amendment to make clear that any development would need to protect and where possible enhance the character and openness of the designated open land. • No amendments to the identified appropriate land uses, as the Site Allocation already makes clear that the Hospital’s requirements are protected, and that social/community infrastructure uses must first of all be explored. • No amendments to the design/heritage references, which are considered to be adequate.
Place-based Strategy for Richmond & Richmond Hill	
<ul style="list-style-type: none"> • The Royal Parks comment should fully recognise the nature conservation designations of Richmond Park as immediately adjacent to this area. While policy encourages active travel and exercise, it should identify need to protect Richmond Park SAC, SSSI and NNNR from all impacts associated with development including increased traffic, recreational pressure and light spill. Effective measures to reduce traffic in and through the Park should be included. • A comment agree with the general objectives but less convinced Whittaker Square is a natural focus for visitors and is not an obvious destination. Should 	<ul style="list-style-type: none"> • Reword of reference to pilot Clean Air Zone to bring up to date. • Update to Retail and Leisure Needs Study reference to reflect updated report’s predictions for Richmond. • Relevant planning history section updated to reference recent planning permission granted. • Add reference to recreational pressures and nature conservation designations of Richmond Park.

be greater provision of public toilets and encourage this being provided by private enterprise e.g. advertising payments. Agree with improving North Sheen Residential Area; changes by TfL do not encourage this is achievable for public transport. Agree much could be made of area around Richmond Station although doubts about a building up to 8 storeys, not convinced the area is suitable for taller buildings and a cluster could change the appearance of the town centre.

- A comment the strategy fails to acknowledge the main challenge to the town centre has been the loss of the department store prompting other clothing retailers to leave. Needs to be a strategy to rebuild the comparison goods offer. Otherwise residents have to travel further and does not fit with living locally.
- A comment on the place definitions, and that the four Conservation Area components should be separately identified and the character area boundaries should match the Conservation Area boundaries.
- A comment the Richmond & Richmond Hill place should be titled as 'Richmond Town Centre and Riverside, Richmond and Richmond Hill Residential and North Sheen Residential', assuming accept the questionable concept and structure of the Urban Design Study.
- A comment that the vision relies on the RBID Vision Report as evidence; the RBID is established by businesses and there is likely to be a bias in favour of businesses. The areas covered by RBID are parts of the town centre, not Richmond Green where wholly oppose commercial use other than mixed use along Greenside. Concerned the democratic process may be at risk and needs to be resolved going forward. Not been able to find the Vision Report and not able to make a reasoned response on the RBID vision included in the Plan.
- A comment that the Old Deer Park Working Group recommend the Old Deer Park should be covered by its own Character Area.
- The Environment Agency state the vision should include 'improving the riverside environment'.
- A comment keep raising and told there is no budget for – the Sheen Road parade of shops does not have even, safe pavements.

- Add reference to promote Richmond area 'via active travel', reduction in car travel and improvement in air quality.
- Add reference to closure of House of Fraser as acknowledge impact on retail offer in Richmond town centre.
- Amend text to character area profile to more explicitly refer to the four Conservation Areas as core of town centre character area.
- Amendment to policy to reference enhancement of riverside environment.
- Retention of promotion of Whittaker Square as a new public space.
- No amendments proposed to character area boundaries, which are considered to be logical and appropriate.
- It is not considered that the Old Deer Park warrants its own character area, which would not be appropriate for the broader scale of the Urban Design Study.
- No amendment to reference to Be Richmond BID's objectives which, although not underpinning the Evidence Base of the Local Plan, are nevertheless considered to be relevant as an initiative the Council supports.
- No recommendation to include Sheen Road repaving in place-making strategy, which is of a more finer detail which is not appropriate for a strategic policy.

Site Allocation 24: Richmond Station, Richmond

- | | |
|--|--|
| <ul style="list-style-type: none"> • TfL welcome the aim of a comprehensive approach including transport interchange improvements; expect to be involved in early discussions and should be made clear in the Site Allocation. • A comment please plan a redevelopment of the station that includes exits from all platforms onto Church Road, to reduce local car journeys and provide more inclusive transport for people living east of the station. • A comment asking if redevelopment envisaged will be over the railway lines with the tall building on the site of the car park. Although the station façade is run down, it is a BTM and a good example of Art Deco, and architect believed to be same as for Surbiton Station which is listed. It merits proper restoration. A tall building over the top of the façade might not achieve the best aesthetic outcome. Support an integrated transport hub, but hard to envisage where buses would be based and relocating tals would be an improvement. • A comment do not support an air-rights development over the railway tracks. This will make public transport less attractive for those waiting for trains. Station has heritage value, extends to the walkways and generous circulation area at platform level and original 1930s features; some restoration could reveal the Art Deco heritage further. Many people visit Richmond as a pretty town on the river that feels less built up and proposal could undermine the tourism sector if development plonked on top. • A comment the title and draft text need substantial amendment. Title should refer not only to the station, but include the NCP car-park, parade of shops fronting The Quadrant, office block fronting Drummond's Place, parade of shops fronting Kew Road, Westminster House offices, and surface level car-park to north. A clear distinction needs to be made between proposals directly affecting the station and those affecting the other buildings, with different considerations that apply to the locally listed station complex and 19th century platform-canopies, to which there is no scope for redevelopment or Decking over the tracks, which would have a damaging impact on amenity and be inconsistent with national, London and local sustainability interests. Any significant increase in retail, leisure or entertainment uses is most likely to damage the viability and vitality of the heart of the town, and is likely to necessitate a significant level of vehicular servicing. This is not to suggest there | <ul style="list-style-type: none"> • Update to Retail and Leisure Needs Study reference to reflect to reflect updated report's predictions for Richmond. • Reference added to need for partnership working with National Rail and TfL. • Minor amendment to make clear that development must respond positively to the Conservation Area <u>and the</u> BTM. • Text referring to transport interchange improvements retained as worded, to remain high-level, as any proposals would require testing and input from transport providers; thus it would not be appropriate to set out specific and detailed requirements as part of the Site Allocation. • The site to be retained as a Tall Building Zone, based on the modelling undertaken by Arup as part of the UDS. Current wording, which does not separate the station from the remainder of the site, to be retained to allow for flexibility of future development. • Requirement for a retail offer to be retained, as this is considered appropriate for a station location and is not expected to negatively impact on the wider retail offer of Richmond. |
|--|--|

<p>is no scope for enhancing the station complex. The Urban Design Study flawed analysis and recommendations including the opportunity for a landmark building is wholly unacceptable, unrealistic and needs to be omitted.</p> <ul style="list-style-type: none"> • See comment on Policy 45. To omit reference to acceptability of development above five storeys and delete or substantially amend Richmond Station tall and mid-rise building zone. 	
Site Allocation 25: Former House of Fraser, 16 Paved Court 20 King Street 4 To 8 And 10 Paved Court And 75 - 81 George Street, Richmond	
<ul style="list-style-type: none"> • A comment the text needs to be amended to reference any redevelopment provides for the enhancement of the external elevations of the existing 1960s building and removal of the existing roof plan enclosures to enhance views of the building from The Green and Hill Street, particularly in relation of the setting of the listed properties in Old Palace Terrace. Reference any extension or extensions to the existing buildings should rise no higher than the existing building (i.e. above four storeys); and for any replacement development. • A comment would like to see House of Fraser back again. 	<ul style="list-style-type: none"> • Update to Retail and Leisure Needs Study reference to reflect to reflect updated report's predictions for Richmond. • No amendment to text setting out design requirements, which is considered to adequately allow for sufficient assessment of more detailed aspects, such as elevational treatment, heights, townscape, heritage etc
Site Allocation 26: Richmond Telephone Exchange, Spring Terrace, Richmond	
<ul style="list-style-type: none"> • A comment support a low rise development of what is an eye sore. • A comment the text needs to be amended to reference any extension or extensions to the existing buildings should rise no higher than the three-storey part of the existing buildings; and for any replacement development. • A comment the site would benefit from demolition; the obvious replacement would be a single dwelling house to reinstate the single dwelling house at 7 Spring Terrace that was lost in the past, to accord with Policy 28 and ensure the design respond to the historic environment. 	<ul style="list-style-type: none"> • No amendment to text setting out design requirements, which is considered to adequately allow for sufficient assessment of more detailed aspects, such as elevational treatment, heights, townscape, heritage etc. • Retention of requirement for a refurb-first approach, in line with sustainability policies in the Plan.
Site Allocation 27: American University, Queens Road, Richmond	
<ul style="list-style-type: none"> • A comment support repurposing the site as education or mixed education/residential or residential. • A comment the text needs to be amended to reference any extension or extensions to the existing buildings should rise no higher than any of the existing buildings; and for any replacement or additional buildings. 	<ul style="list-style-type: none"> • Amendment to correct error regarding a heritage reference. • No changes to proposed appropriate land uses (educational, and then mixed-use social/community infrastructure). The site is not being recommended for a residential development, noting that this does not in itself preclude a residential scheme from being submitted and assessed against relevant policies in the Plan.

	<ul style="list-style-type: none"> • No amendment to text setting out design requirements, which is considered to already make clear the requirement for consideration of heritage assets, and would adequately allow for sufficient assessment of more detailed aspects, such as elevational treatment, heights, townscape, heritage etc.
Site Allocation 28: Homebase, Manor Road, East Sheen	
<ul style="list-style-type: none"> • TfL welcome requirement for retention of the existing bus terminus; helpful to clarify this comprises bus standing and drivers' facilities that should be retained and enhanced in any redevelopment in consultation with TfL. The site is adjacent to the TfL Road Network; early engagement should take place with TfL to assess potential impacts. • A comment the Urban Design Study has negated to account for the locally designated cottages on the NW border of the site, so does not follow the same recommendations of centrally-southerly siting of taller buildings with adequate buffer zones as it has for other sites. Anything above 6 storeys on the border will swamp the buildings and have a significantly deleterious impact on daylight of existing residents. The heat map shows no sufficient buffer, especially those directly next to the railway on Bardolph Road and southerly side of St George's Road, which along with Trinity Road and Trinity Cottages will mean homes left below BRE acceptable standards for light. Detailed summary and diagrams from the Daylight and Sunlight Report from the planning agents to show context and scale of the overshadowing. Support sensitive redevelopment of the site and a reasonable mid/lower rise solution. Noted struggle to register query on the consultation and that residents were not formally notified of the Local Plan consultation. • A comment support redevelopment but with a limit of 8 storeys. • Thames Water do not envisage any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater, but as the site currently drains via infiltration are unable to fully assess the site for a sewer connection prior to completion of infiltration tests. • The CCG note the site allocations in this place, including the application on this site; the CCG has raised the need to provide a contribution to provide additional primary care capacity in the local area. 	<ul style="list-style-type: none"> • Minor amendment to include need to retain/reprovide standing and drivers' facilities as part of bus terminus. • Additional bullet point added to reference requirement to engage with TfL, and also to encourage active travel. • No changes to text of Site Allocation referencing Tall and Mid-Rise Building Zones, though the updated Urban Design Study amends the zone itself in the UDS to set it further back from the building line on the NW border, to reduce the impact on the BTMs. • No changes to text of Site Allocation regarding the prevailing character, which is considered to be sufficient, although the updated Urban Design Study makes specific reference to this in the character area profile. • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site. • No amendment to reference health Infrastructure, which can be assessed against Policy 49 and is considered in the updated Infrastructure Delivery Plan.

<ul style="list-style-type: none"> • A comment noting this is not East Sheen. Given the Urban Design Study flawed analysis and recommendations, reference to the tall and mid-rise building zone should be deleted and state that any new development across the site to rise no higher than 4 storeys to relate to the predominantly 2 storey scale of nearby residential areas and the nearby Conservation Area. • A comment support up to 7 storeys and have objected to the current/past proposals notably the ridiculous 11 storeys development. 	
Site Allocation 29: Sainsbury's, Lower Richmond Road, Richmond	
<ul style="list-style-type: none"> • TfL comment the site is adjacent to the TfL Road Network; early engagement should take place with TfL to assess potential impacts. • A comment the loss of the supermarket would be a major reduction in amenities, but can see the sense in redeveloping the area to make better use of the space, and combine retail/residential provided the height is in keeping with surrounding, not higher than 6 storeys or 8 at most. Public transport and access would need to improve. • Thames Water state the scale of development is likely to require upgrades of the water supply network infrastructure and recommend early liaison and consideration of phasing to ensure upgrades are delivered ahead of occupation. Thames Water do not identify any infrastructure concerns for wastewater and management of surface water should follow London Plan Policy S113. Note the proposed development is within 15 metres of strategic sewer and a condition related to piling should be added to any permission. • A comment about the lack of mention of car parking, asking how much car parking will be required. If the car parking provision is too restrictive, the owners are unlikely to bring forward. • Sainsbury's (landowner) support the commitment to re-provide an equivalent amount of retail floorspace as part of any redevelopment; the allocation should also refer to the re-provision of adequate car parking, servicing and operational space on-site. The store trades well, with shoppers visiting on foot or by bicycle, however visits by car remain important with the majority of expenditure being on large, weekly shops, and parking is beneficial to those with larger families and less mobile/vulnerable. Any redevelopment should incorporate re-provision of car parking to London Plan levels (Table 10.5). 	<ul style="list-style-type: none"> • Additional bullet point added to reference requirement to engage with TfL, and also to encourage active travel. • Added reference to need to provide car parking provision for retail offer in line with London Plan standards. However, no prescriptive targets/limits have been included for a residential land use. • No amendments to inclusion of site as a Tall and Mid-Rise Building Zone, which is considered to be based on sound methodology as part of the UDS. • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site.

<ul style="list-style-type: none"> • A comment given the Urban Design Study flawed analysis and recommendations, reference to the tall and mid-rise building zone should be deleted. • The CCG note the site allocations in this place, and the introduction of a residential use on this site, which will add to the pressure on local healthcare infrastructure. Welcome the opportunity to identify future healthcare requirements which could include new healthcare provision on the site. 	
Place-based Strategy for Kew	
<ul style="list-style-type: none"> • Royal Botanic Gardens Kew request details of the active travel opportunities referenced under other initiatives, noting there are no accessible routes through Kew Gardens Station and would encourage such initiatives. Support reference to improving wayfinding to RBG Kew. • Two comments that Old Deer Park should be covered by its own Character Area, within the Richmond & Richmond Hill area, and the Urban Design Study should be adjusted accordingly. The proposed structure of the character areas relating to Richmond, Kew and North Sheen are challenged as they relate neither to ward boundaries or existing Conservation Area boundaries, and should be based on the most part on present Conservation Areas. • St George Plc and Marks & Spencer support the principle of a place-based strategy for Kew, but suggest amendments to ensure consistency with Site Allocation 30 and their suggestions of amendments, including to refer to an element of replacement retail and small-scale complementary uses, a detailed assessment of surrounding townscape character and a comprehensive viewpoint study, a tall building zone circa 7-8 storeys, and proposals for buildings of height supported by justification including a comprehensive Heritage, Townscape and Visual Assessment. • A comment support the aim to promote active travel and reduce the dominance of vehicle traffic. 	<ul style="list-style-type: none"> • Amendment to reference improved accessibility as part of Kew Gardens Station upgrade. • No amendments necessary to provide detailed information on Kew Gardens Station improvements, given the high-level scope of the place-making strategy. • No amendments to make Old Deer Park its own character area or other alterations to the character area boundaries, the methodology and reasoning for which is set out in the Urban Design Study (UDS) and have been subject to consultation. • No amendments to the mention of acceptable land uses for Kew Retail Park, which are considered to be consistent with what is set out in the Site Allocation for that site. • No amendments to the section mentioning Kew Retail Park to include further details of the design objectives, which instead are set out in the Site Allocation. • No amendment to increase identified Tall and Mid Rise Building Zone for Kew Retail Park from 7 to 8 storeys. Heights have already been tested on this site as part of the UDS and 7 storeys is considered to be the maximum that can be accommodated.
Site Allocation 30: Kew Retail Park, Bessant Drive, Kew	
<ul style="list-style-type: none"> • A comment that a policy compliant level of affordable housing is necessary and the minimum level that should be aimed for. • A comment that Kew Retail Park works well as a local shopping centre, as larger than normal units make it a valuable and unique resource. Removing floorspace 	<ul style="list-style-type: none"> • Amendment to include ‘where feasible’ in relation to requirement to improve connectivity from Kew Retail Park to the River Thames. • No amendments to wording of acceptable land uses. Retail uses are not protected by policy and Local Plan and London Plan policies encourage new

to build homes is a mistake, given number of homes in area and the river barrier to access other areas. Higher rise development is inappropriate to the area and the quality of the local landscape; future developments need to be limited to the height of the existing Kew Riverside development.

- TfL comment the site is adjacent to the TfL Road Network; and welcome the reference to early engagement with TfL prior to a transport assessment.
- Historic England comment the cumulative impact of this site and Kew Biothane Plant need to be considered and referred to in the policies. Identified as suitable for tall and mid-rise buildings (max 7 storeys) and bounded to the north by more recent development 4-5 storeys so this is likely to be appropriate. Taller elements should be carefully located within the site and the policy could state this. Generally criteria helpful in managing how the historic environment is treated; modelled a height of 21m on Vu City to assess potential impacts on Kew WHS and while theoretically visible below the ridgeline of surrounding development and unlikely to be problematic with regards to Kew. An Archaeological desk based assessment will be required; should be early consultation with GLAAS.
- The CCG note adjacent to Levett Square new health facility; would welcome opportunity to discuss the potential healthcare impact.
- St George Plc and Marks & Spencer (landowner) strongly support the allocation of the site for redevelopment and are keen to work collaboratively to deliver a scheme. Key to this is ensuring an appropriately supportive site-specific policy, and set out recommendations as to how this could be strengthened and identify where consider there to be soundness issues, setting out detailed amendments. Set out details about the site including the planning context, site ownership and conditions for making the site available, and timescales. Support substantial residential development, suggest there is no need to repeat content covered in other policies (e.g. affordable housing). Policy should confirm the acceptability of increasing the amount of retail where this can be justified by the sequential and impact policy tests, and an improved retail offer is needed as there is existing access deficiency for main food shop needs on the basis of Living Locally. It is not a sound approach to restrict the acceptable amount of convenience retail floorspace to no more than existing. The acceptable amount

retail space to be directed to town centres. Retention of some retail space strikes the right balance between recognition of the popularity of Kew Retail Park and these policies. There is a need for additional housing in the Borough and this site is considered appropriate to help meet that need. A small amount of office space is considered to be complementary to the mix of uses and supported by a borough-wide need for more office space. The wording is considered to be sufficiently worded to allow for a range of uses, recognising the primacy of housing as part of a residential-led scheme.

- No amendment to requirement for new on-site Public Open Space, which is considered appropriate for a residential-led development in this location and in line with Policy 37.
- No amendment to identified Tall and Mid Rise Building Zone for Kew Retail Park, which is based on sound methodology as part of the Urban Design Study 2021 (UDS). The UDS references that the highest elements should be towards the centre of the zone.
- No amendment to mention of tree-lined avenues, given that these are characteristic of the area and therefore relevant to any future development design proposal.
- No amendments to mention archaeology, as the site is not in an Archaeological Priority Zone.
- No amendment to reference health Infrastructure, which can be assessed against Policy 49 and would be covered in the updated Infrastructure Delivery Plan.

<p>of retail floorspace should be dealt with at planning application stage through the sequential and impact policy tests. There should not be a requirement for provision of 'major' office development as the site is not in a town centre or designated employment area. The inclusion of a range of small-scale other uses that would add to vibrancy and vitality should be in a more flexible approach. The provision of open space is not consistent with Policy 37 and should be removed. Agree that improving permeability and connections to Kew Riverside and the River Thames is desirable, however issues outside of the landowners' control prevent direct options and suggest this is referred to as where feasible. Tree-lined avenues are too prescriptive. The building heights are not backed up by a robust evidence base and a range of heights across the site would be more suitable.</p>	
<p>Site Allocation 31: Kew Biothane Plant, Mellis Avenue, Kew</p>	
<ul style="list-style-type: none"> • A comment agree the site is suitable for housing, but do not believe developments higher than the height of the existing Kew Riverside can be justified due to the visual impact; most people do not want to live in high-rise developments. • Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater, and for surface water drainage would expect discharge directly to the River Thames; there are Thames Water assets running through the site and is within 15m of a Thames Water Sewage Pumping Station and strategic sewer which will need to be taken into account in future plans. • Historic England comment the cumulative impact of this site and Kew Retail Park need to be considered and referred to in the policies. An Archaeological desk based assessment will be required; should be early consultation with GLAAS. • The Environment Agency comment the site is within Flood Zone 3 and all sleeping accommodation must be above the tidal breach 2100 flood level. The site is next to statutory tidal Thames flood defences and raisings in line with TE2100 will be required, and sufficient set back between the development and flood defence to accommodate raisings and future maintenance (would not accept pushing the flood defence riverward as it would have a detrimental 	<ul style="list-style-type: none"> • Amendment to require consideration of nearby sewage works as part of any future residential scheme and need for an odour impact assessment upfront. • No amendments to design section, which already does identify support for tall buildings in this location. • No amendments recommending regarding flood risk, noting that the new format identifies the flood constraints for the site.

<p>impact on flood storage and the environment). Recommend refer to a Riverside Strategy Approach to achieving the TE2100 Plan flood defence raisings in this location. Recommend add to the wording on public open space to refer to multi-functional benefits including flood risk, flood storage and the Riverside Strategy Approach. The buffer zone should be planted with locally native species and form part of green infrastructure, free from all development including lighting; a working methods statement will need to detail how any buffer zone will be protected during construction.</p>	
Site Allocation 32: Pools on the Park and surroundings, Old Deer Park, Richmond	
<ul style="list-style-type: none"> • A comment agree the Council’s position. • Royal Botanic Gardens Kew note the site is in relatively close proximity; support the continued use for sports, however not any development that would adversely impact on the setting, views, heritage context etc. of Kew Gardens. • A comment the fourth bullet point needs to be amended to refer to the incomplete draft of the Statement of Significance which needs to be amended before formal adoption to take full account of the particular special interest and significance of the listed pools complex and its landscaped setting. The Old Deer Park Working Group have been pressing for amendment since 2018; the text also needs to take account of repeated community requests for the Pools complex and its surrounding landscape to be designated MOL. 	<ul style="list-style-type: none"> • No amendments to existing reference to significance of the Park and surroundings, which is considered to be sufficient. • No amendment to mention of Statement of Significance, which is currently noted as a draft on the Council’s website, and remains relevant to refer to. • No changes to the Metropolitan Open Land boundary of the Park to include the site, which is considered likely to score poorly against the 4 criteria set out in the Open Land Review 2021. • No amendments to support for sporting facilities required, as the text is already sufficient. • No amendments to support for biodiversity required, as the text is already sufficient.
Site Allocation 33: Richmond Athletic Association Ground, Old Deer Park, Richmond	
<ul style="list-style-type: none"> • Royal Botanic Gardens Kew note the site is in relatively close proximity; support the continued use for sports, however not any development that would adversely impact on the setting, views, heritage context etc. of Kew Gardens. • Two comments no change / agree the Council’s position. 	<ul style="list-style-type: none"> • No amendments to existing reference to significance of the Park and surroundings, which is considered to be sufficient.
Place-based Strategy for Mortlake & East Sheen	
<ul style="list-style-type: none"> • A comment the removal of the word ‘village’ before ‘heart’ is inconsistent with the vision wording; should retain the word ‘village’ for consistency and clarity with the Village Planning Guidance, Site Allocation and vision. Welcome reference to the Planning Brief to retain the relevance of this document into the future. Concern removal of the word village and the diagrams/Appendix 3 could 	<ul style="list-style-type: none"> • Minor amendment to text to include mention of improved accessibility with regards to aspirations for Mortlake Station and outside public realm. • Minor amendment to text to include improving the riverside environment as an aspiration for the place-making strategy.

create opportunity to excessively develop the site with buildings of 5-6-7 floors predominating and covering too great an extent of the site, conflicting with local context and heritage assets; should be greater emphasis on retaining and enhancing the village character. The School Place Planning Strategy may set out the requirement for a new secondary school but the clear need has been strongly challenged by the community. The Strategy does not take into account the likely damage/harms to the sustainability of existing secondary schools, nor impact assessment on the context or local infrastructure. Concern harm to the viability of existing 6th forms. An updated Strategy needs to take account of these factors and changes and reductions in population, despite reported arrivals from Hong Long there is spare capacity. Remove 'there is a clear need' until there is evidence to substantiate this claim.

- A comment key concerns are the stresses on the riverside corridor imposed by the addition of 1,114 new dwellings and a proposed secondary school, not anticipated in the 2011 Plan and would occasion at least 2400 movements per day in addition to those generated by the inhabitants of new dwellings. Raised issues about impediments for disabled persons, wheelchair users and young mothers unless development at Mortlake Station to enable tracks to be crossed when the gates are closed, foresee accidents at the crossing and a solution for station enhancement would be a wheelchair friendly underpass. Concern new dwellings will place a load on the water management of rain and dirty water draining built by the Victorians; must be assured consequence will not be raw sewage dumping in the Thames or more frequent flooding. Loss of the medical centre in the new Plan will add to travel for vulnerable and elderly people. Only half the school children will exercise every 2 weeks and half of those on MUGA. No specifics in terms of the social housing element including provision for key workers and special needs young persons needing supervised living. Efforts to reduce traffic on the A3003 have not been helped by lack of imagination for use of the river as a transport artery; a flaw not to bring the catamaran service which terminates in Putney up to Richmond, with Mortlake a stop on the route, which would also reduce traffic and pollution at Chalker's Corner.

- No amendments to reference to/omission of 'village', 'centre' and 'place' as these terms are considered to be interchangeable and do not alter the need for the design of any future development proposal to have regard to the character of the wider area, as set out in the relevant character areas of the Urban Design Study, Village Planning Guidance and Conservation Area appraisal where applicable.
- No amendments proposed to character area boundaries, which are considered to be logical and appropriate.
- No amendments to the reference to the Tall and Mid-Rise Building Zone as identified for the Stag Brewery site, which is based on a sound methodology which recognises the sensitivities of the surrounding context.
- No amendment to refer to a reduced number of homes proposed for the area, based on impact on water resources and sewerage. There is provision to assess these matters in Policy 9 (and flood risk against Policy 8) of this Plan and the updated Infrastructure Delivery Plan 2023 also identifies infrastructure and service needs for the borough.
- No amendments to the place-making strategy to include reference to an extended Thames Clipper service, noting this is operated by a private company and the Council is not aware of any plans to extend the service to Mortlake. It is not considered that the policy precludes this from happening, should there be any future plans.
- No amendments to include more specific details of cycle routes, noting that the policy is intended to as an identification of high-level aspirations for the area, and that the potential cycle route identified between Mortlake and East Sheen in TfL's Strategic Cycling Analysis is indicative and aspirational with no commitment from TfL at this stage to deliver.
- No amendment to include further details of the constraints from Richmond Park, beyond citing that the Mortlake and East Sheen area is located between the Park and the Thames, noting that the conservation designations are already listed in the place-making strategy for Ham, Petersham & Richmond Park, the Urban Design Study 'place area' within which the Park the located.
- No amendment to remove reference of Upper Richmond Road as a 'strategic corridor with growth potential', noting that adequate context is provided in the

<ul style="list-style-type: none"> • TfL note the reference to a potential cycle route between Mortlake and East Sheen in TfL’s Cycling Action Plan; this is indicative and more work will be required to determine the actual alignment of any cycle route. • The Royal Parks comment the area profile needs greater recognition of the nature conservation designations of Richmond Park (SAC, SSSI and NNR) as immediately adjacent to the area. While the policy encourages active travel and exercise, it should also identify need to protect Richmond Park SAC, SSSI and NNR from impacts associated with recreational pressure, as well as other impacts associated with development including increased traffic and light spill. Include measures to reduce traffic in vicinity of and through the Park. • A comment disappointed Upper Richmond Road (West) identified as a ‘strategic road corridor with growth potential’ as completely out of keeping with the look and feel of the local area. Similarly Manor Road allowing mid-size development along its length of up to 5 storeys also negatively changing the look and feel of the area. • A comment the Mortlake with East Sheen Society agree with the strategy, but disagree with the boundary of the area which has always defined its area as based on the Parish boundary of Mortlake with East Sheen, which equates better with the catchment area of the shopping centre but also the cultural quarters including our churches (used for cultural events). Note this includes the Mortlake Crematorium and adjacent cemetery, and excludes Christ’s School and its adjacent cemetery. Agree with the definitions of character areas H1, H2 and H3, but problems with the boundary between H4 and H5 - Martindale and Spencer Gardens on the north side of Christchurch Road are in character with H4, not H5, and Sheen Mount Primary School is split between both character areas which makes no sense; boundary needs refinement. Area profile does not mention several cemeteries in the area, including their importance as open spaces, nor the archaeological interest on the Brewery site. Pleased to see focus on town centre including improvement of public realm and creation of public areas at Milestone Green and elsewhere; however needs to be tempered with appraisal of air quality and what can be done to improve it. Public realm at Mortlake Station suggested previously as a Site Allocation and disappointed to see unlikely due to fragmented ownership; not true as Network Rail single 	<p>place-making strategy and UDS regarding the requirement for sympathetic development which respects the character of the area.</p> <ul style="list-style-type: none"> • No amendments to the text regarding Manor Road, noting that Manor Road is not specifically mentioned in the place-making strategy for Mortlake and East Sheen and is not identified as a mid-rise zone along its length or as ‘ripe for development’. A tall and mid-rise building zone is identified at the north end of Manor Road, which is located in the Richmond and Richmond Hill place area, the appropriateness of which has been tested and is soundly justified in the UDS. • No amendments to list the area’s cemeteries, as the place-making strategy already references open spaces and places of wildlife habitat as a characteristic of the area. • No amendment to include Mortlake Station as a Site Allocation, noting that there is no known likelihood of redevelopment of the site coming forward, and that aspirations for the area, such as improved public realm, are referenced separately in the place-making strategy and are not reason enough to designate for a Site Allocation. • No amendments to description of the character of the riverside area near the Stag Brewery site, which is considered to be sufficient. However, an amendment has been made to the Urban Design Study to reference the Arcadian nature. • No amendments to the reference to the requirement of a new secondary school and sixth form at the Stag Brewery site, the need for which is evidenced in the adopted School Place Planning Strategy February 2018 and most up-to-date draft Strategy January 2023. Both documents are based on a detailed and reasoned methodology which demonstrated the need for a fourth state-funded secondary school in the eastern half of the Borough. Concerns and comments raised by objectors to the new school with regards to recent population trends and impact on existing sixth forms, are addressed in the Strategy. • No amendments to the place-making strategy, to remove reference to the need for a new school, on grounds of context or infrastructure. These matters can be assessed under other policies in this Plan and the updated IDP 2023 also identifies future infrastructure and service needs in the borough.
---	--

<p>owner. Pleased to see mention of Mortlake Riverside and Thames Path, but would like to see reference to the river’s arcadian setting mentioned.</p> <ul style="list-style-type: none"> • The Environment Agency comment the vision and sixth bullet point should include ‘improving/enhancing the riverside environment’. Include replacing active flood defences (e.g. flood gates) with passive ones (e.g. walls and embankments); if new developments are unable to design out these features, they should reduce flood risk by raising the sills of these structures. • A comment note the reference in the vision to a village, consistent with the 2011 planning brief which refers to making a new village heart for Mortlake; applications should be consistent with this ‘village’ approach, not an urban approach. Statement about creating a new quarter is inconsistent with this, as is the statement about links between the river and the ‘town’. • The South West London and St George’s Mental Health NHS Trust comment the strategy refers to the expectation the Barnes Hospital site redevelopment will provide a new SEN school and health centre, along with residential. There is an extant outline permission, however subject to other Plan policies this should be amended to reflect the policy position if the requirement for the community use changes / falls away (<i>see also comment on Site Allocation 37</i>). 	<ul style="list-style-type: none"> • No amendment to reference to the Stag Brewery site as a Site Allocation in the place-making strategy on basis of impact on river corridor. The Site Allocation text is based on the constraints and opportunities set out in the adopted Stag Brewery planning brief, wherein creation of improved linkages and enhancement of the landscape around the site and along the river is highlighted. There is also provision to assess development’s impact in Policy 34. • No amendment to reference to the Stag Brewery site in the place-making strategy as a Site Allocation based on the impact of the existing playing fields. The Site Allocation supports the retention and/or reprovision of the designated playing fields and matters relating to their sports use, impact on OOLTI and ecology can be assessed against Policies 36, 37, 38 & 39 of this Plan. • No amendments to reference to the Stag Brewery Site in the place-making strategy as a Site Allocation where comments relate to a previous or current planning application, and are not a direct comment on the texts of either the place-making strategy or the Site Allocation, for example, playspace provision. These would be matters assessed at full planning stage, and assessed against relevant policies in the Local Plan accordingly. • No amendment to reference to Barnes Hospital in the place-making strategy as a Site Allocation on basis of ‘loss of medical centre amenity’ as the Site Allocation makes clear that reprovision of primary and community healthcare services on this site are and appropriate land use which would be supported. • No amendment to the place-making text in reference to the Barnes Hospital site, regarding the policy requirements should a community/social infrastructure use not be proposed. This is set out in more detail in the Site Allocation itself, and is also covered in relevant policies (49 & 11) in the Plan.
Site Allocation 34: Stag Brewery, Lower Richmond Road, Mortlake	
<ul style="list-style-type: none"> • The Department for Education support the allocation to facilitate delivery of a secondary school and meet clearly identified need. DfE Pupil Place Planning Team have confirmed the area contains only 3 of the borough’s 11 state-funded secondary schools and has experienced a sizeable demand for places for some years. Demand could not be addressed through permanent expansion of existing school(s). Projected shortfall of secondary places in 2025/26 at both phase and year of entry level, without even taking into account need that will 	<ul style="list-style-type: none"> • Removal of reference to Area of Mixed Use in recognition that these designations are no longer being taken forward in the Plan. • Minor amendment to add ‘if appropriate’ to requirement to relocate the bus stopping/turning facility from Avondale Road bus station, in recognition that TfL’s review of bus services in the wider area has been delayed and in light of uncertainties of Hammersmith Bridge closure. • Ownership reference amended to cite towpath in public ownership.

arise from additional development. Area of London which does not have a large surplus of school places, with unplaced Y7 pupils and existing schools operating bulge classes for 3 years until the new free school opens.

- TfL support the requirement for bus standing space within the site, but does not support the closure of the Avondale Road bus station.
- Historic England comment the heights set out in Appendix 3 reflect those in the adopted site-specific SPD which have been generally accepted as appropriate. Links back to the UDS are helpful but would be improved by drawing out aspects of the site's significance not just based on distance or visual aspects, and assessment requires a careful judgement. An archaeological Desk Based Assessment will be required as located in Tier 2 Mortlake APA; GLAAS should be consulted at an early stage.
- A comment urge protection of the playing fields and also create a neighbourhood park/garden in that location to add to the sense of heart of the village/community. The only opportunity for decades to come.
- A comment pleased to see reference to the planning brief and the continuation of its 7 storey height which has been reinforced in the UDS. Continue to disagree that there is a clear need for a new 6-form of entry secondary school plus sixth form replacing primary school in the brief, as: no demand for the secondary school as primary school numbers been in steady decline for last 10 years; threaten viability of 6th forms at RPA and Christ's School; deny possibility of Thomson House Primary School relocating from its current two sites; reduce land requirement for housing and affordable component; require existing playing fields to be all weathered with unsightly fencing and floodlights; generate large numbers of cyclists and pedestrians encountering problems at level crossing on Sheen Lane and at crossing of heavily-trafficked Lower Richmond Road. Maintain that the re-distributed OOLTI into a series of courtyards, which will be overshadowed and likely private open spaces in gated communities, represents a failure in terms of both quality and openness. Elaborate on mention of the Archaeological Priority Area. No mention of flood risk and need to install storm surge flood mitigation measures. Note the comments of the Mortlake with East Sheen Society may change in next few months when comment on the forthcoming planning applications.

- No changes to text of Site Allocation regarding the site's characteristics, noting that the general reformatting includes a section on 'Context', though Arup are in agreement to amend the Urban Design Study to include additional wording to draw out further the site's significance.
- No changes to text of Site Allocation to reference archaeology, noting that the general reformatting includes a 'Heritage' section wherein the Archaeological Priority Zone is identified, though Arup are in agreement to amend the Urban Design Study to include additional wording to reference the potential archaeological significance of the site.
- No amendment to the text to reference a desired new park/garden, noting that the Site Allocation already makes clear that provision of new green space is required.
- No amendment to text to reference a café, as there is already mention of this.
- No amendments to the reference to the requirement of a new secondary school and sixth form at the site, the need for which is evidenced in the adopted School Place Planning Strategy February 2018 and most up-to-date draft Strategy January 2023. Both documents are based on a detailed and reasoned methodology which demonstrated the need for a fourth state-funded secondary school in the eastern half of the Borough. Concerns and comments raised by objectors to the new school with regards to recent population trends, impact on primary schools, impact on secondary schools, impact on existing sixth forms, alternative sites and impact on relocation of Thomson House Primary School are addressed in the Strategy.
- The principle of a new school is considered to be justified and sound. No amendments to the reference to the requirement of new school, based on impact on existing playing fields. Reprovision/upgrading of playing fields can be assessed under Local Plan Policies 36 & 37.
- No amendments based on impact on pedestrian and cyclist safety, as the Site Allocation makes clear that the Council expect development to deliver improvements to sustainable modes of travel, as identified in the Stag Brewery site planning brief, on which the Site Allocation is based.
- No amendments based on air pollution, as the Site Allocation makes clear that strict mitigation measures will be required.

<ul style="list-style-type: none"> • A comment redeveloping the site is a laudable and necessary aim, as is providing a new heart for Mortlake. Developing to such an extent and density is not. Question need to do a school. Lack of definitive affordable housing provision and any form of industry. Suggest reversion of heights to original 2011 plan and engagements with Mortlake Brewery Community Group who live in community and have a better proposal detailed. • A comment need for a secondary school is highly questionable, as submission by Mortlake Brewery Community Group demonstrates would be better to relocate Thomson House School and ease congestion at the level crossing. • A comment the need for a new secondary school plus 6th form is not supported by evidence, with the Council having consistently over-projected demand relative to what has transpired; the Mortlake Brewery Community Group have produced a detailed evidence base demonstrating there is no requirement for places that cannot be discharged by temporarily expanding existing schools, which will be negatively impacted by the new school. Further the impact would be disproportionate taking in context of traffic and emissions of noxious gases. Delete references to secondary school, or replace with primary. A primary school will be required to respond to anticipated local demographic change, by development of Stag and other sites, which will displace existing primary catchments. It is a legal obligation to provide sufficient primary school places, and the NPPF references locally as young children cannot travel unaccompanied and only for shorter distances. Council to make available evidence base showing these obligations will be discharged, including basis of proposed residential tenure split. Ideally planning for future primary school provision will involve moving Thomson House to the site. Add reference that the planning brief was reaffirmed as the appropriate basis for development in the 2017 Local Plan. Add reference to new village heart for Mortlake per 2011 SPD. Delete reference to a new secondary school/quality this to reference an expanded primary school. Due assessment must be made of alternative sites for locating a secondary school, consider all material factors including accessibility, impact on emissions, risk of places being lost to out of authority pupil; it is not appropriate to limit assessment to ease of navigating planning restrictions (as previously) – Barn Elms would be a better location holistically. Provision of affordable 	<ul style="list-style-type: none"> • No amendment where comments relate to a previous or current planning application, and are not a direct comment on the text of the Site Allocation, for example, the standard of re-provided OOLTI proposed in a planning application. The Site Allocation text is consistent with the requirements set out in Policy 36 and no amendments to the text are required. More detailed matters would be assessed at full planning stage, and assessed against relevant policies in the Local Plan accordingly. • No amendments regarding flood risk, noting that the new format identifies the flood constraints for the site. • No amendments to the proposed land uses, noting that the Site Allocation does not preclude an industrial use on site as part of a mixed-use scheme. • No amendments to specify density, noting that there is no longer a Density Matrix in the London Plan in favour of a more flexible approach which responds to site-specific context. • No amendments to the reference to proposed heights or the identified Tall and Mid-Rise Building Zone, which is based on a sound methodology which recognises the sensitivities of the surrounding context. • No amendment to reference the proposals of Mortlake Brewery Community Group. The Site Allocation does not preclude any group or developer from submitting a planning application for the site. • No requirement to reference the currently adopted Local Plan (2018) as the new Plan will supersede this. • No amendments to reference to/omission of ‘village’, ‘centre’ and ‘place’ as these terms are considered to be interchangeable and do not alter the need for the design of any future development proposal to have regard to the character of the wider area, as set out in the relevant character areas of the Urban Design Study, Village Planning Guidance and Conservation Area appraisal where applicable. • No amendments to specify tenure within the affordable housing provision, as this can already be assessed under Policy 11. • No amendments to the Site Allocation to designate the playing fields as Local Green Space. The sports fields were omitted from the recent updated Open
--	---

housing should be to appropriate tenure mix spread across the site and avoiding a concentration in one area. Air Quality Focus Area delete reference to secondary school, and regard should be had to impact on Working Mums nursery, imperative Lower Richmond Road does not become more congested/higher emissions – suggest a second, independent traffic and emissions assessment. Playing fields should be retained, with any reprovision scrutinised allowing in truly limited circumstances; roads, a school and a bus turnaround would not satisfy requirements and any area with a fence will cease to be ‘open’ – reference to within the site is not appropriate. Advance an application at the community’s request for designation of the playing fields as Local Green Space. Be more specific about areas of height; add reference to the requirements of the SPD that taller buildings should be located at the centre and heights decline towards the perimeter. Add reference to condition of adequate improvements to the dangerous level crossing in the vicinity, in consultation with Network Rail and other stakeholders. A public footpath runs to the north of the development and needs to be restored. Consider these comments along with detailed representations on the present 2017 Local Plan; comments represent the Community Liaison Group and general consensus, residents of Williams Lane and Wadham Mews.

- Thames Water comment the scale of development is likely to require upgrades of the water supply network infrastructure and upgrades to the wastewater network and recommend early liaison to agree a housing and infrastructure phasing plan. Set out advice for a developer to consider, and for surface water drainage would expect discharge directly to the River Thames.
- The Environment Agency comment the site is within fluvial/tidal Flood Zone 3 and in close proximity to statutory Thames Tidal flood defences. Applications must consider TE2100 raising requirements in their design. Any future application must have fixed flood defence line and remove any flood gates. Recommend refer to a Riverside Strategy Approach to achieving the TE2100 Plan flood defence raisings and ambition for a permanent fixed flood defence line.
- The CCG note a significant number of homes proposed; have been engaged in the planning applications and note a new application is likely.

Land Review 2022 due to the site’s inclusion as a Site Allocation and in recognition of the live planning applications for the site.

- No amendments to reference towpath, which is identified in the reformatted ‘Context’ section. Improvements to the towpath are mentioned in the planning brief, on which the Site Allocation is based. The text makes reference to having regard to the brief, thus no further amendments are required.
- No amendments to reference to construction matters, which would be assessed at planning stage under Policy 48.
- No amendments to reference impact on water resources and infrastructure, which can be assessed against Policy 9 of this Plan. The updated Infrastructure Delivery Plan 2023 also identifies future infrastructure and service needs for the borough.
- No amendments to reference a Riverside Strategy Approach, as the Site Allocation already makes clear that flood risk benefits, urban greening and public realm improvements are expected.
- No amendments to specify biodiversity, provision for bats and a wildlife corridor. The Site Allocation refers to the need to have regard to the site planning brief, which specifies the requirement for a new green space linking Mortlake Green to the Thames and river and ecological enhancement, and there is already scope to assess these issues in the Local Plan against Policies 38, 39 and 40. Implications for bats would be addressed at planning stage as part of a Preliminary Ecological Assessment, the submission of which would be a mandatory requirement for any future planning application.

<ul style="list-style-type: none"> Richmond Bat Species Action Plan Steering Group comment development should include greater provision for biodiversity incorporating provision for roosting bats, including a wildlife corridor between river and Mortlake Green (see comment on Policy 34). 	
Site Allocation 35: Mortlake and Barnes Delivery Office, Mortlake	
<ul style="list-style-type: none"> Royal Mail Group (landowner) comment that Royal Mail have a statutory duty to collect and deliver letters six days a week at an affordable and geographically uniform price to every address in the UK, with minimum standards regulated by Ofcom; meeting high specification performance obligations is in the public interest and should not be affected detrimentally by any highways or development project. Royal Mail currently occupies and are the freeholder of the site, for sorting and distributing mail, with vehicular access from Vineyard Path and operational 24 hours a day, 6 days a week. The delivery office is of strategic importance to Royal Mail to continue to fulfil their statutory duty, and not currently available for development. Support the proposed allocation for redevelopment, should Royal Mail operations cease or be relocated in the future. However, should refer to mixed-use development including new homes. 	<ul style="list-style-type: none"> Amendment to remove reference to the Area of Mixed Use, in recognition that these designations are no longer taken forward in the Plan. Amendment to include reference to the Article 4 Direction, to which the site is subject, which removed permitted development rights for change of use from Class E (commercial) to residential. Minor amendment to clarify that residential uses would be considered as part of an employment-led mixed-use scheme which retains and intensifies employment-generating uses on site. No amendments to inclusion of site as a Site Allocation despite there being no immediate plans from Royal Mail Group to dispose of the site, noting their support for the site's allocation.
Site Allocation 36: Telephone Exchange and 172-176 Upper Richmond Road West, East Sheen	
<ul style="list-style-type: none"> A comment should note permission has been granted and implemented for change of use to a gym; the rear end of the gym site and the closed access to the site off Paynesfield Avenue are derelict and unsightly. 	<ul style="list-style-type: none"> No amendment regarding the implemented change of use to a gym as this is already referenced in the text. No amendments to reference existing access quality as this would be address at planning stage against Local Plan policies relating to design and access.
Site Allocation 37: Barnes Hospital, East Sheen	
<ul style="list-style-type: none"> The Department for Education support the allocation for a SEND school. The need for SEND school provision is generally rising across all LPAs and in Richmond is clearly acknowledged. DfE support is evidence through the approval of funding in 2019. Outline permission was granted in 2020 although further feasibility since demonstrates the site area for the school is significantly smaller than usually required, efforts are being made to optimise the site area and the final site layout may be different. The CCG note the permission granted in 2020 included a health centre, and the allocation refers to the possibility of locating primary and/or community health 	<ul style="list-style-type: none"> Inclusion of a sentence in the 'Flood Risk' section within the reformatted 'Context' section of the Site Allocation, to highlight the EA's intended flood risk review, noting that no changes to the flood risk for this site have been indicated or confirmed at this time. No amendments to Site Allocation based on the current planning applications which have recently been submitted. The text does not preclude amended schemes from the extant permission from coming forward and being assessed, subject to their compliance with the aspirations of the Site Allocation.

services on the site. The outline includes a new healthcare facility which will accommodate mental health outpatient services provided by South West London and St George's Mental Health NHS Trust; there will not be a need to relocate primary health services onto the site.

- A comment there is no guidance about height and density and what can be accepted in relation to poor access from South Worple Way. Outline permission for 83 housing units has been granted, which believe is the maximum; any increase should not be considered.
- South West London and St George's Mental Health NHS Trust (landowner) set out an overview of the Trust and the site. A programme of modernisation of mental health facilities is underway. Outline permission was granted in 2020 and a drop-in amended application is under consideration. Consideration has been given to the NPPF and London Plan context. The Site Allocation is in principle supported. The Trust and LocatED are progressing feasibility studies to maximise opportunities for a health centre and a SEN school. Support the opportunity of alternative uses such as housing, however the policy should reflect London Plan Policy S1 regarding loss being part of a wider transformation plan.
- The Environment Agency note the site is in Flood Zone 1, however due to review the Beverley Brook flood modelling which could potentially result in a higher flood risk designation, and impact on any sequential testing. Recommend no current action required from the LPA.
- Thames Water do not identify any infrastructure concerns but set out advice for a developer to consider the water supply / wastewater / surface water drainage.

- No amendments to remove aspiration of primary or community healthcare facilities on site in light of South West London CCG's assertion that new residential uses on site would not require this. The site has an existing social infrastructure use on site, thus Local Plan policies require its retention/reprovision, and noting too South West London and St George's Mental Health NHS Trust's intention to provide a new healthcare facility on this site.
- No amendments to provide a maximum height, density or number of units for a residential development on site. The Site Allocations are not intended to provide prescriptive targets of this level of detail, beyond identifying where a site has been designated as a Tall and Mid-Rise Building Zone, the on-site and nearby planning, heritage and open land constraints to which a development must respond, and stressing the need to have regarding to the relevant character areas in the Urban Design Study and Village Planning Guidance. Further, there is no longer a density matrix to which a development must comply in the London Plan, to enable account to be taken of other factors relevant to optimising the potential of a site, such as local context, design, viability and transport capacity.
- No amendments to provide more specific details of access arrangements. The Site Allocations are intended as high-level aspirations from development on a site and more detailed matters, such as access, would be assessed at planning stage against transport policies 47 and 48.
- No amendments to reference London Plan Policy S1 regarding loss of social infrastructure being part of a wider transformation plan and the acceptability of other replacement uses, such as residential. The Site Allocation already references Local Plan Policy 49 wherein Parts D and E relate to the acceptability of other land uses where the loss of social/community infrastructure has been justified.
- No amendments to reference impact on water resources and infrastructure, which can be assessed against Policy 9 of this Plan. The updated Infrastructure Delivery Plan 2023 also identifies future infrastructure and service needs for the borough.

<ul style="list-style-type: none"> • Barnes Community Association support the ambition. Welcome the particular focus on the Castelnau shopping parade although have found obstacles to improvement. Improvements to Barnes High Street are being implemented, and would welcome full road closures for events. Ambition is to improve connectivity between the river and replace a section of concrete flood defence with glass. Further investment would aid wayfinding, working on link between the station and the village and would welcome support for a safer crossing at Station Road and at Mill Hill. Also discussing need to review Station Road parking arrangements to prioritise local residents. Agree need to improve shopping at Priest's Bridge and support businesses in White Hart Lane including a new parking scheme. Ambition to open up Barnes Waterside to water sports and recreational activities, and discussions already underway including for a river pool at the dock area with temporary pop-up amenities. Urgent need for resurfacing some sections of the towpath. Welcome support for the green walkway along Barnes Bridge. • A comment on parking in Station Road, where it is difficult to pass if a car is coming the other way (could be made one way) and questioning why there is free, unlimited parking which attracts drivers from elsewhere, and should be made no parking, or pay and display. • The Environment Agency seek clarification that any pedestrianisation of The Terrace should not over sail or impede their ability to inspect any tidal flood defence element, and there should not be encroachment or overhanging of the River Thames. • A comment on the traffic congestion in the Barnes area and impact on air quality. Concern about the garden bridge on the redundant railway bridge, which may be needed for disaster management. • A comment raising other local issues in relation to transport and a suggested route change of the 378 bus, and in relation to the private road belonging to Wandsworth Council outside 5&7 Queen Elizabeth Walk which has no footpath. • The Richmond CVS raises the description ignores Castelnau is an area of relative deprivation with extreme affluence neighbouring poor, with research on residents facing isolation and that they value community provision. (<i>see general comment on Place-based strategies which raise the need for an accurate and</i> 	<ul style="list-style-type: none"> • Added reference to partnership working with Barnes Common Ltd and WWT in 'Other Initiatives' and 'Other policy initiatives' sections • Added reference to community isolation and deprivation in the vision. • Added reference to opportunities for improved wayfinding from the station and opening up the riverside for sport and recreational activities. • Added cross-reference to Policy 8 in respect of the tidal flood defences and to ensure any proposals do not encroach on the river. • It is not considered necessary to add further details of all local specific projects, as these can come forward outside of the Local Plan, subject to funding. • A number of comments related to specific transport issues and are addressed in transport policies, or are beyond the remit of the Local Plan, and therefore no further changes were considered necessary.
---	---

<p><i>balanced profile of each area with expectations for investment and improvement of existing infrastructure).</i></p>	
<p>Responding to the climate emergency and taking action</p>	
<ul style="list-style-type: none"> • A number of respondents supported the emphasis given to climate change and pollution, including organisations, statutory consultees and individuals. • A comment supporting putting climate change at the heart of decision making, but would prefer stronger requirements about the circular economy and worry whether it is sufficient robust to put into practice. • Richmond Charities comment that fuel poverty is a key issue for elderly residents, and they undertook a large scale energy audit in 2019 which identified installation of PV panels as the most appropriate renewable energy source for their almshouses. However the Council has refused permission to install on the majority of their estates, and the policy needs to enable renewable energy sources to be installed on listed buildings and in Conservation Areas, and shift towards the climate emergency. • Royal Botanic Gardens Kew comment that Policies 3 to 7 largely align with their own sustainability initiatives and commitments, but seek a number of clarifications and observations. Their overarching aim is becoming Climate Positive by 2030, which involves an extensive range of site wide initiatives. These will not always be delivered alongside other developments, may be stand-alone, or measures may bridge several projects. The related benefits may not be captured on individual planning applications, so it will not always be feasible for net zero carbon to be achieved for individual developments, and seek a degree of flexibility to consider the wider picture, as well as recognising the complexities around retrofitting sensitive heritage assets as in Policy 29.F. • Historic England is committed to achieving net zero and to meet the Government target of being carbon neutral by 2050 we must adapt our historic buildings. Optimising embodied carbon by reuse, maintenance and retrofit of existing buildings is essential, as is avoiding maladaptation. Suggest it would be helpful if the Plan provided further details on how climate change measures can be applied to historic buildings e.g. encourage a fabric first approach. They provide details and further links to their guidance and research covering both mitigation and adaptation, including utilising modelled life cycle assessments 	<ul style="list-style-type: none"> • The Council have placed climate change at the centre of the Local Plan and with the Net Zero Carbon Study, aim to reduce the amount of on-site carbon emissions significantly. • The Council has established high ambitious targets for reducing the effects of climate change but intends to achieve this while conserving Richmond’s historic environment. A balanced approach to these two objectives will be struck through the development management process. • Policy 4.E.1 does set out that ‘off-site provision instead of a cash-in-lieu contribution is only acceptable if an alternative proposal is identified, delivery of that proposal is certain and subject to agreement by the Council’, which is considered sufficiently flexible for circumstances such as those Royal Botanic Gardens Kew have described.

<p>and finding locally based solutions. Support the emphasis on the circular economy and reuse which reflects the London Plan and supports retention of historic buildings as well as existing materials. Suggest it would be helpful to refer to the risks of maladaptation and areabased solutions, alongside planning for retrofit on a building by building basis.</p> <ul style="list-style-type: none"> • A comment that biomass boilers should be banned, should only be electric or heat source low carbon energy. 	
Policy 3. Tackling the climate emergency (Strategic Policy)	
<ul style="list-style-type: none"> • A comment could mention development plans for centrally sponsored decentralised energy networks using heat exchanges from under sports pitches/open spaces. A comment B.7 could include minimising run-off and promoting soakaways, also aquifer use. • Habitats & Heritage comment on 3.A it will be necessary to move towards net-zero more quickly; planning control over new development is one of the main levels the local authority has to reduce CO2 from buildings, whereas other areas the Council has less control. Support 3.B, 3.D and paragraph 16.6 acknowledging need to increase energy efficiency of existing building stock; research demonstrates problems and existing programmes are reaching only a tiny proportion of properties, and would like to see discussion whether Council can advance this policy using planning powers and what national changes are needed. • EA comment add to B.7 reference to maintaining flood storage and increasing it where possible, to manage flood risk as part of tackling the climate emergency. Even small losses can cumulatively have a large impact, and the NPPF requires no increase in flood risk elsewhere. B.7 could refer to an integrated approach to water management. • EA comment the link between biodiversity and climate crises is expanded upon in this policy. • The CCG support the policy, noting the NHS is committed to reaching net zero carbon by 2040 and moving towards a sustainable model of healthcare. 	<ul style="list-style-type: none"> • Amend the policy to require net-zero to be achieved by 2043, <u>at the latest</u>. The Local Plan's policies are very ambitious. • The requirements for Decentralised Energy Networks and minimising run off and soakaways are adequately captured in Policy 5 and Policy 8 respectively. • Solar panels are already captured in Permitted Development right unless they are subject to Article 4 Directions or within a Conservation Area. References to specific technologies are captured in para 16.13 of the draft Local Plan. In addition to the Plan policies, the Council has committed to producing additional planning guidance to ensure where planning consent is required an optimum balance can be struck between the need to reduce carbon emissions and preserving the borough's historic buildings and their setting. • The Local Plan has set out requirements for developments involving refurbishment in Policy 4 Minimising Greenhouse gas emissions and promoting energy efficiency (Strategic Policy). It is not considered they need to be repeated here. • It is agreed that the policy could be amended as the Environment Agency have suggested with regards flood storage. The Local Plan is to be read as a whole and Policy 39 Biodiversity and Geodiversity is considered sufficient along with the existing reference in Policy 3 to the importance of biodiversity in tackling climate change. Richmond Council have declared a climate emergency and intend to address the effects of climate change through a variety of methods.
Policy 4. Minimising Greenhouse gas emissions and promoting energy efficiency (Strategic Policy)	
<ul style="list-style-type: none"> • A comment that Reselton Properties fully support measures to minimise greenhouse gases and promote energy efficiently, however collectively with the 	<ul style="list-style-type: none"> • The carbon offset amount has been assessed as part of the Net Zero Carbon Study as well as the Whole Plan Viability Assessment, and it is considered to be

Mayor's off set payment, the proposed carbon offset would equate to a payment nearly 4 times the current value. While technology is still evolving and payment more likely to be required initially, may render many schemes unviable, particularly where ambition to meet other priorities such as affordable housing. Suggest should be discretion in the policy to allow payment to be directed to other priorities.

- A comment part B.2 could include DENs using heat from ground source and borehole source heat exchangers.
- The HBF comment on the London Plan approach and that the Council justifies its departure due the cumulatively large number of small sites is a specious argument. The contribution to carbon emissions from new development is negligible compared to the existing housing stock which is highly energy efficient and protected by Conservation Areas which prevents their gradual replacement. New homes on minor developments will have to be built to the higher energy efficiency requirements of the new Part L that comes into force from June this year. Consider the Council's approach is disproportionate when there is a need to encourage a higher supply of housing from small sites, as a strategic priority in the London Plan.
- Royal Botanic Gardens Kew seeking clarification on whether the non-residential development of over 500sqm includes conversions and refurbishments (for listed buildings) or is only applicable to new build floorspace; view is generally more applicable and deliverable in relation to new build development. Part E stipulates a blanket rate for cash-in-lieu offset contributions and does not provide any flexibility or exemption for charities and cultural institutions. RBGK applies its own rigorous site-wide sustainability targets and it is not always able to be reflected in individual planning applications. Highlight a slight conflict part D requires non-residential development of 500sqm or more to achieve net-zero carbon with a minimum of 60% on-site reduction; Table 16.1 specifies 50% and clarification is sought.
- The Mayor of London welcome the elevation of the importance of tackling climate change. The Mayor has set an ambition aim for London to be a zero carbon city by 2030 and you may want to reflect this. With regard the ambitious targets that seek a higher level of on-site carbon reduction and a higher offset

viable. Any payments resulting from a development should be directed to their appropriate causes and are not transferable.

- Decentralised Energy Networks are captured in Policy 5.
- The Council encourages upgrading of the existing housing stock as well as setting a high bar for new developments, changes of use and refurbishments where applicable.
- The Net Zero Carbon Study has shown that the standards established for small sites are achievable, and that the requirements have been tested as being viable as part of the Whole Plan Viability Assessment.
- The Council encourages the development of small sites and sustainable development meeting both goals from the London Plan.
- The Council explained that the supporting evidence had been provided and that the wording to the supporting text would be changed.
- BREEAM targets have been included in Policy 6 relating to Sustainable Construction Standards.
- Further to the Council's own monitoring of compliance with the Sustainable Construction Checklist and on the advice of the Council's sustainability consultants, the threshold requirement for on-site carbon emission reductions has been reduced from 500sqm to 100sqm for non-residential development. This means that all non-residential developments of 100sqm and more need to comply with the specific requirements.

rate compared with London Plan Policy SI2, it will be important to ensure these are deliverable and that housing targets and other Plan requirements can be achieved, and reviewed once the Whole Plan Viability Assessment has been produced. Paragraph 16.8 should read 'at least five years' rather than over a period of 4 years, as per the Mayor's BeSeen energy monitoring guidance.

- A comment welcome the aspirations, but London Square Developments query the need to meet burdensome policy requirements over and above London Plan policy without evidence-based justification. The minimum of 60% on-site carbon reduction for new build development is considerably higher than London Plan Policy SI2, it is not clear why nor has there been a review as to the realities of sites being able to deliver this target. The Government plans to bring in a more gradual approach (Future Homes Standard and interim Part L in 2022) which is more sensitive to the abilities of the industry to adapt and deliver these increasingly demanding targets and is based upon detailed studies and extensive consultation. There is no evidence-based reasoning as to how they carbon offset figure has been arrived at nor the appropriateness of it. A significant increase in carbon offset price will fail to encourage on-site reductions and be prohibitive to the redevelopment of sites as a whole, including on-site affordable housing. Query if the Council have liaised with the GLA regarding the updated figure to ensure alignment. The London Plan targets do not jeopardise the strategic aims for London; the burdensome nature of the policies without justification would significantly affect the deliverability of residential schemes, including the viability of small housing sites, impeding the Council from meeting borough housing targets and deliverability of affordable homes.
- The CCG support the policy. It is recognised delivering a net zero health service will require work to ensure new healthcare buildings are net zero compatible, as well as improvements to the existing estate. For the redevelopment of NHS sites the London Plan Policy SI2 requirement for major development to be net zero carbon can add significant costs. New health estate projects and major refurbishment projects area assessed by BREEAM and note the London Plan paragraph 9.2.7 states can be bused to demonstrate energy efficiency targets have been met and are encouraged in Local Plans.

<ul style="list-style-type: none"> • A comment the Policy is not in accordance with national policy, not in general conformity with the London Plan, nor justified. There is no evidence base for the carbon offset price, which should include an assessment of the carbon offsetting measures possible in the LPA and divide the average cost per tonne per year of these measures by the expected shortfall in emissions from the anticipated development coming forward over the next 30 years. St George Plc and Marks & Spencer set out as a worked example on a development of 20,000sqm it is estimated it would be an additional £1m which will greatly affect a development's viability. Policy 4 is based on a baseline of Part L 2013 emissions which will become superseded by Part L 2021 and under the Future Homes Standard will go further to effectively surpass the 60% target for major developments, but allows for a gradual transitional period for the construction industry to adjust. The GLA are due to release a revised Energy Assessment Guidance 2022 to address the improved carbon reduction target and how this should be assessed. National policy and London Plan encourage maximising renewable provision, including solar PV, but do not set specific targets, recognising site and roof space constraints, and allows greater design flexibility; the target of 40% of the building footprint area should be dropped. Suggest the Policy should reflect the London Plan. • <i>Virtual event feedback:</i> Participants also expressed desire that new homes had very high energy efficiency standards, and those developers were held to account on this. 	
Policy 5. Energy Infrastructure (Strategic Policy)	
<ul style="list-style-type: none"> • A comment that where networks do not exist part B should require developments to contribute significantly to any future network within 5 years or by 2030. • A comment seeking clarification on whether the non-residential development of over 500sqm includes conversions and refurbishments (for listed buildings) or is only applicable to new build floorspace is raised against Policies 4, 5 and 6 (<i>see also comment on Policy 4</i>). 	<ul style="list-style-type: none"> • The Council has made several amendments to confirm that development of 500sqm or more of non-residential floorspace does include conversions, refurbishments, and major developments. • The policy includes a sufficient amount of flexibility which does allow for off-site provision instead of a cash-in-lieu contribution.
Policy 6. Sustainable construction standards	
<ul style="list-style-type: none"> • A couple of comments on behalf of developers raise concern about the high standards required by the policy. 	<ul style="list-style-type: none"> • Following the completion of the Council's Net Zero Carbon Study, BREEAM requirements have been amended in the policy to require evidence if a

- A comment that water stressed does not square with the observation that water levels under London are rising and this aquifer must be a water resource; the requirement for high standards of water efficiency in new developments should remain.
- The HBF comment that the requirements that go further than the London Plan and national Building Regulations are a disproportionate position and places a significant barrier to smaller developers. Advise the Council not to make additional policy in this area and adhere to the London Plan and any new requirements via Building Regulations.
- A comment that the policy standards are unduly onerous and costly, and the rigid application (as worded) will deter SMEs from locating to the borough (due to high fit out costs) and become unviable to deliver new commercial schemes. A BREEAM 'outstanding' rating for commercial elements will have a negative impact on economic growth and job creation, and it is an unusual requirement with the BRE defining as appropriate for an innovator building. It is more appropriate to target an 'excellent' rating. Achieving a BREEAM rating over and above the London Plan requirements has not been justified by the Council's evidence base.
- A comment suggesting wording to encourage prefabrication/modular construction to speed up construction and reduce pollution and disruption, as tend to be more energy efficient. Modular construction is common and appropriate, with examples from elsewhere.
- A comment that the policy is not in accordance with national policy or general conformity with the London Plan, nor justified. Deviation on BREEAM and Home Quality Mark standard. Policy does not take into consideration practical implications to 'shell only' and 'shell and core'. BREEAM 'outstanding' is a considerable uplift, which requires assessor input prior to consultant appointments. The London Plan targets BREEAM minimum performance for selected key credit criteria, such as energy and water, and surpasses BREEAM outstanding for other key areas, such as reduction in carbon emissions and prediction of operational energy performance, and reduction of demolition and construction waste. Recommend the London Plan policies be targeted which cover the key BREEAM credits. The Fabric Energy Efficiency Standards should be

- development is unable to achieve the Outstanding rating. The threshold for BREEAM non-domestic new construction has been increased from 100sqm to 500sqm following the findings of the Study.
- The Council does encourage the use of modular construction in paragraph 17.40 but the suggested change would be too limiting and effectively make modular construction the default.
 - The supporting text has been amended to clarify that the final ratings for BREEAM need to be applied to shell and core or core only developments.
 - Thames Water's comments were agreed with and the supporting text changed accordingly.
 - The Council considers BREEAM to be the preferred construction standard and will enable more sustainable developments to come forward in the borough.
 - Further to the Council's own monitoring of compliance with the Sustainable Construction Checklist and on the advice of the Council's sustainability consultants, the threshold requirement with regards to fabric efficiency standards has been reduced from 500sqm to 100sqm. This means that all non-residential developments of 100sqm and more need to comply with the specific requirements.
 - A summary table was added to the end of the policy including all the climate change requirements of different developments.

<p>based on Building Regulation compliance in accordance with Part L and the Future Homes Standard.</p> <ul style="list-style-type: none"> • Thames Water refer to the Environment Agency’s designation of the Thames Water region to be “seriously water stressed” and support the mains water consumption target of 110 litres per head per day as set out in national planning guidance, which should be applied through a planning condition for all new residential development. • A comment relying on BREEAM and not Passivhaus. A comment that many town centres are under stress without proper infrastructure e.g. drains, street lighting, refuse management. • A comment seeking clarification on whether the non-residential development of over 500sqm includes conversions and refurbishments (for listed buildings) or is only applicable to new build floorspace is raised against Policies 4, 5 and 6 (see also comment on Policy 4). 	
Policy 7. Waste and the circular economy (Strategic Policy)	
<ul style="list-style-type: none"> • The Richmond CVS comment that while food waste from retailers is used for community benefits it involves multiple vehicle journeys around the borough; reference surplus waste in plans for infrastructure. • The Mayor of London welcomes the policy reference for Whole Life-Cycle Carbon Assessments and the Mayor’s guidance should be referenced within the supporting text. • On waste, the Mayor of London sets out that the London Plan requires boroughs to allocate sufficient land and identify waste management facilities to meet apportioned tonnages of waste, or any pooled arrangements. Welcome the safeguarding of existing waste sites and noting the West London Waste Plan/London Plan policies will be used to assess proposals. Noting the Waste Plan is due for review it should be made clear the waste apportionment over the lifetime of the Plan will be accounted for. • EA comment on A.3 should include a requirement for a Construction Environment Management Plan for all development using the river to transport construction materials and waste to ensure the river will be protected. • EA comment generally that waste management activities can cause pollution and emissions, and waste planning has a role to play in prevention, making sure 	<ul style="list-style-type: none"> • The Council recognises that the West London Waste Plan was adopted in 2015, however the London Plan (2021) also states that waste sites should be safeguarded. This policy position would also apply to Arlington Works. • Added a requirement for a Construction Environmental Management Plan to be required for all development using the river to transport construction materials and waste. • Added clarification that the policies of the West London Waste Plan will apply over the lifetime of the Local Plan. • It is not considered relevant to add a reference in the Local Plan to infrastructure for distributing surplus food waste.

<p>waste facilities are located and designed to minimise their impact, including for further afield hazardous and specialist waste streams.</p> <ul style="list-style-type: none"> • Sharpe Refinery Service Ltd comment on Arlington Works (landowner) that the policy approach does not meet the requirements of NPPF section 3 and has failed to consider the site could deliver homes/commercial floorspace. Part B is based on out of date evidence base, and should refer to a referenced version of the London Plan. Policy will continue to safeguard a disused waste site which is in conflict with London Plan policy GG2. 	
Policy 8. Flood risk and sustainable drainage (Strategic Policy)	
<ul style="list-style-type: none"> • A comment that the place-based strategies demonstrate the importance of the river and the River Thames Society is supportive of the overall principles and policies proposed, but the details on particular planning application details can be more problematic. Hope planners to insist on exceptionality for any built development in MOL (including over Thames water space) or within 16 metres of the bank of the tidal river. • A comment urging include a policy stating flood risk areas are protected from storm surges and rising sea levels. Suggest a paragraph for the opening text on these risks, a Zone 0 should be added with the same parameters as Zone 1 to take account of extreme storm surge flooding, and a Sustainable drainage reference should be 2 l/s per sqm runoff rate. • Habitats & Heritage suggests a reference to the Thames Landscape Strategy including its work on flooding via the Rewilding Arcadia project. • Thames Water comments that waster and/or sewerage infrastructure may be required to be developed in flood risk areas, and existing works will need to be upgraded or extended to provide the increase in treatment capacity to service new development. Flood risk policies should reference 'sewer flooding' and that it is the responsibility of the developer to make proper provision for surface water drainage to ground, water courses or surface water sewer, to reduce the quantity of surface water entering the sewage system to maximise the capacity for foul sewage to reduce the risk of sewer flooding. • The Environment Agency comments on their general remit as a statutory consultee and welcome the ambition to go above and beyond national policy, although urges to consider the practical implications. Recommend the Plan 	<ul style="list-style-type: none"> • Comment noted in relation to place-based strategies. • Storm surges do not need to be specifically referred to in the policy as this is taken into account in the TE2100 Plan and climate change allowances. Flood zone definitions need to be in line with national guidance, therefore, a Zone 0 cannot be introduced. • Reference to the Thames Landscape Strategy has been included. • Thames Water's comments are already reflected in the relevant Local Plan policies. • The Environment Agency's recommendations have been taken on board as follows: <ul style="list-style-type: none"> - Inclusion of requirement for sequential approach on specific sites. - Clarifications regarding the role of the LLFA and EA. - Inclusion of additional wording in relation to flood risk mitigation and resilience, including additional paragraphs in the supporting text, to reflect specific requirements for finished floor levels as well as flood storage. - Separately refer to fluvial and surface water flood risks in part D. - Minor amendments to flood storage requirements. - Clarification on functional floodplain and making the policy clearer as to what would be required if redevelopment is proposed. - Clarifications have been made in relation to parts I and J and supporting text around 'set backs'. - Clarifications in relation to basements.

strongly emphasises connection between tackling climate change and flood risk management.

- The Environment Agency comments part A should differentiate between national policy and guidance such as the SFRA, and recommends the sequential approach is required to the layout of sites.
- The Environment Agency recommends clarifying reference to the EA and LLFA in part B.
- The Environment Agency recommends specifying finished floor level requirements for developments in the fluvial and defended tidal wording in part B.
- The Environment Agency recommends that fluvial and undefended tidal flood storage compensation is referenced in part B as well as surface water compensation.
- The Environment Agency recommends separating the surface water and fluvial flood risk requirements in part D.
- The Environment Agency comments that the requirement for floodplain compensation in part D should be clarified as it is not just an ask from the Environment Agency.
- The Environment Agency comments the requirement for providing additional flood storage in part D should be strengthened.
- The Environment Agency comments in part E to update the wording to clarify what is meant by no intensification of the land use in Zone 3b.
- The Environment Agency welcomes references to the TE2100 Plan and the future defence maintenance, replacement and raising requirements, and suggest amends to parts I and J and the supporting text. Clarify some instances a greater set back may be required. Remove the reference to 'where possible'. Include a policy to ensure no new active flood defences will be permitted, and require any developments coming forward that currently use active flood defences to replace them with permanent flood defences to achieve betterment through re-development. Refer to the flood defence owner's responsibility for maintaining flood defence structures. Update to mandate flood defence raisings to the statutory 2065 flood level for developments adjoining the tidal Thames statutory flood defences.

- Change from 'upper end' to 'central' climate change allowance requirement.
- Reference to the requirements for an Environment Agency Flood Risk Activity Permit (FRAP) have been included.

Note that no changes have been made to the application of the Sequential Test and the local approach.

- The Environment Agency recommends include in part J promotion of the Riverside Strategy Approach for the benefits to flood risk, placemaking and biodiversity.
- The Environment Agency suggests to add reference to the multiple benefits that flood defence work can achieve to paragraph 16.75.
- The Environment Agency comments the requirements for basements are stronger than their position across the tidal Thames on bedrooms at basement level, but do not suggest a change.
- The Environment Agency comments on the climate change allowances for fluvial flood risk, as while commendable using the upper end allowance is not in line with national guidance. The EA would review Flood Risk Assessments against the national guidance and maintain consistency. Urge to consider the practical implications, and highlight may cause further contradictions with setting finished floor levels to the current required heights.
- The Environment Agency comments on the national guidance relating to the Sequential Test, as not requiring the Sequential Test (subject to certain criteria for the 800m buffer zone around town and local centres) will restrict the ability to move development to lower risk flood zones. If the local Sequential Test is taken forward, consider the impacts and advocate minimising the buffer zone.
- The Environment Agency comments there is no reference to the requirements for an Environment Agency Flood Risk Activity Permit (FRAP) which may be required.
- The Environment Agency comments that sustainable drainage (SuDS) should incorporate above ground features with outfalls that have minimal impact on the receiving watercourse. Should be an emphasis on working with natural processes to reduce flood risk, such as soft engineering to bank protection works, and the requirement for river buffer zones should acknowledge the multiple benefits of undeveloped river buffer zones (*see also comment on Policy 40*).
- The Environment Agency comments flood risk management requirements can deliver multiple benefits. Support cross-referencing between policy areas and recommend enhancing the emphasis on the multiple benefits for flood risk, biodiversity, access to the river and public realm for example.

<ul style="list-style-type: none"> • The Environment Agency comments on the islands and seek clarification in paragraph 16.63 on what the Council considers to be in the functional floodplain for example even structures that are elevated above the 1 in 20 modelled flood level. • A comment that certain areas of the borough might be better to allow flooding to defend other areas. • A comment on the number of Thames islands included within the borough, and those claimed by other authorities. Clarity helpful in the Plan on how the EA's general rules limiting development within 8/16 metres apply, noting all the islands have existing build development closer. 	
Policy 9. Water resources and infrastructure (Strategic Policy)	
<ul style="list-style-type: none"> • FORCE would prefer C.1 to encourage improvement where rivers have been classified by the EA as failing to meet 'good' status as the target standard for the Water Framework Directive (WFD). Minimising misconnections between foul and surface water networks will be dependent on effective inspection and sanctions regimes by the Council. Support adherence to the WFD that 'good status' or 'good ecological potential' should be achieved by 2027. Consider impacts on Combined Sewage Outfalls when considering applications for developments which will increase demand for water services, as these contribute to sewage pollution. • The HBF set out the legal duty on companies providing water supply and wastewater services. It is contrary to the national approach to place the onus on the developer to demonstrate capacity, as the provider of water services should invest to meet planned requirements. The housebuilding industry already provide resources to water companies, and there is no need for policy to stipulate further payments to water companies to allow new residential development to connect. • Thames Water refer to national guidance which states Local Plan should be the focus for ensuring that investment plans of water and sewerage/wastewater companies align with development needs. Support the section on Water and Sewage Infrastructure in the Policy. Authorities should also consider the requirements of the utilities for land to enable them to meet the demands that will be placed on them, noting it is not possible to identify all the water and 	<ul style="list-style-type: none"> • A minor amendment is proposed to Policy 9 C.1: "protect the water quality of rivers and groundwater; where rivers have been classified by the Environment Agency as having 'poor' failing to meet 'good' status, any development affecting such rivers is encouraged to improve the water quality in these areas." • Some amendments are proposed in response to the HBF, including clarifying that developers need to provide information that shows there is adequate supply and capacity (this is to reflect that it's not the applicant's responsibility to ensure this; additional text has been added to the supporting text to clarify that water companies are responsible for ensuring that water supply, drainage and wastewater infrastructure is in place in advance of new development coming forward. • Thames Water's comments have been addressed by referring to the fact that any adverse land use or environmental impacts are minimised as far as possible. The other points raised by Thames Water do not necessitate any further changes. • A number of changes are proposed as a result of the Environment Agency's (EA) response, although Policy 6 already deals with water efficiency standards and the fact that the borough is in a water stressed area, therefore, these will not be repeated within policy 9 as well. • The EA's suggested advice note on riverbank protection goes beyond the scope of this Local Plan.

<p>wastewater/sewerage infrastructure over the plan period as water companies are regulated in 5 year periods. Suggest a change to part B to reference any adverse land use or environmental impact is minimised as far as possible.</p> <ul style="list-style-type: none"> • The Environment Agency raise the Plan should recognise the borough has been classified as an area of serious water stress and there is limited water resource availability, along with demand and supply issues set out in Water Companies Water Resource Management Plans. The classification should be mentioned in the Plan, and consider the capacity and quality of water supply systems and any impact development may have, including considering cross-boundary working and the impact of a changing climate. Encourage the Council to ensure the Plan and major developments identify and plan for the required levels of water efficiency and water supply infrastructure to support growth, the IDP can help. Support the use of water efficiency measures, where the area is designated Water Stressed seek the tighter Building Regulations optional requirement of 110 l/p/d. In addition, the EA's assessment of water availability and the impacts of existing abstraction on the aquatic environment in the area shows most of the catchments in the South East are heavily abstracted with unsustainable abstractions occurring to the detriment of the environment. Note it is a useful exercise to carry out a water cycle study to inform policy requirements. • The Environment Agency seek mention of how the WFD Waterbodies could achieve good ecological status/potential and encourage the Council to produce supplementary advice for developers undertaking bank protection works, as they seek to restore and enhance watercourses to a more natural channel wherever possible. • The Environment Agency note other policies will be relevant to Water Quality, and would like to see requirements for construction sites to include strict adherence to the regulatory position statements regarding dewatering. Construction method statements should include details of how silt/site run-off will be managed and note whether any site activity requires a Flood Risk Activity Permit. 	<ul style="list-style-type: none"> • Further changes are proposed to Policy 53 in relation to Construction Management Plans and necessary requirements to ensure that surface and ground water is not polluted as a result of a development, particularly its construction.
Delivering new homes and an affordable borough for all	
<ul style="list-style-type: none"> • A comment that the Town & Country Planning Association states 20 minute neighbourhoods without adequate social housing is just gentrification. 	<ul style="list-style-type: none"> • Add reference to refer to Living Locally in Policy 11.

Richmond has delivered the lowest level of housing in London in recent years – and the outlook is the same. The existing housing associations have a limited ability to build more housing. If there is to be a step-change the Council would have to attract new housing associations or start building Council housing. Housing associations charge higher rents than equivalent council house on average. Do not understand why Richmond is so reluctant to help neediest members of society, by not focusing on housing delivery that results in the lowest rents. Lack of social housing means new tenants no longer have lifetime tenancies and therefore have much less security.

- Spelthorne Borough Council recognise housing is a strategic and cross-boundary issue, and acknowledge boroughs face similar constraints. Support the plans to meet the London Plan housing target, however every effort should be made to address housing needs in the wider Greater London area. While the Mayor of London is responsible for the overall distribution of housing need in London, recognise there remains a notable amount of unmet need in the Greater London area therefore further work should be undertaken to review the implications associated with this and to identify further capacity options to ensure this is met within Greater London. Support emphasis on higher density development and smaller units, but could have implications for Surrey, since previous under-delivery in London and lack of affordable family units has added to housing pressures in Surrey districts / boroughs with associated implications for infrastructure.
- Elmbridge Borough Council recognise the difficulties in delivering sustainable growth and balancing competing environmental, social and economic pressures. Note the London Plan target and Policy 10 states the borough will exceed the minimum, and note the top end of the approximate number of units to be delivered in the broad areas equates to 4,800 dwellings and the details are set out in the Housing AMR; however for transparency it would be useful if each of the allocations set out the indicative number of units. If approach to meeting housing need changes wish to further discuss. Elmbridge is pursuing a Local Plan strategy that will not meet the local housing need figure (as set by the Standard Methodology); as indicated could potentially exceed the London

- It is considered the Plan already sets an ambitious affordable housing target and allows for a mix of unit sizes.
- The Council is unable to assist in meeting any unmet housing need from other boroughs, but Duty to Cooperate discussions continue.

<p>Plan target circ. 700 homes across 10 year period, grateful if could confirm if the position on meeting any of Elmbridge’s unmet need has changed.</p>	
<p>Policy 10. New Housing (Strategic Policy)</p>	
<ul style="list-style-type: none"> • A comment note the housing target for Barnes, Mortlake and East Sheen has increased; see as being substantially met from the Brewery and Barnes Hospital redevelopments and any increase beyond this will put significant strain on physical and social infrastructure which is already at breaking point. • The Royal Parks note the number of homes to be delivered within close proximity to Richmond Park (around 1,200) and Bushy Park (around 1,000). This would result in intensification of visitors to the Parks. Capturing some of the value of those developments, through S 106 or CIL payments, would seem appropriate to help The Royal Parks ensure the Parks can continue to cope with the resultant increase in visitor numbers and their increasing importance as open green space for borough residents. • The HBF raise whether the London Plan target is the right figure to base the plan upon is arguable in view of the now apparent strategic shortfall in planned housing provision across London as a whole as well as the more local evidence of need in the LHNA. Housing delivery across London as a whole is failing to keep up with the requirements of the new London Plan; the Council could do more to make a greater contribution towards addressing the wider-housing shortfall. Land supply is tight. The Council should consider the OOLTI sites assessed that perform weakly for release as housing and rethink its approach to development on back garden land which is generally too restrictive. The Plan contains few large site allocations for housing and the indicative ranges (upper and lower) represent a very slender housing land supply; it is unclear how the site allocations relates to this table but appears relying on windfall homes from these broad areas and many site allocations are expected to provide affordable homes only. National policy expects authorities to identify and allocate sites for small developments equivalent to 10% of overall housing supply, also encouraged by London Plan Policy H2; some allocations are on small sites but unclear and it would be helpful to identify and allocate more small sites to assist in delivery. Recommend rethink approach to retaining so much OOLTI, as unjustified given the documented housing problems – 3 sites perform weakly, 	<ul style="list-style-type: none"> • Clarify in the policy the target is for net housing completions. • Update the policy and supporting text to reference the context of the latest Housing AMR 2021/22. • Add to the supporting text clarification on rolling forward the London Plan housing target beyond the ten year London Plan target. • Add the housing trajectory from the Housing AMR 2021/22 to the supporting text. • Clarify the cross-reference to employment policies to assess if there is potential to housing gain on employment land. • Clarify in the supporting text to Policies 2 and 11 the London Plan housing target is based on capacity, whereas the LHNA affordable housing needs are unconstrained figures calculated to inform the policy approach to affordable housing.

and York House car park offers potential for housing, and Harlequins site has potential. New Government policy as well as the London Plan is keen to tap back gardens and suburban areas as potential sources of land supply; London Plan Policy H2.B.1 is in contrast to Policy 15.B which is very restrictive and includes many conditions to make it virtually impossible to build on back gardens, neutralising the Government objective of gentle densification; stipulating no identified harm is general and vague and there is no justification for this. Recognise the political sensitivity surrounding the development of back gardens but the Council should avoid erecting unnecessary barriers.

- A comment in line with London Plan Policy H1 the target is expected to be achieved through optimising housing delivery on all suitable, deliverable and available brownfield sites. It is therefore supported that, on the basis that community uses is not delivered in full or part across a site, that residential accommodation could be a suitable alternative use on the Barnes Hospital site (suggested by South West London and St George's Mental Health NHS Trust) and should be reflected in the policy.
- A comment support the statement to exceed the minimum 10 year housing requirement. The policy would benefit from a clear reference to number of homes being a net target. Important for Ham Close (suggested by RHP).
- The Mayor of London welcomes the commitment to exceed the borough's 10 year London Plan target of 4,110 homes through the optimisation of all suitable and available brownfield sites and are pleased to note delivery against the target is capable of being met without the release of employment land. Note confirmation the target can be rolled forward for future years; this will need to be carried out in accordance with London Plan paragraph 4.1.11.
- A comment support the statement to exceed the minimum 10 year housing requirement. The policy would benefit from a clear reference to number of homes being a net target. Important for Ham Close (suggested by Hill Residential). Consider the housing target too low for Ham & Petersham (examples provided) and should be changed to 300-350 homes.
- A comment support the delivery of the minimum target and the new homes proposed within Twickenham, noting appears to be inadequate number of draft site allocations for housing within sustainable locations to achieve this. The

AMR 2019/20 shows delivery in 2019/20 331 homes were delivered below the 410 target set by the London Plan, and a shortfall against the LHNA (affordable homes per annum). Encourage the Council to increase the number of draft site allocations for housing including the Greggs Bakery site (by London Square Developments), to reduce the reliance on small housing sites that result in few affordable new homes and can become unviable. The supporting text that states the borough target is capable of being met without release of employment land is not demonstrated by the latest AMR and should be removed.

- A comment to be consistent with national policy the housing requirement should cover the whole Plan period; the target set by London Plan Policy H1 is projected forward to cover full 15 years and amended to plan for a target of 6,165 homes. The reference to exceed the minimum strategic dwelling requirement should not be qualified with the reference to other Local Plan policies as it is unnecessary and over cautious; the policy should adopt a more positive and ambitious approach to significantly boosting housing supply and optimising sites on the basis of the supply of deliverable/developable sites. A housing trajectory should be included in the Plan. Recommend amend the Site Allocations expected implementation timescales to years 1-5, 6-10, and 11-15 to be consistent with national policy. The use of wards is inconsistent with the place-based approach in the Plan, and cannot be read/applied effectively. The indicative ranges are vague and do not commit to delivering the London Plan minimum housing target; recommend the futures stated should be 'targets' and amended to tally with the 10-year housing target and where possible the 15-year period. No explanation is provided how the amounts for each location have been calculated and our review suggests they may be under-ambitious and too low (examples provided) (offer by St George Plc and Marks & Spencer to prepare the evidence to determine the optimum capacity of the Kew Retail Park site).
- A comment the aspiration/target (paragraph 17.7) should not be able to override protected open land and should be consistent with requirements of Conservation Areas, which should be held by present owners as trustees for

<p>future generations. Once gone for short-term needs and perceived needs, they are gone forever.</p> <ul style="list-style-type: none"> • A comment to add wording to paragraph 17.8 to state on employment land there may be potential for enabling housing gain if proposals increase the level of existing floorspace or the existing commercial floorspace is not viable. 	
Policy 11. Affordable Housing (Strategic Policy)	
<ul style="list-style-type: none"> • A comment the Affordable Housing SPD makes reference to the discounted contribution sought from listed buildings subject to conversion from employment to residential; this should be referenced in the supporting text to the policy. • A comment pleased to see the definition. Note the tenure split is different to current; there is no explanation as to why this has changed. • A comment the aims are worthy but the targets appear optimistic. Questions how will be financed if developers find profit margins unattractive, and will the restrictions in Conservation Areas be respected. • A comment that the Regulation 18 Plan is not supported by a Local Plan Viability Assessment limiting scrutiny and the Council should reconsult on the Regulation 18 Plan with the supporting viability assessment. The viability of specialist older persons' housing is more finely balanced than general needs housing, and these typologies should be robustly assessed to accord with the PPG. • TfL Commercial Development raise the Mayor's portfolio approach to delivering 50% affordable housing across public sector landholdings in London, and this flexibility allows for more complex sites to come forward; update the policy to reflect the wording in London Plan Policy H4. • A comment that as not enough affordable housing is being built, every possible option should be explored to ensure affordable homes are provided, including a balanced appropriate to mixed use development while ensuring no-net loss of employment floorspace. A large proportion of future delivery is predicated on small sites which often results in payments of lieu that are far less effective. • A comment viability should be required where schemes do not meet the threshold in the London Plan. 	<ul style="list-style-type: none"> • Add reference to listed buildings to clarify on small sites seek the normal percentage requirement for conversions, even if a change of use from employment to residential. • Add clarification in policy and supporting text seeking evidence of discussions with Registered Providers, and the Council's Affordable Housing Enabling Officers to determine the appropriate housing mix, to inform on-site affordable housing provision. • Add reference to the inclusion of key workers in the Council's latest affordability criteria and priority allocation for Intermediate Housing in the supporting text, and add key worker housing to the Glossary. • It is considered the policy approach reflects the need for ambition, in light of the acute affordable housing crisis, while recognising viability and other policy requirements need to be taken into account on a case by case basis. • The policy is considered appropriate in light of variation to national and regional approaches, given local circumstances, and the Council's evidence base. • References are updated in terms of the Whole Plan Viability Assessment (WPVA) 2023, to recognise site-specific viability, and Local Housing Needs Assessment (LHNA) Updates 2023. • It is not considered necessary to expand on the reference to almshouses, as the benefits of charitable housing can be recognised under Policy 12.

- Mayor of London welcome intention to seek 50%, however the threshold approach is not reflected in the Plan which is likely to constitute a General Conformity Issue. The threshold approach should be reflected in policy, as the borough's approach is not supported by viability evidence or historical delivery rates.
- A comment welcome the tenure split, as a greater proportion of intermediate housing can make a significant difference to viability. Should be flexibility in the policy for different tenure splits where delivering same social rent quantum but allows for a significant increase in overall quantum of affordable housing.
- A comment the policy is contrary to the London Plan threshold approach where they would not be required to provide a viability assessment and would not apply a late stage review. The exceptional circumstances when viability will be accepted should be defined; site specific circumstances should be taken into account through the Viability Tested Route (particularly important to the Greggs Bakery site due to decontamination). Question how the borough intends to deliver the additional affordable housing requirements without the release of employment land given historical under-delivery.
- The CCG note the tenure split and that the London Plan allows for flexibility to explore innovative products. Recognise the shortage of affordable housing is hindering recruitment and retention of public service workers; the NPPF definition includes essential local workers which includes NHS staff. The redevelopment of surplus public sector land and buildings represents an opportunity to delivery homes for essential workers which could be part of the 50% requirement.
- A comment the definition is muddled, including what the Council considers to be 'genuinely' affordable and is not in accordance with NPPF nor in general conformity with the London Plan; the definition should reflect the NPPF and the supporting text should reflect the London Plan on LAR and LSO (the Council's Intermediate Housing Policy Statement is not available therefore it is not possible to assess if it is sound). The 50% policy requirement is not justified by a Whole Plan Viability Assessment to confirm if it is viable and therefore deliverable. It is essential the Whole Plan Viability Assessment accounts for the range of site-specific considerations in the borough. The policy approach has

not delivered the amount or proportion of affordable homes in the borough, and there is evidenced success of the Mayor's threshold approach; there is no justification in deviating from the London Plan and the reference to only accepting viability information in exceptional circumstances is not sound. Discussions with RPs should be done at Plan-making stage. There is no evidence to confirm if the proposed 70/30 split is viable.

- A comment in support of providing social housing at truly 'affordable rents' rather than a percentage of actual private rents. Raises if any scope for Council funding provision through investment constructs such as Model Dwelling Companies.
- A comment the definition should have almshouses added. The Council refuses to accept its affordable housing while at national level the Government hands out grants for almshouse charities.
- The HBF comment the definition excludes First Homes. Give consideration to allowing First Homes to form an element of the affordable housing supply.
- The HBF comment it is contrary to national policy to levy affordable housing contributions from schemes of all sizes. Increasing delivery of SME developers is a strategic priority in the London Plan to increase delivery from small sites. Lift this requirement to make the planning application process easier and help with viability.
- A comment pleased to see almshouses acknowledged. The Richmond Charities are delivering new almshouse developments and are recognised as an affordable housing provider. They would like the requirement for 100% nomination rights on developments of over 10 units reconsidered, as their Trustees must retain the ability to decide who to house in line with the charity's criteria for residency.
- *See comment on Site Allocation 5 Carpark for Sainsburys, Uxbridge Road, Hampton that the allocation for 100% affordable housing is not justified.*
- *See comment on the Place-based Strategy for Teddington & Hampton Wick that affordable housing should not be subsidised and those unable to afford properties should go somewhere where they can afford.*

Policy 12. Housing Needs of Different Groups

- | | |
|--|--|
| <ul style="list-style-type: none"> • A comment that Churchill Retirement Living and McCarthy Stone support inclusion of B.4. The need for specialist older persons' housing across Greater London is detailed in the London Plan which requires the borough to provide 155 units per annum. Richmond's AMRs do not monitor the delivery of specialist older persons' housing. The Knight Frank Senior Housing Update 2021 is a useful reference and highlights the target of an additional 4,115 units per year across London up to 2029, however only 3,000 units have been delivered since 2017, with a further 1,600 units under construction/granted which will do little to address the shortfall. In light of the urgent need to significantly increase the delivery of specialist older persons' housing in the borough and across London, it is imperative the planning framework does not impede delivery, and question the requirement to demonstrate local need when the need for specialist older persons' housing is critical and self-evident. • The Mayor of London supports Policy 12 that seeks to assess applications in accordance with London Plan H13, however note the policy refers to identified local need as set out in the Council's LHNA and currently appears to be lower than the London Plan benchmark of 155 units; would welcome further review of this figure to bring it closer in line with the London Plan benchmark. Note the Gypsy & Traveller accommodation research (2016) suggested no demonstrated need for additional pitches, however 10-year pitch requirement needs to be set out once research is updated in 2022 and should take London Plan Policy H14 into account. Welcome reference to the Mayor's future London-wide Gypsy and Traveller accommodation needs assessment. • The CCG welcomes policy which supports the need to provide a wider range of housing options for older people, reducing reliance on residential care homes to enable people to live more independent lives for longer. Should recognise an increase in homes which support people with complex and nursing care needs will support a shift in healthcare 'closer to home' and reduce pressure on hospital services. A concentration of specific types of accommodation e.g. residential care beds can place additional burden on local health and care services. Should also recognise other forms of accommodation e.g. student and shared living will place pressure on local healthcare services/infrastructure and may require developer contributions to mitigate. | <ul style="list-style-type: none"> • Clarify in the supporting text the policy applies to all specialist housing, but this is not an exhaustive list and can come through various development types. Add to glossary definition of conventional homes. • Clarify the net need (for housing for older people and housing with care) identified by the Richmond Housing LIN research. • Add to the supporting text details about current housing priorities. Reference the Richmond Accommodation-Based Care Commissioning Statement 2022. • Add in the supporting text reference to the Council's informal specification guidance for supported housing. • Add reference in the supporting text to the Mayor of London's Practice Note on Wheelchair Accessible and Adaptable Student Accommodation 2022. • The aspirations of St Mary's University for student growth are noted, but it is not considered necessary to update the LHNA. • Update the supporting text with reference to the Council's Gypsy and Traveller Research 2023. |
|--|--|

- A comment the wording in parts A and B indicate the policy applies to new 'housing' and/or 'accommodation'; neither term is defined and the initial paragraphs of the supporting text implies the policy applies to specialist forms of housing only' - recommend amend policy to make explicitly clear what type of residential development applies to. Part B states a legal agreement will be necessary to control nature of provision, eligibility and affordability for future occupiers; may not be justifiable against CIL Regulation 122(2)/NPPF paragraph 57 and will need to be judged on a case by case basis – recommend text amended to refer to 'may be necessary'. Part B.1 duplicates Policy 11 and is unnecessary - recommend deleted. Part B.2 requires proposals to demonstrate how 'higher' standards of accessible and inclusive design have been met, but not defined and therefore requirement unclear – recommend policy is amended to make it explicitly clear standards required, which would need to accord with NPPF para 35, and reserve right to make further representations at Reg 19 stage.
- Richmond CVS raise the LBRUT Learning Disability Strategy 2015 – 20 identified gaps in service provision for supported living spaces for people with multiple and complex physical and health needs including behaviour that challenges services, and accessible quality accommodation for people with a learning disability and a physical disability, with both children's and adult's services stating intention to provide facilities and accommodation in borough and reduce cost of out of borough placements. The position has not changed, and there is a need to ensure building-based services are fit for purpose and meet future accommodation needs of this cohort, echoed in the AfC SEND Futures Plan and needs added to this section (page 178).
- A comment agree helping older residents to remain in their own homes by making minor adjustments is a good objective, but should also focus on encouraging developers to build accommodation suitable for older/less mobile residents to downsize.
- HBF comment that relying on the small number of homes required to Part M4(2) or M4(3) standards or hoping adaptations will not provide an adequate response to catering for the ageing population. Strongly recommend include the London Plan benchmark figure for the supply of older persons housing (155

<p>units per year from 2017 – 2029), as a figure the Council should endeavour to achieve. Need to clarify what intending in part B.3 of the Policy and take care not to apply to the supply of care home accommodation, which H13 does not encompass, and does not contribute towards the benchmark requirements. HBF does not support the supplementation of the Council’s own assessment of need with the assessment undertaken by the GLA, as London is a single housing market area and the assessment of need is undertaken by the GLA on behalf of all boroughs/development agencies.</p> <ul style="list-style-type: none"> • St Mary’s University comment the LHNA reflects the position regarding provision of student residential accommodation subject to two amends: accommodation projections should reflect on-site capacity increase to 950 units (not 893) and it should be made clear the statement - there is no requirement to increase the overall housing need on the basis of student growth – will not apply if their predicted growth in residential cannot be contained within exiting landholdings. 	
Policy 13. Housing Mix and Standards	
<ul style="list-style-type: none"> • A comment that minimum standards should be set higher, for the people to live in these developments and important for mental and physical health. • A comment from a registered provider supporting the policy requirements for accessible and adaptable homes and wheelchair homes. Sets out the local benefits of making such provision, and directing to further information and resources. • A comment suggesting issues regarding the likely effectiveness of the policy – clarify the standard referred to is the NDSS, clarify winter gardens can be an appropriate form of amenity on constrained sites to overcome issues of noise and air pollution, and clarify private amenity space relates to the London Plan minimum standards and can be accessed from bedrooms. • A comment paragraph 17.53 should refer to listed buildings where housing mix and standards may not be met due to the plan form of the building and the heritage benefits. • CPRE London would like the Council to ensure new housing development or estate regeneration do not leave residents with inadequate green and communal open space. 	<ul style="list-style-type: none"> • Add reference in the supporting text to dual aspect dwellings, to cross-reference to London Plan Policy D6. • Add reference in the supporting text to the Council’s approval of the Inclusive and Accessible Housing Design Guidance, the Council’s specification for supported housing, and to the Government’s announcement to mandate M4 (2) requirement in the Building Regulations as a minimum standard for all new homes. • It is considered that local authorities cannot go beyond the Government’s Nationally Prescribed Space Standards. • It is considered there is flexibility in requirements for provision of external amenity space, and the supporting text makes adequate reference to the London Plan. • It is considered the policy allows for a flexible approach to housing mix and standards, and it is unnecessary to reference the conversion of listed buildings to residential. • It is considered the policy requires an open space assessment to address public open space for future occupants and surrounding local communities.

Policy 14. Loss of Housing	
<ul style="list-style-type: none"> • A comment noting the reference to embodied carbon and the circular economy is sensible. 	<ul style="list-style-type: none"> • Added clarification to the policy on the environmental considerations that are set out in the supporting text. • Added further reference in the policy and supporting text as to the impact of a loss of housing units on supply.
Policy 15. Infill and Backland Development	
<ul style="list-style-type: none"> • The Mayor of London welcome A.2 encouraging redevelopment of car park sites for housing, however there is no need to demonstrate parking is no longer needed in London Plan Policy H1. Reductions in parking can deliver modal shift and this requirement should be deleted. • A comment back garden development is a key issue in the Mortlake & East Sheen Society area, in particular summerhouses becoming office or residential accommodation. The policy needs strengthening and should be separate to backland. • Habitats & Heritage agree garden land protection needs protection as it often forms part of green corridors for protected or endangered species. A case in Hampton Road where trees/shrubbery were removed prior to an application shows the Council needs to lobby for additional powers. 	<ul style="list-style-type: none"> • Amend criterion A.2 to refer to assessment of any net loss in parking in accordance with transport policies. • Update references in the supporting text to the latest London Plan Guidance on ‘Optimising Site Capacity – A Design-Led Approach’ and ‘Small Site Design Codes’. • Add reference to the supporting text to modern methods of construction. • It is not considered appropriate to include a separate section on back garden development, nor refer to garden buildings; the policy is considered to set the appropriate balance for how garden land proposals are assessed. • It is considered other policies cover green corridors; national TPO legislation and guidance is a matter separate to the Local Plan.
Policy 16. Small Sites	
<ul style="list-style-type: none"> • The Royal Parks comment the London Plan priority to increase delivery from small sites is not at the expense of open space; sites could be close to Royal Parks and impact individually or cumulatively, and should be addressed in the policy. • A comment seeking clear policy guidance on the redevelopment of substandard lock-up garages and/or development at the rear of corner sites with access from small roads. • The Mayor of London supports the policy. • <i>Virtual event feedback:</i> In terms of small sites feedback, there was agreement with the principle of encouraging development where there already is development. Given the range of styles and site types with small sites development, it was felt that designs should be judged by individual merit and 	<ul style="list-style-type: none"> • Clarify in the policy the approach to intensification outside the areas identified in part B.2. • Update references in the supporting text including to the latest Housing AMR figures and the London Plan Guidance on ‘Optimising Site Capacity – A Design-Led Approach’ and ‘Small Site Design Codes’. • It is not considered necessary to add further references to different types of small sites, nor the potential impact on existing infrastructure.

<p>that conservation area status may prove a challenge. There was also a wish to see a more joined up approach in terms of small sites development.</p>	
<p>Shaping and supporting our town and local centres as they adapt to changes in the way we shop and respond to the pandemic</p>	
<ul style="list-style-type: none"> • Two comments support attention given to the cultural policies and would like to see Richmond town centre playing a significant role in the Council’s Culture Richmond Plan. 	<ul style="list-style-type: none"> • Noted.
<p>Policy 17: Supporting our centres and promoting culture (Strategic Policy)</p>	
<ul style="list-style-type: none"> • A comment notes East Sheen is designated as a District Centre and the boundaries remain unchanged. A number of shop frontages and other non-residential frontages are outside the secondary frontage limits; these limits need to be better-defined taking into account additional features such as footway widths, landscaping and opportunities for creating gateway treatments. • A question whether shopping, leisure and culture uses is intended to represent Class E. The area at Kew Gardens Station is attracting more coffee shops/cafes and it might be useful to stress that a range or mix/diversification of uses is supported. A question whether the wording includes beauty salons, spa-type uses, and fitness studios which have been increasing in some locations such as Sandycombe Road, Kew and have become successful businesses meeting a community need; suggest such uses should be encouraged and would be more appropriate in the smaller centres. • The Mayor of London note and support the approach to use existing vacant stock to meet the identified need in the Retail and Leisure Needs Assessment 2021. Support approach towards diversifying and repurposing high streets and centres for a wider range of uses and note this will facilitate Living Locally. • A comment part A of the policy should be amended to include reference to major retail and leisure development also being directed to allocations, and amend the supporting text to remove the theoretical assumption all new town centre uses should be accommodated in vacant shop units and re-purposing existing retail floorspace does not mean that there is no requirement to allocate sites for major retail development. The retail hierarchy should define which locations are town centres through an assessment of scale, role, catchment and function, to comply with the NPPF; and the role and function of 	<ul style="list-style-type: none"> • This policy and others in this chapter of the plan have been reviewed and significantly revised. Phase 2 of the RLNS, much more detailed than Phase 1 and including an up-to-date household survey, has informed policy development along with the updating of other key elements of the evidence base. An important outcome of RLNS Phase 2 is that there is no need for further retail Site Allocations. • The Council considers that Parades of Local Importance should remain within the hierarchy. The policy conforms with the requirements of the sequential and impact tests set out in the NPPF. The degree to which a local parade should be considered in terms of the 2 tests would need to reasonably relate to the proposal. • It is proposed to amend the text in relation to a respondent’s suggestion to include reference to an acceptable location for retail being also at a Site Allocation which specifies retail, providing that any requirements of that Site Allocation in terms of scale of retail are met and that the proposal complies with other Local Plan policies. • Local Plan policy would not preclude further gateway treatments at East Sheen. • The need for public toilets is noted.

<p>the various tiers, to assist with the operation of the sequential and impact tests. The evidence base is out of date due to the age of the household survey, or will be due to new Experian economic forecasts in January 2022.</p> <ul style="list-style-type: none"> • A comment as the Phase 2 Retail Study has not been published, the evidence base is out of date and cannot be relied upon. Recommend the matters to be addressed in Phase 2 include the methodology for assessing quantitative retail floorspace capacity and consideration of qualitative needs. Reference that a restriction on the amount of convenience goods floorspace at Kew Retail Park would not be supported by any recommendations in the Phase 1 Retail Study. • A comment the public realm needs public toilets to encourage people to dwell, support that such provision is generally supported and form a part of requirements for new major development. • A comment agree with the Article 4 Direction requiring planning permission for change of use from Class E to residential use. 	
Policy 18. Development in centres	
<ul style="list-style-type: none"> • A comment the intention to create ‘shop-like’ appearances to empty retail premises is papering over the problem; pro-active initiatives to do with ownership, pricing, and Use Class management are warranted. Note Use Class E challenges and opportunities. • RFU comment Part C does not acknowledge the trip generation of visitor attractions such as Twickenham Stadium; suggest amended text. • A comment considering the evidence for retail, non-retail services and leisure floor space, office floor space, and housing floor space, raise concern the character of Richmond Town will be harmed by an imbalance amount and type in the development of floor space. Recommend several reports be updated and coordinated to provide comprehensive estimates across all future uses for Richmond Town, and there needs to be a pre-Covid base year stock for all uses. At the moment evidence is piecemeal or missing, and it would be unwise to place too much weight on the quantitative estimates of the future. Should be recognition of uncertainties and risks, apply sensitivity analysis and focus on planning controls. Do not believe estimates are robust to support major development at Richmond Station or higher buildings. 	<ul style="list-style-type: none"> • Primary Shopping Areas have now been defined in the larger centres and the policy approach updated to reflect these. • Some revision has been made to the text to clarify that the sequential test as set out in the NPPF is to be followed. Part C – The policy text has been revised to include reference to Site Allocations. Part F – The sentence relating to the inappropriateness of out-of-centre development has been deleted. • A reference to markets is added to the policy and supporting text, in line with the NPPF. • The updated RLNS Phase 2 has been used to update the approach to retail. Additionally, other elements of the evidence base have also been updated to provide the most accurate data at a time when the economy has experienced an unprecedented degree of change. • Reports have been published separately as per industry standards but have been produced in a co-ordinated way. • The Council notes that more than one respondent refers to the introduction of Class E. Policies are designed to be flexible in terms of change of use so that vacant retail premises can be occupied by other commercial and community uses.

<ul style="list-style-type: none"> • A comment the Local Plan should provide town centre and primary shopping area boundaries, and only defined frontages where they can be justified, to reflect the NPPF and PPG. Part C of the Policy requires major development that generates high levels of trips to be located within a town centre boundary, but this is not consistent with other parts of the Plan, notably the Site Allocation for Kew Retail Park; amend the text to refer to specific allocations. Part F states out of centre development is not considered appropriate in line with the London Plan, but the London Plan does not preclude it; amend the text to refer to where out of centre development involves the replacement of existing out of centre development and/or in accordance with Site Allocations. Part F refers to the sequential test for main town centre uses and impact assessments for retail and leisure, but should refer to proposals outside of defined centres and not in accordance with an up to date development plan; the sequential test should not apply to proposals at Kew Retail Park (or any other retail allocation). Similar inconsistencies in relation to the impact test. • A comment welcome the recognition of the implications of Use Class E and changes to permitted development rights. • <i>Virtual event feedback:</i> In terms of ideas for Richmond’s cultural quarters, there was demand for pop-up and season use of spaces, as well as emphasising ‘hidden gems’ and heritage, culture and art trails. There were many comments in support of improved wayfinding and sign-posting, as well as noting the lack of public toilets and bins that became particularly apparent during lockdown. Clarity over what is considered ‘culture’ in planning terms would be appreciated, as there was support for the concept of cultural quarters but concern of activities or certain uses being excluded. It was also recognised that the Council should not always be organising, but encouraging and supporting residents to organise their own arts and culture events. Ideas for highlighting our local assets included: • Breakdown barriers to ensure people feel able to attend. • Links and connections to other cultural places. • Transport links between more local areas and key stations. • Increased use of the river as a third is greenspace. • More murals and public art. 	<ul style="list-style-type: none"> • There is no need to specifically mention Twickenham Stadium. Policy as it stands would not preclude appropriate development there.
---	--

Policy 19. Managing impacts

- A comment in support of the policy, noting effect of Use Class E. Suggest in Part D add reference to betting shops, public houses, bars and takeaways, where the potential to reduce diversification of uses applies as well as potential to affect amenity of residents, compromising the notion of community in the 20 minute neighbourhood.
- A comment in support of the policy, while there needs to be flexibility to reflect changes in society (e.g. shift from retail to leisure) there must be a balance to take account of residents enjoyment of their properties.
- A comment note Government is considering making external areas, brought into temporary use during the pandemic, a permanent right; if this transpires need to designate suitable frontages capable of mitigating adverse impacts.
- The Mayor of London note the Policy aligns with London Plan Policy D13 on the Agent of Change principles; a reference to D13 would be welcomed.
- A comment note the support in the Plan to the Richmond town centre night-time economy and extending to the Riverside and Richmond Green, and welcome caveat the impact needs to be controlled and amenity of residents protected. Recommend greater distinction between evening and night-time economies, and oppose supporting a night time economy in Richmond Town and around Richmond Green and the Riverside due to resident harm. Richmond town and surrounding areas have one of the highest ratios of pubs/bars to residents to the whole of London and confined to a small area, public transport is reduced by midnight and police and cleaning resources not available at night time. Support the evening economy but the town needs to wind down by midnight. Urge the Plan to go further to discourage closing hours past 11pm in Richmond town.
- The CCG support part D to avoid an over-concentration of uses which can have a detrimental impact on health and wellbeing. Suggest extend reference to pawnbrokers, pay-day loan stores and amusement centres in line with paragraph 6.9.5 of the London Plan; remove reference to public houses as overconcentration is unlikely to occur.
- A comment from McDonald's Restaurants which supports the policy objective of promoting healthier lifestyles and tackling obesity but considers the policy
- Removal of specified frontages/areas subject to specific restrictions of public houses, bars and hot food takeaways, as changes in Government policy have brought flexibility on what changes can occur in our centres, and there is insufficient evidence to justify such an approach in these locations.
- It is noted there are some respondents who would like policy to be even stronger in terms of restricting certain types of uses, including the night-time economy as a whole. Two respondents suggested that specific uses could be added to the non-exhaustive list of examples. However, it is considered that the policies as drafted are suitably flexible but provide a strong degree of protection against deleterious impacts.
- The London Plan policy E9 is a very similar policy on new takeaways within 400m of schools, with which the Local Plan should be in general conformity. It is considered unnecessary to make revisions bearing in mind the London Plan and that there remains a continuing need within the borough to retain such a policy.
- A reference has been added to London Plan policy D13 Agent of Change in response to the representation by the GLA and further amendments made to the text for clarity.

<p>approach (Policies 19 and 51) which assumes all hot food takeaways are harmful to health is not supported by evidence. Provide examples of the McDonalds business which offer a wide-ranging menu (following steps to reduce fat, salt and sugar in recent years) with healthy meal options and transparent nutritional information to allow for healthy choices; while food high in calories and low in nutritional value can be derived in Class E consents that are not controlled and therefore the approach is inconsistent. Policy fails to acknowledge the wider benefits of restaurants, including for community health and wellbeing. The policy approach is inconsistent with national policy on positive planning, and discriminates against hot food takeaways without mention of other possible reasons behind the national high levels of obesity.</p>	
<p>Policy 20. Local shops and services</p>	
<ul style="list-style-type: none"> • A comment agreeing with the policy to resist the closure of pubs. • A comment the Council should reduce business rates, which are an impediment to small operators. 	<ul style="list-style-type: none"> • Support for the policy is noted. A reduction in Business Rates is beyond the remit of the Local Plan.
<p>Increasing jobs and helping business to grow and bounceback following the pandemic</p>	
<ul style="list-style-type: none"> • A comment recognising the housing schemes at Greggs Bakery site, Twickenham and St Clare Business Park have been refused on insufficient employment/industrial use, but there should be some flexibility in largely residential areas, especially where difficulty of access. • A comment concerns the employment policies are too binary, separating office and industrial uses, and the evidence base and supporting text sets out a need for flexibility in the provision of uses and floorspace. Policy approach could result in an inability to be responsive to the borough’s needs, hinder investment in retention/upgrading of premises, and does not necessarily reflect how existing employment sites operate or what some sectors need. Many creative industries and SMEs require a mix of uses. Discouraging investment could affect investment in improvements such as energy and water efficiency, which underpin the Circular Economy objectives, and there is limited recognition of role of refurbishment and intensification of existing sites. Policies do not explicitly support proposals that facilitate retention of existing firms where their operational needs have changed and require a mix of uses. Request amendments to policies and supporting text which provides for a more flexible 	<ul style="list-style-type: none"> • The nature of the borough means that many of the existing commercial uses are located in residential areas and this is not a justification in itself for the loss of a commercial site. • Distinguishing between office and industrial uses follows the Use Classes Order, as well as the London Plan and NPPF.

approach, to provide certainty for site owners, support viable operation of a site, and a greater incentive for investing in refurbishment of existing stock to improve workspace quality and increase number of employees, energy efficiency and longevity of the stock. This will also provide certainty for occupiers. This would avoid having to determine primary and ancillary uses, and avoid empty units or businesses going outside of the borough. It would provide flexibility to achieve appropriate intensification. A similar approach to that taken in Camden’s Local Plan is suggested.

Policy 21. Protecting the Local Economy (Strategic Policy)

- Port Hampton Estates (landowner) while support the principles included in Policies 21, 23 and 24, they need to take account of site specific conditions that may not enable reprovision of employment space or provision for a range of types of commercial units, particularly on sites such as Platts Eyot where opportunities limited by access arrangements and site conditions.
- A comment note the aim to make office space more efficient but see little about how this will be done particularly in the light of occupational changes accelerated by the pandemic.
- The Royal Parks support protection of the local economy but any increase in number of workers could increase footfall in Richmond and Bushy Parks; keen to ensure Parks are protected and any additional pressure on them mitigated.
- BMO Real Estate comment on Onslow Hall (landowner) that supply of high quality office accommodation is outstripping demand, with secondary space not being taken up. Provide report on Onslow Hall marketing which remains largely vacant, reflecting difficulties faced by unflexible accommodation. Suggest wording should reflect the London Plan which recognises that some office space is no longer viable and there will be instances of surplus office capacity.
- A comment the policy does not recognise other sectors which provide valuable employment and socio-economic advantages for example leisure and tourism sectors, and policy should be revised to take into account such redevelopment possibilities.
- London Square comment the policy is contrary to the London Plan and should be amended to retain employment capacity whilst also taking into account

- Specific site considerations and policy requirements are weighed up as part of the Development Management Process (including where an application relates to a Listed Building).
- The Employment Sites and Premises Needs Assessment 2021 has identified an ongoing shortfall in the amount of office and industrial floorspace in the borough. The update in April 2023 considered recent (post-pandemic) economic data. There has been a reduction in need for office floorspace since 2021 however industrial need has remained at the same level.
- Introduction of Class E provides greater flexibility for the consideration of other commercial uses on certain sites. The B2 and B8 use classes have been retained. Leisure and tourism uses are considered under other policies.
- Changes made to policy 21 and policy 22 to recognise the importance of the voluntary and community sectors in the borough.

<p>employment type and quality, and note there are no Strategic Industrial (SIL) designated in the borough. Employment designation in the borough serves less of a strategic role, and set out that the Greggs site (landowner) meets none of the criteria being in a residential area with low footfall, PTAL rating of 2, located far from the strategic road network and in an existing condition where full redevelopment and high capital costs are required for any use. The highways and amenity impact cannot be mitigated, full re-provision would give rise to the same impacts and would affect the amenity of adjoining residential properties.</p> <ul style="list-style-type: none"> • A comment paragraph 19.3 should be amended to protecting viable employment land within designated employment areas to reflect London Plan Policy E1. • The Richmond CVS comment on the challenge of affordable and conveniently located office accommodation. The needs of the sector have not changed as a result of the pandemic and there is still a need for in-person services, and co-located office accommodation that offer flexible work spaces and hybrid delivery, and potential to create a participatory, inclusive and community focused economy. The accommodation needs of the voluntary and community sector need to be recognised. There should be a commitment to the long-held ambition for a voluntary sector hub, or hubs, offering affordable office and meeting spaces for the VCS. • A comment paragraph 19.4 should recognise constrained facilities and layout of listed buildings when upgrading office stock; add reference that if cannot be successfully upgraded then consider alternative viable uses. • A comment paragraph 19.7 should recognise some listed buildings may not be adaptable to provide affordable and flexible workspace. 	
Policy 22. Promoting jobs and our local economy	
<ul style="list-style-type: none"> • The Royal Parks welcome the note in the supporting text that the Parks offer opportunities for economic spin-offs. Important that any resultant increase in footfall within the Parks is effectively mitigated through support for their work to protect and conserve them. • A comment the requirements for high standards of workspaces should be included in Policy 23 which relates to protecting existing offices. 	<ul style="list-style-type: none"> • Amendments to policy 21 and policy 22 have been made to recognise the importance of voluntary and community sectors in the borough. • Policy 23 also makes reference to refurbishment of existing office floorspace and the requirement for refurbishment to improve the quality, flexibility and adaptability of office space for different sizes. • Note LGC response that site should be allocated for mixed use development.

<ul style="list-style-type: none"> • A comment welcome support for TV, film studio capacity and river-related/dependent industries. • LGC Ltd (landowner) comment their headquarters on Queens Road, Teddington should be allocated for mixed-use development. Set out their intent to secure a future for LGC in Teddington, with a high quality office and laboratory headquarter building for LGC while also delivering a ‘third-party’ employment buildings(s), affordable workspace and space for SMEs, and residential development. Details the previous representations submitted and the existing facilities continue to become unsustainable and uneconomical. Details the indicative scheme for a balance of development, re-providing and enhancing the existing net employment space on site. Seek a land-use allocation for mixed-use enabling development, to make effective use of the brownfield site to reflect the NPPF. • A comment the policy adopts a narrow view of employment floorspace and should recognise much employment takes place and is reliant upon sectors such as retail, health, leisure and tourism. Add at part A.8 leisure and tourism sectors. 	<ul style="list-style-type: none"> • Introduction of Class E provides greater flexibility for the consideration of other commercial uses on certain sites. The B2 and B8 use classes have been retained. Leisure and tourism uses are considered under other policies.
Policy 23. Offices	
<ul style="list-style-type: none"> • A comment that the policy should reflect London Plan Policy E1 and Policy 22 so that existing unviable office space is not restricted by the policy, and should be considered for alternative uses. • A comment that it is not clear how the forecasts fit in with post-pandemic uncertainties around demand. • The Mayor of London comment London Plan Policy E1 supports the focus of new office development in town centres, however the Key Business Areas should be supported by improvements to walking, cycling and public transport. • A comment support the reference to marketing evidence. Reference should be made in paragraph 19.19 to listed buildings and recognition there may be heritage benefits arising from a change of use from offices. 	<ul style="list-style-type: none"> • Specific site considerations and policy requirements are weighed up as part of the Development Management Process (including where an application relates to a Listed Building). • The Employment Sites and Premises Needs Assessment 2021 has identified an ongoing shortfall in the amount of office and industrial floorspace in the borough. An update to the employment evidence in 2023 found that there was a lower need for office floorspace, albeit still a positive need for the Plan period. • Amendment to policy to make reference to encouraging active travel in Key Business Areas.
Policy 24. Industrial land	
<ul style="list-style-type: none"> • A comment from Shurguard their storage facilities are a key economic benefit. Suggest that reference to ‘no net loss’ of industrial land should be removed from the policy, requirement for greater clarity in Policy 24 regarding the 	<ul style="list-style-type: none"> • Requirement for ‘no net loss’ of industrial floorspace is considered appropriate in Richmond context in light of employment evidence.

<p>provision of affordable employment space and flexibility when considering applications for industrial (storage) uses outside employment designations.</p> <ul style="list-style-type: none"> • A comment should designate Arlington Works as a Locally Important Industrial Land and Business Park to allow for the neighbouring Twickenham Studios to expand. • A comment noting paucity of industrial land in Mortlake and East Sheen area; reference to the Big Yellow storage unit and no mention of the potential loss of Stag Brewery site. • LGC Ltd (landowner) commented on inflexibility of ‘no net loss’ approach in this policy and scope for intensification and co-location of industrial uses to achieve policy objectives; suggest more flexible wording. • The Mayor of London note the evidence base and few options to address this deficit; approach will help to protect existing floorspace and potentially provide a net increase as supported by London Plan Policy E7. • London Square comment that the Greggs site is inappropriate for industrial use and is being promoted for residential-led development. • London Square object to the inclusion of the Greggs site as a designated Locally Important Industrial Land and Business Park in the West Twickenham cluster, as future needs for employment land can be met through other sites or even mixed-use redevelopment. Raise inconsistencies between the LBR’s Draft Local Plan (as worded) and the London Plan (2021). • Rename Marlborough Trading Estate as 159 Mortlake Road and de-designate as Locally Important Industrial Land and Business Park. 	<ul style="list-style-type: none"> • The Employment Sites and Premises Needs Assessment 2021 has identified an ongoing shortfall in the amount of office and industrial floorspace in the borough. It is a priority of the Local Plan to continue to protect industrial land. The update in February 2023 considered recent (post-pandemic) economic data and found the industrial need for the Plan period to be the same. The industrial stock in the borough has continued to decline. • Note Mayor of London’s support for Policy 24. • The nature of the borough means that many of the existing commercial uses are located in residential areas and this is not a justification in itself for the loss of a commercial site. The policy is informed by the evidence which has identified a need to protect existing employment sites.
Policy 25. Affordable, flexible and managed workspace	
<ul style="list-style-type: none"> • A comment there is different wording to Policy 24 part B and should be clarified. The policy is ambiguous and does not state what proportion of employment floorspace will be required to be affordable and at what rate of affordability (only within the supporting text). It is not clear the 1,000sqm threshold is viable. Flexibility should be incorporated to allow for an off-site contribution where provision on suitable sites is not feasible. Suggest detailed wording to include in policy a minimum of 10% affordable light industrial workspace will be required in all major developments, at 80% of local market rates for a minimum of 15 years. 	<ul style="list-style-type: none"> • Affordable workspace policy encapsulates all types of provision, whereas policy 24 specifically refers to provision on industrial sites. • Evidence base for policy is Employment Sites and Premises Needs Assessment which identified limited availability of this type of floorspace in the borough, as well as high rents more equivalent to fringe of central London than an outer London borough. • Supporting text to the policy provides detail regarding thresholds and targets for provision of affordable workspace.

<ul style="list-style-type: none"> • A comment part B.3 does not provide any threshold as to when securing the appointment of managed workspace providers will be required, suggesting even a minor amount of new floorspace as an extension to an existing premises would be subject to this requirement. Unworkable in practice and could impact on viability. A threshold should be provided and/or made clear it would not apply to extensions to existing premises. • A comment agree with the aims set out. • The Mayor of London welcome the policy, protecting existing affordable workspace and requires new provision in line with London Plan Policy E3. Should ensure this is supported by local evidence in accordance with E3 part C and in the circumstances outlined in part B. • A comment appreciate the supporting stance towards smaller-scale businesses and intended delivery of affordable workspace in accordance with London Plan Policy E3. Policy does not provide adequate detail in terms of specific affordable workspace targets. A suggested minimum target for developments proposing over 1,000sqm is in the supporting text only, and not supported by a detailed evidence base. Policy provides no provisions to take into account site specific viability; this should be incorporate and to accept a level of affordable workspace below policy requirements in exceptional circumstances and where it is robustly justified. 	<ul style="list-style-type: none"> • Local Plan policies have been subject to viability testing, and detailed viability evidence is considered on a case-by-case basis. • Planning Obligations SPD provides further guidance on delivery of affordable workspace. • 1,000sqm threshold is gross and can include extensions to existing premises. • Part B.1. of policy 25 directs new affordable workspace provision to the borough’s town centres. This does not preclude its provision within major developments that may be located outside the town centres given the limited opportunities to secure this type of provision in Richmond and its accessibility to different active travel modes.
Policy 26. Visitor economy	
<ul style="list-style-type: none"> • The Royal Parks comment Richmond and Bushy Parks should be specifically including in the policy, and supported in providing the infrastructure to support visitor numbers. • A comment there is potential for expanding this within the Mortlake & East Sheen Society area associated with the river, Stag site, Sheen Lane Community Centre, Richmond Park and local/passing trade demands for seating and al fresco areas. • RBG Kew welcome the policy including Kew Gardens and other assets connected via the River Thames. Note that proposals leading to increased visitors and tourists will be assessed against transport policies, and that events at RBG Kew lead to increased visitors at certain times and are an essential part 	<ul style="list-style-type: none"> • The list of major attractions included in the policy is not exhaustive and no changes are proposed to extend the list. It is considered that proposals for temporary events are more appropriately considered on an individual basis, bearing in mind the uniqueness of RBGK. It is not considered necessary to give further encouragement to the redevelopment of existing visitor accommodation sites. Such proposals would in any case be considered against all plan policies including those relating to the location of development and wider transport issues.

<p>of the visitor attraction and of great benefit. Suggest temporary events could be considered in the plan (see also Policy 32).</p> <ul style="list-style-type: none"> • RFU comment Twickenham Stadium should be added to the existing attractions that the borough will support, promote and enhance, adding as a criteria to part A supporting appropriate development which complements the use as an internationally significant sports and entertainment venue. • The National Trust support the Policy supporting sustainable growth of the visitor economy. Particular support for A.1 and the reference to Ham House and A.4 as it recognises approaches to and from visitor destinations. • A comment that policy support needed for additional visitor bedspaces with reference to other Local Plan policies may make proposals unacceptable, particularly for existing development that happens to be outside of a town or district centre; add reference to B.2 to add support for development and redevelopment of existing visitor accommodation sites. 	
<p>Policy 27. Telecommunications and digital infrastructure (Strategic Policy)</p>	
<ul style="list-style-type: none"> • FORCE support the policy to ensure appropriate siting and minimising the number of sites. Oppose siting of such infrastructure within the Crane corridor, as will intrude visually and into tranquillity. • A comment that all applications for masts should include visual impact studies, for the promotor to assess the impact. • A comment of support for the Council's position. 	<ul style="list-style-type: none"> • It is considered the policy reference to appropriate siting is sufficient to consider site proposals. • A photomontage, whilst helpful, is not essential to making a decision on such a planning application, thus it would not be reasonable to make this a policy requirement.
<p>Protecting what is special and improving our areas (heritage and culture)</p>	
<p>Policy 28. Local character and design quality (Strategic Policy)</p>	
<ul style="list-style-type: none"> • A comment pleased to see the Council will resist removal of shopfronts of architectural or historic interest and shopfronts including signage and illumination should complement the surrounding street-scene and buildings. From experience, know that many owners/leaseholders are not aware nor advised by agents of this. Asks if there is some way the Local Plan can ensure this is done properly and regularly communicated to interested parties. • The Royal Parks comment the scale and nature of Richmond and Bushy Parks is such they are considered to be a significant influence on local character; it is important development does not threaten their character. The inclusion of the 	<ul style="list-style-type: none"> • Shopfronts SPD is referenced which provides detailed guidance. • Impacts on character of Green Belt and MOL considered elsewhere. Policy amended to clarify developments and the way they connect or relate to wider open space network needs to be considered as part of this policy. • Comments relating to lighting considered elsewhere. • Comments relating to design of health facilities considered elsewhere. • Purpose of Urban Design Study considered in detail earlier in the Plan – not considered necessary to repeat in this policy.

Parks' importance and reference to their protection should be included within this Policy.

- Habitats & Heritage strongly support the need to ensure lighting is appropriate and does not have a detrimental impact on biodiversity and biodiversity species. The Council needs to keep up with current research which is showing some lighting previously considered non-detrimental is having a detrimental impact.
- The CCG support the policy. The National Design Guide sets out ten characteristics of well-designed places, including movement, nature, safe and socially inclusive public spaces, mixed and integrated uses and healthy and sustainable homes and buildings, all of which contribute towards health and well-being. Suggest the Council's Public Health team are involved in the local design coding process. Refer to numerous national accreditations and standards which seek to improve design, and NHS England advice on designing healthy places. When setting out requirements relating to health and care facilities, there is a need to include a specific reference to DHSC's Health Building Notes which provide guidance on design and planning new healthcare buildings and their immediate environment. *See also comment on Policy 51 in relation to housing design to ensure homes are healthy.*
- A comment note the addition of nine new principles such as the promotion of energy efficiency, urban greening etc. however note one phrase in LP1 has disappeared – gated developments will not be permitted – and ask why and whether this is because it has proved to be unrealistic.
- Two comments the wording on part A needs to be amended to refer to the Borough's Conservation Areas as well as to the 'character areas' and 'places' identified in the Urban Design Study characterisation work, given the statutory protection enjoyed by such designated heritage assets. The wording needs to be amended to define the 'places' identified in the UDS, and the purpose of such a designation.
- A comment while the drafting of the Policy is generally supported, part B is unsound. Recommend amendment to refer to 'where appropriate' enhances the local environment and character.

- Amendment to include 'maximise opportunities to' under Part B of the policy in relation to developments being required to enhance local character.
- Individual types of adverts are not prohibited as part of this policy.
- Energy efficiency in digital advertising displays will be encouraged as part of the guidance on adverts.
- Additional information about the Secured by Design scheme referenced in policy and encouragement to consult with the Metropolitan Police at an early stage in the supporting text.

<ul style="list-style-type: none"> • A comment on paragraph 20.22 should ensure banners are still included in the list of banned advertisements especially on MOL, as individual coaches and clubs would like their own banners. • A comment digital advertising displays are energy wasteful and serve minimal public utility. Policies should ensure energy utilisation is minimised e.g. static displays, require no additional lighting or energy, and not just be about the visual appearance. Provided links to research. • The Metropolitan Police Service – Crime Prevention and Designing Out Crime set out the Secured by Design scheme has proven results in reducing crime and the fear of crime, and successful in reducing anti-social behaviour through a raft of measures including design/layout of new homes. Support reference part B.11 and would like to encourage early consultation with the Metropolitan Police Designing-Out Crime Officers (DOCO's) as well as following the Secured by Design Guides for New Homes/Schools/Commercial as applicable. Suggest an additional point to add to part B to: Council to consult the Metropolitan Police on all applications involving major development, significant community interest or those deemed appropriate by the LPA, and in certain circumstances achieving Secured by Design certification may be required as a condition; applicants should consult the Metropolitan Police at the earliest opportunity and include details of security and secured by design compliance in the Design & Access Statement. Additionally, MPS and Secured by Design can play a huge role in a safe environment, health and wellbeing; research details provided. Consideration should be paid to the Council's duty under section 17 of the Crime and Disorder Act 1998 to consider crime and disorder implications in exercising its planning functions; to promote the wellbeing of the area in pursuance of powers under section 2 of the Local Government Act; and ensure development provides a safe and secure environment in accordance with London Plan Policy D11 section B and paragraphs 3.11.3 and 3.11.4. 	
<p>Policy 29. Designated heritage assets</p>	
<ul style="list-style-type: none"> • The Royal Parks welcome the Council's approach to heritage assets, especially the protection and enhancements of the Borough's Historic Parks and Gardens. • A comment in relation to part A.8, note this will have to address the challenge of accommodating protection of protected open lands and heritage assets with 	<ul style="list-style-type: none"> • Requiring developments to enhance 'where possible' (the borough's Historic Parks and Gardens') accords with the NPPF. • Re-wording of part A.2 in relation to total loss of or substantial harm to a listed building in response to comments from Historic England.

satisfying perceived strategic needs, including how Kew WHS will be protected and enhanced in light of development in Hounslow which would impact negatively on the OUV (*see also comments on Policy 2 and the place-based strategies*).

- Historic England recommend amendments to part A.2 as equates substantial harm with the total loss i.e. demolition, of an asset rather than dealing with significance. The NPPF is clear substantial harm can occur without demolition or total loss of the asset. Furthermore when considering substantial harm, the term resist is a weaker test that is unlikely to be effective given such harm should be either exceptional or wholly exceptional (depending on the grade of the asset), and the NPPF goes on to tell us where a proposal will lead to substantial harm of total loss of significance consent should be refused. Ideally not to duplicate the NPPF tests, however if a policy criterion is included it should better reflect the NPPF. However, if the intention of part A.2 is not to deal with substantial harm but instead to maximise embodied carbon through retention rather than demolition of buildings, this could be drawn out as a separate issue – a criterion covering just the importance of reusing and repurposing heritage assets. In either situation policy criterion should be amended and split into covering the differing issues 1) substantial harm 2) demolition, re-use, and embodied carbon. It would be helpful at part E to reference the risks proposed by maladaptation; suggested wording ‘to avoid maladaptation’.
- A comment nothing is said about issuing enforcement notices where owners have left listed buildings or BTMs to decay.
- Royal Botanic Gardens Kew generally support the policy as largely reflects the NPPF. However part A.3 resists the change of use of listed buildings where their significance would be harmed, particularly where the current use contributes to the character of the surrounding area and sense of place. The change of use of a building is not generally controlled by the listed building consent process; it is a matter of whether constitutes development. Furthermore the change of use of heritage assets can be a positive to bring back into a functioning, viable use consistent with their conservation; in turn helps to secure investment in their upkeep to preserve them. PPG also acknowledges the ‘optimum viable use’ is

- Policy text on embodied carbon that would be maximised through retention of buildings moved to supporting text.
- Issuing of enforcement notices falls outside the planning policy process and relates to the legal powers contained in the Planning (Listed Buildings and Conservation Areas) Act 1990. Each enforcement situation will be carefully considered on a case-by-case basis.
- Additional text added to part A.3 in relation to resisting the change of use of listed buildings where their significance would be harmed ‘unless it secures the optimum viable use and/or there are public benefits that outweigh the harm’ in response to comments from Royal Botanic Gardens, Kew.
- Part B of policy amended to correct drafting error (duplication of earlier text).
- Additional text added to supporting text paragraph 20.29 to make a stronger link to policy 31 on views and vistas in relation to development affecting heritage assets, in response to comment from National Trust.
- A number of amendments in response to comments from Nick Alston, Avison Young (on behalf of St George Plc and Marks & Spencer – response number 880) whilst other parts of the policy were considered to be sound and have not been changed.

not necessarily the original use. While harm to significance should be generally avoided, changing the use of a historic asset is sometimes necessary to secure other heritage and public benefits and this might be better reflected in the policy. RBG Kew welcome recognition in the Plan there is a balance between securing energy and carbon savings in historic buildings while protecting their architectural and historic significance; suggest acknowledgement of this is within the main energy and sustainability policies (3 to 7). Part F recognises whilst energy and carbon savings in historic and listed buildings are supported, there are limitations given the heritage value of the buildings and need to protect sensitive fabric; the supporting text acknowledges each proposal will be assessed on a case by case basis – RBG Kew support this approach dealing with the complex but important balance, and encourage a focus on accommodating building efficiencies, where other potentially intrusive options could cause greater harm to significance. Highlight a reference effort at paragraph 20.27 which refers to RBGK WHS as Policy 28 rather than Policy 32.

- A comment part B duplicates part A.9; one of these has to be deleted.
- The National Trust supports the Policy, and the wording within requiring developers to also have regard to the setting of heritage assets when considering the significance of the borough's designated heritage assets; while support paragraph 20.29 this could be strengthened by linking with Policy 31 Views and Vistas. Climate change is the single biggest threat to the precious landscapes and historic houses, and are tackling the causes of climate change by reducing emissions with an environmental pledge to be carbon net-zero by 2030 across our own emissions and those created by our supply chain and investments; pleased the draft Plan recognises historic and listed buildings will need to adapt and that sympathetic measures to make energy and carbon savings in historic and listed buildings are encouraged (criterion F) as will allow us to adapt our significant historic buildings.
- A comment consider the Policy to be unsound and suggest amended wording. NPPF states where a proposed development will cause harm to a designated heritage asset (whether that be substantial or less than substantial), clear and convincing justification is required in order to demonstrate that such harm is outweighed by the public benefits of a proposal. Parts A.4, A.6, A.8 and A.9 are

<p>considered too specific, particularly in reference to the requirement to retain and preserve original structures, layouts and architectural features; there is no requirement in national policy or the London Plan to reinstate historic features, not least in cases of buildings of multiple periods, as it may not be appropriate to reinstate features of a particular phase of a building's history.</p> <ul style="list-style-type: none"> • Two comments no change proposed. 	
<p>Policy 30. Non-designated heritage assets</p>	
<ul style="list-style-type: none"> • FORCE are disappointed the policy makes no explicit reference to the preservation and enhancement of the borough's historic industrial sites and watercourses e.g. formerly industrial landscape of Crane Park with its water power, Little Park and historic water features in grounds of Kneller Hall. The whole of the Crane corridor is an area of archaeological importance, and it should be protected and promoted as a heritage and educational asset as other assets identified in paragraph 20.37. • A comment nothing is said about issuing enforcement notices where owners have left listed buildings or BTMs to decay. • A comment pleased that historic walls dating from the 18th and 19th centuries have recently been designated as BTMs but there are numerous other walls not included and hope these will come to be recognised as 'other historic features'. Logical the applicants' requirements have been moved to the supporting text. • A comment the policy is not consistent with the NPPF, which requires the effect of an application on the significance of a non-designated heritage asset to be taken into account; there is no requirement to preserve or enhance the significance of non-designated heritage assets. Suggest amended wording to refer to significance, and a balanced judgement. • Two comments no change proposed. 	<ul style="list-style-type: none"> • Reference to the borough's historic industrial sites and water courses has been added to the examples in the supporting text of non-designated heritage assets. • The issuing of enforcement notices falls outside of the planning policy process. • Process for designating Buildings of Townscape Merit falls outside the Local Plan process. • Policy 30 is considered to be consistent with the NPPF.
<p>Policy 31. Views and vistas</p>	
<ul style="list-style-type: none"> • The Royal Parks welcome the Policy as aims to protect the quality of identified views, vistas, gaps and skyline which are important factors in the Parks. Commend inclusion of King Henry VIII mound as a protected view. Would like to work further with the Council to positively manage views from the Parks. • Historic England comment a helpful Policy with appropriate criteria for assessing development proposals. Support the criteria to seek improvements to 	<ul style="list-style-type: none"> • A list of new local views for designation in the Local Plan is referenced in the draft policy and included in the supporting text, further to consultation on a draft Local Views SPD in 2022. • Policy wording will be amended to specify that harm to the quality of views etc should be avoided.

remedy existing harm; suggest amended wording to state “avoid harm to” rather than “protect” or “respect” the quality of views and settings etc. as that is less ambiguous.

- A comment support the approach, but biggest threats are from applications for high rise buildings outside the borough.
- FORCE support the policy of protecting views and vistas, and encourage the Council to explore opportunities to create new views and vistas with reference to the River Crane corridor (trust these requirements will take precedence over Policy 45 on tall and mid-rise buildings).
- A comment look forward to consultation on the additional views identified.
- Royal Botanic Gardens Kew generally support the Policy. However, seek clarification as to how the views have been assessed. Support any proposal affecting a designated view or vista to have to submit CGI and visual impact assessments; particularly relevant for Kew Gardens which is highly sensitive to impacts of surrounding development. Wish to be kept informed of the Views and Vistas SPD.
- The National Trust support the Policy, including criterion A.1 as seeks to protect the quality of the designated views and vistas, and support the requirement for proposals affecting these to be supported by CGI as use of visualisation will help communicate the visual impacts of proposals. Wish to be kept informed of the Views and Vistas SPD.
- A comment the Policy is too prescribed and elements do not conform with the London Plan, which states that development should not harm, and should seek to make a positive contribution to, the characteristics and compositions of Strategic Views and their landmark elements. Recommend redrafting to be in line with the London Plan, Policy HC4 and the London View Management Framework.
- The Mayor of London comment the London Plan identifies the King Henry VIII’s Mound to St Paul’s Cathedral linear view as a protected vista, which should be managed by following the principles of London Plan Policy HC4 and this should be noted in the supporting text. Welcome recognition of the importance of CGI and 3D modelling in the policy and paragraph 20.44.

- The Council commissioned consultants (Arup) to carry out analysis on the borough’s views, alongside the Urban Design Study. Existing documents, such as Conservation Area Appraisals, were reviewed, and site visits carried out to recommend whether existing views were intact and whether there were any new views which merited designation. Further analysis was carried out in the draft Local Views SPD which sets out existing protected views, as well as newly identified locally important views.
- Reference to Policy HC4 of the London Plan will be noted in the supporting policy text for the management of the view from King Henry VIII’s Mound to St Paul’s Cathedral.
- It is not considered any further amendments are necessary to reference tall and mid-rise buildings or make the policy less prescriptive.

Policy 32. Royal Botanic Gardens, Kew World Heritage Site

<ul style="list-style-type: none"> • Historic England suggest amended wording to make reference to Outstanding Universal Value in part A, and an additional criterion in the policy requiring development within or around the WHS to provide a HIA upon application to accord with guidance. Suggest it would be helpful to explain how the Council will refer relevant applications to UNESCO in the supporting text. • Royal Botanic Gardens Kew support the site-specific policy, but request the Council recognise the effective management of the WHS requires an appropriate balance between the needs of conservation, access, interests of visitors and the local community, and sustainable economic use and operation of the site. Request a degree of flexibility and scope, with a fourth point added to part A about ensuring the long-term sustainability of the WHS requiring a careful balancing between the needs of conservation, access, biodiversity, the climate emergency, income and the public benefits of any development on the site. Request a fifth point added to part A to recognise temporary events and exhibitions are a key part of the offer and are supported in principle. Suggest updating detailed references to the WHS documents. • Mayor of London welcome the policy in line with London Plan HC2. The requirement for development proposals with the potential to affect the WHS or it setting to be supported by HIA should be in the policy not the supporting text. 	<ul style="list-style-type: none"> • Outstanding Universal Value of the WHS covered in separate bullet point of the policy. • Requirement for Heritage Impact Assessment considered on a case-by-case basis, and is proportionate to the scale of development that is being proposed. • There is not a process in place for referring applications affecting the WHS to UNESCO (UNESCO inscribes new WHS). Ongoing protection of the WHS takes place through partnership working that sits outside the Local Plan (detailed in paragraph 20.51). • Most appropriate approach to considering exceptions to the policy (including on temporary events and exhibitions) continues to be on a case-by-case basis. • Policy amended to refer to ‘current’ Royal Botanic Gardens, Kew World Heritage Site Management Plan. • Reference to Kew Landscape Masterplan removed as now outdated.
<p>Policy 33. Archaeology</p>	
<ul style="list-style-type: none"> • A comment that there is insufficient time allowed for archaeological field investigations on the Stag Brewery site. 	<ul style="list-style-type: none"> • Comment relates to a specific planning application for the Stag Brewery. Noted no comment on the draft policy.
<p>Increasing biodiversity and the quality of our green and blue spaces, and greening the borough</p>	
<ul style="list-style-type: none"> • A comment the Biodiversity Plan looks great. It would be good to see inclusion of support for Nature-Connected Neighbourhoods, including urban hedgerows, swift tiles, hedgehog highways and wildlife gardening as equitable access to green and blue spaces. It would be great if the Council adopt the Wildbelt strategy as recommended by the Wildlife Trusts. • River Thames Society set out the borough is very important to the river, being the only London Borough with territory over both banks. Includes water that is fully tidal up to Richmond, half-tidal between Richmond and Teddington, and then non-tidal further upstream. As such helps demonstrate the diversity of the Thames which is celebrated. River Thames Society share the sentiment in the 	<ul style="list-style-type: none"> • Add a reference in the strategic objectives to engaging with local community groups invested in the protection and enhancement of local green and blue assets. • No further amendments to refer to nature-connected neighbourhoods, interlinked wildlife sites, as the Plan sets out the broad strategy to protect biodiversity. • Further regulations and guidance are awaited before proceeding with the nature recovery network mechanism.

Plan to encourage wide enjoyment of the blue/green spaces, and endorse the vision and strategic objectives in the Plan in relation to protecting and improving the unique environment of the River Thames as wildlife corridors, opportunities for recreation and river transport, increasing access to and alongside the rivers, gaining wider local community benefits and habitat improvements when sites are redeveloped. This means protecting river-related vistas and restraining any development which risks overpowering the river environment. An active supporter of the Thames Landscape Strategy and encouraged by the commitment to continued partnership working.

- CPRE London are a membership based charity concerned with the preservation and enhancement of London's vital green spaces, as well as improvement of London's environment for health and wellbeing. Welcome the Council's commitments to protect and retain the borough's Green Belt and MOL, with no changes to the GB boundaries, and protect Local Green Space from inappropriate development, with six new LGS sites. However, raise concerns on the 20 minute neighbourhood concept and whether unearthed opportunities to meet need (*see comments on Policy 1 and the Spatial and Place-based strategies*).
- Richmond CVS play a crucial role in protecting, maintaining and enhancing the green and blue infrastructure, engaging people of all ages – Habitats & Heritage, Friends of Barnes Common, Friends of Crane Park, River Thames Boat Project etc. The Plan should acknowledge the breadth of expertise and community engagement that such groups provide and encourage developers to work with groups to provide the formal and informal education to enable people to learn and connect with nature and biodiversity.
- A comment on wildlife sites – does not go far enough to secure a meaningful network of interlinked wildlife sites for wildlife to move about and ensure genetic diversity. Not fully implemented recommendations in 'Making Space for Nature' by Sir John Newton. About 20 years ago all the railway lineside were recognised as important routes and the following Local Plan deleted them all. Support Whitton Linesides being added, feel the whole route to Richmond Bridge should be added.

<ul style="list-style-type: none"> • The Environment Agency welcome the approach to protect and enhance the borough's' biodiversity and green corridors (<i>see comment on the Sustainability Appraisal against the Introduction</i>). 	
Policy 34. Green and Blue Infrastructure (Strategic Policy)	
<ul style="list-style-type: none"> • A comment why the Policy excludes the public open space hierarchy listed in Policy LP 12. • A comment dogs off the lead are a nuisance; ensure the policies are retained to not permit dogs on the Wandsworth Sports Centre and Richmond Playing Field and keep dogs on a lead on public roads, pavements and footpaths. • The Royal Parks welcome acknowledgement of recreational pressures and impact of increased development on the Royal Parks, and reference to working with the Royal Parks to ensure careful management is achieved. • The Royal Parks welcome recognition of role of green infrastructure in reducing recreational impacts on sites such as Richmond Park. Specific reference should be made within the policy text given the significance of the impact on sites, including the Bushy Park SSSI and the Richmond Park SAC, SSI and NNR. • FORCE support the primacy the Plan places on protecting and enhancing designated open land and other open spaces and the presumption against the loss of, or building on, greenfield sites. Support recognition of importance of smaller pieces of open land in providing continuous linkage, and emphasise significance of the River Crane Valley. Agree residential development is likely to exacerbate pressure on existing green infrastructure; ask the Council to be creative in avoiding the over-usage of existing green spaces. Support protection and provision of pedestrian and cycle routes through green spaces, however important paths are maintained for dual use and the green space characteristics are upheld when selecting alignments and surfaces, in particular avoid lighting in dark corridors. Support recognition of storm water retention opportunities and would like the Plan to recognise the potential for attenuating flooding by naturalising the River Crane below the Mereway Weir, and naturalising riverbanks to improve the recreational value of the river. While recognise potential for trees to promote urban cooling and provide shade cover, the Plan should recognise inappropriate tree planting can reduce biodiversity by blocking light. Would like a more explicit commitment to tackling invasive 	<ul style="list-style-type: none"> • Add a reference to recognise non-designated sites can also contribute to increase biodiversity. • Add a reference to ensure biodiversity value is protected and enhanced in a measurable way. • Add a reference in the supporting text to clarify green corridors, and add to the Glossary. Refer to safeguarding biodiversity in green corridors, through physical infrastructure such as the impact of artificial lighting (with cross reference to Policies 39 and 42). • Dark corridors are not identified in the Plan as there is no policy requirement to do so, and are difficult to achieve in urban areas. • As this is a strategic policy, it is not considered necessary to add further details such as reference to the specific environmental designations for the Royal Parks or on inappropriate tree planting, where matters are covered by other Plan policies.

species. Welcome commitment to encourage multi-functional green spaces and advocacy of SuDS, and recognition of need for long-term management and maintenance. Believe dark corridors are essential for wildlife and quiet spaces are important for wildlife and people; would like to see specific policies to protect and enhance dark corridors and quiet spaces.

- The Port of London Authority support reference to blue and green infrastructure, including aim to enhance accessibility to the blue infrastructure network, particularly rivers and their banks, for leisure and recreational use.
- Habitats & Heritage comment it is essential to protect as well as enhance green corridors, including dark corridors used by bats and other species at night. Green corridors are not mapped and the definition is not clear. Protecting only designated open spaces will not ensure protection for many species most at risk and subject to action plans in the Richmond Biodiversity Action Plan, whereas Policy 39 sets out a more comprehensive vision. Applaud introduction of requirement to provide space for food growing in new developments; this is needed and needs to be part of the design of landscaping of developments at an early stage.
- The Environment Agency are pleased to see value of green and blue infrastructure recognised. Part 2.7 of the Policy would be strengthened if refer to enhancing biodiversity value in a measurable way.
- A comment would like to see wording ensuring wildlife corridors are functional during the night as well as during the day. Unless completely unavoidable, should have no light spill from artificial lighting which has been shown to have detrimental effects on bats. The borough is important for bats, and richness in biodiversity is an important part of the borough's character. The wide extent of artificial lighting causes fragmentation of habitat; to prevent worsening need new lighting to be kept to a minimum and opportunities taken to review existing lighting in areas adjacent to important bat habitat.
- A comment could the commitment in paragraph 12.7 regarding multi-functional green space be included in each of the larger site specific plans, highlighting where this is missing. Site Allocation 10 St Mary's University should be a statement about the biodiversity value of the site and connectivity via the Thames to Ham Lands/Young Mariner's Club. Site Allocation 34 Stag Brewery

<p>should include greater provision for biodiversity, incorporating provision for roosting bats, and a wildlife corridor between the River and Mortlake Green.</p> <ul style="list-style-type: none"> • A comment many community groups want to enhance their local area but face barriers from the Council. A policy encouraging working together would accelerate improvements and attract external funding. • <i>Virtual event feedback</i>: Other ideas included better connections between the ‘Green’ and the ‘Blue’, for example in Radnor Gardens to improve the park to river access for things like paddleboarding and jetties to flow into park. There was also support for more covered outdoor spaces that can be used in all weathers. 	
Policy 35. Green Belt, Metropolitan Open Land and Local Green Space	
<ul style="list-style-type: none"> • A comment suggesting policy wording to add reference to cycle storage as appropriate small-scale structures in part C, and to refer to accessibility for disabled persons and those travelling via Active Travel modes in part D. • The Royal Parks welcome the policy, given both Bushy and Richmond Parks are designated MOL. • A comment ‘very special’ circumstances should be changed to ‘exceptional’ to give the fullest protection. • FORCE welcome the clear statement on Green Belt and MOL protection and associated test of very special circumstances for development, and commitment that visual impacts of developments on sites in proximity will be taken into account. Keen to uphold the sense of “escape” and associated mental health benefits provided by natural vistas, and keen to avoid intrusion of light into dark corridors. Welcome no changes to the Green Belt boundaries. • A comment there is no mention of the importance of the playing fields and other Green Belt land as flood storage areas. For example the playing fields on the Stag Brewery site are in Flood Zones 2 and 3 and should remain green. The Mortlake Brewery Community Group applied to the Council to have the playing fields designated as LGS but there has been no positive response and would like to know the reason. • A comment terminology should match the NPPF and London Plan more closely. 	<ul style="list-style-type: none"> • The policy reference to acceptable inappropriate development has been moved to only be referenced in the supporting text. • A minor amend to the supporting text has been made to address improving accessibility to open land for a range of users; a reference to cycle storage is added to the supporting text. • The detailed comments on the site specific MOL assessments have been considered by the consultants Arup who undertook the Open Land Review. Where appropriate, updates to the methodology/site assessments/scoring have been made in an update to the Open Land Review, although these do not alter the overall outcome of the assessments.

- *See Habitats & Heritage comment on Site Allocation 5 concerned at the MOL release until a plan is agreed for the restoration of the important green corridor and so that relevant parts should be kept as MOL.*
- CPRE London suggest the policy wording is not compliant with London Plan or NPPF; it suggests MOL has policy goals and leaves MOL open to threat from development.
- The Mayor of London is pleased to note the strong protection of Green Belt in accordance with London Plan Policies G2 and G3 and following recommendations of the Open Land Review in retaining Green Belt designations. Note the majority of MOL identified as strong performing with some specific areas scoring weakly including the proposed release of Sainsburys car park and some front gardens. Alterations to MOL boundary should only be changed in exceptional circumstances when fully evidenced and justified; none of the three sites appear to meet the MOL criteria and the Mayor raises no objection at this stage, subject to detailed justification being provided in the supporting evidence.
- A comment in support of maintaining the openness of the Green Belt. General support for the allocated site proposals for Hampton with caveats. Releasing the MOL designation of the Sainsburys car park will only work if adequate customer car parking is retained, and for Hampton Square proposals. *See comments on Site Allocations 1 and 5.*
- A comment the MOL assessments for Little Green and Thames Old Deer Park should be retitled.
- A comment on the pocket of land (landowner) within the former Thames Water Operational land adjacent to west of Sunnyside Reservoir, Lower Hampton Road in relation to the claimed designation as Green Belt and that it is performing weakly against the NPPF criteria. Details the shortcomings and omissions in the Green Belt designation, until 1993 it was part of Spelthorne BC and not designated as Green Belt, and there are no records to legally designate the land as Green Belt. Details the performance against Green Belt criteria, that the site is constrained on all four sides and does not protect a gap between settlements. Refers to the 2017 Local Plan Inspector's Report which set out the

Council should satisfy themselves the Green Belt boundaries were correctly depicted and correct any errors.

- Two comments on the MOL status and boundary anomalies to remove any question of important part of Old Deer Park ceasing to being designated as MOL. The current Policies Map is unclear. The MOL assessment unjustifiably severs the area south of the A316 despite it forming an integral part of the Park, forming the most accessible part of the park from the town and riverside. The eastern third provides an integral part of a pedestrian link. The scoring of the MOL parcel assessments for The Green and Little Green are flawed and do not recognise its accessibility to the riverside and the town, the historic significance and amenity value to the community.
- *See comment from Sainsbury's (landowner) on Site Allocation 5 supporting the removal from MOL.*
- A comment from Putney Town Rowing Club (landowner) the MOL should include the car park adjacent to the boathouse/gatehouse together with the school playing field adjacent and to the west. Allotments in the site are not mentioned.
- A comment the MOL assessment for Fulwell Golf Club contains inaccuracies, errors and omissions. Details provided including public access, allotments, public right of way, biodiversity and contribution to habitat connectivity. Suggest these could have significant potential to result in higher scores for MOL criteria.
- A comment the MOL assessment for Longford E & Schools contains some inaccuracies, providing details including the public right of way, nature conservation, and historic and cultural heritage value, and highlights potential for a wildlife corridor link.
- A comment from Petersham Nurseries (landowner) that the site fails to meet four of the MOL criteria and should be excluded. Suggest the hedgerow and wall provides a natural buffer between the site and Petersham Meadows which is distinguishable from the built environment.
- RFU (landowner) comment the eastern edge of the MOL should be de-designated. Consider the MOL assessment justifies the removal of the hardstanding associated with the Stadium.

<ul style="list-style-type: none"> • A comment from the David Lloyd Club (landowner) that the MOL boundary does not follow any defensible boundary, cutting through the site, and is considered weakly performing and should be released from the MOL. Suggest the boundary is drawn southwards from the tennis courts to exclude the southern portion of isolated MOL land. • Thames Water propose the removal of Hampton Water Treatment Works (landowner) from the Green Belt. The operational site is of strategic importance for London’s water supply and it is inevitable that further upgrades will be required. The site has a built up nature. Disagree with the findings of the Green Belt assessment, which is unclear and flawed. • A comment that the Udney Park Playing Fields Trust welcome the retention of the site as an asset of community value and as LGS. • Habitats & Heritage support the new LGS designations, and ask to consider Teddington Library Gardens as an additional LGS. 	
Policy 36. Other Open Land of Townscape Importance (OOLTI)	
<ul style="list-style-type: none"> • A comment questions whether the biodiversity /nature conservation criteria could stand on its own, removing the reference to meeting one of the above criteria. • A comment wish to see the quantum and openness defined more precisely where OOLTI will be reprovided; even if new smaller spaces are of high quality they would not act as a replacement. Suggest refer to quantum as broadly equivalent proportions to the existing OOLTI. Same principles in terms of openness. The timing of re-provision should be controlled, so on a major scheme it is not only re-placed in the last phases, and defined in the policy. • A comment concern at the re-provision of the OOLTI on the Brewery site as question the quality, character and biodiversity of the reprovioned space. • <i>See the HBF comment on Policy 10 which raises protecting large swathes of the borough including as OOLTI is unjustified given the documented housing problems.</i> • A comment of support for the green at Ellerman Avenue becoming OOLTI. Funding has been received to “wild” up the green which has resulted in a small wildlife rich area. 	<ul style="list-style-type: none"> • It is not considered necessary to amend the criteria for designation; as this policy is to safeguard open land of local importance. • It is considered further definition for the re-distribution of OOLTI is not necessary, as it will be context specific. • Note the support for the new OOLTI at Ellerman Avenue.
Policy 37. Public open space, play, sport and recreation	

- | | |
|--|---|
| <ul style="list-style-type: none"> • The Royal Parks welcome the policy states public open space, such as Bushy and Richmond Parks, will be protected. Welcome provision of new open spaces as part of new development which could mitigate potential increases in visitor numbers to existing parks. • Sport England refer to the updated guidance on planning for sport and note the Playing Pitch Strategy adopted in 2015 is being kept up to date and support the update being considered. Their new Strategy 'Uniting the Movement' is about the big role of sport and physical activity in improving physical and mental health, through connecting communities and active environments. Wish to ensure the choice to be active is easier and appealing for everyone, and would welcome a reference to their design guidance on 'Active Design'. • Sport England support the clear protection for sport and recreation facilities in line with the London Plan and NPPF. Welcome the requirement for early engagement with Sport England for development affecting playing field. Welcome the aspiration to secure community use agreements in order to ensure that private sports facilities meet the wider needs of the community. • Sport England comment for any future site allocations, sites for sports facilities should be identified through a robust evidence base such as the Playing Pitch Strategy. The NPPF states it is important to ensure the right facilities in the right place. Essential that where sites adjacent to playing fields are redeveloped the new use does not prejudice the use of the playing field. Note the aspiration open space delivered as part of housing developments and mentioned in several site allocations; request for major developments the evidence base for support determines whether on-site sports facilities may be appropriate. • FORCE are strongly in favour of investing to improve underutilised open spaces for public and environmental benefit, and improvement to those spaces at risk of excessive wear-and-tear from new development. At a basic level, frequency litterbins are emptied after weekends. When play space is provided in private developments, support expectation for play spaces to be made publicly accessible, and important on-site facilities are maintained. The Council are reluctant to take on responsibility for new green and open spaces through planning gain or its own estate; a missed opportunity for significant public benefit and note the Twickenham Junction Rough has provided a major public | <ul style="list-style-type: none"> • Criteria at paragraph 21.27 has been imbedded into the policy to ensure existing open space is protected from development. • The updated Richmond Playing Pitch and Outdoor Sports Strategy is anticipated to be finalised in 2023 and will operate alongside the Local Plan to inform decision-making. • Policy 37 explicitly requires new major developments to provide additional open space, as well as improving existing space where accessibility in inadequate. • Amend the Policies Map to redesignate the eastern strip of land at Heathfield Recreation Ground as public open space. • Update the Public Open Space Deficiency Areas on the Policies Map, in line with the Open Spaces Assessment 2023, including update to the accessibility standards. • Add reference to Community Use Agreements and artificial grass pitches, given the need to make best use of sites. • Add reference to the Richmond Public Health Physical Activity Plan 2021-2031 and Sport England's Active Design Guidance in the supporting text, giving emphasis to the importance of active environments. • External lighting is considered under Policy 43. |
|--|---|

benefit. As population grows the benefits of local open space are better understood, and need and value then becomes greater. Propose a specific policy to encourage the Council to take the opportunities for new public open spaces.

- The Mayor of London support references to children and young people's play facilities and note the references to the GLA's child yield calculator, London Plan benchmark of 10sqm per child, and the Mayor's Play and Informal Recreation SPG. Paragraph 21.27 sets clear criteria for the loss of facilities and should be embedded in the policy. London Plan Policy S4 notes the importance of informal recreation and paragraph 5.4.2 highlights the lack of opportunities for children to play in their local neighbourhood; a recognition of informal play would be welcome, connected to the Healthy Streets Approach.
- A comment the policy is not fully evidenced to be justified, although the intention to prepare updated Public Open Space deficiency maps should address this.
- A comment note the Playing Pitch Strategy will be updated in 2022; it is essential Udney Park retains the status granted in the current Local Plan as a strategic site in the provision of playing field capacity at this end of the borough, as demand exceeds supply and all capacity / potential capacity must be protected irrespective of site ownership.
- A comment notes the further sports review to be undertaken in 2022.
- CPRE London comment an area of land at Heathfield Recreation Ground was proposed for a school site and should be added back in and given protected status. More needs to be done to turn 'grey' space to green or community open space.
- Another comment that a portion of Heathfield Recreation Ground was taken out of the Public Open Space designation to allow for the redevelopment of Heathfield School in the early 2000s; now not going ahead the POS removal should be reversed.
- CPRE London believe the Council could demonstrate greater ambition for increasing the amount of green space e.g. new parks in areas of the borough with not enough green space by converting 'grey space' into streetparks.

<ul style="list-style-type: none"> • A comment supporting the reference that, regardless of the type of open space provision, it should be designed with nature conservation and biodiversity benefits in mind. Add about the importance of avoiding artificial lighting in order to provide dark corridors. • Two comments proposing no changes. 	
<p>Policy 38. Urban Greening</p>	
<ul style="list-style-type: none"> • The National Trust support the policy, as urban greenspace has a proven impact on health and wellbeing, as well as providing environmental benefits. Refer to research on the economic case for investing in green infrastructure. Support for strategic green infrastructure and small spaces that cumulatively can have a significant impact on greening. Support criterion D focus on the climate emergency and biodiversity, and welcome reference to locally relevant greening to add to the identity and connect to the local area. • A comment that only major development need to do calculations – move to something like 5 units or over. A comment all sites should contribute to the greening of streets or local areas. A comment that biodiverse green roofs are needed. A comment that design guidance for houses favour pitch roofs so may need to be altered so more green roofs can be constructed. • A comment that part E should be amended as there is no evidence to justify the 70% requirement which limits space for rooftop amenity, plant/services and is too restrictive. • <i>Virtual event feedback:</i> There were many suggestions to support our urban greening policy: <ul style="list-style-type: none"> • An interest in integrating policy requirements for items like bee bricks and bat and bird boxes. • Proper maintenance and consideration of trees - not just numbers. • Pop up allotments and food growing spaces, using as educational tools. • Desire for sensory planting and areas of wildflowers. 	<ul style="list-style-type: none"> • It is considered that the policy reflects appropriate requirements for biodiverse green roofs and the technical details for floorplates.
<p>Policy 39. Biodiversity and Geodiversity</p>	
<ul style="list-style-type: none"> • A comment support increasing biodiversity and greening the borough and the initiatives in the Plan to support this. Building on greenfield sites tends to offer most provide and more attractive, and trees, hedgerows, wildlife are more likely to be cleared around the time of a land sale destroying complex mature habitats; needs to be more lifecycle responsibility for green sites so initiatives to retain and enhance biodiversity are monitored beyond initial development 	<ul style="list-style-type: none"> • Clarify the approach to blue and green infrastructure, particularly the importance of ecological corridors. • Clarify how back gardens will be protected from development to protect this cumulative key wildlife habitat resource.

plan. Council appears to have limited powers in prevention, even in designated green space and often only aware when too late. Developers demonstrating environmental conscience should be welcomed and responsibility with site owners to evidence ongoing maintenance plans, and take a positive approach to budget to demonstrate impact of development on existing species during and after development, to improve future decisions. Green roofs and walls should be additional measures rather than replacements for existing biodiversity; new habitats are not usually a valid replacement for mature complex habitats. Local opposition to measures less likely to succeed in areas where little finance to hire experienced planning barristers; would welcome any funding to be provided by development companies to ensure adequate representation (similar to party wall disputes funded by the owner wishing to build).

- A comment part B.3 delivering offsite biodiversity value is likely to favour profit over biodiversity, since difficult to predict the impact on other ecosystems connected to the existing site; propose this is removed as an option.
- A comment part B appears to apply less obligations on protecting biodiversity than national and London Plan policy and guidance, narrows the application of the mitigation hierarchy versus its application elsewhere in planning guidance, and is inconsistent with the objectives/principles of the Plan which depend on whole ecosystems and ecological networks – an apparently ‘less significant’ feature may nevertheless play a vital role. Suggest maintain the explicit application beyond designated SINCE sites, as the obligation to protect biodiversity applies even if a site has not been designated. Suggest make explicit the requirement to firstly and wherever possible avoid harm; add as per the London Plan Policy G6 A and C. Even with clear contextual clarification on the mitigation hierarchy, NPPF paragraph 180 must be fully taken into account; it may be helpful to provide explicit clarity on the requirement for adequate mitigation / compensation without which planning permission should be refused (not the same thing as simply achieving biodiversity net gain).
- The Royal Parks welcome the Policy given the SSSI designation of both Richmond and Bushy Parks and the National Nature Reserve and SAC designation of Richmond Park.

- Clarify the biodiversity mitigation hierarchy in line with the NPPF and London Plan, covering non-designated sites and the additional hierarchy to be applied to SINCEs.
- Clarify the requirements for information to be submitted with applications including for major developments and small scale development.
- Amend the policy and supporting text to refer to the importance of dark environments and the opportunities to maintain these in line with the Biodiversity Action Plan.
- Amend the policy and supporting text to refer to a measurable net gain for biodiversity including the relevant metric and good practice guidance, and the details confirmed following the Environment Act.
- Add to the supporting text the provision of swift bricks is expected at one per dwelling.
- Update the supporting text to refer to locally important geological sites.
- It is not considered appropriate to make further detailed changes including reference to buildings-based species, or requiring the submission of ecological data to GiGL.

- The Royal Parks welcome the Policy and the protection and opportunities it offers for enhancement of designated sites and green corridors. *See also comments on Appendix 4 in relation to proposed SINCE extensions.*
- FORCE welcome commitments to protect and enhance biodiversity and geodiversity and protecting ecological or wildlife corridors from development. Favour an approach that starts by recognising biodiversity potential of a site rather than its current biodiversity status as the relevant baseline from which to evaluate genuine biodiversity net gain, and trust that this approach will inform the upcoming SPD. Trust the new SINCEs will be implemented (whether or not the population increases as forecast) as will make an important contribution to countering the Climate Emergency and improving physical and mental health of existing residents.
- A comment there is little mention of geodiversity. There is a proposal to include the landforms and Pleistocene deposits of Richmond Park into a new Geodiversity area.
- A comment the requirement for 20% Biodiversity Net Gain goes beyond Government requirements or the London Plan, and a Whole Plan Viability Assessment has not been published. The cost of BNG must be allowed for in the forthcoming Viability Assessment; presently the policy is not justified and unsound.
- The Port of London Authority welcome references in part A.4 to the need for development to deliver measurable net gains for biodiversity by incorporating/creating new habitats/biodiversity features, and part 5 which requires at least 20% BNG. As part of this it should be noted net gains in biodiversity can be achieved in and alongside riverside areas as well as on land. Note the future SPD and the PLA requests to be consulted. Suggest amended wording for A.4 to reference green 'and blue' links.
- The National Trust supports the Policy; everything must be done to prevent the decline in biodiversity. The National Trust is committed to creating 25,000 ha of new wildlife habitats by 2025 to provide more opportunities for nature and people to connect to nature; recognise multiple small and local actions that enhance and improve biodiversity add up. Support A.5 which requires a minimum 20% biodiversity net gain and appreciate this target is one of the

more ambitious within the region. Support part C which positively supports proposals that will reduce deficiencies in access to nature and green space. Aligns with our values and the NPPF.

- A comment raise concern the 20% biodiversity net gain requirement will be unfeasible. It is twice the requirement sought through the Environment Act 2021; it is unsound and should be amended to reflect the requirements of the Environment Act. Site Allocation 5 should be amended to refer to 10% BNG (*see also comment on Site Allocation 5*).
- The Environment Agency welcome blue-green infrastructure, biodiversity and rivers are all covered in separate policies and the ambitious policy for 20% Biodiversity Net Gain set on most types of new development. A third of the borough's land is parkland or green open space, and policies recognise the importance of this to the borough's unique character. *See also comment on Policy 34 which links biodiversity value and Policy 39 with green and blue infrastructure. See also comments on the Strategic Objectives and Policy 3 which seek to expand on the link between the climate and biodiversity crises.*
- The Environment Agency are pleased to see an ambitious policy for 20% Biodiversity Net Gain to build on requirements in the Environment Act. Much of the secondary legislation and guidance is still under consultation before the requirement becomes mandatory in 2023, including expanding the metric to consideration of marine (sub-tidal) biodiversity and which types of development will be included; recommend the policy remains flexible so can be applied in conjunction with and compliment the mandatory net gain requirements. Note householder development is included in the Policy requirement and consideration should be given whether DEFRA metric 3.0 is appropriate; Natural England have developed a Small Sites metric which may be applicable. The policy should include a demonstration the requirements are consistent and proportionate to the size of development proposals and any potential impact on biodiversity. In point A the biodiversity value of rivers should be acknowledged, as some of the biggest assets and opportunities to enhance them should be sought; the links between biodiversity, climate change, food risk, and the Water Framework Directive should be made. Clarity of point A.5 would be improved if changed to 'provide a measurable 20% net

gain for biodiversity, in line with the DEFRA metric 3.0 or latest available version'. Policy should also include a requirement for developers to demonstrate how they have followed the mitigation hierarchy and demonstrate they have followed CIEEM BNG good practice. The rivers section of the DEFRA Biodiversity metric penalises encroachment within 10m of top bank, so providing a 10m buffer zone would help sites with a riverine element (requested a 8m buffer zone from fluvial main rivers so if extended) synergise well with BNG requirement. Note intended SPD and appreciate some comments could be explored in more detail in this.

- A comment welcome parts A.2 and A.4 and paragraph 21.66 for their requirement to provide integrated nest boxes, in accordance with the London Plan and the NPPG, and welcome encouragement for swift bricks as a universal nest brick which benefits a range of birds. Request a requirement for nest boxes to be installed in accordance with CIEEM best practice guidance with regard to recommended densities (1:1 swift bricks to residential units, and one swift brick per 6sqm of façade on commercial buildings).
- A comment paragraphs 21.66 and 21.70 relating to swift bricks are a welcome implementation of London Plan Policy G6 item B4, and the reference to universal nest bricks is welcome representing the latest guidance from NHBC and CIEEM. However important omission is these should be implemented in accordance with best practice (RIBA, CIEEM, and imminent British Standard), on average one nest brick per dwelling. Note Brighton & Hove Council go beyond this requirement.
- A comment the requirement to provide data to GiGL is in the current Local Plan, but is largely ignored by developers despite its promotion as good practice, and understand the Council has no means of enforcement. Suggest include a requirement in paragraph 21.67 that all ecological data must be submitted to GiGL at the same time any ecological survey is submitted; any planning application cannot be accepted under this requirement has been fulfilled (this accords with CIEEM guidance which clarifies the whole dataset should be available on request).

<ul style="list-style-type: none"> • Habitats & Heritage comment it needs to be compulsory for developers to lodge with GiGL all data collected during ecological surveys, enforced through planning conditions or some other way. • A comment paragraph 21.67 is welcome but does not clearly consider the impact on buildings-based species of bat and birds; suggest wording to add reference to including buildings-based species. • A comment that biodiversity net gain should include a time factor – in ensuring displaced species are displaced to suitable nearby habitat and not eliminated. Also a requirement to demonstrate actual net gain over a period of several years, not purely an intention to create which fails due to poor implementation e.g. tree planting fails or ‘lip-service’ placement of bat boxes. • A comment requesting some specific commitments to retaining and increasing areas of darkness in and around features with known/likely biodiversity value or which have the potential to act as nocturnal wildlife corridors should lighting be reduced or removed. Richmond Bat Species Action Plan Steering Group’s recommendation would be to exclude the introduction of street lighting, waymarking lighting on key dark habitats primarily (but not limited to bats) in these areas including restrictions of light pollution from developments adjacent to the key nature reserves and habitats: Ham Lands, Ham Avenues, Ham Common, Ham Common Woods, Petersham Common, Terrace Gardens, Ham and Petersham towpath, Kew towpath, The Old Deer Park, Barnes Common, London Wetland Centre, Richmond Park, Bushy Park, Barnes Towpath, Home Park, Barge Walk (towpath Home Park), Marble Hill Park, Corporation Ait, Flower Pot Islands, Petersham Meadows, Petersham Lodge Woods, The Copse, and Glover’s Island (Petersham Ait). • <i>See also comments on Appendix 4 in relation to site-specific designations of Richmond SINCs and Candidate SINCs.</i> 	
Policy 40. Rivers and river corridors	
<ul style="list-style-type: none"> • River Thames Society note the Council is proud of the river-related industry, but the last remaining working slipways are at risk (at Platts Eyot and Eel Pie Island). Only rigid planning controls can protect these and the Policy needs to be worded more strongly to protect these and other river-related uses, many of which struggle to compete with alternative uses on strictly financial criteria. 	<ul style="list-style-type: none"> • Part F of policy 40 clearly states that the loss of river-dependent and river-related uses will be resisted, this includes slipways and therefore no change is proposed. • additional wording is added to reflect that public access to the riverside should be accessible at all times.

River-related uses should be for the benefit of the general public. Policy 47 on the use of the river for transport depends on the continuation of river infrastructure, as well as working boatyards with slipways also means wharves and landing stages.

- River Thames Society comment any public access which is secured is genuine and free for all at all hours, not conditional and limited at the discretion of the developer/riparian owner; this prevents the creeping privatisation of what should be public space.
- Richmond CVS suggest the Plan could think about the neighbouring boroughs' development on the borough borders and ways of working cross borough to gain benefit along the length of the river that flows through it.
- FORCE comment the Policy is presented largely with reference to the River Thames, and believe many of the ambitions and protections proposed would be equally applicable to the River Crane. The Crane has more scope to add marginal value in terms of amenity and public health benefits; the Council as a major riparian owner should have scope to influence development outcomes. Welcome the recognition in paragraph 21.89 to the aim of creating a metropolitan park incorporating river restoration works along the lower Crane, and the explicit linkages to relevant Site Allocations. Support the requirement to enable public access to the riverside environment and would like this extended to the Crane and all feasible sites, at all times of the day and night, while protecting the river corridor from light and noise pollutions. Strongly support the requirement for an 8m buffer zone.
- A comment Port Hampton Estates Ltd generally support the provisions of the policy, but consider that it needs to address the situation where site specific conditions may preclude meeting all or some of these objectives; alternatively this could be addressed in the text/policy for Platts Eytot.
- A comment pleased to see reference to the Thames Policy Area and the special character of the reach set out in the Thames Landscape Strategy and Thames Strategy (latter should add 'Kew to Chelsea'). Interested to know what the Local Plan has to say about the GLA's Green Grid Study (2016) which showed the whole section of the river in the borough as 'Arcadia'. Paragraph 21.84 should include reference to the groundwater hydraulic flow systems and where they

- In response to CVS' representation, the Council works closely with neighbouring boroughs, partner organisations and stakeholders through for example strategies such as the Thames Landscape Strategy etc.
- FORCE's ambitions are already covered in the policy as well as in paragraph 21.89.
- In response to Port Hampton Estates Ltd, it would not be appropriate to refer to site specific circumstances or conditions as the onus will be on the applicant to demonstrate and set out why criteria cannot be met.
- The Thames Strategy will be correctly referred to as "Thames Strategy (Kew to Chelsea)".
- The detailed requests for technical groundwater flooding matters are already sufficiently covered elsewhere in the Plan.
- A reference will be added to exploring opportunities to improve accessibility between different areas of the borough that are separated by the borough's rivers, such as between Ham and Twickenham.
- The Port of London Authority's suggestion on strengthening suicide prevention measures is agreed, and wording in relation to appropriate drowning prevention measures is added to Part D of the policy as well as to the supporting text.
- A reference is added to support initiatives to de-culvert rivers where it is feasible and practicable to do so, with a reference to the Council's Surface Water Management Plan, which outlines this measures as generally not suitable for constrained or heavily urbanised areas.
- The comment on requiring access to and a public footpath along Longford River is noted; some of this is addressed in Policy 47 around the GLA's new requirement to set out a full network of walking and cycling routes.
- Part A of the policy will be amended to take account of the Environment Agency's (EA) requests. In addition, the supporting text will be amended to refer to Policy 8 in relation to the set back requirements for rivers as well as including a reference to creating buffer zones that support green infrastructure networks and reduce light spill into the river. A new paragraph is added to reflect the EA's comments on barriers to fish movement.
- Add to the supporting text to clarify the remit of the Marine Plan and the Marine Management Organisation (MMO).

intersect particular aquifers can be a zone of particularly sensitivity, which need careful mapping and control of any building work, especially basements.

Paragraph 21.87 about the network of linked waterways should refer to barriers to movement and need for expensive bridges and ferries.

- The Port of London Authority in principle welcome the Policy, predominantly unchanged from current policy. To strengthen the policy recommend contains a specific reference to the need for development proposals adjacent to the riverside to consider appropriate suicide prevention measures, such as CCTV and appropriate fencing/edge protection and signage, in line with the PLA's guidance and the Tidal Thames Water Safety Forum Drowning Prevention Strategy. Suggest adding reference to part D.
- A comment need to map covered rivers and seek redevelopment proposals to see that they are restored to a natural uncovered state. Ones run through Fulwell Bus Garage, Kneller Hall and Twickenham Stadium. The Council should explore options to open up Longford River to more public access.
- The Environment Agency suggest could promote the link between protecting and enhancing river corridors for design reasons as well as biodiversity and flood risk benefit. Suggest update part A to incorporate the multiple benefits that can be achieved.
- The Environment Agency comment all waterbodies are failing to achieve 'good ecological status' or 'good ecological potential' and development needs to address this; the policy should acknowledge the need to bring into good ecological status/potential. Note requirement for set back is in Policy 8, but could sit under this policy; Part F. should be corrected so it is in line with Policy 8 or expand buffer zone requirements to a subsection of the Policy. Undeveloped buffer zones have multiple benefits, and suggest additional wording and would welcome a separate advice note on watercourses, including on the design of new riverside development (and the inclusion of buffer zones); landscape design of the riverbank; public access; surface water run-off and the avoidance of pollution and weirs/barriers to fish passages. (*see comment on Policy 8*)
- The Marine Management Organisation note paragraph 21.88 which means there is an overlap with terrestrial planning which could be referenced, with the

• The CVP only endorses FORCE's formal response, which is already addressed elsewhere.

• Policy 40 sufficiently addresses the points raised in relation to Mereway Day Centre site allocation.

• A definition has also been added to the glossary to clarify the remit of the Marine Management Organisation (MMO).

<p>benefits of working with the MMO, and ensuring the policies do not conflict through referencing specific and relevant marine plan policies. Ensure correct reference to the South East, South, and East marine plan areas where included. Refer to a webinar on the South East Marine Plan Implementation Training.</p> <ul style="list-style-type: none"> • See general comment of the Crane Valley Partnership endorsing comments of FORCE and reinforcing the Colne and Crane Valleys Green Infrastructure Strategy which identifies a range of river corridor enhancement and active travel opportunities, with the need for a coordinated approach to river corridors. • See comment on Site Allocation 14 in relation to development adjacent to the river. 	
Policy 41. Moorings and floating structures	
<ul style="list-style-type: none"> • A question how the Council will deal with requests to use riverside structures for different purposes; likely to be increasing pressure for greater commercial use extending further towards Petersham. • A comment part C includes important principles and the Council needs to follow through with enforcement action when the existing rules appear to be being flouted. Harsh words appropriate in relation to planning transgressions, most particularly for floating structures purported to be for wider benefit for the community but this cannot be demonstrated. • The PLA support the principle unchanged from current Policy LP19. The supporting text states the Council has limited powers regarding the appearance of boats and therefore recommend further justification is required for inclusion of the policy wording (replacement houseboats should not harm the character of the river). • The Environment Agency support the presumption against new houseboats but suggest part A wording is updated to say ‘no new proposals for houseboats’ to strengthen argument against any new or extensions to houseboats. • The Environment Agency comment applications for new and replacement moorings and floating structures invariably involve sheet piled bank protection methods and result in shading of the river. Policy should discourage the use of hard engineering approaches to riverbank protection where possible. • Elmbridge Borough Council would welcome sight of the evidence base that supports the approach to resisting new proposals for houseboats. EBC has 	<ul style="list-style-type: none"> • Provided more clarity regarding the application of criteria B of the policy, including in the supporting text at paragraph 21.102. • Emphasised the importance to protect the biodiversity of waterbodies in the policy and the supporting text. • MOL designation heavily restricts development along the river to water-based activities such as sport and recreation and would protect against changes of use that would conflict with these uses. • Planning Enforcement is a discretionary function of the Council and appropriate action is taken in line with the Council’s Planning Enforcement Policy and the NPPF. • ‘Presumption against’ is a strong policy position, and the supporting text in paragraph 21.101 further outlines potential negative impacts of new development. The wording provides limited flexibility for potential exceptional cases otherwise not captured by the policy. • New housing development is inappropriate development on MOL and so a more flexible policy would undermine this designation. As noted above the policy provides limited flexibility for potential exceptional cases. The Council’s research has considered riverboat dwellers.

<p>recently assessed the housing needs of boat dwellers on the River Thames in Elmbridge and found there is a need for 10 additional moorings.</p>	
<p>Policy 42. Trees, Woodland and Landscape</p>	
<ul style="list-style-type: none"> • The Woodland Trust in general welcome the policy. Recommend strengthening part B.2 on ancient woodland to include minimum 50m buffer, and make clear applies to ancient and veteran trees outside woods as well as the full range of ancient woodland habitats. Recommend strengthening part B.5 requirement to replace lost trees on a greater than 1:1 basis, to increase the canopy cover in line with biodiversity net gain requirements, using a ratio based on their guidance. Recommend strengthening parts B.6 and C.3 with preference to UK & Ireland sourced and grown tree stock. • A comment that there is a gap in planning policy on protection of hedgerows which are important in an urban setting for supporting biodiversity, and could be given prominent and explicit protection within the Local Plan. Suggest for example clarifying existing hedgerows will be protected in part A and that conditions will be used to protect hedgerows in part C. • <i>Virtual event feedback:</i> There were also concerns about tree removal and the level of protection given to trees in policy. 	<ul style="list-style-type: none"> • Reworded criteria A to provide further clarity regarding what the London Plan policy G7 requires. • As there is no ancient woodland within the Borough, criteria B.2 was reworded to make reference to historic parkland as suggested by the Woodland Trust. • Included more explicit support for hedgerows in the supporting text and linked this to the Council’s biodiversity objectives. • Included more explicit support for increasing the Borough tree canopy cover in line with wider London Plan objectives. • Referred to the proposed Tree Planting Strategy being prepared by the Council’s Tree team.
<p>Policy 43. Floodlighting and other external artificial lighting</p>	
<ul style="list-style-type: none"> • FORCE raise concern at the presumption floodlighting of sports pitches will be permitted unless there is demonstrable harm, as this can be very difficult to demonstrate e.g. species may have abandoned spaces. Oppose floodlighting of College Field and Moor Mead Park in the River Crane corridor, and the lighting of any path along the River Crane or Duke of Northumberland’s River. Council should adopt a policy that recognises and protects the value of dark corridors through the borough as important for wildlife. • The National Trust supports the policy; aligns with the NPPF requires new development to take account of light pollution. Welcome criterion D.1 as light pollution can have a significant adverse impact on the historic integrity of historic building. • A comment that within a biological context the body of evidence for artificial light causing harm is extensive, and disturbance of nature often causes harm. Current Ecological Impact Assessment guidelines are clear a precautionary 	<ul style="list-style-type: none"> • The wording of Criteria A has been altered to put emphasis on the need to demonstrate there should be no unacceptable harm, and to clarify how this should be justified in an application. • The wording of paragraph 21.114 has been altered to ensure that any likely harm is considered in the context of Criteria D. • Added a reference in the supporting text to the importance of dark environments, and to the Institution of Lighting Engineers Guidance Note for Bats and Artificial Lighting. • Dark corridors are not formally identified in the Plan as not considered practicable – not being a national or London Plan requirement, given other designations for open space and biodiversity, and as generally difficult to achieve in urban environments; may be opportunities to maintain dark night-time corridors/refuges in line with Plan priorities and the Biodiversity Action Plan.

approach to evaluation must be applied, thus it is appropriate to assume a significant effect where artificial light may impact on biodiversity. NPPF includes no presumption in favour of floodlighting. Issues are the policy and supporting text do not apply the appropriate standard, and appears to place the burden of proof on the Council, rather than requiring the developer to submit enough information to fully consider the effect on protected species and their habitats. Any presumption in favour is contrary to trends in understanding how artificial light harms biodiversity, efforts to maintain dark corridors and decrease harmful light pollution. Suggests detailed wording to apply a precautionary approach.

- A comment that improvement of existing lighting installations should be considered against the appropriate 'baseline' to avoid temporary installations being used as a way around this policy.
- Habitats & Heritage comment the policy is not adequate to protect biodiversity. Reword part A to put the onus on developers to carry out a full assessment to demonstrate there will be no harm. Part E is open to abuse as it is not clear how long the lighting being replaced needs to have been in use.
- The Environment Agency comment rivers and river corridors should be free from direct lighting to minimise impact on nocturnal animals. All artificial lighting should be directional and focused with cowlings to reduce light spill, refer to the Institute of Lighting Professionals guidance. Where floodlighting is likely to result in light spill into the river corridor, a luminaire schedule should be submitted and a bat survey carried out.
- A comment the emphasis is the wrong way round, floodlighting should not be permitted unless it can be shown that there would be no harm to biodiversity.
- A comment part A feels weighted in favour of floodlighting that is far from essential; harm is not easily demonstrable. Applicant should set out the actual need for lighting.
- Sport England welcome policy considers the positive benefits of sports lighting and reference to their guidance. Newer forms of LED lighting less problematic in terms of light spill and timing can be automatically controlled.
- A few respondents noted no comments on this policy.

Improving design, delivering beautiful buildings and high-quality places

Policy 44. Design Process

- A comment noting the quality of design is itself subjective, although underpinned by policy and guidance, and by the Urban Design Study. It is good to see the Design Review Panel formally included as part of the process. This policy would sit better in the section on Local Character and Design Quality.
- A comment that it is not clear how proposed developments will be judged to determine whether they are beautiful or not, which is subjective. Applications are validated that do not provide sufficient information on judging sensitivity to the surrounding area – all applications that potentially affect the street scene should include before and after street scenes of the development and its surrounding properties, perhaps 3D representations, and this requirement can be mandated in the Plan.
- Two comments the reference in part B to the design guidance for the relevant character area in the Urban Design Study should be omitted insofar as it refers to Tall and Mid-rise Building Zones for Richmond and Richmond Hill.
- The CCG suggest Public Health should be involved in the local design coding process (*see comment on Policy 28*).
- A comment whether it is possible to meet part C as pre-applications do not have any timescale for assessment, especially for smaller projects and household developments can be time wasteful, and the guidance can be overturned at formal application. The previous duty planning officer system was a better way of getting feedback, please reconsider reintroducing a meeting.
- *Virtual event feedback:*
Some responses to the meaning of ‘good design’:
 - Materiality – detailed proposals at ground floor where live or interact.
 - Contemporary better than pastiche.
 - Should ideally promote a sense of connection with surroundings and the area.
 - Bring people together in communal spaces and encourage a sense of community.
 - Ideas to improve design quality focused on function, longevity, connection and sustainability.A requirement to consider the lifespan of material choices during planning, for example timber cladding, was also suggested. Concerns were raised about implementation and monitoring as being a barrier to design quality. There were also caution about expecting the planning process to do too much.
- Minor rewording of the policy and supporting text to enhance clarity of the policy requirements.
- Additional bullet to main policy added on fire safety requirements during design stage, plus an additional paragraph in the supporting text.
- Supporting text on community engagement expanded to clarify expectations and reference draft ‘Raising the Bar’ guidance.
- Rewording of Part C to reference strong encouragement of developers engaging with pre-app, rather than ‘it is recommended that all planning applications receive pre-application advice’, to change the nuance of the expectation slightly given that there will be circumstances where pre-app is not necessary (fully policy-compliant minor householders eg).
- No amendments to the position/numbering of the policy in the Local Plan, which is considered to be logical and appropriate.
- No amendments to policy to stipulate what ‘beauty’ is, given that good design is subject to a number of factors which are often site-specific.
- No amendments to require CAD streetscape visuals for all applications, as a blanket approach is not considered appropriate given that such visuals would not always be essential to make a planning judgement on the acceptability of an application, and streetscape visuals are already required within the Local Validations Checklist for infill developments.
- No amendments to reference to Urban Design Study, as this would be relevant to all applications, including Tall and Mid Rise Building Zones and applications in Richmond and Richmond Hill.
- No amendment to stipulate involvement in local design code process, as this is not a direct comment on the Local Plan / policy.

Policy 45. Tall and Mid-Rise Building Zones

- The Royal Parks raise tall buildings around the Parks can have a significant impact on their character; welcome protection of views and vistas towards heritage assets and the protection of parks.
- A concern that mid-rise buildings may be permitted outside the zones, as once developments such as Homebase are built proposals in the vicinity will use that to argue for compliance with part C.
- Historic England support the policy and provides appropriate criteria to positively manage the conservation of the historic environment and consideration of local character. Reinforces that higher densities can be delivered through mid-rise development. Minor comments on where the policy could be improved – avoid harm to vistas and views, and a key or explanatory text to the maps with colour gradients in Appendix 3.
- FORCE would like to see the same criteria applied to the River Crane where appropriate as applies to tall and mid-rise building near the River Thames frontage. There are no tall building zones within the Crane and DNR corridors, and the only mid-rise building is The Stoop, and would oppose any further designations as higher density development has disproportionate impacts on adjacent open space. Committed to protecting vistas in open spaces; tranquillity and escape is compromised by visual intrusion, and the absence of such should be a public benefit.
- A comment this policy would sit better in the section on Local Character and Design Quality.
- Royal Botanic Gardens Kew request further information and justification on the heights for the zones in proximity to Kew Gardens, including F1 (Richmond Station), F3 (North Sheen), and G3 (Kew Retail Park). Strongly against any development that would have an adverse impact on the WHS. Suggest wording is amended to ensure a maximum height, and only appropriate where fully justified through a tall building assessment. Support A.5 supported by graphic 3D modelling, including Accurate Visual Representations and lighting assessments, and wish to be consulted on any future planning applications for these sites.
- Additional paragraph added to Appendix 3 to clarify the colour coding for the heat maps and to refer to the explanatory text accompanying the mapping in Section 4.6 of the Urban Design Study.
- An amendment to include ‘and their setting’ to the reference to heritage assets in Part C2 of the policy.
- Amendment to the Urban Design Study to add additional bullets to the negative qualities section for Kew Residential.
- Additional text added to the Kew ‘sensitivities’ section in the Urban Design Study to reference character and views to/from the River Thames, landscape and open spaces, surrounding low rise houses, Ruskin Residential & Defoe Avenue Conservation Area, wider context of the Royal Botanic Gardens Kew World Heritage Site, and the setting of/views from opposite the river bank within LB Hounslow.
- Removal of reference to Kew Biothane as a consented tall building, as it does not meet the definition.
- Amendment made to text within Appendix A justifications section in Urban Design Study to clarify the scenario testing on Kew Retail Park site included a range of heights up to 9 storeys, rather than just 9 storeys.
- No amendment to text which states that there may be some circumstances where mid-rise buildings will be considered appropriate outside of designated zones. Part C of the policy sets out the circumstances and a criteria which development must meet. The policy wording is considered to be sufficiently robust to protect the borough against inappropriate mid-rise development.
- No amendment to requirement to ‘respect’ local context, as ‘respect’ is used throughout the Local Plan with regards to design and is not considered to be ambiguous.
- No requirement to reference the River Crane and Duke of Northumberland River in the same way as the River Thames in the policy. The River Thames and Thames Policy Areas are specifically referenced in the London Plan and thus it is appropriate that development near this river has its own section in Policy 45. There are no tall building zones directly adjacent to these subsidiary rivers and any such development would in any case need to comply with the requirement

<ul style="list-style-type: none"> • RFU suggest revised wording for Part A as recent case law confirms tall buildings can be acceptable outside zones provided they meet London Plan Policy D9.C, and the portion of Site Allocation 13 to the north of the stadium is less sensitive in townscape terms and should be included in Appendix 3 (see comment on Site Allocation 13 on the Urban Design Study and that the stadium merits its own character area; and support acknowledgement of areas more able to accommodate growth and change and would support an approach to stepping down in massing as suggested). • The National Trust support the policy including to prohibit tall buildings outside of the identified zones. As landowner for Ham House, support A.1 and C.2 with regard to heritage assets. Suggest strengthen C.2 to reference heritage assets and their setting. • London Square comment the Greggs site (landowner) is not included in locations for tall or mid-rise development, and the refused application proposed a mix of building heights rising to 5 storeys which has been accepted in consideration of the application and the Urban Design Study; the Greggs site should therefore be included as an area suitable for mid-rise development in the Plan. • A comment the policy is too prescriptive and gives no opportunity for consideration of detailed design to influence the extent to which a location is capable of being able to accommodate a tall building, suggest reference to tall buildings will normally only be appropriate in tall building zones. • The Environment Agency suggest part B of the policy should recognise the biodiversity value of setting tall buildings back from the river; proposals for tall buildings close to the river should be submitted with a Transient Overshadowing analysis. • Two comments that the policy should be amended to omit any reference to the acceptability of development above 5 storeys in the character areas F1, F2, F3 and G1 to reflect the maximum height of existing development, with parts of the Urban Design Study reflecting a flawed analysis and appreciation of this area. The claim that tall buildings can make a positive contribution has not relevance at all to the existing urban character of Richmond. 	<p>in Policy 45 that waterways are respected, as well as other policies protecting rivers in the Local Plan.</p> <ul style="list-style-type: none"> • No amendments to incorporate a 'view premium' on residential development adjacent to open spaces/riverways. It is not clear what this would entail. Local Plan Policies 31, 35, 36 and 40 allow for assessment of the impact on open spaces and/or river views. • No amendments to remove Policy 45 as a separate policy. London Plan Policy D9 requires Councils to identify tall building zones and thus it is appropriate that provision for this is via a standalone policy. • No amendments to remove Richmond Station, North Sheen and Kew Retail Park as tall building zones. The methodology underpinning the Urban Design Study, which includes scenario testing of the zones and their impact on the surrounding area, is considered to be robust and sound. • No amendment to Kew Retail Park tall building zone text in the Urban Design Study to reference 8 storeys, as scenario testing showed that heights above this would likely be visible from the World Heritage Site. • No amendment to the policy stipulation that applications for tall buildings outside of the designated zones will not be supported. Policy 45 is considered to be in general conformity with London Plan D9 whilst also seeking to make it specific and appropriate to the borough, having regard to the local environment and evidence, as set out in the Urban Design Study. The approach is considered to give clarity to developers, residents and decision-makers. • No amendment to include Twickenham Stadium as a tall and mid-rise building zone, given the sensitivities of the wider area. • No amendment to include the former Greggs Bakery site as a mid-rise building zone, noting its assessment as having a low probability of change, largely due to its designation as a Key Business Area and Locally Important Industrial Land and Business Park (part of the West Twickenham cluster). Further, the policy does not preclude mid-rise development from coming forward outside of the designated zones. • No amendment to include reference to the ecological value of setting tall buildings back from the river. Part B of the policy already requires buildings to maintain the river frontage as a public resource and to be set back and Criteria
---	--

<ul style="list-style-type: none"> • Two comments concerned at the support for high-rise development at the Richmond Station and elsewhere given the potential for interrupting views/vistas important to Old Deer Park. • A comment opposing designating North Sheen as a location suitable for tall buildings, with an 8 storey building overbearing and visible from Conservation Areas. • St George Plc and Marks & Spencer comment (landowner) the general principles of the Urban Design Study are sound and well justified, and support the need to identify specific locations for tall building development, but are concerned with the lack of detail in the supporting evidence particularly to underpin where tall and mid-rise buildings are considered appropriate. Generally agree with the findings of the townscape character assessment of the area, concerns with its ability to support the parameters set in the Plan. Suggest West Park Avenue is in East Kew Mixed Use Character Area (G3) but is more similar to Kew Residential (G2) and a revised boundary could run along Kew Meadow Path. The valued features for G3 contain repetitions. In the design guidance it is not appropriate to state that tall buildings are to be set in landscape. There is a need for a detailed townscape character assessment. The study fails to identify existing tall building development in the borough, which highlights the lack of a thorough, granular assessment. Tall buildings are capable of being acceptable in areas of lower height, and London Plan Policy D9 allows for such an approach; the recent Hillingdon judgement makes clear tall buildings can be found to be acceptable in areas that are not identified where they meet D9.C and thus the analysis of acceptability should allow for some flexibility. For G3 lack of referent to the Kew Biothane Plant redevelopment. If the supporting evidence was underpinned by a thorough assessment, the sensitivity for G3 would be identified as low, and question the medium probability to change given the site allocations, which would increase the development capacity to the highest rating. Raise a lack of consistency in the definition of a 'tall building' (example of Kew Biothane) and that using scenarios to test appropriateness of tall building zones ignore the importance of viability. It is not necessarily the case that tall buildings require space around them. Sets out detailed comments on the analysis of the Kew Retail Park site, while 	<p>5 of Part F requires the setting back of development from river banks. Matters of ecology and biodiversity can be assessed under Policies 39 and 40 of the Plan. Policy 39 has been amended to reference dark spaces, that are important for some species, and to specifically cite blue links.</p> <ul style="list-style-type: none"> • No amendment to the character area boundaries, which are considered to be logical and have also been subject to public consultation. • No amendment to remove any values qualities for Kew 'place' from the Urban Design Study, which are considered to be sound and appropriate. • No amendment to guidance in Urban Design Study on landscaping and connectivity to the river in Kew 'place', which are considered to be appropriate aspirations. • No amendment to include reference to existing tall buildings in Kew 'place', which are already referenced. • No amendment to reference to Kew Biothane Plant redevelopment in relation to the Kew Retail Park site in the Urban Design Study. Whilst consented developments influence the assessment of appropriate heights, they do not affect the probability and development capacity analysis as set out in the methodology. • No amendment to 'Probability' section in Kew 'place' in the Urban Design Study, noting that other factors also influence probability, including PTAL. The methodology is considered to be sound. • No amendment to the design guidance for Kew 'place' in the Urban Design Study, as it is not considered that there are any conflicts with the guidance set out in the London Plan.
--	--

<p>welcoming the identification able to accommodate tall buildings, suggest a scenario of 8 storeys and the testing of 9 storeys should be made available.</p> <ul style="list-style-type: none"> • St George Plc and Marks & Spencer (landowner) suggest amends to the policy, including deletion of A.10 and C.5, and around the function of the base of buildings in line with London Plan D9. • A comment the Kew Retail Park should be no more than 5 storeys, over the whole site, in keeping with adjacent development. • <i>See also comments on Appendix 3 in relation to site-specific designations for tall and mid-rise zones.</i> 	
Policy 46. Amenity and living conditions	
<ul style="list-style-type: none"> • A comment this policy would sit better in the section on Local Character and Quality. • A comment regarding first floor roof terraces when considering the impact on neighbour amenity and overlooking. The policy references and SPD suggest such proposals will not normally be acceptable, yet the assessment is subjective, and permitted in a specific case. The objecting neighbour is unlikely to afford an appeal, creating an unconscious bias in favour of applicants. 	<ul style="list-style-type: none"> • Add clarification in the policy and supporting text to separate the different types of amenity impact and add reference to noise and plant equipment which can impact on amenity. • Update the supporting text with reference to the Mayor’s latest London Planning Guidance. • Policy 46 replaces Local Plan Policy LP 8, which is a standalone policy. Considered appropriate to include in this theme. • No amendment regarding roof terraces. A blanket restriction would not be appropriate. New development is expected to have neighbouring amenities at the forefront of its design. Where there are likely to be impacts, developers are expected to mitigate these via the design of the development and/or agree to conditions attached to the planning decision. The wording of Policy LP46 is considered to sufficiently make this requirement of developers clear. However, owing to its existing built-up nature, the majority of development in London will have some impact on neighbouring amenities. That there would be some impact does not mean that the effects would be unacceptable for the occupier(s). Further, compliance with the development plan needs to be assessed by reference to the content of the plan as a whole. Thus it does not mean that a proposal which has some unavoidable impact on neighbouring amenities, and where all reasonable steps have been taken to account for this, would warrant overall refusal of the application. • No amendment based on Appeal process and bias. All planning decisions are made in accordance with the development plan, unless other material planning

	<p>considerations indicate otherwise. Planning decisions are based on a planning judgement following an assessment of the scheme. The Appeals process exists for where developers feel that planning permission was refused for reasons that they think go against the development plan. Where an application is refused and then appealed, the Council would seek to defend their reason(s) for refusal on policy grounds and make a case to the Planning Inspector (PINS) on this basis. A costs application would only be granted by PINS where the Council has been found to have acted unreasonably, or caused the appellant unreasonable costs or delay. That these processes exist, and the reasons for them, does not mean that planning officers would have a 'subconscious bias' towards a developer, or any other interested party.</p>
<p>Reducing the need to travel and improving the choices for more sustainable travel</p>	
<ul style="list-style-type: none"> • TfL welcome the aspirations to implement the 20 minute neighbourhood concept, reduce the need to travel and improve the choices for more sustainable travel. Helpful to reference the Mayor's Vision Zero ambition for road safety. Commend adopting London Plan parking standards and encouragement of car free development, however not always reflected in site allocations and text which refers to car parking requirements or needs. Welcome intention to seek contributions towards active travel improvements and enhanced public transport capacity and infrastructure. Welcome safeguarding of transport land, this should be extending to existing transport infrastructure as well as future schemes. As part of the evidence base recommend potential need for borough-wide strategic transport assessment to address concerns about deliverability and useful when considering transport impacts of major sites. • Highways England comment there are no sections or junctions with the Strategic Road Network (SRN) in the borough, although a series of junctions lie just beyond the boundary that could still be affected by development and policies within Richmond (M3 J1 including short section of A316, M4J1 and J2) and interested as to whether there would be any adverse safety implications or material increase in queues and delays on the SRN. Encourage policies and proposals which incorporate measures to reduce traffic generation at source and encourage more sustainable travel behaviour. Require a robust evidence 	<ul style="list-style-type: none"> • Regarding the need for a Borough-wide strategic transport assessment to help assess the cumulative impacts of major developments, the Council strongly encourages applicants to use the pre-application advice service it offers to work with Council and TfL Officers to agree with parameters of any vehicular traffic impact assessment and the tools used to complete this.

base and refer to their guidance. Accept that policies and allocations will have no boundary issues related to the SRN. Welcome the exploration of strategic traffic modelling and expect necessary SRN improvements to have been identified for allocations and tested as part of the long-term Transport Strategy, considering individually and the cumulative Plan impact. It could identify necessary highway improvements as part of the Infrastructure Delivery Plan, so the only consideration as part of a planning application would be phasing of development, with conditions to ensure infrastructure is in place prior to development becoming operational to ensure operation and safety of the SRN.

Policy 47. Sustainable travel choices (Strategic Policy)

- A comment support these policies and note they are well matched with those promoted by TfL. However, note the evidence base does not include any borough-based transport studies. Note developments that would generate high volumes of trips should be focused in PTAL areas 4-6 unless mitigated by bus service improvements; highlights some of the problems arising from the development of the Stag Brewery. Note paragraph 23.12 that safe networks should be created for pedestrians and cyclists and conflicts with deterioration of safety conditions around Mortlake Station and the Council's stance on the provision of local schools. Note the policy protecting local filling stations has been omitted – ask if expecting to be phased out as more cars become electric, where will tyre pumps and car wash facilities be located? There are only two filling stations in the East Sheen Society area and one of them is listed Grade II, question if it will soon become under threat.
- A comment infrastructure plans are needed to larger developments e.g. dangerous traffic congestion along South Worple Way and question how traffic will be managed with new larger development there. Congestion on the Upper Richmond Road at peak times has caused Queens Road to be used to access South Worple Way as a rat run, there is insufficient turning circle.
- Richmond Cycling Campaign is overall highly supportive of the Policy, it includes many positive measures to deliver on the strategic vision enabling choosing to walk or cycle. Suggest a number of improvements. Part B should also refer to improve infrastructure on the cycle network. Part C should also refer to Local Transport Note 1/20 Cycle infrastructure design. Part D ask to confirm if

- Supporting text relating to refuelling stations has been amended for clarity.
- Additional general information about safeguarding for transport schemes and infrastructure has been included in the supporting text.
- The impact of construction traffic on highway safety is assessed as part of any transport assessment.
- Further additional references included in policy to specific cycle design guidance.
- Clarity on references to most up-to-date Inclusive Design guidance.
- Amendment to specify in policy that there is an overall objective to reduce the proportion of trips taken by private car.
- Amendment to specify that major developments must demonstrate how they help to meet sustainable transport mode targets.
- The impact of development proposals on air quality and wildlife habitats and vegetation is assessed by the Environmental Health team and not through the transport assessment process.
- Additional text highlighting importance of high quality, safe access to public transport services in supporting text.
- Agree supporting text should also refer to vulnerable road users.
- River Crane is not maintained by the Council but contributions can be secured as long as they meet CIL Regulations (2021).

'Inclusive Mobility' is referring to Inclusive Mobility: a guide to best practice on access to pedestrian and transport infrastructure; if not please refer to. Paragraph 23.4 add reference to bus and cycle links. Paragraph 23.4 clarify if the Policy intends future improvements are to be implemented before the occupation of new development, as travel habits form early must be implemented before the occupation or use of a new development. Paragraph 23.12 clarify the measures should be applied in all new developments, while the use of modal filters should be considered for addition; reference LTN 1/20 in addition to the London Cycling Design Standards. Paragraph 23.12 the Council should also ensure that signage and waymarking of the sections of National Cycle Route 4 that passes through the borough is achieved, along with other cycle routes passing through borough. Paragraph 23.19 refer to sustainable and active travel.

- TfL support the potential requirement in part B to provide financial contributions towards increased capacity or improved infrastructure. However, public transport capacity constraints may apply in higher PTALs and the wording should make it clearer there is a potential requirement for contributions in all areas regardless of PTAL; the level and type of mitigation will be informed by a multi-modal assessment. Part C could refer to implementing measures identified through an Active Travel Zone (ATZ) Assessment in line with the Healthy Streets Approach. Part H should refer to safeguarding existing transport infrastructure.
- TfL comment on paragraph 23.2 helpful to clarify developments will need to demonstrate how they are contributing to the Council's sustainable transport mode split targets.
- The Royal Parks comment specific reference should be made in this section to the impact of traffic and associated air pollution on designated sites and priority habitats, such as: Richmond Park SAC, SSSI and NNR; Bushy Park SSSI; veteran trees; and acid grassland; and highlight the need for the impacts to be mitigated by measures to reduce traffic in and through such sites and habitats.
- A comment Part C should be made clear that such walking and cycling routes should not obstruct public transport nor adversely affect the safety of those less able (e.g. cycle route running inside a bus stop so that persons alighting a

- London Plan does not have maximum off-street parking standard for coaches and this is therefore discussed on a case-by-case basis. Amendment to part I to specify policy also applies to coaches and public highway should only be used for minimum time necessary for dropping off and picking up and where there is no off-street alternative.
- General reference added to traffic calming measures as Richmond does not have LTN (but it does have a number of school streets).
- Bus garages will be protected unless it is demonstrated they are no longer operationally needed. Policy amended to state this will need to be confirmed by TfL.
- Council's Active Travel Strategy and LIP 3 contain details of the borough's strategic cycle routes and quietways and these documents are referenced in the policy.

bus might encounter cyclists on the pavement). Part D relates to disabled persons but there are many others (e.g. elderly less able but not disabled) who will be excluded by the priority of cycling over public transport which appears to the case in the Plan. Sustainable travel choices should be inclusive and the needs of the ageing population an important consideration relating to travel and the 20 minute neighbourhood.

- Sport England fully support the Policy which promotes a high quality walking and cycling environment, in line with Sport England's own aims around Active Design. *See also comment on Policy 37.*
- FORCE fully support improvements in transport provision for both cyclists and pedestrians, and appreciate commitment to signage and way marking of the River Crane Walk (23.13) and improvements that have been made in recent years. Believe scope for further improvements along the River Crane and DNR that will benefit road traffic management, connectivity and public health. Would like to see improvements to path beside the River Crane to increase clearances for pedestrians and cyclists under Hospital Bridge Road and A316, de-trafficking of Craneford Way between Challenge Court Meadow and Craneford West Field, path through Twickenham Rough during hours of traffic restrictions on RFU event days or ideally unrestricted. Concerned at the in-borough focus of the Policy, when need to consider at a sub-regional level in partnership to deliver cross-borough links. The Colne and Crane Valley Green Infrastructure Strategy 2019 sets out a strategy for enhancing the linkages; the Local Plan would benefit significantly from adopting the Strategy as a strategic objective for enhancing green links as well as committing to specific interventions identified. FORCE is currently engaged with the Crane Valley Partnership to develop the Smarter Water Catchment programme, funded by Thames Water, one of the key elements is to identify the opportunities and blockages to green travel through the catchment and the work is being delivered by Sustrans; hope the Council will engage with the next phase which will seek to prioritise improvement options along the corridor. FORCE have conducted usage surveys for over 10 years at multiple locations along the River Crane and DNR and show the order of magnitude increases in cyclist and pedestrian usage that can follow investment; data and insights can be shared.

- Royal Botanic Gardens Kew note Part I confirms where appropriate taxis, minibuses, coaches and PHVs can be safely accommodated; and comment they have seen a reduction in coach parking in recent years which is unfortunate as it provides an efficient and sustainable way for visitors to major destinations. Support the Policy and request that existing coach parking on surrounding streets is retained and where possible improved. RBK Kew also support improvements in public transport to reduce car trips, however the need for sufficient car parking for visitor and specialist staff needs remains an important part of daily operations.
- Cycling UK comment on Part C cycling proposals should adhere to LTN 1/20, unless physically impossible, as the most up to date specification. Paragraph 23.8 should refer to a network linking people's homes with schools, workplaces, shops and other destinations. Paragraph 23.12 management of other users should include excluding through traffic from residential roads as LTNs; maybe protected lanes rather than segregation. Paragraph 23.13 should also extend to NCR4 in the borough and the local cycle network (if we had one).
- A comment on paragraph 23.11 developments must be permeable on foot and by cycle if appropriate. Paragraph 23.14 promoting new access routes and transport links should not cause consequential harm to the amenity of existing users of the route or nearby residents. Paragraph 23.24 the Plan needs to recognise that taxis and PHVs are increasingly being used to make deliveries from food businesses and dark kitchens; may need to be managed while waiting to avoid bringing harm to other road users.
- TfL Commercial Development comment the policy wording does not recognise that bus operations can be made more efficient and sustainable as part of redevelopment; suggest wording changed to reflect enhanced provision has been made as part of a redevelopment of the site or made elsewhere.
- Mayor of London refer to TfL comments, and welcome references to Active Travel. Welcome intention to safeguard land required for transport schemes, which should also be extended to existing transport infrastructure in accordance with London Plan Policy T3. It will be important the transport chapter identifies the need to secure land for transport and outlines future plans and proposals in line with Policy T3 and the emerging Sustainable

<p>Transport, Walking and Cycling London Plan Guidance (LPG). The Plan should identify walking and cycling networks and any gaps or potential improvements.</p> <ul style="list-style-type: none"> • Ham and Petersham Neighbourhood Forum comment the aims and aspirations of the section are in line with the Neighbourhood Plan and updated in the context of the climate emergency and new London Plan. Important to include that active and sustainable travel infrastructure (part C and paragraphs 23.4 and 23.6) should be installed prior to occupation of new development to enable new residents to support positive habit formation. Ask to confirm if ‘National Design Guide’ is referring to LTN 1/20 or future equivalent. Support reference to Manual for Streets. Ask to confirm if ‘Inclusive Mobility’ is referring to Inclusive Mobility: a guide to best practice on access to pedestrian and transport infrastructure or future equivalent. Suggest the Plan should address increasing issue of car charging cables across pavements which are a trip hazard. Paragraph 23.11 taking into account additional travel demand of development and to support active travel. Paragraph 23.12 clarify new design should meet the London Cycling Design Standards. Paragraph 23.13 support wayfinding and marking of routes; cycle routes should be network and identified by numbers. • Crane Valley Partnership comment generally that the Plan should be informed by the Colne and Crane Valleys Green Infrastructure Strategy (2019) which identifies a range of river corridor enhancement and active travel opportunities in the Borough (<i>see comment on General</i>). • Elmbridge Borough Council support the Policy, though it is unclear what the proposed major developments are as Table 1 does not exist in the document and requires clarification. Whilst Surrey County Council is the Local Highways Authority, welcome direct discussions on opportunities for connecting two boroughs through active travel means. 	
Policy 48. Vehicular Parking standards, Cycle Parking, Servicing and Construction Logistics Management	
<ul style="list-style-type: none"> • TfL comment on paragraph 23.10 when referring to London Plan minimum standards for cycle parking, helpful to add developments that exceed the minimum will be encouraged. 	<ul style="list-style-type: none"> • Policy amended to state cycle parking should be provided at least in accordance with the London Plan standards. • Site Allocations seek to strike a balance between provision of car parking and encouraging active travel and highway safety.

<ul style="list-style-type: none"> • Mayor of London pleased to note the intention to adopt London Plan parking standards and encouragement of car free development in accordance with London Plan Policy T6; also expect to see this reflected in Site Allocations. • TfL comment on paragraph 23.21 welcome safeguarding of bus garage facilities, but should make clear in all cases TfL agreement will be needed to confirm that any replacement facilities are fit for purpose and capable of being delivered, or existing facilities are surplus to requirements. This will need to take into account need for additional space to accommodate alternative fuel facilities. • A comment paragraph 23.25 need to be balanced against the issues of excessive paving and loss of valuable green space and flooding adaptation. • A comment that the borough only grants car-club spaces to the most expensive profit-making car clubs, asks has consideration been given to involve a non-profit making one. Understand they have to pay for on-street spaces at a higher rate and is counter-productive to reducing car ownership and waiving this cost might enable lower fees. • A comment welcome general approach that new developments will not necessarily be associated with right to resident parking. However, should be accompanied by a more radical approach to CPZ parking rather than individual developments being considered in operation. The Council causes a significant problem in my local CPZ X (probably applies elsewhere) as no restriction on number of resident parking badges each household can have, found reoccurring problems as insufficient space for contractors' and delivery vehicles on an occasional basis, suggest a solution; a broader-based approach to parking restriction would make it easier to justify not allowing resident parking for new development. • TfL strongly support the requirement to provide cycle and vehicle parking in line with London Plan policies and standards, including reference to London Cycling Design Standards. Where parking is provided, a Parking Design and Management Plan should be submitted with the application. Welcome part F encouragement of car free developments in PTAL3 or above. In F5 where CPZs are not already in place it would be appropriate to encourage developments to provide funding towards implementation of a new or extended CPZ (or equivalent controls). In F8 and part I it may not be appropriate to require car 	<ul style="list-style-type: none"> • Policy amended to state developers must secure an accredited car club operator. • Policy sets out circumstances in which an applicant will need to complete an on-street parking stress survey to support their case as to whether occupants should be included in or excluded from a CPZ. • Note TfL support for consideration of car-free development in PTAL 3 or above. Council's view is that developers should continue to provide access to car club vehicles in areas with a high PTAL as they help to reduce car ownership by providing residents with use of a car when they need it. • Council does not want to encourage provision of disabled parking by developers on street through the policy. It will continue to be considered on a case-by-case basis where developers are seeking to demonstrate there is no alternative. • Policy has been amended to refer to developers contributing to cost of providing cycle parking off-site. • London Plan does not specify a requirement for cargo and non-standard cycles. The policy references London Cycle Design Standards where 20% of spaces should be for large bikes. • Electric vehicle charging points for vehicles should be on-site wherever possible. The policy has been amended to state provision should be in such a way that ensures the development is safe for other road users. • Cycle parking should be well-located and close to the pedestrian entrance of the main building. The policy has been amended to state it should be easy to use by people of all ages. • Car free developments may be appropriate in areas with a PTAL of 3 or above, and the list of criteria in the policy will also apply. • Additional references to guidance on servicing and refuse collection have been added to the supporting text of the policy.
---	--

club spaces in developments in areas of very good connectivity. In part G may be a need to consider on street disabled persons' parking spaces on constrained sites otherwise suitable for car free development. In part H where there is no physical possibility of accommodating short stay cycle parking on site, on street provision may need to be considered as set out in paragraph 23.35. In part L helpful to refer to TfL guidance on Delivery and Servicing Plans. In Part M it would be helpful to refer to Construction Logistics Plans rather than Construction Traffic Management Plans, to ensure consistency with London Plan and TfL.

- Richmond Cycling Campaign overall support the number of positive policies for improving on and off street cycle parking provision, as well as reducing car dominance. While understand the need for compliance with the London Plan, should explore options to further reduce the number of motor vehicle parking spaces provided with new development, as well as allow for provision of a greater amount of off and on street cycle parking, including replacement of on-street car parking with secure cycle parking. Suggest a number of improvements. Part A refer to the impact and use of car-based travel. Part B refer to provision for cargo and non-standard cycles. Part B clarify electric car charging points must be done in a way that is not detrimental to the safety of vulnerable road users, avoids unnecessary street clutter, does not detract from pedestrian, cycle or wheelchair user amenity, and wherever possible are provided on the highway not the pavement. Part C clarify the meaning of "well located" cycle storage, must be more easily accessible and convenient than car storage i.e. next to the building entrance, safe, secure and easy to use by people of all ages and abilities. Part F the deletion of points 4 and 5, or the increase of on-street parking stress permitted to a significantly higher than 85%. Continued provision of additional parking spaces (on or off street) perpetuates the dominance of motor vehicles (cars parked around 95% of their time); car free developments an excellent way to discourage car ownership). Part H refer to provision of lockable on-street cycle shelters. Part I car clubs are a positive measure, but only if deployed at scale, otherwise only ever remain a supplement to owning a car. Paragraph 23.25 delete last sentence (referring to on-site parking). Delete paragraphs 23.27, 23.28 and 23.29 (referring to CPZs).

Paragraph 23.35 delete reference to local support for the Traffic Management Order as illogical that public opinion gathering exercises are to be carried out for installation of cycle hangars, especially if cost is covered by a developer through S106.

- A comment the use of electric vehicles requires parking and no acknowledgement of this is made as a separate matter of parking and electric vehicle parking is included in the required reduction of all vehicle parking; this seems inconsistent – air quality improvements must occur, charging facilities must be provided, but question where are they to park. Part E car free developments but PTAL3 is only moderate , surely car-free developments should be considered where there is good public transport PTAL4 at least. Part F.4 new developments preclude residents from CPZ permits but outside operational hours so increasing parking stress for residents in the CPZ. Realistically people do use cars and increasingly households have on-line deliveries of goods which do not seem to be addressed. Creating car-free major developments may increase congestion, parking stress and difficulties for residents; this may detract from the Living Locally concept and a more realistic approach could be indicated.
- A comment support these policies.
- A comment car-free developments are only mooted for PTAL3 and above but not everyone owns a car and its not fair to make people pay for car parking they don't want/will not use. Maybe better to shift away from wanting highest number of car-free developments and have a percentage of all developments that are car-free instead.
- CPRE London support car-free development and more efforts should be made to use planning policy to restrict car parking and driving. Support proposals to restrict front garden parking. Policies could ensure bus lanes, pavements are given higher priority.
- A comment the location of electric charging points should be promoted within the new development parking provision; on-street embeds parking and detracts from the attractiveness, safety and amenity of the place. Clarify the meaning of 'well-located' for cycle storage so that it is easily accessible and convenience i.e. near the building pedestrian entrance; it should be safe, secure and easy to use

<p>by people of all ages and abilities. The standards in part I seem far too low; car clubs are the opportunity to reduce car trips/ownership and align travel costs per journey more closely with real costs to the environment (individual car ownership puts majority of cost into initial purchase and future journey costs to the car owner relatively small, while costs to environment are high).</p> <ul style="list-style-type: none"> • A comment on paragraph 23.39 this should be expanded to ensure that developers have fully considered and will manage the freight and servicing requirements of residential properties (i.e. not only business needs). 	
Securing new social and community infrastructure to support a growing population	
<ul style="list-style-type: none"> • The Richmond CVS comment on the voluntary sector as owners/leaseholders of community buildings and research identifying they face property issues of affordability of premises, unforeseen repair/maintenance cost, lack of in-house property management expertise, and cost/difficulties of compliance with workplace regulations. Also low awareness of environmental regulations. Local authorities can be landlords, and most common charity sectors were education, health and disability, village halls/community centres, culture, recreation and community development. Outdated community buildings in a poor state of the borough is reflected in the local picture, exacerbated during the pandemic with lower incomes/fees. There is no clear understanding of the assets uses, the communities they serve, and their value in supporting the 20 minute neighbourhood, and it would be useful if the Council mapped and reviewed their buildings and spaces, their maintenance/repair/refurbishment needs and prioritised them in terms of urgency and benefits to the community (<i>see also comment on Policy 21</i>). 	<ul style="list-style-type: none"> • It is considered it would be difficult to map and update existing voluntary sector buildings, and the policy context provides for an assessment of local needs through the planning application process (where permission is required).
Policy 49. Social and Community Infrastructure (Strategic Policy)	
<ul style="list-style-type: none"> • The Metropolitan Police Service seek contributions from major development to cover the cost of policing infrastructure and should be referenced in the policy, the Infrastructure Delivery Plan, and the Planning Obligations SPD. • Sport England note the supporting text refers to indoor sports facilities and welcome the encouragement to engage early with Sport England. • South West London and St George’s Mental Health NHS Trust seek a reference in Part D that other alternative uses such as residential would be considered appropriate, reflecting the London Plan, to optimise the potential on sites. 	<ul style="list-style-type: none"> • It is suggested that a cross-reference to policy 51 is added to the policy and supporting text (paragraph 24.17) in relation to the requirement for a HIAs for residential development of 10 or more units. • Minor updating required to refer to the Integrated Care System which replaced CCGs in July 2022. • It is not proposed to include residential use (open market) as a use acceptable on unviable social infrastructure sites. The policy text as drafted refers to enabling development and also to agreed programmes of re-provision being

<ul style="list-style-type: none"> • The CCG comment on what living locally means for healthcare services and models of care (<i>see comment on Policy 1</i>). The CCG comment that when considering redevelopment or disposal of surplus NHS sites there should be flexibility to allow the loss, or part disposal, in accordance with NHS service transformation and estate strategies. The introduction of housing and other uses provides funds for re-investment, and flexibility would accord with the London Plan. The CCG support clause F and suggest the impact is addressed in a Health Impact Assessment and there should be a cross-reference to Policy 51 B.1. The CCG suggest additional wording that developer contributions will be sought if there is insufficient capacity to accommodate the needs arising from new development, as set out in the Planning Obligations SPD (<i>see also comment on Policy 55</i>). 	<p>taken into account when proposals are determined. However, it is proposed that the supporting text is amended to refer to NHS service transformation.</p> <ul style="list-style-type: none"> • No further changes are suggested. The issue of financial contributions raised by the MPS is dealt with adequately in the text in addition to the reference in the Planning Obligations SPD.
Policy 50. Education and Training	
<ul style="list-style-type: none"> • In relation to identifying sites, this should not include protect green sites/infrastructure, with a suggestion to commission an independent sequential search. A comment that for local authority development there must be safeguards to protect against any questions of bias, with ideally proposals promoted through the local plan. • A comment that schools can have admission priority areas. • Some comments in relation to education provision on the Stag Brewery site (<i>see comments on Site Allocation 34</i>). 	<ul style="list-style-type: none"> • Add clarification to the supporting text on the implementation of Local Employment Agreements to ensure they deliver specific and measurable outputs. • It is considered that in light of safeguarding education land and buildings and the Site Allocations to meet future needs for schools, a site search is not necessary at this time. • It is considered that schools are not able to grant priority to children on the basis of residence within the borough. • The comments in relation to the Stag Brewery site are addressed under Site Allocation 34.
Creating safe, healthy and inclusive communities	
<ul style="list-style-type: none"> • The Mayor of London comment the policies are aligned with the Mayor’s Good Growth objective. 	<ul style="list-style-type: none"> • Support noted.
Policy 51. Health and Wellbeing (Strategic Policy)	
<ul style="list-style-type: none"> • The Richmond CVS comment on a lack of reference to community safety (aside from food and night club licences and reference to crime and minimising anti-social behaviour), given increased concern relating to public safety and measures (e.g. reduction in violence against women, street lighting, stop knife crime) to factor into developing neighbourhoods. 	<ul style="list-style-type: none"> • Add reference in the policy and supporting text to cross-refer to housing design to reflect the importance of healthy homes, as part of the broad approach to health and well-being.

<ul style="list-style-type: none"> • A comment that older people are fit and active but may no longer be able to walk or cycle long distances. A specific point that public transport in the Kew area is being reduced and older people may need to use a car. • Some comments in relation to the approach to takeaways, including whether healthy food neighbourhoods and school super zones should be investigated as an alternative due to the limited impact of this type of policy. • A comment that there are needs of an ageing population with long term health issues (at cost to the NHS and social care) which specialist older persons' housing is designed to alleviate. Therefore the requirements of HIAs should not apply, and should be limited to developments with clear adverse impacts on health and wellbeing and strategic housing. • The CCG comment that the policy should cross reference housing standards, and that there is repetition in the clauses dealing with loss of health facilities. • A comment that the policy should address where and how the provision of public toilets is going to happen, as the Community Toilet Scheme is not working, and details many specific examples of locations across the borough where there is insufficient provision and opportunities exist. • Some general support noted for the policy, including from Sport England, the CCG. 	<ul style="list-style-type: none"> • Add broader references in the supporting text to community safety, including to cross-reference where this is addressed elsewhere in the Plan, and to the emerging new Community Safety Strategy. • Update the supporting text to reflect the move to the South West London Integrated Care System has happened. • It is considered there are already adequate references to recognise the needs of the older population. • It is considered the approach to takeaways is justified (see also Policy 19). • It is considered the approach to requiring Health Impact Assessments is justified. • It is considered that the approach to loss of health facilities should be explicitly stated. • It is considered there are adequate references in the Plan to public toilets.
Policy 52. Allotments and food growing spaces	
<ul style="list-style-type: none"> • Habitats & Heritage support the retention of all allotment sites and their assessment as possible SINCs, but should recognise many require considerable investment e.g. maintaining paths and water supplies, introducing composting. • Comments that the allotments not designated as statutory should be upgraded to such, and that there are waiting lists, with subdivided plots too small for crop rotation. 	<ul style="list-style-type: none"> • Support noted. • Only allotments in Council ownership can be designated as 'statutory'; some allotments are however not in Council ownership and therefore this isn't feasible to do. In addition, designating sites as 'statutory' would need to take place outside of the Local Plan process under the Allotments Act. • Any non-statutory allotments are afforded full protection from inappropriate development through open land designations such as Green Belt, Metropolitan Open Land and Other Open Land of Townscape Importance. • Allotment (including plot) management is not a matter for the Local Plan; respondents are referred to the Council's latest Allotment Strategy 2019-2029.
Policy 53. Local Environmental impacts	

<ul style="list-style-type: none"> • A comment this policy would sit better in the section on Local Character and Quality. • PLA support reference to the Agent of Change principle, in line with NPPF and the London Plan, which states the Council will apply the principle. Thames Water comment the Plan should consider the impact of any development within 800m of a sewage works and 15m of a pumping station, in line with the Agent of Change principle, in line with the NPPF, PPG and the London Plan, through requiring a developer to liaise whether an odour impact assessment is required to assess adverse impact on resident's amenity and any mitigation required. • EA comment in detail on waste management, seeking more details on developer's requirements at waste sites - where poor air quality and excessive noise issues can arise from occupiers of new developments near to these sites. • EA seek clarification in relation to biodiversity - include a definition of receptors in relation to light pollution; support inclusion in relation to construction and demolition that sensitive receptors includes rivers and the habitat they support. • EA comment the Plan should ensure groundwater is protected, identifying sensitive groundwater areas, and where necessary development will not create risk of land contamination whether from previous uses or new development. • EA comment sustainable drainage systems involving infiltration must be assessed with the EA to ensure groundwater protection. • EA comment in detail on development enabling contaminated sites to be brought into beneficial use, and the specific conditions that should be secured and the guidance applicants should be referred to. Suggest a stronger and clearer policy wording to clarify what is required in both terms of assessment and suitability through site investigations, with a risk-based approach to defining contaminated land by identifying the source-pathway-receptor, requiring a Preliminary Risk Assessment where land is potentially contaminated. • Elmbridge Council support the policy and recommend greater emphasis and connection with Policy 3 Tackling the climate emergency, expecting increased development will impact air quality in the Hampton court area. 	<ul style="list-style-type: none"> • Amendment to reflect/reference recent publication of Mayor's Air Quality Neutral LPG 2023. • Minor amendments to incorporate comments from Council's Environmental Health (land contamination) expert, with main change being replacement of 'competent person' with 'aptly qualified person'. • Part C amended to make clear that agent of change principle is relevant to nuisance-generating uses and not just noise. • Intro section of supporting text to Policy 53 added to include short para linking relevance of local environmental impacts to the climate emergency. • Amendment to policy and supporting text to refer to dewatering in Construction Management Plans. • Supporting text of agent of change amended to include odour as a nuisance from existing uses. Supporting text amended to include the addition of a requirement to submit a relevant impact assessment, where development is likely to be impacted by an existing nuisance-generating use, to enable the Council to understand the nature/degree of the impact, and to inform the necessary mitigation measures required to make the development acceptable. • The supporting text on light spill has been amended to make clear that occupiers, residents and wildlife are deemed to be 'receptors'. 'Ecological habitats, including rivers' has been added/clarified as a receptor. • The supporting text on land contamination has been amended to reference Policy 8 (Flood Risk and Sustainable Drainage) and the need to minimise risk of groundwater flooding (which can increase risk of land contamination). Additional text added to outline that water quality must also be protected from land contamination risks. • It was not considered necessary to set out specific distances from certain uses for when an impact assessment (re noise, odour air quality etc) would be required for new development. The policy and text is already clear that the Council will require this information where necessary. • It was not considered necessary to specifically mention waste sites, with regards to applicant's requirements for new developments near these sites, as this is covered within 'nuisance-generating uses' and would be subject to the agent of change principle.
---	---

	<ul style="list-style-type: none"> It was not considered necessary to specify/include all of EA's recommended requirements, as these recommendations are already requirements in other policies within the Plan (eg Policy 8 Flood Risk) and/or would be dealt with outside of the planning process via other legislation pertaining to environmental matters. The requirements set out in the land contamination supporting text are considered to be sufficiently clear, especially as it states that a competent person is required to prepare any necessary reports. The EA would also be a statutory consultee as part of the planning process.
Policy 54. Basements and subterranean developments	
<ul style="list-style-type: none"> A comment that the Policy should be modified to demonstrate that the scheme will not puncture or degrade a sealed or isolated aquifer or increase or otherwise exacerbate flood risk. A comment this policy would sit better in the section on Local Character and Quality. Thames Water comment that the policy should require all new basements to be protected from sewer flooding, through installation of a suitable pumped device, where there is a waste outlet from the basement, as basements are particularly vulnerable to sewer flooding. 	<ul style="list-style-type: none"> This matter is already addressed in Policy 8 Flood Risk and Sustainable Drainage. The policy sits well amongst the policies that focus on creating safe communities, particularly alongside Policy 53. Local Environmental impacts. A pumped device is already requested at paragraph 16.82 of Policy 8. To ensure this requirement is also stipulated in policy, a new criterion is proposed as part of Policy 54 to specifically require the installation of a suitable pumped device to protect from sewer flooding.
Delivery and Monitoring	
Policy 55. Delivery and Monitoring	
<ul style="list-style-type: none"> The Royal Parks note the size and value of the Royal Parks, and it is important some of the value of development helps to support the maintenance, management and protection of Parks which will come under increasing pressure. The CCG welcome the policy, but the clauses under Infrastructure do not refer to social infrastructure and does not reflect the requirements in Policy 49. Part D refers to planning obligations but the SPD is not mentioned in the policy or supporting text, and the requirements for each type of infrastructure. Note the intention to update the IDP and welcome opportunity to contribute so that it reflects the Richmond Health and Care Plan and Richmond Health and Care Estates Strategy. 	<ul style="list-style-type: none"> A formatting error has been corrected in the policy. The section has been expanded to address implementation of the Plan, drawing out details in the supporting text and to reflect the update to the Council's Infrastructure Delivery Plan and Infrastructure Delivery Statement. Reference added in the supporting text to the Planning Obligations SPD. Reference added in the supporting text to the GLA's datahub. Reference added in the supporting text to future Plan reviews being brought forward through the Government's reformed system for plan-making.
Appendices	

<ul style="list-style-type: none"> Two comments note a Glossary should be added. One notes in the absence of one, the definitions in the NPPF will be applicable. 	<ul style="list-style-type: none"> Add a glossary to the Plan.
<p>Appendix 1: List of Key and Secondary Shopping Frontages</p>	
<ul style="list-style-type: none"> No comments received on this appendix. 	
<p>Appendix 2 Marketing Requirements</p>	
<ul style="list-style-type: none"> No comments received on this appendix. 	
<p>Appendix 3: Tall and Mid-Rise Building Zones</p>	
<ul style="list-style-type: none"> St George Plc and Marks & Spencer comment on the Kew Retail Park tall and mid-rise building zones, commenting on the Urban Design Study and suggesting a scenario of 8 storeys and the testing of 9 storeys should be made available, <i>see comments on Site Allocation 30 and Policy 45</i>. A comment on the Stag Brewery (Mortlake) tall and mid-rise building zones. In the UDS there are three locations where there is inconsistency which requires correcting. The appropriate building height references should be to 7 storeys as a maximum height. The darker tall building zone generally accords with the Planning Brief SPD 2011, however the mid-rise zone is far too broad reaching and does not accord with the SPD and in particular clause 5.31 which requires buildings to diminish in height and scale towards the perimeter of the site or along the Riverside; a reduction is not sufficient in the location shown by the contours and ought to be defined further back from the site perimeter and riverside. It could be interpreted buildings up to 6 storeys would be acceptable at the perimeter and along the Riverside but this would be harmful to the Arcadian Thames context, towpath and surrounding character. Given scale of the site, it would be appropriate to enlarge the diagrams in Appendix 4 for clearer definition of the zones. A comment on the Richmond Station and North Sheen (Lower Richmond Road) tall and mid-rise building zones, raising concern about support for high rise development on Site Allocation 24, Site Allocation 29 and Site Allocation 29 and that the Urban Design Study analysis is flawed, <i>see comments on Policy 45</i>. A comment on the Richmond Station and North Sheen (Lower Richmond Road) tall and mid-rise building zones, raising concern about development on Site Allocation 24, Site Allocation 29 and Site Allocation 29 as the Urban Design Study analysis is flawed, <i>see comment on Policy 45</i>. 	<ul style="list-style-type: none"> Many of the comments are similar to those addressed under Policy 45 and relate to specific sites and the text of the Urban Design Study and not Appendix 3 itself. Please refer to the Summary of Reg 18 comments for Policy 45. A supporting paragraph has been added to Appendix 3 to make clear the colour coding and to refer to the explanatory text accompanying the mapping in Section 4.6 'Tall and Mid-Rise Buildings' of the Urban Design Study (nb. this is in response to comment 1023 received on Policy 45). Amendment to the tall and mid-rise zones at North Sheen, Lower Richmond Road, to set the buildings further back from the railway line to the west. The following amendments have been made to the Urban Design Study that do not relate directly to the Appendix 3 maps/diagrams, but were received as comments to Appendix 3 and have not been raised elsewhere in the consultation on the Plan: <ul style="list-style-type: none"> Amended caption to fig. 446 to reference correct name of pub (Jolly Gardeners) Text for Stag Brewery Tall and Mid-Rise Building Zone amended to read 7 storeys to correct consistency issue Added text to Stag Brewery Mid-Rise Zone section state that buildings should step down sensitively to the riverside and respect the character of the Arcadian River Thames and surrounding area of 2-3 storeys Additional text to the sensitivity section of the character profile for Teddington Residential (sub-area B2a) to reference views from within Bushy Park No amendment to the Stag Brewery Mid-Rise Building Zone, as it is considered that is sufficiently offset already to allow for appropriate stepping down to

<ul style="list-style-type: none"> • A comment on the Richmond Station tall and mid-rise building zones, not convinced the area is suitable for taller buildings, <i>see comment on Place-based Strategy for Richmond & Richmond Hill</i>. • LGC Ltd note the Urban Design Study character area appraisal for Teddington Residential (and sub-area B2a) and suggest the LGC site is one of the few areas in the borough that can accept change, through redevelopment that could be progressed in a form that is highly beneficial to the urban design context and is appropriate for designation as suitable for mid-rise buildings. Acknowledge the sensitivity to change, but should be assessed in more detail. An evolving illustrative masterplan suggests mid-rise buildings could be carefully located and designed to step down to surrounding existing and proposed buildings. The site is no longer fit for purpose and must change to ensure business and scientific needs are met into the future, and the probability of change should be increased to high. Given its suitability and moderate sensitivity to change, suggest assess potential to be designated as a mid-rise zone. • A comment on the Kew Retail Park tall and mid-rise building zones, raising concerns developments higher than the existing height cannot be justified, <i>see comments on Site Allocation 30 and site Allocation 31</i>. • A comment on the Teddington (railway side) mid-rise zone raising concern it is inappropriate, <i>see comment on Place-based Strategy for Teddington & Hampton Wick</i>. • A comment on The Stoop (Twickenham) mid-rise zone raising concern would cause overdevelopment, <i>see comment on Site Allocation 12</i>. • Harlequins Rugby Football Club comment on The Stoop (Twickenham) mid-rise zone as believes potential to accommodate 7 stories or more and should be an opportunity for tall buildings, <i>see comment on Site Allocation 12</i>. • A comment on the North Sheen (Lower Richmond Road) tall and mid-rise building zones, in relation to Homebase site, concern not taken into account locally designated cottages on NW border, <i>see comment on Site Allocation 28</i>. 	<p>surrounding low-rise buildings and Mortlake and Mortlake Green Conservation Areas, noting too that the zone does not suggest 5-6 storeys over the entirety of the zone, as reinforced in the supporting text.</p> <ul style="list-style-type: none"> • No amendment to the scale of the Stag Brewery Tall and Mid-Rise Building Zone diagram, which is considered to be of a scale which sufficiently indicates the heat mapping. • The LGC site has not been included as a Mid-Rise Building Zone, noting its assessment as having a low probability of change largely due to its designation as a Key Business Area and Locally Important Industrial Land & Business Park designation (part of the West Twickenham cluster), together with it having a medium sensitivity to and capacity for change, and further noting that Policy 45 recognises that proposals for mid-rise buildings may be considered suitable outside of the designated zones. • The following amendments – as put forward in duplicate comments received to Policy 45 and/or the relevant place-based strategies/Site Allocations, but which also relate directly to the maps/diagrams in Appendix 3 – have <u>not</u> been incorporated: <ul style="list-style-type: none"> – No amendment to remove Richmond Station, Kew Retail Park, Kew Biothane Site and North Sheen as Tall and Mid-Rise Building Zones. No amendment to remove Teddington (Railway Side) and The Stoop as Mid-Rise Zones. The methodology underpinning the Urban Design Study, which includes scenario testing of the zones and their impact on the surrounding area, is considered to be robust and sound.
Appendix 4: Review of Sites of Importance for Nature Conservation	
<ul style="list-style-type: none"> • A comment about Barn Elms. Add the area of <i>Shadwell Pool from Queen Elizabeth Walk to Beverley Brook</i> as a vital and essential area for nature conservation – for protected wildlife like bats, but also only over-land wet area 	<ul style="list-style-type: none"> • The inconsistency in the mapping of the borough boundary around the river has been improved in the Plan.

to and from the London Wetland Centre from Surrey via Richmond Park Roehampton Golf Club and Barnes Common. The *strip of grass between the Wandsworth Tennis courts and the Richmond Playing Field copse belonging to Wandsworth* used to have special status to protect the woodland copse but removed some years ago; protect again to prevent car and boat parking, waste bins and rubbish being placed on it. Ensure the *no floodlighting on Barn Elms* regulation remains and also *address the issue of increasing numbers of mobile lights*. Already on Rocks Lane Sports Centre narrowing the wildlife run, Enable Wandsworth Sports Centre between the copse and Beverley Brook, Richmond Playing Field Tennis Courts and the London Wetland Centre, and Enable will want on their tennis courts too; patchwork of lights blocks the north/south wildlife corridor, insect life is at its peak for first hour after sunset which lights are switched on so seriously affect food supply for nocturnal creatures.

- River Thames Society comment responsibilities over river-related matters are not immediately obvious, and unhelpful the maps (pages 336 and 339) draw over the borough boundary to exclude the water space which is incorrect. While some of the Council's powers do not apply in/over the river, it is still the responsible borough and charts need to be corrected.
- A comment in support of **RiB32 Udney Park** as the fields are an important corridor of green space for wildlife as well as for sports play. Biodiversity studies show varied wildlife – in particular bat species, and has been partially rewilded.
- A comment in support of **RiB32 Udney Park** being designated as a SINC so that biodiversity can be maintained/enhanced. Site hosts multiple and protected species and acts as connecting habitat for flocks of birds and local wildlife. Its earlier OOLTI status did not prevent some destruction of mature habitat, including tree felling and hedgerow removal.
- A comment the Udney Park Playing Fields Trust support **RiB32 Udney Park** for designation as a site of boroughwide importance, consistent with public access and use of Udney Park as a community playing field. It is a critical habitat as part of the local ecology network of SSSIs and home to at least 9 protected species.

- Support noted for designations at a number of sites, including Udney Park Playing Fields, upgrading of Twickenham Junction Rough and of Portlane Brook and Meadow, Richmond Park, Bushy Park and Home Park, and Longford River in Richmond. Noted support for all the new designations and changes from Habitats & Heritage and FORCE, who also support the candidate sites. Objection to upgrade of Hampton Water Treatment Works and Reservoirs.
- It is considered that existing uses, such as car parks, in relation to golf uses and reservoirs, do not mean sites should be excluded from SINC designations.

- A comment in support of **RiB32 Udney Park** as a Borough Grade SINC. The overwhelming evidence base supporting this designation (with references) includes
 - bat surveys onsite in 2016-17 recorded at least 8 different species of bats, report names 9 species.
 - bat surveys in 2019 recorded similar at least 8 different species of bats, report naming 9 species.
 - the Richmond Bat Species Action Plan steering group noted high species richness, including records of species of conservation concern in London; site is part of a network of green spaces connecting two important bat habitats, Bushy Park and the river Thames, and vitally important to maintain these wildlife corridors which are under threat.
 - for the planning inquiry 2019, Peach Ecology assessed as meeting some criteria for a Site Metropolitan Importance for Nature Conservation, most notably species richness and important populations of species.
 - for the planning inquiry 2019, Dr Sarah Cox evaluated the bat data, considered within the context of the wider landscape (GiGL) and agreed with the Council presents an important local assemblage. Given provides functional connectivity and at least eight species, guidelines clear to apply a precautionary approach and evaluate at least at the borough scale.
 - Natural England in 2019 response on the Local Plan Modifications noted the significant role in the provision of a mosaic of linked and related greenspace across the area, including Udney Park as an important 'stepping stone' site for wildlife.
 - Ecological Appraisal from 2016 noted hedgerows more than 20m long, contain 80% native species, and considered as UK BAP habitat.
 - Salix Ecology Review of Sites of Importance for Nature Conservation in Richmond upon Thames (November 2021) Addendum noted further protected and priority species recorded at Udney Park.
- Habitats & Heritage support the new designations and changes suggested, including the recognition of **RiB32 Udney Park (Playing Fields)** in Teddington as a Site of Borough Importance for Nature Conservation.

- David Lloyd Club comment on **RiB07 Fulwell and Twickenham Golf Courses** and the Salix Review of the site. Support the exclusion of the David Lloyd club, its car park and tennis/external areas. The site assessment confirms the area south of the club of neutral grassland, which forms part of the golf practice area, and dispute this is 'semi-improved' given it is regularly cut to facilitate use by the Club; consider this element of the proposals can be removed from the SINC, providing very little contribution to the designation.
- FORCE support the addition of the new SINC, proposed expansions of existing SINC, and upgrading of SINC from Local to Borough importance. In particular welcome upgrading of **RiB29 Twickenham Junction Rough** to Borough Grade SINC and of **RiB24 Portlane Brook and Meadow** to Metropolitan Grade SINC. Support all of the candidate SINC, in particular **50. Kneller Gardens, 8. Twickenham Bridge, 12. Marsh Farm** and **19. Hatherop Road Allotments, 22. Challenge Court Open Space** and **24. Kneller Hall**. Ask the Council to give consideration to the way in which appropriate public access could be secured to new SINC.
- The Royal Parks comment on **M082 Richmond Park and Associated Areas** (paragraphs 5.3.10 and 5.3.11) and assume the additional areas at Richmond Park Golf Course comprise the two small expansion areas on the eastern boundary of the site – note these comprise an existing overflow car park (within the existing SINC boundary) and an existing golf driving range (closely mown grassland and boundary scrub). On the assumption the inclusion of these areas will not preclude the existing use explained above, there is no objection; other extension areas are on land outside of TRP control.
- The Royal Parks comment on **M084 Bushy Park and Home Park** there is no objection to the area to be added (paragraph 5.3.13) as the habitats warrant their inclusion in the SINC boundary.
- The Royal Parks comment on **RiB06 Longford River in Richmond** there is no objection to the area to be added (paragraph 5.3.17) which would provide a buffer to the River.
- Thames Water object to proposal to upgrade **M085 Hampton Water Treatment Works and Reservoirs** SINC to a Site of Metropolitan Importance. Hampton WTW is an operational site which should not be unduly constrained by

additional planning designations. The proposal to upgrade is flawed based on the presence of all of the WTW infrastructure development on the site similar to industrial processes and are not suitable for the creation/enhancement of new habitats, as important they are able to function in line with operational requirements. Furthermore inclusion of the full WTW is anomalous as it is a developed site with buildings, roads and hardstanding and no natural/green space. The site assessment sets out 'potential' to improve biodiversity conditions e.g. reduced mowing is fundamentally incompatible with the operation. Thames Water has strong commitments to biodiversity to its regulator Ofwat, which includes identifying sites of biodiversity interest where biodiversity can be enhanced without affecting operations. While certain areas may be temporarily not in use they are retained for future operations key to London's water supply improvements.

All responses received to the Pre-Publication Draft Local Plan (Regulation 18)
https://www.richmond.gov.uk/services/planning/planning_policy/local_plan/draft_local_plan/draft_local_plan_pre_publication_version
 Consultation from 10 December 2021 until 31 January 2022

Published by LBRuT April 2023

Please note, the responses below are exactly as received from the respondents and have not been edited by the Council.

They are not alphabetically ordered or in any other order of priority.

Comments have been moved/grouped so that common points are viewed together.

The format follows the questions set out on the [response form](#) in Tables 1 to 5 and the following general comments in Table 6 are in Plan order.

The schedule shows where any personal information within responses relating to contact details, particularly full address data, has been removed stating e.g. *[personal details removed for data protection]* or shown as black rectangles in the appendices.

[Appendices](#) have been made available separately where due to the length or nature of responses they could not be captured within the main Schedule. The officer references added are shown in the Schedule as *[See Appendix....]*

A full consultation report including summaries of issues raised and responses to the comments raised, and a report of the virtual events, are published separately. A separate report will also include discussions with relevant Duty to Cooperate bodies.

Table 1: All responses received (to question 4 on the [response form](#)) in relation to the strategic vision (section 3 of the draft Plan) (as received) and the Council's officer response

(note general comments in relation to the strategic vision are also set out in Table 6 below)

Rep No.	Name	Comment	Council's response
1	Caroline Wren	I don't disagree with anything in this section but I think it's missing some important ingredients / is a bit too light in some important areas; • shouldn't we see something about supporting sustainable energy sources such as solar panels, or is that not in scope for this type of doc because there are limitations imposed at national level on what can be pushed through in a conservation area? • I'm quite concerned about flooding and read that a lot of the borough is 'Critical Drainage Area'; by 2024 there are commitments to have new Sustainable Drainage Systems in place across the borough, according to the Climate Change Emergency Strategy - should that have been referenced? for example better drainage for schools and other public facilities.	Solar panels are already captured in Permitted Development rights unless they are subject to Article 4 Directions or within a Conservation Area. References to specific technologies are captured in para 16.13 of the draft Local Plan. A report to the Council's Environment, Sustainability, Culture and Sports Committee on 6 September 2022 considered energy efficiency within the historic environment and included recommendations for producing additional planning guidance such as an update in the Solar Together guidance. Policy 3 requires development to provide sustainable drainage systems, with further details in Policy 8.
2	Robert Blakebrough	Generally reasonable and not controversial	Support noted.
3	Gary Backler, Friends of the River Crane Environment (FORCE)	This response to the London Borough of Richmond upon Thames Local Plan Pre-Publication Regulation 18 Consultation has been prepared by Friends of the River Crane Environment. FORCE is a registered charity, set up in 2003 and with nearly 800 members, most of whom reside in LBRuT. More information on FORCE can be found at www.force.org.uk The Objects of the Charity are to protect and enhance the corridors of the River Crane and Duke of Northumberland's River for the benefit of wildlife and local people. This response is prepared in relation to these Objects, and we comment on the Consultation draft only insofar as its draft policies pertain to our Objects. We believe that we have a constructive relationship with relevant LBRuT officers, and we value this relationship. It has enabled a positive track record of delivery of benefits for the Crane valley. We look forward to continued engagement with LBRuT in the development and implementation of its Local Plan. At a strategic level, we recognise that the climate emergency and growing population are identified as reasons why a new Local Plan is needed (2.10). We welcome the parity given by the Council in the Local Plan to addressing the climate emergency and accommodating population and business growth. We trust that in its development and implementation, the Local Plan will continue to respond to emerging population levels, taking account of Brexit-related and post-pandemic population shifts. We trust that it will continue to respond also to the changing age profile and work-location preference of residents, both of which impel towards increased demand for accessible open spaces connected by safe and intuitive pathways, and may mitigate the pressure to provide new office space.	Support noted.
4	Jon Rowles	The document has become difficult to comprehend. Maybe the area plans and site allocations need to go to the end. It does not appear 'positively prepared' and I get the impression that LBRuT is trying to push growth onto neighbouring boroughs and the countryside. For instance, conservation areas are not off-limits for new development and they often contain buildings which if replaced could enhance the area. I do not believe that assertion that at the end of the plan period everything a resident needs 'can now be reached within 20 minutes by foot or bike' - some needs may be met this way but not 100% and the plan doesn't have enough detail on how it's going to increase capacity for longer essential journeys that will still need to be made in the context of huge growth taking place in Kingston and Hounslow (both London Plan Opportunity Areas) and the home counties. When you go through the plan it is clear that the policies will never get near delivering this and it makes the plan unsound. Twenty-minute neighbourhoods may be the current "buzz word" in planning circles but Richmond appears to have misunderstood what the 'twenty minutes' refer to. The generally accepted definition is ten minutes to the destination and ten minutes back home (twenty mins in total). This local plan is trying to say that people would be willing to walk a round trip of forty minutes, which is just not going to happen. The council seems to have mixed up the 20-minute neighbourhoods with 15-minute cities which have 15 minute-one way journeys by foot or cycle (and thus significantly less compact) and is more of the traditional 'town-centre-first' policy and doesn't include the need for most people's workplaces to be in the same neighbourhood. Therefore, the plan needs to define better what it trying to achieve; 20-minute neighbourhoods or 15 minutes cities as there are significant differences. Any ambiguities will be fully exploited by developers and their expensive planning barristers. Statements like 'local hubs provide space to work, rather than workers commuting daily out of the borough' already look out of date - and show a lack of understanding of the local labour market. Most employers are now requiring workers to return to the office - and the majority of economically active people in Richmond do not have jobs that can be easily undertaken at home. The local plan is not addressing their needs and appears to be saying that it will be a 'good thing' if their journey to work is taking longer and is more uncomfortable.	It is considered that it is logical for the overarching Living Locally and Spatial Strategy policies to be followed by the place-based strategies interspersed with the relevant site allocations. The themes have then been ordered to start with climate change and affordable housing. In any plan order there will always be policies that have to be at the end; it is more important that the structure flows and it is easy for a user to navigate around the document. As with the adopted Local Plan, it responds positively to seeking opportunities to meet the needs of the borough, including the objectively assessed needs for homes, jobs and other key community facilities in a way that is compatible with the specific context and constraints of Richmond. Policy 29 addresses development in Conservation Areas and is in line with Section 72 of the Planning (Listed Buildings and Conservation Areas) Act 1990 (as amended) and paragraphs 199 to 202 of the NPPF. Policy 1 addresses the Council's policy requirements and ambitions regarding 20 minute neighbourhoods, which has been amended to add further clarity. Census 2021 data identifies significantly high rates of residents working from home, although the timing was affected by the pandemic, and the ONS release of commuting data

		<p>If you look at the alternative Travel to Work Areas website you can see that people with fewer qualifications are having to work increasingly further distances to work. Therefore, if the council is serious about reducing the need to travel it needs to improve adult education and training opportunities and set up more adult education hubs across the borough.</p> <p>The borough is an important part of London, the capital city of the UK - but the plan is very 'lite' on how it aims to support London's role as the centre of the UK economy.</p> <p>One of the easiest ways to reduce traffic would be to increase the number of school places so that children can go to a school close to their home. Another is to have more food shops (such as Tesco Express or Sainsbury's Locals) close to peoples homes. We used to have twenty-minute neighbourhoods in the 1950s and they give us a very good blueprint on what facilities are needed. Unfortunately, this plan concentrates on town centres rather than identifying areas that lack services and plugging these gaps.</p> <p>The plan also suggests there should be large scale investment in the cultural offerings in the well to do Twickenham and Richmond centres - where there is already good provision, but then offers very little for the less wealthy areas that have none and just suggests that one-off events can be held in parks or high streets. I can see why the Town & Country Planning Association warns of the risks of gentrification and that left behind areas can be further disadvantaged by the reduced mobility that poorly implemented 20-minute neighbourhoods can cause.</p>	<p>is awaited. See the update to the Employment Land & Premises Needs Assessment which has considered the local economy and latest forecasts further.</p> <p>See Policy 20 in relation to essential local shops and services. See Policies 17 and 18 that support culture.</p> <p>The section on Delivery & Monitoring has been expanded to address implementation of the Plan, and the updated Infrastructure Delivery Plan looks at the future needs of providers. There is emphasis in the Plan on delivery through the private sector, other agencies and bodies, and parts of the public sector, as well as the community and voluntary sector, recognising the limitations of the Council's role.</p>
5	Melanie Gurney, The Planning Lab, on behalf of the Royal Botanic Gardens	RBGK is generally supportive of the overarching strategic vision, including the response to the climate emergency, retaining and improving biodiversity, and protecting heritage and culture.	Support noted.
6	Tom Dunbar	I see an opportunity to allow smaller businesses to thrive nearer Twickenham Green. in particular, local amenities (E.g. gyms) and shops / cafes - especially as more and more people are now working from home. Such amenities should evolve to meet the growing population in this area - particularly with the new Greggs site potentially bringing in more households.	Twickenham Green is being upgraded from a Local Shopping Parade to a Neighbourhood Centre. Please see Policies 17 and 18. Note that Greggs is designated as a Locally Important Industrial Land and Business Park to protect for employment, please see Policy 24.
7	Stephen Brooker, Walsingham Planning, on behalf of Whitbread Plc	Whilst the thrust of the Vision is supported the emphasis on localism should not be allowed to become resistance to the encouragement of inward investment and the attraction of people and resources from outside the Borough, for example hotel schemes which support the local economy and community by attracting and retaining visitors and their spending power.	The emphasis on living locally is intended to encourage the development of vibrant communities that enable residents to complete everyday tasks such as shopping and accessing essential services by foot, bike, or public transport. This is achieved by ensuring residents are within 20 minutes' walk from a town centre, local centre, neighbourhood centre, or local shopping parade in line with Policies 17 and 18, or other smaller concentrations of local shops and services in line with Policy 20. The value of the visitor economy is recognised through Policy 26, which sets out how proposals for tourist accommodation will be assessed.
8	Louise Fluker, The Richmond Society	The vision is a challenging one. Without specific targets which are measurable it might be meaningless	The Local Plan sets out the strategic vision for the borough, as required by the NPPF, as well as the policies that planning applications are assessed against. While the Local Plan is aspirational in nature, it does set certain targets such as for new housing and for what percentage of new housing is classed as affordable housing. The Local Plan Monitoring Framework will be updated for submission. Monitoring of these strategic outcomes and targets is completed in house and published in the Council's Annual Monitoring Report. Please see Policy 55.
9	Siriol Davies, Ham and Petersham Neighbourhood Forum	<p>The 20- minute neighbourhood concept and strategic vision is complementary to the Ham and Petersham Neighbourhood Plan (HPNP) vision copied below. We recognise that HPNP was developed in conformity with the current Local Plan and previous iteration of the London Plan and does not reflect the council's declaration of Climate Emergency or the impact of the pandemic.</p> <p>HPNP Vision To build on the identity of Ham and Petersham as a distinct and sustainable mixed community giving great opportunities to live and work within a semi-rural historic landscape. Our vision for a sustainable community is that, whenever viable, residents will have access to education, shopping, working, cultural and other opportunities within Ham and Petersham so as to foster a greater sense of belonging and identity. We will encourage an increasing proportion of local journeys to be by foot or bicycle by creating a network of cycle/walking routes accessible to a range of ages and good public transport. Local services, activities and opportunities will be complemented by convenient and efficient access to Kingston, Richmond, Twickenham and further afield including central London. Walking, cycling and public transport will be attractive and viable for these journeys also. From our consultation, the range of social groups living in the area emerged as a distinctive and valued characteristic and this has led to the aspiration to continue to encourage a mixed community of different ages and social groups. The description of the neighbourhood area as 'semi- rural' has been used to describe the setting of the settlements of Ham and Petersham within substantial areas of open and undeveloped land. This is also a distinctive and valued feature of our area, providing relative isolation from more urban areas of London.</p> <p>20-minute Neighbourhood concept We are supportive of the 20 minute Neighbourhood concept and the idea of living locally with access to local shops, schools, and social spaces and workplaces within an easy 20-minute walk or cycle journey; nurturing local facilities and connectedness to strengthen communities and improve the quality of life, by reducing the anxiety and time spent travelling, and providing more time to spend with family and friends. And decreasing car journeys to improve air quality, and create liveable cities, and increase active journeys to improve physical and mental health and wellbeing. Inclusiveness and equality As a concept, the provision of local services is inclusive of those who are less able to travel through wealth or health inequality and for younger people and children who are less able to travel independently. For communities who have experienced isolation through lockdowns and shielding, the importance of sustaining relationships and value of social interaction and activity for mental and physical health, has been brought into focus and is addressed through this concept. Economy As the pandemic has exacerbated a rise in internet shopping, the 20-minute Neighbourhood is a means to support local and independent shops and services and provide a strategy for recovery.</p>	Support noted, particularly that it is complementary to the Ham & Petersham Neighbourhood Plan.

		<p>Heritage and Design The plan notes that today's London was formed from the expansion of villages which joined to form the metropolitan area. This concept seeks to re-establish the character and identity of neighbourhoods within the metropolitan area.</p> <p>Climate Emergency The draft Local Plan and 20-minute Neighbourhood strategy responds to Richmond Council's declaration of Climate Emergency and commitment to net-zero by 2050, through reducing need to travel and improving the choices for sustainable and active modes, improving the environment and biodiversity and promoting net-zero development.</p>	
10	Mr & Mrs Metcalf	We are concerned that the climate objective rings hollow when, first, policies allow a weaker approach to flood risk for an extension than a new development/ redevelopment, especially when the former includes the demolition of a house but for a token piece of wall (or, if the developer can manage it, even that can be demolished in the course of the works on safety grounds); second, if the Borough's officers do not enforce the policies, eg accepting FRAs that consultees point out as flawed as to facts and completeness of content. We have personal experience of that.	Please see Policy 8 which has been updated following the Regulation 18 consultation. Enforcement is a discretionary function of the Council where the expediency of each case is determined in line with the Council's adopted Planning Enforcement Policy.
11	Simon Tompsett, Richmond & Twickenham Friends of the Earth	We welcome the emphasis on avoiding climate change and protecting biodiversity.	Support noted.
12	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond (and supported by the Friends of Richmond Green)	We agree broadly with the Strategic Vision but with a number of caveats referred to in this response.	Support noted.
13	Benjamin John	Provision for existing waste disposal to be improved and recycling of plastic waste especially should be included as a top priority.	Please see Policy 7 for the Council's waste management policy, and refers to the Council's SPD on Refuse and Recycling Storage Requirements.
14	Carolyn Doughty	I think it is very important to provide community services and minimise over development of residential properties	The Council's 20-minute Neighbourhood concepts and Policies 17-20 should ensure that neighbourhoods are adequately serviced by community uses as well as shops and services.
15	Lynne Bailey	concern when you mention 20 minute neighbourhoods is that you do not always tie it in with public transport and the need for good public transport to reach those amenities. Many people who prefer to avoid car use do not cycle and would struggle badly to walk for 20 minutes therefore leaving public transport as the only option. I did not feel this section gave enough consideration to the elderly and disabled. I also felt Section 4 had the same issue.	While the emphasis of the 20-minute neighbourhood concept is to encourage more active travel, it is recognised that not all residents will be able to walk or cycle and will need to undertake part or all of their journey by public transport. This is reflected in Policy 1, which has been amended to emphasise facilitating access to public transport including improving inclusive access.
16	Clare Snowdon	I would like to see the borough be even more bold, visionary and courageous in the vision for biodiversity, climate and human welfare - perhaps through training and collaboration e.g. with https://climateimagination.org/	Please see Policy 39 for the Council's biodiversity policy. Several amendments have been made following Regulation 18 consultation to make the policies even more robust. The Council considers the draft Local Plan to have ambition, bold, and deliverable policies that will improve the biodiversity in the borough. Beyond the remit of the Local Plan, the Council's Climate Emergency Strategy is about taking robust action, as shown in the report to the Council's Environment, Sustainability, Culture and Sports Committee in February 2023 highlighting actions delivered and progress made and an updated Action Plan, including for example training and partnership working.
17	Paul Luton, Cycling UK	Fully support this vision	Support noted.
18	Lynda Hance	It's out of date already: 2 We are in year 2 of the pandemic and I can see no acknowledgement of how this has impacted the people of the borough or any consideration to what they will need in the future. I am particularly thinking of larger homes with more space to work from home, & improved broadband connectivity. [See comment 558 in relation to Kneller Hall and comment 552 in relation to Whitton/Heathfield]	To inform the Regulation 19 Local Plan, further evidence base phases and additional studies have been undertaken during 2022 and 2023. There are areas where there may still be a time lag in evidence to be able to firm up medium and long-term trends, but the Plan overall seeks to recognise the impacts on our centres and on businesses and on travel, and has informed the focus on 'Living Locally'. With regard to the specific points Policy 27 promotes enhanced connectivity including broadband, with the supporting text recognising the increase in home working, along with the supporting text to Policy 13 recognising the importance of space in homes, including the potential for future working patterns in some sectors to retain a high proportion of home working.
19	James Armstrong, Richmond Cycling Campaign	RCC strongly agrees with the Strategic Vision. The framing of the Local Plan within the 20 Minute Neighbourhood concept is a remarkably progressive, and to the benefit of all residents. A borough where Active Travel is the easiest choice, with reduced dominance of vehicles and benefiting from a Healthy Streets approach is one that is healthier, happier, and wealthier. We hope Richmond Council is bold enough to deliver the policies that will make this vision possible.	Support noted.
20	Faye Wright, Forward Planning and Development on behalf of BMO Real Estate	The Strategic Vision states that "office space in our main centres has adapted and local hubs provide space to work, rather than works community daily out the the borough". We would comment that Richmond is a key SW London Office Market and is proving particularly attractive for the Technology, Media and Telecomms sector. There has been a recent large influx of available newly refurbished office space. Older office stock is not as able to adapt to the changing post pandemic requirements particularly in the face of the large amount of newly refurbished stock. As a result, the strategic vision to secure the best for the borough needs to recognise the disparity between viable and unviable office space. The release of unviable office space will not harm the strategic vision of increasing jobs and helping business to grow and bounce back following the pandemic.	There is scope for landowners to invest in upgrading existing stock. The update to the Employment Land & Premises Needs Assessment has considered the local economy and latest forecasts further, including the impact of available office floorspace, but recommends a stringent policy to resist losses. A variety of space at different prices will support a range of employment opportunities, wider than just the Technology, Media and Telecomms sector. See also updates to Policy 23; no further changes to the vision are considered necessary.
21	Jim Brockbank	I especially agree with Policy 1 the 20 minute neighbourhood, Policy 11 Affordable Housing, Policy 49 Social and Community Infrastructure, and Policy 51 Health and Well-being These policies are especially relevant in the context of the borough being an attractive locality for families, as acknowledged in the local plan.	Support noted.
22	Michael Cross	The principle of the 20 minute community is a very sound one for the social, economic and environmental development of Richmond	Support noted.

23	Matthew Bolton	I strongly agree with the strategic vision, particularly around the spatial plan to cater for 20-minute neighbourhoods. This is vital as we learn the lessons from the pandemic and the importance of the local community, health and wellbeing. By promoting localism, there will be better opportunities to walk and cycle for daily needs and reduce car dependency within the area which has numerous disbenefits for the driver and the wider community. I strongly support the need to reduce the need to travel and improving the choices for more sustainable travel. As a borough with high car ownership, it will always be difficult to tempt drivers out their cars. In many cases they have paid a lot of money for their car, which they consider as a status symbol and therefore wish to drive it, irrespective of whether it is the most appropriate mode. However, by promoting sustainable modes and reducing the attractiveness of driving, such as the councils free 30 minutes car parking, the council can make a meaningful change to the way its residents behave day to day.	Support noted.
24	Mark Lawson	I support any genuine improvement to the borough that increase or maintain it as a desirable borough to live in. This is clearly an important document which I would have appreciated more time to consider prior to the deadline for one of my local buildings in Teddington.	Support noted.
25	Alison Parkes	I agree that any plans for Teddington should reflect the strong sense of community already within the area. Emphasis should be on promoting local businesses and initiatives rather than national chains. We also need to do more to make our green spaces - like the misnamed Udney playing fields - publicly available. With regard to residential developments, we do need truly affordable housing within the borough. And housing that reflects the needs of families - ie not more blocks of flats. Perhaps the council should take direct landlord responsibility rather than relying on developers - who have other imperatives - to provide 'affordable' dwellings as part of a broader commercial package.	Following the amalgamation of various use classes into a single class (Class E), the Council has limited ability to encourage a variety of different shops and services within this use class. Open spaces that are currently not publicly accessible, such as Udney Park Playing Fields, will be encouraged to make them available for public access and use. Udney Park Playing Fields are already designated as Local Green Space of particular importance to the local community which protects it from inappropriate development. Please see policies 35-38 for the Council's approach to protecting and enhancing access to green space within the Borough. Affordable Housing is designated as a Strategic Policy in the Local Plan. The Council has set an ambitious target for 50% of all housing delivered in the borough to be affordable housing over the plan period. The Council's affordable housing targets are informed by the Local Housing Need Assessment. Please see Policy 11 for more information.
26	Alison Campbell	More social housing for affordable rent needed.	Please see Policy 11 for the Council's affordable housing policy which seeks to maximise delivery of genuinely affordable housing.
27	Ursula Armstrong	There should be an option to agree with some objections and disagree with other objectives/strategic visions [See 357 comment on Site Allocation 9: Teddington Police Station, Park Road, Teddington]	Noted.
28	Sue Clayton Smith	The vision to encourage response to climate emergency is critical. I think this can be assisted by increasing urban greening and protecting what valuable green space there already is in the borough. The plan for new homes is important, however it should be borne in mind that in some parts of the borough housing density is already high and the addition of new homes in these areas with the additional traffic and pressure on local services this will bring needs to be fully taken into account. The variety of shops and uses should be increased and encouraged there are too many of the same type of outlet in Twickenham town centre for example, cafes, barbers etc.	The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Council will also require developments to provide a Net Biodiversity Gain (NBG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see policies 34-39 for more information, particularly policy 38 on Urban Greening. Policy 2 is seeking to direct new higher density development in the town centres or places that are well connected. The London Plan sets out a town centres first approach, and also prioritises sites that are well connected by public transport. The NPPF requires us to meet the development needs of the area, to provide for objectively assessed needs for housing and other uses, and expects a Local Plan to optimise the use of land, therefore it would be difficult to avoid further development in certain areas if other policies in the Plan could be addressed. Following the amalgamation of various use classes into a single class (Class E), the Council has limited ability to encourage a variety of different shops and services within this use class. However, Policy 1 on Living Locally and the 20-Minute Neighbourhood Concept activity encourages a mix of uses in order to create vibrant centres. Policy 19 explicitly states that overconcentration of certain uses will be resisted.
29	N Maureen John	Agree with general ideas. Specific to Teddington: To combine the old Police Station in Teddington with housing and use as a medical centre thus relocating Park Road Surgery would be good a use of the existing site.	Support noted. The site allocation for Teddington Police Station requires retention of community/social infrastructure use at ground floor level and specifically identifies medical/health use as one option. Please see Site Allocation 9 for more information.
30	Christine Palmer	Affordable housing needs a far higher presence and priority	Affordable Housing is designated as a Strategic Policy in the Local Plan. The Council has set an ambitious target for 50% of all housing delivered in the borough to be affordable housing over the plan period. The Council's affordable housing targets are informed by the Local Housing Need Assessment. Please see Policy 11 for more information. The supporting text has been amended to recognise affordable housing for key workers and the contribution to communities.
31	David Marlow	P14 - P24. Ok. <u>BUT</u> it is a pity Council largely ignores its own Vision + strategic objectives e.g. See Twickenham Riverside Planning Application ref 21/2758. Project will generate tons (undisclosed) of CO2. Delivers new homes but on Diamond Jubilee Gardens held in Trust for public enjoyment - re-provision is clearly inferior.	The Site Allocation for Twickenham Riverside seeks a comprehensive redevelopment including to provide high-quality public realm, and improvements to the riverside and open space.
32	Christine Duke	Agree for the most part, with reservations. Am concerned that the more positive aspects of this strategic vision will not be experienced fairly and equally across the Borough; And do not consider additional high rise buildings to be of benefit anywhere within the Borough. Also, am concerned that certain areas idealistically proposed for development and infill could end up becoming overcrowded, crammed and cluttered with a mish mash of concrete buildings and deprivation of various and numerous kinds, especially at the centre and on the outskirts of our lovely Borough. I think it is fair to say that most of Richmond Borough residents would want to live in family friendly towns / village areas and healthy streets.	The NPPF requires us to meet the development needs of the area, to provide for objectively assessed needs for housing and other uses. It expects a Local Plan to optimise the use of land, expecting an uplift in density of residential development in city and town centres and other locations well served by transport. The London Plan sets the Council's housing target and directs incremental intensification to existing residential areas within high PTALS or close to stations or town centres. Therefore it is not possible to take an approach that considers we are over populated and resist higher density development.

		Also regarding the vision of local residents needs being reached within a twenty minute walk or cycle ride. It needs to be borne in mind that not everyone can cover the same distance within 20 minutes and the condition of both pavements and roads need to be improved dramatically, and kept safe to use.	While the emphasis of the 20-minute neighbourhood concept is to encourage more active travel, it is recognised that not all residents will be able to walk or cycle and will need to undertake part or all of their journey by public transport. This is reflected in Policy 1, which has been amended to emphasise facilitating access to public transport including improving inclusive access. Comment regarding condition of pavements and roads is noted.
33	Hannah Blunstone, CBRE on behalf of Rugby Football Union (RFU)	The strategic vision states that from adoption of the Plan in 2024 (by 2039) growth will have been accommodated across the borough, making use of the borough's much valued assets. The RFU support this ambition and the creation of adaptable and vibrant places through new development. The vision references the outcome of the 'living locally' concept: by 2039 everything a local resident needs can be reached within 20 minutes by foot or bike. The RFU support the living locally approach for access to essential services to fulfil daily needs. However, the vision and the corresponding policy (Policy 1) as currently drafted applies to 'all development, except householder applications', and needs to clarify exclusions for Twickenham Stadium as a nationally significant sporting and entertainment venue. This is further considered in the attached detailed response letter. The vision includes the borough's sustained and enhanced strong arts and cultural offer, and its role in post-pandemic recovery, providing a destination and reason to visit, locally, from across the wider region and beyond. The Twickenham Stadium and complementary uses included within its site allocation will be key to attract visitors and the associated local spend essential to post-pandemic recovery This is further discussed in the attached detailed response letter. [See comment 522 in respect of Site Allocation 13. Twickenham Stadium]	See response to comment 269. In terms of the strategic vision and overall approach, Policy 2 is seeking to direct new higher density development in the town centres or places that are well connected. The London Plan sets out a town centres first approach, and also prioritises sites that are well connected by public transport. It is reasonable in a strategic policy to not refer to out of centre development which may not be well connected. That does not mean the useful contributions from existing sites will not be recognised. Any proposal is considered on a case by cases and subject to all other Plan policies, so it may be possible to demonstrate there are no unacceptable impacts identified.
34	Mary Egan	The vision to encourage much more response to climate emergency is a high priority. This can be achieved by increasing urban greening and protecting species and habitats thus tackling the biodiversity loss. Wildlife and dark corridors along the borough rivers should be promoted especially after the pandemic when we realised just how important they are. Delivering new homes is good, but some of our communities are overcrowded with dense housing and resultant traffic stress. The variety of shops should be increased, most new openings are related to food - cafes, grocery.	The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see Policies 34-39 for more information. The NPPF requires us to meet the development needs of the area, to provide for objectively assessed needs for housing and other uses. It expects a Local Plan to optimise the use of land, expecting an uplift in density of residential development in city and town centres and other locations well served by transport. The London Plan sets the Council's housing target and directs incremental intensification to existing residential areas within high PTALS or close to stations or town centres. Therefore it is not possible to take an approach that considers we are over populated and resist higher density development. Following the amalgamation of various use classes into a single class (Class E), the Council has limited ability to encourage a variety of different shops and services within this use class. Policy 19 explicitly states that overconcentration of certain uses will be resisted.
35	James Bartholomeusz	It is good to see a plan to help combat the climate emergency via local action, including maximising the positive environmental impact of the borough's green spaces. This will be the single most important aspect of any policy, local or national, in the coming years.	Support noted.
36	William Mortimer	Although keen to see redevelopments in the riverside area comprised of Mortlake and Barnes, it is difficult to agree that proper consultation is resulting in the appropriate detail of the proposed schemes, particularly for the Brewery Site. This stretch of the Thames is where J M W Turner learned to paint the river-scape with its mists and surface conditions in a variety of lights. His paintings show the amount of craft on the river plying trade and ferrying people. Historically, the tall chimneys at the brewery site were approved in very recent history. The plan for restoring a village centre for Mortlake, which was gutted when the dual carriageway element of the A3003 was pushed through in the 1960s. A change in the designation of land use from industrial to a mixture of residential and commercial building must therefore consider the character of the adjacent residential areas and the historic importance dating before the huge population growth from the time of Tudor and Stuart monarchies. Since the arrival of the railways this area has supported the verdant riverside towpath and Commons that today provide the recreational lungs of our communities. The Mortlake Community Group reflects a desire to develop the brewery site but has not enjoyed the support of the Council to date in its pursuit of solutions that match the needs of the community and the service infrastructure that is available to support them. I have responded to the Developer's Zoom event on 26th January 2022 and my principle concerns are repeated later.	The Council has produced and adopted the Stag Brewery Planning Brief SPD in 2011 for this site, which sets out the vision for redevelopment and provides further guidance on the site's characteristics, constraints, land use and development opportunities. Please see Site Allocation 34 for more information.
37	David Abel	I agree with the idea of trying to provide services within a twenty minute walk but do not agree that we need to intensify the density of housing. Affordable housing to ensure that the borough is a mix of people and occupations should be the strategy not just to increase housing provision. The desire to tackle biodiversity loss and improving green spaces is an excellent idea but I can't see how that is going to be achieved by building over and astroturfing existing green spaces.	The NPPF requires us to meet the development needs of the area, to provide for objectively assessed needs for housing and other uses. It expects a Local Plan to optimise the use of land, expecting an uplift in density of residential development in city and town centres and other locations well served by transport. The London Plan sets the Council's housing target and directs incremental intensification to existing residential areas within high PTALS or close to stations or town centres. Therefore it is not possible to take an approach that resists higher density development. Policy 11 emphasises the importance of affordable housing delivery, for creating mixed and balanced communities, and the supporting text has been amended to recognise affordable housing for key workers and the contribution to communities.
38	Alice Shackleton, on behalf of The Kew Society	In principle The Kew Society is supportive of this vision. We discuss some aspects and concerns below under relevant policies, as we do have concerns about potential lack of inclusivity of older people (there is noted the increasing proportion of ageing people), those less able and those with young children in the emphasis on cycling an walking or other people who are less mobile and who may need motor vehicle transport.	While the emphasis of the 20-minute neighbourhood concept is to encourage more active travel, it is recognised that not all residents will be able to walk or cycle and will need to undertake part or all of their journey by public transport. This is reflected in Policy 1, which has been amended to emphasise facilitating access to public transport including improving inclusive access.
39	Jon Burrell	Key points of strategic vision are good but would expect a focus on public transport in addition to active travel. More focus should be made on air quality and reducing noise pollution.	Air quality is referenced in the strategic vision, and pollution as a strategic objective. Add further reference in the strategic vision to improving public transport.

			<p>More broadly, while the emphasis of the 20-minute neighbourhood concept is to encourage more active travel, it is recognised that not all residents will be able to walk or cycle and will need to undertake part or all of their journey by public transport. This is reflected in Policy 1, which has also been amended to emphasise facilitating access to public transport.</p> <p>Policy 46 explicitly ensure there is no harm to the reasonable enjoyment of the use of buildings, gardens and other spaces due to, inter alia, air and noise pollution. The Council has additionally prepared and adopted an Air Quality SPD in June 2020 that sets standards for air quality and Air Quality Assessment in the Borough.</p>
40	Bridget Fox, on behalf of the Woodland Trust	We support the vision of protecting, enhancing and extending biodiversity and natural green infrastructure within the Borough.	Support noted.
41	Joanna Childs	<p>Climate change initiatives need to be accelerated or much of the borough will be under water by 2039. Does your use of terms such as “compacted”, “intensification” and “infill” mean you aspire to cram as much housing into the area as possible, so that everyone’s quality of life deteriorates?</p> <p>Has the biological leakage of the ageing population been factored in? In 2013 13.6% of the population were over 65 so will be over 91 by 2039 and it is likely that many may have died.</p>	<p>The Council’s Climate Emergency Strategy is about taking robust action, as shown in the report to the Council’s Environment, Sustainability, Culture and Sports Committee in February 2023 highlighting actions delivered and progress made and an updated Action Plan. The strategic vision has been amended to reflect the borough aim to be net-zero carbon by 2043, at the latest.</p> <p>The NPPF requires us to meet the development needs of the area, to provide for objectively assessed needs for housing and other uses. It expects a Local Plan to optimise the use of land, expecting an uplift in density of residential development in city and town centres and other locations well served by transport. The London Plan sets the Council’s housing target and directs incremental intensification to existing residential areas within high PTALS or close to stations or town centres. Therefore it is not possible to take an approach that considers we are over populated and resist higher density development.</p>
42	Vivien Harris, Friends of Richmond Green	<p>The Friends of Richmond Green (FoRG) is an amenity action group. Our key aims and objectives are:</p> <ul style="list-style-type: none"> • to promote public interest and civic pride in Richmond Green and vicinity • to improve the quality of life and long-term attractiveness for residents • to improve the character and quality of the built and natural environments • to improve the cleanliness and appearance of the streets and public spaces • to contain traffic while recognising the parking needs of residents and visitors • to encourage responsible use of The Green and surrounding area <p>FoRG as an amenity group is over 50 years old and is run by an executive committee based on a formal constitution. The Friends of Richmond Green fully endorse and support the response by Prospect of Richmond to the new draft Local Plan. We have read the response and have been engaged with the respondents on the content. For clarification, the response is a Prospect of Richmond response with Friends of Richmond Green support and endorsement.</p>	Noted.
43	Alec Lever, Richmond Labour Party	Congratulations are due to all whose diligent work produced this plan. Its Strategic vision and objectives are endorsed by Richmond Labour Party.	Support noted.
44	Vicky Phillips, Habitats & Heritage	<p>Habitats & Heritage (www.habitatsandheritage.org.uk) is a local charity based in Twickenham that acts for the natural and historic environment and climate of South and West London. We act as the Chair and Secretariat of the Richmond Biodiversity Partnership which produces the Richmond Biodiversity Action Plan. We also work on projects which seek to tackle climate change, including the energy efficiency project South West London Energy Advice Partnership (www.swleap.org.uk), and involve the community in parks and open spaces.</p> <p>We are pleased with the overall shape of the plan and its emphasis on action to tackle the climate emergency, protect and increase biodiversity and protect local heritage. The concept of living locally and the 20-minute neighbourhood is also very much part of the vision of our charity which seeks to connect people to the places where they live and work.</p>	Support noted.
45	Peter Willan and Paul Velluet, Old Deer Park Working Group	We agree broadly with the Strategic Vision but with a number of caveats referred to in this response.	Support noted.
-		Note comments on site-specific allocations (including in relation to Site Allocation 9: Teddington Police Station) have generally been collated in Table 6 below.	

Table 2: All responses received (to question 5 on the [response form](#)) in relation to the strategic objectives (section 3 of the draft Plan) (as received) and the Council’s officer response
(note general comments in relation to the strategic objectives are also set out in Table 6 below)

Rep No.	Name	Comment	Council’s response
46	Caroline Wren	<p>There were a few details I thought were lacking / too light:</p> <ul style="list-style-type: none"> • if one of the aims is to make this borough 'affordable for all', shouldn't there be more reference to that? or is a few nods to affordable housing and the 20 min neighbourhood the only in-scope initiatives for this type of doc? I felt like we should see harder targets for pricing on new homes, potentially commitments on rents too. • I would have preferred to see a mention of VisionZero for reducing Killed & Seriously Injured on the transport network • obligations around sites important for nature conservation (SINC) include preventing adverse effects from air/water/noise pollution; as such, couldn't we aim for more to be done to improve pollution around those sites? 	<ul style="list-style-type: none"> • The Local Plan forms the basis for assessing planning applications in the Borough and would not be appropriate to set hard targets for pricing of new homes or rental rates, as it beyond the remit of the Plan as the Government does not allow rent control. The Council has set an ambitious target for 50% of all housing delivered in the borough to be affordable housing over the plan period. Please see Policy 11 for more information. • The Council is committed to Vision Zero, which is adopted in the borough’s Local Implementation Plan. It sets the long-term aim of achieving Vision Zero by 2041 by lowering

		<ul style="list-style-type: none"> from the Climate Change Emergency strategy there's some commitments to details like installing drinking water fountains and creating rain gardens, blue/green roofs, etc - i didn't see mention to that type of initiative specifically in the Local Plan, although I think those ideas were being hinted at; could we be more specific so that the plan will be more measurable and actionable? 	<p>speed limits on local roads, working with TFL to lower speeds on the TLRN, addressing collision hotspots and through education and training. Measures are largely outside of the remit of the Local Plan, and therefore it is not considered necessary to reference.</p> <ul style="list-style-type: none"> The Biodiversity Action Plan recognises specific threats from pollution, including in individual habitat and species action plans. Where development would impact on a species or habitat Policy 39 applies the mitigation hierarchy. Actions to improve pollution around sites that is not in relation to new development can be taken forward by the Council with local stakeholders, with generic and specific actions set out in the Biodiversity Action Plan. As explained above, the Local Plan is a planning policy document that guides decision makers in assessing planning applications. It sits alongside the Climate Change Emergency Strategy as a policy document of the Council as a whole. The Plan is specific, measurable, and actionable in determining the planning policy approach for applicants. Rain gardens and green roofs are recognised for their role in surface water drainage and urban greening where they may form part of development proposals. Reference to free drinking water is included in Policy 51, which reflects London Plan Policy D8, as these may form part of public realm proposals.
47	Myrna Jelman	I support urgent urban greening as well as mitigating strategies for surface flooding in the borough. There is no sense of crisis from the local plan yet in my view and yet flooding is coming to London, as we already know.	The Council recognises the extreme challenge that climate change poses and the need to create a climate resilient Borough. Please see Policy 8 on Flood Risk and sustainable drainage and Policy 38 for the Council's urban greening policy, and Policy 3 for the Council's Strategic Policy on Tackling the climate emergency.
48	Jon Rowles	<p>There are ten strategies - with a subset of policies under each one. They are too long, difficult to comprehend and are confusing which will result in few people being to understand what the key strategies actually are.</p> <p>It looks like the council have copied out the old community plan and corporate plan objectives rather than thinking about what is a strategic policy is. Maybe the council need to look at paragraph 20 of the NPPF - and are more general aims and policies and need to be moved to the correct section.</p> <p>The NPPF also expects councils to identify shortfalls in infrastructure and community facilities and find places for these identified needs. the council does not appear to have done this and only says that any new provision should be in town centres, or that they are doing research (such as sites for education) and will report back separately outside of the local plan process.</p> <p>The strategy section is dominated by net-zero and a host of other environmental policies but they probably should not be here – as they sit below the top-level item of combating climate change and are more detailed policy. It may also be wise to move the detailed strategies into separate supplementary planning documents so that they can be updated more often. I suspect the requirements around zero-carbon houses, boilers, heat pumps etc will keep changing as more research is carried out.</p>	<p>The themes have been developed since the Direction of Travel consultation in 2020, and have been ordered to start with climate change and affordable housing. Where a policy is a Strategic Policy, this is clearly signposted in the Plan on the list of policies and in the policy titles.</p> <p>As with the adopted Local Plan, the Plan is unable to meet the objectively assessed needs for housing and employment. References to updated evidence base have been added to the Plan. The section on Delivery & Monitoring has been expanded to address implementation of the Plan, and the updated Infrastructure Delivery Plan looks at the future needs of providers.</p> <p>The Council's climate change policies are bold and ambitious, and it is necessary to include all policy requirements in the Plan. While SPDs can be updated through a quicker process, they can only provide greater detail and guidance to supplement Local Plan policies. It is intended that the Sustainable Construction Checklist SPD will be updated to reflect the new Plan, once it nears adoption.</p>
49	Melanie Gurney, The Planning Lab, on behalf of the Royal Botanic Gardens	No specific comments.	Noted.
50	Tom Dunbar	<p>I strongly agree and support the broad objectives of the borough as stated in the document. Relevant to comments made later in my response, I strongly support the Council's ambitions to response to climate emergency with decisive action and delivering new home (especially genuinely affordable housing).</p> <p>I encourage the Council to continue to work with organisations such as FORCE to achieve these aims.</p> <p>At a high level, I support the vision to increase urban greening and protecting brown and green field sites where possible.</p>	Support noted.
51	Stephen Brooker, Walsingham Planning, on behalf of Whitbread Plc	Whilst the thrust of the Objectives is generally supported it is important that interpretation of the Objectives into policy does not become too inflexible, for example it is important to recognise existing patterns of development/land use in considering new proposals (for example that not all "town centre" uses are currently located in town and district centres but that they are nonetheless worthy of support) and that there will be practical limitations on the ability of some new development to fully meet all climate change objectives so that pragmatic application of policy is important.	All proposals are assessed on a case-by-case basis against the Plan as a whole. The Council has identified a town centre hierarchy that also recognises smaller parades of local importance. The Council's climate change policies are bold and ambitious, all developments will be expected to conform to the policies within the Plan. Please see policies 3 and 17-20 for more information.
52	Victoria Barrett-Mudhoo, Lichfields on behalf of the West London NHS Trust	n/a	Noted.
53	Louise Fluker, The Richmond Society	<p>The strategic objectives are laudable because they are so general but there are some ones which contradict each other. For example the population of the borough is said to be ageing but how the transport needs of elderly and less mobile residents are to be met is not clear unless there is good public transport and a recognition that some people will still need to drive even if getting the rest of the population to walk or cycle is highly desirable.</p> <p>Likewise there is much emphasis on the concept of a 20 minute neighbourhood i.e. with residents being able to reach amenities within 20 minutes by bike or foot but such areas will be different since a cyclist will travel at least three times as far as a pedestrian in 20 minutes. Which is meant?</p> <p>There is a good emphasis on the environment as regards new housing and developments but one of the challenges is that the housing stock in Richmond is old and the draft Plan highlights that domestic emissions are the major source of carbon emissions but the draft does not address this.</p>	<p>While the emphasis of the 20-minute neighbourhood concept is to encourage more active travel, it is recognised that not all residents will be able to walk or cycle and will need to undertake part or all of their journey by public transport. This is reflected in Policy 1, which has been amended to emphasise facilitating access to public transport including improving inclusive access. Further details are added to the supporting text in Policy 1 as to how the 800m relates to the borough, but clarifies this is not measured as an absolute geography, and there are no fixed zones or boundaries.</p> <p>Policy 3 recognises that extensive retrofitting will be required to decarbonise Richmond's existing building stock and will actively promote retrofitting of existing buildings through low-carbon measures. See further in response to comment 138.</p>
54	Siriol Davies, Ham and Petersham Neighbourhood Forum	<p>The Ham and Petersham Neighbourhood Plan (HPNP) strategic objectives are copied below, although we recognise that HPNP was developed in conformity with the current Local Plan and previous iteration of the London Plan and does not reflect the council's declaration of Climate Emergency or the impact of the pandemic.</p> <p>HPNP objectives</p>	Noted.

		<p>1.1.4 Character and Heritage To ensure all development enhances the character and appearance of the area and is designed to integrate with the existing architecture and green spaces. To ensure that development is only permitted in locations which are consistent with the vision for the neighbourhood.</p> <p>1.1.5 Housing To ensure the mix of any new housing has an appropriate balance in terms of tenure, size and type. Opportunities will be optimised for affordable housing. Older persons' housing, providing for a range of independence and support, will be encouraged.</p> <p>1.1.6 Green Spaces To protect and enhance existing green spaces, sites of historical and environmental significance and the semi- rural character of the area, for the benefit and enjoyment of the local and wider community and in the interest of nature conservation.</p> <p>1.1.7 Travel and Streets To create better transport links within the neighbourhood and with adjoining centres, in such a way as to enable safe walking, cycling and the use of public transport, and to minimise traffic congestion and pollution.</p> <p>1.1.8 Community Facilities To provide an appropriate range of community facilities which will promote the health, education and physical, mental and spiritual development of all residents, particularly the young and the elderly.</p> <p>1.1.9 Retail and Local Services To enhance the character, quality and distinctiveness of the neighbourhood's three local centres to ensure viable and vibrant shopping centres serving residents and visitors. To encourage small businesses and self- employment, many based from home.</p> <p>1.1.10 Environmental Sustainability To ensure that buildings in the area achieve the highest of standards for energy and water efficiency and that flood risk is minimised.</p>	
55	Mr & Mrs Metcalf	See above [See comment 10 on strategic vision]	Noted.
56	Simon Tompsett, Richmond & Twickenham Friends of the Earth	<p>P16 Responding to the climate emergency and taking action: Good statement but needs to consider existing buildings too, esp with regard to alterations and changes. If owners are seeking planning permission for extensions say, would it be possible to grant it only if they undertake other improvements to improve their energy efficiency?</p> <p>P20 "Provide a positive approach to accommodate growth across the borough"- not clear what this means. Is it the number of residents, of buildings, of households or of land occupied by buildings? Needs clarification as each of these has differing implications.</p>	<p>Policy requirements are related to the nature and scale of a proposal, so this limits opportunities via householder extensions (that may be permitted development) (and similarly to the Building Regulations that would apply), although the Council makes efforts to raise awareness. Policy 4. Minimising Greenhouse gas emissions and promoting energy efficiency (Strategic Policy) does set out requirements for all conversions and changes of use that result in the creation of 1 or more dwellings. They must provide an energy strategy as well as achieve net zero carbon along with a 35% reduction of carbon emissions against Part L 2021 on site.</p> <p>The general reference to accommodating growth is considered appropriate in the strategic objectives, as Policy 2 in particular in the supporting text, explains the future needs for housing, employment, retail and leisure, as identified through the housing target or future floorspace needs.</p>
57	Philip Briggs, Richmond Bat Species Action Plan Steering Group	The commitment to increasing biodiversity is excellent, in particular in relation to the constant pressure of development: "Require new major development to provide on-site green spaces with multi-functional benefits for biodiversity, climate change as well as health and wellbeing, including providing formal and informal education opportunities to enable people to learn about and connect with nature and biodiversity".	Support noted.
58	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond (and supported by the Friends of Richmond Green)	We agree broadly with the Strategic Objectives but with a number of caveats referred to in this response.	Noted.
59	Benjamin John	The policy of new residential builds that incorporate 'affordable' housing should be a top priority. Prices of houses in the Teddington area are grossly inflated and are available only to those people are cash rich.	Affordable Housing is designated as a Strategic Policy in the Local Plan. The Council has set an ambitious target for 50% of all housing delivered in the borough to be affordable housing over the plan period. The Council's affordable housing targets are informed by the Local Housing Need Assessment and the affordability issues are recognised. Please see Policy 11 for more information.
60	Eileen Folan	Anti car use policies too aggressive. Focus on active travel does not consider needs of less mobile (older, disabled) people and can limit their ability to shop locally and enjoy our green spaces. Pedestrian safety not incompatible with 30mph speed limit on main roads, particularly with new highway code and pedestrian rights. 20mph in residential streets good but frustrating on main roads.	<p>The emphasis in the Plan is contributing to a modal shift away from the car, to minimise residents' trips made by car, recognising the borough has high levels of car ownership. The 20-minute neighbourhood concept is intended to encourage the development of vibrant communities that enable residents to complete everyday tasks such as shopping and accessing essential services by foot, bike, or public transport. While the emphasis of the 20-minute neighbourhood concept is to encourage more active travel, it is recognised that not all residents will be able to walk or cycle and will need to undertake part or all of their journey by public transport. This is reflected in Policy 1, which has been amended to recognise that not everyone will be able to walk or cycle and emphasise facilitating access to public transport including improving inclusive access.</p> <p>Outside of the remit of the Local Plan, note that the Local Implementation Plan (2018) refers to the introduction of the lower 20mph speed limit on borough roads – the key aim is to reduce the number and severity of collisions; reductions in vehicle speeds are particularly beneficial for pedestrians, cyclists and other vulnerable road users when struck by a vehicle.</p>
61	Serge Lourie	<p>I support the strategic objectives, especially the commitment to respond strongly to the Climate Emergency</p> <p>However, I do not feel that the Plan goes far enough as it appears not to give enough weight to the impact of the climate emergency on listed buildings and in conservation areas.</p> <p>Although I support many of the policies relating to listed buildings, I believe that tackling the climate emergency should always take priority over other policies.</p> <p>In conservation areas and on listed buildings, "enhancement" should include the reduction of greenhouse gas emissions</p>	The Plan places emphasis on reuse and conversion of existing buildings to minimise embodied carbon with a presumption in favour of refurbishment set out in Policy 2. The Council has prepared a Net Zero Carbon Study to support several policies in the Plan which set out ambitious targets for Richmond. There is no one-size-fits all approach or solution to accommodating sustainable energy measures in the historic environment, and further

			details are added to the supporting text of Policy 4 to recognise this conflict and how it is expected to be addressed on a case by case basis.
62	Clare Snowdon	perhaps supporting initiatives such as Transition Towns (as in Totnes), and a People's Climate/Nature Assembly, using Doughnut Economics tools in decision making, solving the issue of LED street lights decimating insect populations far more than sodium lights did, dealing with vacant properties and property-as-an-investment vs housing need (as far as possible within national policy)	Comments are noted but suggestions largely fall outside the scope of the Local Plan. Tools in decision-making for organisations, including the Council, are beyond the remit of the Local Plan. The Council's work on climate policy and projects may take a broader view on initiatives around climate change. A report to the Council's Environment, Sustainability, Culture and Sports Committee in February 2023 on the delivery of the Council's Climate Emergency Strategy, including a 2023 Action Plan, with an expansion of climate and sustainability engagement work planned for 2023.
63	Paul Luton, Cycling UK	Again fully in support. Arguably Hampton should be included in development centres to give spread into SW of borough. New housing must be highly energy efficient by requirement. It would be a logical extension to have a target for reducing car ownership per household.	Hampton Village and Hampton Hill are identified as Local Centres in the Plan's centre hierarchy. Please see Policies 17 and 18 for more information. Policy 4 sets out the Council's approach to energy efficiency and identifies targets for new-build residential development. The Council's Living Locally and 20-minute neighbourhood concept policies aim to promote more use of active travel and public transport that would reduce the need to own a car for the majority of residents. The emphasis in the Plan is contributing to a modal shift away from the car, to minimise residents' trips made by car, recognising the borough has high levels of car ownership. A target in the Local Plan for reduced car ownership is not therefore considered appropriate. A report to the Council's Transport and Air Quality Committee in November 2022 on Transport Priorities 2022-26, agreed new performance indicators and targets in relation to transport, which are kept under review.
64	Lynda Hance	See above [comments on vision] - you are focusing on the wrong things and ignoring the things that are important for residents and which will hugely impact on us.	See response to comment 18.
65	James Armstrong, Richmond Cycling Campaign	RCC strongly agrees with the Strategic Objectives, particularly those that require measures to be taken in new developments to encourage Active Travel and improve the Public Realm, create 20 Minute Neighbourhoods, and make reference to the application of a Healthy Streets approach. It was additionally encouraging to see the holistic inclusion of Active Travel as a tool for delivering many of the Strategic Objectives. Focusing on the Strategic Objective: Reducing the need to travel and improving the choices for more sustainable travel, we are excited to see active and public transport featured prominently, and are largely supportive. However, we would ask that the council aims more highly than simply "maintaining" post pandemic increases in Active Travel, and instead finds appropriate wording to deliver on the Strategic Vision, which in our understanding would require levels of walking and cycling far higher than those seen post-pandemic. The Strategic Vision for example states that by 2039 Richmond will have increased levels of Active Travel.	Support for the strategic objectives noted. The emphasis in the Plan is contributing to a modal shift away from the car. Please see policy 47 on Sustainable Travel Choices that explicitly deals with enhancing active travel in the Borough. The long term Local Implementation Plan target is for 75% of journeys to be made by sustainable modes by 2041. A report to the Council's Transport and Air Quality Committee in November 2022 on Transport Priorities 2022-26, agreed new performance indicators and targets in relation to transport, which are kept under review. However it also relevant to note that revenues that support transport investment, for the Council notably from parking management, and for other providers income from fares, have not recovered to pre-pandemic levels.
66	Faye Wright, Forward Planning and Development on behalf of BMO Real Estate	In relation to the strategic objectives in relation to jobs and helping businesses to grow and bounce back, the objectives should recognise that protection of all employment uses may not result in the most efficient use of land. In the case of outdated/unviable office space, it is not considered that the protection of these spaces will help businesses to grow. Encouraging the delivery of newly refurbished, viable office spaces which meet occupier demands should be the focus of the Council's strategy in relation to office space.	See response to comment 20.
67	Jim Brockbank	I strongly agree with the objective to promote working with communities and local partners including the public sector, community, and voluntary sector as set out in paragraph 2.23	Support noted.
68	Matthew Bolton	I agree with the strategic objectives in light of the climate emergency and need to reach net zero. I think that the council should be ambitious and consider workplace parking levies under its objective to reinforce the need for business and workplaces to embed sustainability at their heart.	This is not a matter for the Local Plan; it is not solely related to new development. The Mayor's Transport Strategy refers to workplace parking levy schemes as a possibility for the next generation of road user charging systems. Generally work place planning levies would be part of a package of measures promoting alternatives to car travel and improving transport options and infrastructure. It would be subject to a scheme order, operated through a licensing scheme, rather than any link with planning.
69	Mark Lawson	It is frankly too wordy to read on a mobile phone. I won't always agree with Council decision-making, or be consulted on it, but one has to applaud the consideration and intentions of those deciding the future of this wonderful borough.	Support noted.
70	Liz Waters	Largely agree, but the Council needs to ensure that there are adequate facilities (eg health services, transport capacity, school places, playing fields) to support any increase in population resulting from provision of new residential developments.	Policies 49 and 50 set out the Council's policies regarding social and community infrastructure and education facilities. The Council supports the provision of other essential services and infrastructure such as transport and health. Proposals need to assess the potential impacts on existing infrastructure. However, service provision itself would be a matter for the relevant provider such as a health body. Where the Council does have the ability to support the provision of infrastructure this has been identified in the plan. See also Policies 37 for outdoor sport and 47 for sustainable travel choices. The section on Delivery & Monitoring has been expanded to address implementation of the Plan, and the updated Infrastructure Delivery Plan looks at the future needs of providers.
71	Sue Clayton Smith	Reducing the environmental impact of air, noise, light and odour pollution is important. Thames Water should not be allowed to regularly pollute our rivers. Affordable housing is important but needs to be managed carefully and the creation of high density flats should be managed against the need for family homes, ie don't just allow lots of small flats to be built.	Policy 46 requires all new development to protect the amenity and living conditions of new, existing, adjoining and neighbouring properties.

		Green spaces for residents to relax is really important, particularly now that so many people are working from home more and therefore likely to be using these type of spaces more regularly. They need to be safe and planned so that people feel safe using them, with regular park and police patrols if necessary. Planning for walkable environments which are well connected to the surrounding areas is good but the impact on the surrounding existing residents must also be taken into account.	Policy 13 seeks a higher proportion of small units in sustainable locations, it does not set prescriptive proportions by unit size and tenure that need to be met, allowing for a site-specific assessment. The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see Policies 34-39 for more information.
72	N Maureen John	Sounds good though I'm no expert and have only glanced at the detailed document	Support noted.
73	Christine Palmer	facilities for youth needs to be enhanced and prioritised	Policy 37 and 49 provide for play and sporting facilities and youth centres, please see these policies for more information.
74	David Marlow	P14 - P24. 1/3 of respondents with disabilities said they would no longer visit because of poor access + loss of parking (80 spaces). Overall regular visitors will reduce by 4% + all bad for retail and hospitality businesses + cultural offer. The presents DJG cafe is special, popular is being destroyed 5 storey block flats on Wharf Lane will be a blight.	While the emphasis of the 20-minute neighbourhood concept is to encourage more active travel, it is recognised that not all residents will be able to walk or cycle and will need to undertake part or all of their journey by public transport. This is reflected in Policy 1, which has been amended to emphasise facilitating access to public transport including improving inclusive access. The Site Allocation for Twickenham Riverside seeks a comprehensive redevelopment including to provide high-quality public realm, and improvements to the riverside and open space, including a widened footway to better connect the town to the river.
75	Christine Duke	Strategic objectives - Agree with some, disagree with others. - Agree that previously developed land and preused buildings should be repurposed where possible as part of new developments. Cannot understand why this could not still be the case with the old Richmond upon Thames College building in Egerton Road Twickenham, which could for instance be used as a dance, drama and film making school / college with operational film studios attached as were previously situated at Teddington Riverside. - Agree that on-site green spaces, preferably with seating, should be included in all new developments. - Agree with the ideal of 20 minute neighbourhoods. - Agree with the recognition of the importance of inclusive neighbourhoods. - Agree with protecting and improving the River Thames and its tributaries and environs. Would like to see more thoughtful use in transporting goods as well as people for work as well as leisure purposes, a little more diversity. - Do not agree with enabling tall buildings and/or high density developments to develop anywhere in the Borough, this would increase temperature and pollution levels. - Do not agree that only Richmond, Twickenham, Teddington, Whitton and East Sheen should be disproportionately purposed for major new developments, is unreasonable.	Support noted for a number of objectives. Policies 28 and 46 refer to consideration of the local micro-climate. It is recognised that tall buildings have an impact on the microclimate, and the Urban Design Study contains design guidance on factors to consider during the design development. Policy 2 is seeking to direct new higher density development in the town centres or places that are well connected. The London Plan sets out a town centres first approach, and also prioritises sites that are well connected by public transport. It is not therefore considered disproportionate or unreasonable to direct major new development to these locations.
76	Hannah Blunstone, CBRE on behalf of Rugby Football Union (RFU)	The RFU support the strategic objective to protect what is special and improve our areas (heritage and culture), and value the recognition that cultural facilities provide a destination and reason to visit the borough and a means to sustainably grow the visitor economy. The RFU support the objective to provide a positive approach to accommodate growth across the borough, enabling tall buildings and higher density development in 'appropriate locations'. However, it should also be noted that recent case law has clarified how Policy D9 should be interpreted, and this needs to be reflected in the wording of Policy 45 (Tall and mid-rise building zones). This point is further discussed in the detailed response letter appended to this form. [See comment 1027 in respect of Policy 45]	Support noted. Please see response to comment 1027.
77	Mary Egan	I agree that reducing the environmental impacts of air, noise, light and odour pollution levels is crucial. That Thames Water can regularly pollute our rivers is a disgrace. Delivering genuinely affordable housing, without creating tall buildings, is very important and the necessary social and amenity infrastructure should be a prerequisite, as well as the benefits for biodiversity climate change. Safe play and relaxation areas for children and families are important. Protecting the environment and giving access to the borough's rivers will give wonderful opportunities for the education and appreciation of nature by local people. Planning for walkable environments with street connectivity is good but ensuring the local impacts of development do not damage the health and safety and amenity of existing nearby occupiers is paramount.	Policy 46 requires all new development to protect the amenity and living conditions of new, existing, adjoining and neighbouring properties. See response to comment 162 on why tall buildings are considered in the Plan. Policies 49 and 50 set out the Council's policies regarding social and community infrastructure and education facilities. The Council supports the provision of other essential services and infrastructure such as transport and health. However, the Council processes limited control over this provision and relies on London-wide and National bodies to provide this infrastructure. The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Council will also require developments to provide a Net Biodiversity Gain (NBG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see policies 34-39 for more information. See Policy 40 and 41 in regard to rivers and river-based amenity.
78	William Mortimer	On a personal level, I am extremely concerned that the development strategy for the whole area is proceeding without looking at a parallel definition of disaster planning and allocation of resources. Not only flooding but the possibility of a commercial airliner crash or a 'dirty bomb' from terrorist activity requires that priority is given to the safety of local citizens and the services necessary to deliver an effective recovery of services - transport, communications, provisioning, medical services and so on. Hence I am completely averse to the use of the third track over the Thames via Barnes Railway Bridge for a garden when it is of strategic significance to a Disaster Recovery plan.	The Council's emergency planning includes a Corporate Resilience Plan, work with emergency services and other agencies on a multi-agency response, and a Borough Risk Register . This identifies for example the significant number of road and rail bridges that cross the Thames. The Partnership promoting the proposed green walkway along the disused railway bridge have now appointed consultants to progress the project, including costing, and set up a website www.theviewatbarnesbridge.org/ . This sets out the challenges, and it is considered that both the risks and opportunities can be considered as part of the planning and design processes.

79	David Abel	There are elements that I disagree with mainly because the wording is aspirational rather than anything concrete but it's largely sensible but not for the world that the pandemic has shown us so the whole plan is to my mind completely out of date and out of step. I entirely disagree with the objective of providing more housing for affluent middle class people like me. All our new housing should be for the people who actually make society work and any new areas of development particularly brownfield should be turned into largely parkland incorporating traditional gardens or outside space and not towering flats with bars and shops. If the recent pandemic has taught us anything it is that there isn't enough space for people and these objective do not meet that. It's also sad that there is no mention in terms of facilities for new provision of allotments.	The Local Plan sets out the strategic vision for the borough, as required by the NPPF, as well as the policies that planning applications are assessed against. The Local Plan Monitoring Framework will be updated for submission. Monitoring of these strategic outcomes and targets is completed in house and published in the Council's Annual Monitoring Report. Please see Policy 55. Affordable Housing is designated as a Strategic Policy in the Local Plan. The Council has set an ambitious target for 50% of all housing delivered in the borough to be affordable housing over the plan period. The Council's affordable housing targets are informed by the Local Housing Need Assessment. Please see Policy 11 for more information. The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see Policies 34-39 for more information. Policy 52 deals with allotments and food growing spaces.
80	Philip Villars, WSP on behalf of Sharpe Refinery Service Limited	We welcome that the Local Plan states that it will enable opportunities to deliver new homes across the borough, and the contribution that sites such as Arlington Works can make to deliver mixed use development. We hope that the planning policies contained within the plan are supportive of these objectives and that officers will deliver upon what is stated within the Local Plan.	See also response to comment 839, as any loss of existing waste and industrial uses on Arlington Works would be considered against the relevant policies protecting those uses.
81	Alice Shackleton, on behalf of The Kew Society	We agree in principle with these, subject to comments we have made elsewhere in this response.	Support noted.
82	Jon Burrell	As someone who lives in small development of flats I am concerned about how we will make changes that help respond to the climate emergency e.g. charging points for electric vehicles in resident parking spaces and retro fitting heat pumps. There should be help for residents to plan and adapt to the changes that will be needed. Would like support for self fixing and freecycling e.g. of electricals. Need identification of wasteful use of energy e.g. digital billboards. Champion elimination of cars from boroughs parks (or placement of car parking on periphery)T.	Comments noted though some suggestions fall outside the scope of the Local Plan. See Policies 3, 4, and 47. A report to the Council's Environment, Sustainability, Culture and Sports Committee in February 2023 on the delivery of the Council's Climate Emergency Strategy, including a 2023 Action Plan, indicating progress and planned actions on many areas including EV charging infrastructure, retrofit, and electrical reuse and repair. See response to comment 869 on digital advertising.
83	Bridget Fox, on behalf of the Woodland Trust	We support the strategic objectives for increasing biodiversity, the quality of green spaces, and greening the borough, including trees.	Support noted.
84	Joanna Childs	All too vague. Need to have concrete measurable objectives. Very woolly about green energy and water efficiency. Also what about sewage?	The Local Plan sets out the strategic vision for the borough, as required by the NPPF, as well as the policies that planning applications are assessed against. The Local Plan Monitoring Framework will be updated for submission. Monitoring of these strategic outcomes and targets is completed in house and published in the Council's Annual Monitoring Report. Please see Policy 55. For more information regarding green energy, water efficiency, and sewage, please see Policies 5 and 9. The updated Infrastructure Delivery Plan also sets out details including on surface and foul water infrastructure and wastewater treatment.
85	Max Millington	Disagree with objective of maximising affordable housing (page 17/341). This should be consistent with London Plan requirement to optimise and should acknowledge competing objectives which mean maximisation will not always be achievable or even desirable (e.g. protection of natural green space). In connection with green space and recreational space, natural spaces (such as playing fields) should be prioritised over man-made spaces (e.g. astro turf pitches), not least for the biodiversity they offer but also because they represent a significant part of what is great about Richmond.	The Council's affordable housing targets are informed by the Local Housing Need Assessment. Please see Policy 11 for more information. This is considered in accordance with the London Plan which does expect all schemes to maximise the deliver of affordable housing (paragraph 4.4.1). Optimising is about the London Plan expectation to use a design-led approach to establish site capacities (Policy D3) which is reflected in Policy 28. The Local Plan sets out a number of priorities, to cater for economic, social and environmental objectives as required by the NPPF, and it would be for the benefits and harm of any proposal to be weighed up on a site-specific basis. The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see policies 34-39 for more information.
86	Peter Willan and Paul Velluet, Old Deer Park Working Group	We agree broadly with the Strategic Objectives but with a number of caveats referred to in this response.	Noted.
-		Note comments on site-specific allocations (including in relation to Site Allocation 9: Teddington Police Station) have generally been collated in Table 6 below.	

Table 3: All responses received (to question 6 on the [response form](#)) in relation to Policy 1. Living Locally and the 20-minute neighbourhood (section 4 of the draft Plan) (as received) and the Council's response
[\(note general comments in relation to Policy 1 are also set out in Table 6 below\)](#)

Rep No.	Name	Comment	Council's response
---------	------	---------	--------------------

87	Myrna Jelman	The '20mins' guideline you insist upon seems to privilege walking and cycling over public transport. I would like a similar commitment to a 20mins bus ride guarantee with no more long waits for local buses! I expect much more of the richest borough in London and would like to see a fleet of smaller electric buses running on all major roads in the council at very high frequency, giving access to all in an inclusive and innovative manner and thus contributing greatly to reduced local traffic and increase in air quality, as well as providing a few more local jobs and more discovery of other areas in the council.	Public transport is supported in the policy, particularly enhancing access to public transport. However, bus routes and frequencies are provided London-wide by TfL (who aim for transition to a zero-emission bus fleet by 2034, but for longer routes electric buses cannot be charged sufficiently overnight, and so alternative fuel cell options are being investigated). The Council work closely with TfL and bus operators, but does not have the resources to provide the kind of service described.
88	Robert Blakebrough	People should make their own decisions about where they live not dictated to by the State	The Policy will not dictate where people live. The 'Living Locally' concept will give greater choice for people living and working locally by providing increased accessibility to things like shops, services, parks and community facilities that are in easy reach by foot, bike, or public transport for everyone through improvements to the public realm that incorporate the needs of children, older people, and people with disabilities. Due to wider concerns about the concept, add clarity that the policy is not seeking to restrict movement, and there are no fixed zones or boundaries.
89	Jon Rowles	<p>The council is proposing more of a town-centre-first vision, and then a 15-minute city approach to development. Therefore, unless there is a reboot, the council should adopt the 15-minute city name over that of a twenty-minute neighbourhood.</p> <p>The trajectory of the council's approach is going to be regressive as the council currently has an urban village approach with 14 villages - whilst the new local plan will merge some to create bigger town planning units - so in many ways that council is doing the opposite of what it is claiming to do. Maybe the council need to have a rethink and divide up the top-level places into neighbourhoods so that residents have access to essential food and healthcare needs within a short walk and town centre in a slightly longer journey?</p> <p>Its approach to work is that people will just be able to work from home, or from shared office space. All the guides to 20-minute neighbourhoods talk about providing more mixed-used developments that include workspaces like artist studios, workshops, etc.</p> <p>As mentioned above the 20-minute neighbourhoods are supposed to be about 10-minute one-way trips, but LBRUT have doubled this - and research shows most people will get into the car if the round trip is over 20 mins.</p> <p>It assumes that everyone can walk or cycle - significant numbers of the over 70's will not be able to walk or cycle to these facilities - and the council is proposing to take away car parking in many places will mean they will be cut off from essential facilities. These people are at a huge risk of becoming socially isolated and are likely to see a huge decrease in their quality of life. I know many people in the western fringe of the borough who has become isolated and cut off as they have aged and have become less mobile (such as having to give up their car due to age). This local plan should be doing more to reduce this isolation and improve the offerings in the smaller centres and parades.</p> <p>The plan is very much 'town centre first' and then larger parades of shops but it makes no mention of the social value of corner shops - of which there are still many, often newsagents that also sell small selections of basic groceries. The council should investigate their distribution and what can be done to protect them.</p> <p>There is also a risk to the central London economy if this policy is pursued 'too-far' as there could be disbenefits from deagglomeration - both in terms of the economy and to the individual. The Office of National Statistics has income tables that show that people who live in the borough but commute into central London earn considerably more than those who live and work here. If more people are encouraged to pursue employment close to home the result will be less financial security and lower retirement incomes which will ultimately mean the council will have a higher social care bill.</p> <p>Research undertaken for the Centre for Cities states there is a risk of isolation, territorial stigmatisation, and a widening gap between the rich and poor associated with 20-minute neighbourhoods due to reduced mobility.</p> <p>The Town & Country Planning Association state 20-minute neighbourhoods can be just gentrification if there isn't sufficient provision of affordable housing. I note that Richmond has been building the lowest number of affordable housing in London for some years, and the targets for new affordable housing are also amongst the lowest. I feel the council need to explain how this won't lead to negative social outcomes.</p> <p>The map under paragraph 4.10 needs to be done on actual walking distances - because as the crow fly can greatly exaggerate how accessible places are.</p> <p>An unintended outcome of the pandemic and more flexible working patterns is that more residents could end up working in central London because the choice is no longer commuting five days a week or working locally. Only having to work two or three days in the office could mean that local employers find that staff leave for better-paid jobs in the centre of London and they have recruitment issues.</p>	<p>Different authorities have adopted slightly different interpretations and understanding of the general concept. Terminology and precise methodology may differ. However, the central aim of facilitating those who wish to live more locally by providing the opportunity to do so. The availability of shops and services to meet the essential needs of local residents is an extension of a long-established aim of local planning policy. Equally, it does not mean that individuals cannot access services, shops, cultural facilities, places of work and so on outside of their local areas.</p> <p>It is intended that neighbourhood boundaries are flexible; add wording to clarify there are no fixed zones.</p> <p>The adopted Local Plan includes a hierarchy of centres which categorises the borough centres from the principal centre of central Richmond to local parades of importance which may consist of only a handful of businesses. The Council produced a report looking into the distribution of convenience provision across the borough and to identify gaps in provision where residents lived more than 400 metres from provision. This research fed into the development and review of the centre hierarchy.</p> <p>The composition of the borough's centres is monitored annually through the Council's Town Centre Land Use Survey which covers approximately 2,500 properties.</p> <p>Policy 11 seeks mixed and balanced communities and recognises that affordable homes, including for key workers, are important to local communities. Additional wording has been added to refer to Living Locally in that policy; see also response to comment 765.</p> <p>It is not clear at this stage exactly how the pandemic will alter an individual's choice of place of work. However, it has been suggested that the pandemic may result in positive opportunities for areas such as Richmond, should individuals prefer to work at home more often on a more permanent basis which could assist in supporting local centres, for example Policy 22 supports flexible workspace and serviced offices in the borough's suburban town centre locations.</p>
90	Melanie Gurney, The Planning Lab, on behalf of the Royal Botanic Gardens	<p>RBGK support the concept of living locally and the 20-minute neighbourhood in general. We welcome many local visitors each year and run a number of festivals, events and exhibitions to encourage different audiences and repeat visits, alongside concessionary admissions (including as part of our universal credit programme offer); and other community outreach programmes.</p> <p>While RBGK actively encourage all visitors and staff to travel to the site by walking, cycling and public transport, this is not possible to enforce as an existing, internationally significant, major London visitor attraction and science research facility. Therefore, development in Kew Gardens cannot always meet Part (B) of the policy that suggests that a target of 75% of trips be undertaken by sustainable modes. Part C also requires all development to demonstrate how it will deliver improvements to support the locally living concept. However, many applications for RBGK relate to temporary events and installations, which will not always be able to demonstrate this. RBGK request that some flexibility is considered in relation to this policy for uses outside commercial and residential uses.</p>	<p>The target of 75% of trips by walking, cycling, and public transport is a Borough-level target set in the adopted Local Implementation Plan, and it may be that where justified individual developments would not be required to meet this target, however as much modal shift as possible is encouraged.</p> <p>It is recognised that not all development applications will be contributory to the Living Locally concept and a commensurate amount of detail to the scale of development would be all that is expected.</p>
91	Tom Dunbar	Yes, but as stated above there is an opportunity to increase and diversify the area of Twickenham Green. This is an expanding area and has little to offer especially as more people are now working from home. The Council should support local gyms, cafes, restaurants, and other amenities in the area.	Twickenham Green is being designated as a Neighbourhood Centre, rather than a Local Shopping Parade, owing to its importance locally as providing an increasingly diverse array of shops and services. See Policy 17. Further development appropriate to neighbourhood centre that supports the Living Locally concept is supported in principle.
92	Stephen Brooker, Walsingham Planning, on behalf of Whitbread Plc	Whilst the thrust of the Policy is generally supported, it is essential that this approach does not become parochial, the unequivocal wording of the Borough Living Locally policy runs this risk and should be modified to take account of the importance (and advantages to the Borough) of also attracting outside investment and activity, for example visitors and tourists.	It is hoped that by promoting our centres as vibrant and people-focussed, this will attract investment as more businesses choose to locate within the borough. The Borough boasts some of the finest green spaces in Greater London that attract visitors from all over the world such as the UNESCO World Heritage Site in Kew Gardens, and Richmond Park which is the largest park in London. Enhancing the vibrancy of our centres will ensure that these visitors stay longer in the Borough. The Plan should be read as a whole, and for example Policies 17 and 26 recognise the importance of visitors.

93	Victoria Barrett-Mudhoo, Lichfields on behalf of the West London NHS Trust	n/a	Noted.
94	Louise Fluker, The Richmond Society	Agree but with caveats about provision for less mobile residents who cannot walk or cycle: New developments should provide safe space for vehicles to drop off and collect elderly or less mobile passengers. The draft Plan highlights that Richmond has an ageing population whilst there is evidence of under occupancy of properties. Some of this may be because people are reluctant to downsize with all the expense incurred and there is insufficient housing provided for the elderly if they wish to continue living in Richmond. The Council could do more to encourage developers to provide housing more suited to older residents and provide incentives for people to downsize thus freeing up family accommodation. In the section on safer communities surely developers should be required to show explicitly how the plans for large developments have designed out crime.	Reference has been added in the policy to inclusive access and a new paragraph has been added to the supporting text which recognises that not all residents can comfortably walk or cycle and some still require the use of a car. Specific mention has been given prioritising the retention of disabled parking spaces and providing additional spaces where appropriate. Please see Policy 12 – Housing Needs of Different Groups for the Plan’s policy approach on downsizing. References have been added to the Council’s new Community Safety Strategy in the supporting text to Policy 51, and in Policy 28 the Secured by Design scheme is now referenced in policy along with encouragement to consult with the Metropolitan Police at an early stage in the supporting text.
95	Siriol Davies, Ham and Petersham Neighbourhood Forum	The 20-minute neighbourhood has parallels with the Neighbourhood Plan process in that it is a place based methodology which identifies neighbourhoods and analyses their character and needs, with the aim of conserving the identity and heritage, and providing the services and needs for the community. We note that on Map 4.1 Petersham is identified as having no local centres within the buffer zone and residents of Ham and Petersham are reliant on Richmond town Centre and Kingston Town Centre for many amenities, shops and services, albeit the road network is limited, public transport is limited to buses and improving infrastructure for sustainable and active travel to Kingston and Richmond is one of the objectives of the HPNP.	Noted.
96	Philip Briggs, Richmond Bat Species Action Plan Steering Group	This clearly has a wide range of benefits. From our perspective it's good to see this identified as an additional driver for "improving accessibility and connectivity of green infrastructure". It would be good to have something in about managing accessibility for people in a way that does not impact on biodiversity, particularly avoiding lighting green spaces at night as artificial lighting has a negative impact on nocturnal wildlife, and avoiding new infrastructure or public access that will negatively impact on wildlife.	Support noted. Please see policies 39 and 43.
97	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond (and supported by the Friends of Richmond Green)	We agree broadly with Policy 1 and the 20-minute neighbourhood.	Support noted.
98	Benjamin John	Any policy that encourages people from using their car to shop locally is to commended.	Support noted.
99	Eileen Folan	this will only work if rail services are protected. SWR cuts to Fulwell and beyond undermine efforts to reduce car use, and also impact on my local area Teddington. Also provision of local services such as banks. i am very disappointed that the four major banks have all closed in Teddington, resulting in shops refusing cash as nowhere to bank their takings. A better mix of shops in Teddington could be encouraged - greengrocer (no pre packed, plastic wrapped veg), butcher in high street, everyday clothing.	Unfortunately, rail services are not under the remit of the Council and beyond the scope of the Plan. The Council’s Local Implementation Plan sets out that the Council will work closely with TfL, Network Rail and South Western Railway to improve public transport across the borough. The Living Locally concept aims to enhance access to public transport which hopefully would encourage greater service provision by transport companies. The Policy and supporting text have been amended to place a greater emphasis on the need for mixed uses. However, please note that following the amalgamation of many commercial uses into Use Class E in 2021 it is exceedingly difficult for the Council to control this. By retaining Class E through the use of Article 4 Directions prohibiting the change of use to residential, it is hoped that market forces would regulate the diversity of commercial offering. See Policy 20 in relation to essential local shops and services.
100	Catherine Rostron	Where I live offers a prime example of an area which does currently support the concept of the 20 minute neighbourhood in a good way but which is currently under significant threat. Half of Kew Retail Park has just been sold to a developer who intends to build luxury flats. All the retail units other than Marks and Spencer will be lost to the community. Without the footfall to the other shops it is unlikely that Marks and Spencer will survive for long. Between 2001 and 2019 the population of Kew ward increased by over 27%. The retail park is the main non-tourist retail site in the area. Without it the 12,000 residents will be served by only a handful of corner shops. The retail park provides for most daily shopping needs within walking or cycling distance for Kew’s residents e.g. pharmacy, clothing, food and basic household goods. It goes a long way towards supporting a ‘20 minute neighbourhood’. Access along the tow path also provides a safe walking or cycling route which also benefits from lower levels of pollution. Without the retail park car journeys to the larger supermarkets around the periphery of Kew will have to increase (Richmond, Brentford etc) as will congestion and air pollution. While I support the need for more housing in London, particularly social housing, communities also need viable infrastructure. I can only really comment about my local neighbourhood, here it feels as if the facilities to support the ‘20 minute neighbourhood’ are in shorter supply than housing.	As set out in response to comment 624, the Site Allocation for Kew Retail Park does recognise that Kew Retail Park is well used and a popular retail destination, despite its location outside of a main or local centre. The Site Allocation also makes clear that the Council expects commercial uses to be retained on site, and that the mix of such uses, including retail, should be curated so that they add to the vibrancy and vitality of the new community. As Policy 1 sets out general principles, it cannot deal with every scenario, but the Council’s aspiration is that applying part C to an application will ensure that all the elements that contribute to “Living Locally” are fully considered. Add to the supporting text further clarity about how applicants are expected to demonstrate compliance with the policy.
101	Andrew Barnard	This is an idealistic vision which will not suit all in the community. Not everyone can walk or use a bike, nor indeed may they wish to. The policy risks creating 'islands' (were it to be implemented) with extensive duplication and/or significant costs. The Council's ability to make the investments envisaged is extremely limited and will depend on the private sector who will make judgements made based on commercial viability. However, the Council can help by reducing business rates and associated costs to encourage businesses to invest and employ staff.	The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.

		Great care must be taken not to extrapolate the exceptional experiences of the past 2 years to build a vision for fifteen years hence. Changes in behaviour have been by force of circumstance. We live in close proximity to all the extraordinary assets of one of the world's major cities - London - and imagining that the inhabitants of Richmond will somehow turn in themselves over a strategic timeframe seems entirely unlikely.	The different centres will be permeable, and many people will be within the catchment of more than one centre. The centres are organised in a hierarchy based on the level of service provision and importance and not all centres will offer the same. At the very least, Local Shopping Parades provide basic needs and some services.
102	Paul Luton, Cycling UK	Improvement of walking and cycling availability should be required in all areas.	As can be seen on the 800-metre centre catchment area map, the vast majority of the Borough is within 800-metres of a centre. Improvements to walking and cycling will, therefore, be promoting in all areas. The Borough has an ambitious target of 75% of all trips being undertaken by walking, cycling, and public transport and the policy will aim to achieve this goal.
103	Lynda Hance	It's a nonsense to imagine that people living in a London Borough won't travel into Surrey or elsewhere in London to work, for shopping, for pleasure (theatres etc) to other transport hubs (Waterloo, Heathrow, the tube, etc). You have stated that Whitton isn't well served by transport links so this policy doesn't tie in with that.	The policy will not prevent residents from travelling and not all services or amenities will be offered within the Borough. The goal of the policy to increase choice by offering more everyday needs and services close to where people live to promote increased use of active travel and public transport.
104	Clare Snowdon	I love the 20 minute neighbourhood idea. It would be nice to see provision for people with disabilities here so that they can see how they fit into this neighbourhood	The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.
105	Jim Brockbank	The policy of the 20 minute neighbourhood, living locally and encouraging easy access through active travel eg walking and cycling is excellent	Support noted.
106	James Armstrong, Richmond Cycling Campaign	RCC strongly agrees with Policy 1, and welcomes the strong commitment of the council to the Living Locally concept & 20 Minute Neighbourhoods. The measures included will go a long way towards leveraging the planning system to enable modal shift to Active and Sustainable Travel modes. We wish to ask for clarification regarding Policy 1C, Point 6. Is the wording intended to be interpreted such that relevant proposals must demonstrate how they will improve local walking and cycling routes, ONLY in areas with lower levels of public transport accessibility or higher levels of health deprivation and disability? If so, we would ask that this is amended such that major developments located in ALL PTAL levels must demonstrate how they will improve local walking and cycling routes. This is important because of the focus in Policy 2 on the direction of higher density development towards high PTAL level areas, which likely present the largest opportunities for gains in Active Travel use.	Support noted. This particular policy ask to demonstrate improvements was intended to be sought in areas with lower levels of public transport accessibility or higher levels of deprivation and disability. The supporting text at paragraph 4.11 is intended to refer to the spatial areas of deprivation and PTALs. For clarity, this is considered to go beyond the requirements of Policy 47.C which ensures developments provide a high quality walking and cycling environment within the curtilage of the development and in its near vicinity.
107	James Stevens, Home Builders Federation (HBF)	The HBF is the principal representative body of the house building industry in England and Wales and our representations reflect the views of discussions with our membership of national and multinational plc's, through regional developers to small, local builders. Our members account for over 80% of all new housing built in England and Wales in any one year. Recent research by the Government has estimated that housebuilders have made a significant contribution to the nation's infrastructure, providing some £21 billion towards infrastructure of all types including affordable housing since 2005. We have noted the site allocations and the rationale behind the 400 metre and 800 metre active travelling zones. In view of the relatively small size of the borough, and the constraints on the supply of land for housing, but the high levels of public transport connectivity - most locations are within 800 metres walking distance of a train or tube station and even those few areas beyond this distance are still a feasible distance to walk or cycle – every area of the borough should be considered capable of contributing to future housing supply. Nowhere should be placed off limits on grounds of public transport connectivity.	Policy 15 recognises the Areas for Intensification as set out in the London Plan, but this does not exclude development outside of those areas. The Council's aspiration is that applying part C to an application will ensure that all the elements that contribute to "Living Locally" are fully considered, not just public transport accessibility.
108	Lynne Bailey	In the same theme as my comments on Section 3, this policy feels like it is excluding the elderly and disabled. Not everyone is capable of walking or cycling for 20 minutes and doesn't want to be continually reminded of this! I am not suggesting you disregard the policy but, rather, expand it to cater for the less mobile in the borough. Remember that not everyone who is mobility limited has a blue badge. Please reword to show you are considering all residents and not simply disregarding some of the more vulnerable.	The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.
109	Matthew Bolton	Policy 1 1 under point C should include the need to have a 'Healthy Streets' Transport Assessment for Major developments of 10 or more residential units or non-residential development of 500sqm of floorspace or more. Whilst the Local Plan Policy adheres to the same principles the TfL document categorises how developments should contribute to the TfL objective of healthy streets that promote healthy travel and environments. I would highlight the current council policy of offering 30 minutes free car parking to residents undermines the objective of the 20-minute neighbourhood. This scheme encourages motorists to drive to shops, often for short trips, as it incentivises them with 30 minutes free parking. This free parking should be cut down. This scheme also ensures that on street bays are often occupied when there would be considerably better uses to the high street public realm such as parklets, tree planting and cycle parking. To support the objective of living locally and 20 minute neighbourhoods, the council should consider reviewing the free parking scheme and put the revenue gained from parking receipts into public realm enhancements and cycle infrastructure improvements. I note the council has recently approved the East Twickenham public realm improvements which is commended. This should be replicated more widely through improving the pedestrian environment on all its High Streets. I would recommend Broad Street in Teddington as a potential priority area. This has two sides of car parking and narrow footways. Buses are frequently blocked due to the narrow road as a result of wide cars parking on both sides. These cars could comfortably be accommodated within the North Lane Car Parks, as shown in the Ellery Hall Transport Assessment. As a result, the pedestrian environment is not as good as it could be, which is a key component of the success of 20 minute neighbourhoods. I would add that free car parking and narrow footways along Hampton Hill High Street also undermines the 20 minute neighbourhood objective.	The requirement to follow the 'Healthy Streets Approach is set out in part B of Policy 1, in Policies 17 and 51, as well as underpinning the emphasis on Active Travel in Policy 47, and as set out in TP2 of the London Plan. It is therefore considered the requirements are clear and it does not necessarily need to be stated under part C. The provision of free car parking is beyond the remit of the Local Plan, although it is recognised that this can bring benefits to those with restricted mobility, and for short period of times aids deliveries and collections, which need to be considered along with the impacts. The Council will be led by whether there is space in highways/footways before considering any change to green space – see also response to comment 956. The Council has set up a Public Realm Investment Fund (PRIF) and, as reported to the Finance Policy and Resources Committee in September 2022 and a further update in February 2023, placemaking interventions have been identified in areas across the borough to support high streets.
110	EE McClelland	I have concerns about providing car-free development as many people will choose to park elsewhere on streets making congestion worse. I believe in a suburb like Teddington car use is often required as larger stores such as Sainsburys are distant and as a family-oriented town parents often require a car for baby and child transport. This is NOT always easy on public transport if you want your child to participate in activities with their peers.	The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.
111	Mark Lawson	I will read the document in more detail on my laptop this evening. The implications and changes resulting from the Pandemic are certainly interesting and the Council seem to be preparing for those changes which are complex and varied. For example I happen to feel that non-mask wearing on public transport and crime in the Inner London boroughs is encouraging residents to stay local, certainly for their leisure time.	Support noted.
112	Anna Kendall	I have been living locally for 35 years. I hear my surgery has to move and would like it to move to the site described in sectopn7 as site allocation 9, so it stays local and can support initiatives such as the Whatsapp groups set up in Covid time for Albert Road and Park Road which helped with collecting prescriptions etc...	Noted. See the Site Allocation for Teddington Police Station and the response to comment 307.

113	Olivier Somenzi	let's not forget that a 20-min walk or bike ride might not be possible for everybody (older people, people with disabilities etc) - what's the plan for these vulnerable populations?	The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.
114	Sue Clayton Smith	A great idea and goal but this will only be achieved if the local high streets are attractive and have an appropriate mix of outlets. There also needs to be good access to health and education, as well as sufficient green space so that it is not too overcrowded. Amenities need to be provided to such green spaces too, eg toilets on Richmond and Twickenham Greens to avoid the adjacent residential streets from being used as public toilets. Local walking and cycling routes to be enhanced and developed.	The Policy and supporting text have been amended to place a greater emphasis on the need for mixed uses. However, please note that following the amalgamation of many commercial uses into Use Class E in 2021 it is exceedingly difficult for the Council to control this. By retaining Class E through the use of Article 4 Directions prohibiting the change of use to residential, it is hoped that market forces would regulate the diversity of commercial offering. Recreational pressures on our green infrastructure are recognised in the Plan, such as Policy 37. Policy 51 seeks access to free public toilet facilities in major developments open to the public, and the site allocations for Twickenham Riverside and the place-based strategy for Richmond & Richmond Hill also refer to aspirations for provision of public toilets.
115	N Maureen John	Sounds good though again - I'm no expert and have only glanced at the document	Support noted.
116	David Marlow	<u>BUT</u> Council is ignoring residents with disabilities and the fact that not everyone can walk or cycle. See DJG comments. The planned Elleray Hall in Teddington is far less convenient than present building (as well as being of incongruous design and out of character). A site next to the Teddington Library and adjacent bus stops was rejected.	The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.
117	Christine Duke	Agree for the most part with the ideal of the 20 minute neighbourhood. However, consideration needs to be given to the fact that not everyone is able to cover the same distance in 20 minutes and could take twice as long or more (40 min +) to get to local shops and amenities. After shopping etc. then having to another 40 + minutes to return home, exhausted and often in pain, makes far easier said than done. Also many elderly, disabled and vulnerable people are afraid to go out anywhere alone for fear of falling over, crime and other accidents etc. The condition of roads and footpaths will need to be improved greatly, across the Borough. Footpaths will need to be well lit and maintained. There will need to be more resting points/seats, more localised accessible toilet facilities, visible community policing. Clear enforcement of the ideal of "pavements are for people" is needed as many people are fearful of being hit or knocked over by electric scooter riders, and cyclists etc. using the pavements often at high speeds, and it is difficult for the less able to move out of the way to avoid an accident, more time is needed to cross roads, timed crossings do not allow enough time to cross safely. Overall would like to see the views of Disability charities and organisations sought for their input, so that their views can be taken on the reality of getting around for shopping, socialising etc.	The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.
118	Hannah Blunstone, CBRE on behalf of Rugby Football Union (RFU)	As noted in response to Question 4 [See comment 33 in respect of the strategic vision] , the RFU support the living locally approach for access to essential services to fulfill daily needs. However, the vision and the corresponding policy (Policy 1) as currently drafted applies to 'all development, except householder applications', and needs to clarify exclusions for Twickenham Stadium as one of London's premier entertainment venues and an nationally significant sporting venue. To account for this, we would suggest that Policy 1 (Part C) be redrafted as described in the detailed response appended to this form. [See comment 269 in respect of Policy 1]	Support for the Policy is noted. Requirements of Criteria C are not onerous to demonstrate in a way that would satisfy the requirements of the policy and the needs of the stadium. As acknowledged in the representation, applicants are expected to demonstrate compliance with policies regarding transport, biodiversity, healthy streets, air quality and other such measures. This policy would only require consideration in the supporting planning documents how this compliance is in support of the Living Locally concept.
119	Mary Egan	The policy of the 20 minute neighbourhood is an excellent goal - ensuring access to food and necessities by creating attractive high streets, health and education by providing good open spaces and work good public transport as well as access to recreational and cultural areas. Developers should comply with these aims, by creating well designed and finished low rise housing with adequate on site parking. Local walking and cycling routes should be increased.	Support noted.
120	David Abel	Having sounded negative in my previous answers it would be churlish of me not to fully applaud this. It's an excellent idea so long as it incorporates things like access to a GP surgery	Support noted.
121	Philip Villars, WSP on behalf of Sharpe Refinery Service Limited	The Arlington Works site is within a short walk of the local centre of St Margaret's and other local facilities such as parks, train and bus services. The Arlington Works site has the potential to positively contribution towards the 20-minute neighbourhood of St Margarets.	Noted.
122	Alice Shackleton, on behalf of The Kew Society	- in principle, The Kew Society is supportive of this concept - there are some requirements for this to work: one is that a high density of residential development is required in order for there to be a large enough population to support a "living locally" environment - to have businesses, education, health, culture, retail and other elements of a viable community as envisaged. - This concept is fine if one is mobile. Whilst the increasing proportion of ageing people in the Borough population is noted, there needs to be more recognition that even those who are relatively mobile may not be able or want to walk or cycle for twenty minutes or at all and also may not be able to carry grocery shopping, for example. They may need carers who themselves may need a vehicle to cater for their needs (and travel to various customers). Not to make provision for these needs risks excluding a growing part of the population. - Within Kew the distance to walk to Kew Gardens Station and bus stops for the older people can be daunting, for example, it is a significant distance from the Kew Riverside development to the Underground station. It may be a short distance for a fit young person who could walk or cycle. - The draft Local Plan considers the increasing ageing population in terms of adult social care rather than in meeting their needs for transport. Many of the older population are relatively fit but not comparable to the young and so not able to walk or cycle to meet all their needs.	Support noted. The Policy has been amended to recognise that not everyone will be able to walk or cycle but that this should be supported, and appropriate facilitation be made to enable walking or cycling where this is currently unfeasible due to public realm, lack of opportunities to rest, distance too far, etc.
123	Jon Burrell	Totally support active travel and cycling but something needs to be done about high rates of bike theft which undermine this.	Support noted. The Local Implementation Plan sets out how crime and fear of crime can be addressed, such as through assessment of lighting levels through parks and other open spaces. Policy 48 refers to the London Cycle Design Standards to deliver cycle parking that is secure and well-located.
124	Hilary Pereira, River Thames Society	Not a matter on which comments from the RTS would be appropriate	Noted.
125	Laura Hutson, Sport England	Sport England is fully supportive of this policy which helps create environments that make it easier to be physically active. This is also in line with our Active Design guidance as outlined below. [See comment 945 in relation to Uniting the Movement and Active Environments]	Support noted.

126	Bridget Fox, on behalf of the Woodland Trust	Support B8. "improving accessibility and connectivity of green infrastructure".	Support noted.
127	Joanna Childs	Nice idea, but the whole point of living in a city is access interesting jobs and culture otherwise we'd all live in Tavistock. Will you relocate the Financial Services sector, the ROH, British Museum, RA, National Gallery, Barbican etc to LBRUT? In pre-industrial London fisherman dried their nets by Kew Bridge and had no bathrooms.	The 20-minute neighbourhood concept is intended to encourage the development of vibrant communities that enable residents to complete everyday tasks such as shopping and accessing essential services by foot, bike, or public transport. This is achieved by ensuring residents are within 20 minutes' walk from a town centre, local centre, neighbourhood centre, or local shopping parade in line with Policies 17 and 18, or other smaller concentrations of local shops and services in line with Policy 20.
128	Joan Gibson	Would think some policies to encourage active travel such as green routes, and exercise information would help folks leave the car at home without costing LBRuT a fortune. Hounslow's beat the streets is a good example which has been shown to work. Also planning need to change so they take a wider view of developments and make sure any changes include through routes to improve walking / cycling. For instance cut throughs from Redfern Avenue to Heathfield rec could have been organised with the THS development. Have any cut throughs been organised for the Brewery development etc. etc.	The Council has published an Active Travel Strategy in 2020 and Richmond Public Health has introduced a Physical Activity Plan 2021-2031 which both seek to increase physical activity in the borough.
129	Max Millington	I am wary of the numerous references to cycling: more cycle lanes and rights for cyclists are not to my mind the answer for Richmond. The needs of pedestrians, public transport users and drivers (of less polluting vehicles) should not be deprioritised. I don't think it is right to say LBRuT needs to be more locally dependent - a great many residents work and have educational requirements in Central London and in the wider area, so it would be inappropriate not to provide adequately for that.	Increased number of cycle lanes will reduce conflict with pedestrians and drivers and make for overall safer streets and roads. The policy aims to provide more choice locally by increasing access to our centres by walking, cycling, or public transport. It does not seek to restrict access to other parts of London. Access to Central London will be retained by cycling, public transport, or car.
130	Peter Willan and Paul Velluet, Old Deer Park Working Group	We agree broadly with Policy 1 and the 20-minute neighbourhood.	Support noted.
-		Note comments on site-specific allocations (including in relation to Site Allocation 9: Teddington Police Station) have generally been collated in Table 6 below.	

Table 4: All responses received (to question 7 on the [response form](#)) in relation to Policy 2. Spatial Strategy: Managing change in the borough (section 4 of the draft Plan) (as received) and the Council's response
(note general comments in relation to Policy 2 are also set out in Table 6 below)

Rep No.	Name	Comment	Council's response
131	Caroline Wren	Broadly speaking this section all makes sense: welcome the commitment to brownfield development and sensitivity to place-based character in design, consideration of embodied carbon, and the other principles.	Support noted.
132	Robert Blakebrough	Certainly do not agree with Policy 2 -A "higher density development including homes," Complete madness in a city/country already hugely over populated i.e. UK population has increased approx. ten fold in the last 300 years. Solutions should look at reducing population as current situation is unsustainable	The NPPF requires us to meet the development needs of the area, to provide for objectively assessed needs for housing and other uses. It expects a Local Plan to optimise the use of land, expecting an uplift in density of residential development in city and town centres and other locations well served by transport. The London Plan sets the Council's housing target and directs incremental intensification to existing residential areas within high PTALS or close to stations or town centres. Therefore it is not possible to take an approach that considers we are over populated and resist higher density development including homes.
133	Jon Rowles	This sounds OK in practice, however, as the council is adopting a 20-meter walking distance/800-meter buffer development can take place in 95% of the borough. Development needs to be directed towards the 200-meter buffer, and to a lesser extent, the 400-meter buffer - and these need to be actual walking distances. Section B - the presumption in favour of refurbishment could end up being a 'maladaptation' as converting buildings can involve using more carbon. Reading through the research - it's often the case that only 'lite' refurbishment saves carbon. It also does not consider the benefits of intensification that rebuilding can bring to town centres and the reduced need to build on green land in the countryside. Rebuilding also saves carbon after about 30 years and most domestic buildings will last over 100 years – so on that timeframe it is the right thing to do. I get the impression the council is trying to make development more difficult. With the high property prices in the borough, most refurbishment schemes are very intensive with places often gutted back to the shell - and then most of the shell is often replaced too. There would have to be some very robust calculations to show that refurbishment uses less carbon.	The focus on Living Locally is considered an appropriate concept for the borough; and further details are added to the supporting text in Policy 1 as to how the 800m relates to the borough, but clarifies this is not measured as an absolute geography, and there are no fixed zones or boundaries. The Plan places emphasis on reuse and conversion of existing buildings to minimise embodied carbon with a presumption in favour of refurbishment set out in Policy 2. The Council has prepared a Net Zero Carbon Study to support several policies in the Plan which set out ambitious targets for Richmond. There is no one-size-fits all approach or solution to accommodating sustainable energy measures in the historic environment, and further details are added to the supporting text of Policy 4 to recognise this conflict and how it is expected to be addressed on a case by case basis. The need to avoid maladaptation has been added to Policy 29.
134	Melanie Gurney, The Planning Lab, on behalf of the Royal Botanic Gardens	RBGK generally agree with this policy. However, request that Part (A) of the policy reflects that higher density development, which is directed to sites in the town centres or highly accessible spaces, should also have regard to the impact on townscape character, heritage assets, and key views. Each application for development must be assessed on a case-by-case basis, and just because a development is proposed for a highly accessible, town centre location, does not necessarily mean that it will be acceptable in townscape and heritage terms. RBGK also seek clarification on the "key diagram" on page 28. A large proportion of Kew Gardens is designated as an "incremental intensification area", as well as an "area deficient in public open space". The Royal Botanic Gardens at Kew is a World Heritage Site; located in a Conservation Area; registered as a Grade I Registered Park and Garden of Special Historic Interest; and manages a total of forty-six listed buildings and structures. It provides approximately 300 acres of open space and gardens, and is heavily protected in policy terms, therefore it is unclear why these designations have been partially applied to Kew and its immediate setting, which is also very sensitive. RBGK request that these designations are removed, or their relevance to Kew Gardens be clarified in the policy text.	Noted and agree every decision is assessed on a case by case basis - the Plan should always be read as a whole; this particular policy would not override other policies. However, it is considered important that this is a policy seeking to convey the spatial strategy, and adding cross-references and caveats could undermine what it is seeking to articulate. In respect of the key diagram and the areas of public open space deficiency, only sites publicly accessible are included in the assessment, so any sites which people cannot access freely, are not included – such as Royal Botanic Gardens Kew. The Public Open Space deficiency areas have been updated in Policy 37 to reflect the 2023 study, and continues this approach. That is not to say it does not make an important contribution towards provision.
135	Tom Dunbar	I agree but the growth needs to be proportionate to a) the need to protect green / open spaces; b) to ensure the right infrastructure and amenities are in place to meet needs (especially public transport).	Noted, and these priorities are mentioned in Policy 2.

			<p>The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see policies 34-39 for more information.</p> <p>Policies 49 and 50 set out the Council's policies regarding social and community infrastructure and education facilities. The Council supports the provision of other essential services and infrastructure such as transport and health. However, the Council itself has limited control over many aspects of this provision and relies on infrastructure providers, service delivery organisations, strategic bodies, developers and landowners, as set out in the new section on Implementation of the Local Plan.</p>
136	Stephen Brooker, Walsingham Planning, on behalf of Whitbread Plc	Policy 2 [A] fails to recognize that there are reasonable opportunities for the redevelopment of existing sites which lie outside of town and district centres and which may not enjoy good public transport connections but which can nonetheless make useful contributions to the Borough.	Policy 2 is seeking to direct new higher density development in the town centres or places that are well connected. The London Plan sets out a town centres first approach, and also prioritises sites that are well connected by public transport. It is reasonable in a strategic policy to not refer to out of centre development which may not be well connected. That does not mean the useful contributions from existing sites will not be recognised. Any proposal is considered on a case by cases and subject to all other Plan policies, so it may be possible to demonstrate there are no unacceptable impacts identified.
137	Victoria Barrett-Mudhoo, Lichfields on behalf of the West London NHS Trust	n/a	Noted.
138	Louise Fluker, The Richmond Society	We agree with the general approach and that the Plan identifies the specific challenges to LBRUTC in meeting its targets of affordable housing because so little land is available. To that extent focusing on reusing land is sensible. There is however an issue which is not sufficiently debated which is that the Council has identified that most of the CO2 emissions are from domestic consumers yet the housing stock in Richmond is old with specific areas containing many historic and listed buildings, it is unclear how both objectives can be reconciled (i.e. preserving historic buildings vs modernising them sufficiently)	The Plan places emphasis on reuse and conversion of existing buildings to minimise embodied carbon with a presumption in favour of refurbishment set out in Policy 2. Policy 3 recognises that extensive retrofitting will be required to decarbonise Richmond's existing building stock and will actively promote retrofitting of existing buildings through low-carbon measures. There is no one-size-fits all approach or solution to accommodating sustainable energy measures in the historic environment, and further details are added to the supporting text of Policy 4 to recognise this conflict and how it is expected to be addressed on a case by case basis.
139	Siriol Davies, Ham and Petersham Neighbourhood Forum	A. Ham and Petersham also has a very low PTAL. We note that Ham Close redevelopment (site allocation) would lead to a significant increase in residents and trips, which need to be met by associated services, public transport and active travel infrastructure. B. It is good to see recognition of embodied energy and support for reuse and conversion of existing buildings to minimise embodied carbon with a presumption in favour of refurbishment, however reference to retrofitting/ deep retrofitting should be included here so that when buildings are refurbished they are also upgraded to improve the fabric performance to achieve net zero by 2050, and to make a strategy which addresses the challenge of retrofit in conservation areas.	In relation to A, the limited options for access in Ham and Petersham are referenced in the place-based strategy, along with the Neighbourhood Plan requirements for higher levels of cycle storage due to the poor accessibility. I note under consideration of the planning application on the site, a draft Travel Plan included the objective to reduce the number of car trips by 5%, due to the low PTAL for the area, and recognised opportunities to encourage walking and cycling, and car club membership. Overall with the proposed mitigation, the site layout and connections to the existing road network and the level of parking were considered to pose no severe threat to highway safety and convenience, subject to conditions and a legal agreement. Note support for B. See also response to comment 138 and the further details added to the supporting text of Policy 4.
140	Philip Briggs, Richmond Bat Species Action Plan Steering Group	Really good to see the commitment to growth being delivered in a sustainable way, with supporting infrastructure, while tackling the climate emergency and biodiversity crisis, limiting new housing to already developed land.	Support noted.
141	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond (and supported by the Friends of Richmond Green)	We agree broadly with Policy 2, Spatial Strategy: Managing Change in the borough.	Support noted.
142	Carolyn Doughty	It is crucial that South western railways are encouraged to maintain the previous level of service from Shepperton to London Waterloo. The current reduction in train results in severe disruption to commuting times and overly busy trains, particularly at peak times.	Unfortunately, rail services are not under the remit of the Council and beyond the scope of the Plan. The Council's Local Implementation Plan sets out that the Council will work closely with TfL, Network Rail and South Western Railway to improve public transport across the borough
143	Deborah Waddon	The opportunity to receive affordable housing is extremely limited. It is very sad the opportunity is not there to those that have grown up here and worked here to support the local economy and to continue to be a support to their families have little or no chance of affordable accommodation.	Affordable Housing is designated as a Strategic Policy in the Local Plan. The Council has set an ambitious target for 50% of all housing delivered in the borough to be affordable housing over the plan period. Please see Policy 11 for more information, as further details are added to refer to providing genuinely affordable homes for local key workers.
144	Paul Luton, Cycling UK	"places that are well connected by.....cycling". In an area the size of Richmond borough all there is no reason why all places should not be readily accessible by cycling especially taking into account e-cycles. Perhaps question forecasts of demand for retail space given growth in on-line shopping.	Noted. The Retail & Leisure Needs Study has taken into account online shopping, and while it is difficult to predict longer term implications they have used both the household survey and Experian projections to inform forecasts.

145	Faye Wright, Forward Planning and Development on behalf of BMO Real Estate	In relation to Part B, we agree that prioritising the use of previously developed land, including the reuse and conversion of existing buildings to minimise embodied carbon with a presumption in favour of refurbishment will deliver growth in a sustainable way. The continued use and reuse of listed buildings should also be prioritised and it should be recognised that the conversion of listed buildings to alternative uses may secure their future, thereby representing sustainable development.	Support noted. Please see Policy 28 regarding listed buildings. See response to comment 138 which recognises a case by case approach to sustainable energy measures in the historic environment.
146	Clare Snowdon	I would like to see strong policy on protecting habitat and connectivity of green spaces - for instance designating the Sainsburys St Clares car park as MOL and the introduction of urban hedgerows, support for Nature-Connected Neighbourhoods etc	The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. It recognises the multi functional network, including corridors and stepping-stone sites. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see policies 34-39 for more information. Note the Open Land Review (Green Belt, MOL, LGS and OOLTI) examined the performance of existing designated open space against relevant national, regional and local purposes and criteria – for MOL the criteria are set by the London Plan.
147	Jim Brockbank	The 'living locally' concept makes a lot of sense. But paragraph B11 which relates to the Major's Healthy Streets Approach to encourage walking and cycling are the choices made for local journeys is significantly let down if the health and social care facilities locally are not 'fit for purpose'. This is relevant to the proposal for site allocation 9 at Teddington Police Station- see below. The local plan acknowledges that there are limited opportunities for development in the locality and the opportunity to develop the site allocation 9 as a community / social infrastructure should not be missed	Noted, and Policy 49 seeks to ensure adequate provision of community services and facilities, with Policy 51 also supporting health and social care facilities. The Site Allocation for Teddington Police Station already makes clear that redevelopment of the site will only be acceptable if a community/social infrastructure use is re-provided on the site, such as for a medical/health use.
148	James Armstrong, Richmond Cycling Campaign	RCC agrees with Policy 2, noting with particular interest the proposal to direct higher density development towards areas that are well connected by public transport, walking and cycling. If Policy 2 was to be improved, note could be made of the need to avoid further development in areas that would encourage motor vehicle use.	Policy 2 is seeking to direct new higher density development in the town centres or places that are well connected. The London Plan sets out a town centres first approach, and also prioritises sites that are well connected by public transport. However, the NPPF requires us to meet the development needs of the area, to provide for objectively assessed needs for housing and other uses, and expects a Local Plan to optimise the use of land, therefore it would be difficult to avoid further development in certain areas if other policies in the Plan could be addressed. Clearly the Plan as a whole seeks to contribute to a modal shift away from the car, to minimise residents' trips made by car.
149	Mark Lawson	I think we all appreciate that we live in the Royal Borough of Richmond for a reason. Intentions are honourable.	Support noted.
150	Graeme Fraser-Watson, The Teddington Society (Planning Group)	See Question 10 [comments added under Section 7 Place-based Strategy for Teddington & Hampton Wick in Table 6]	See response to comment 300 in relation to the place-based strategy for Teddington & Hampton Wick.
151	Sue Clayton Smith	Plans for housing, retail and employment related development need to also take into account the impact on the local environment and in particular the need for accessible green spaces for exercise and relaxation.	The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Plan recognises the importance of providing open spaces on-site as part of new development. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see policies 34-39 for more information.
152	N Maureen John	Generally agree	Support noted.
153	David Marlow	BUT the Council is not reusing the present safe, enclosed, popular amenities of Diamond Jubilee Gardens (which in fact was the rubble from the former swimming pool, very eco efficient). Proposal is <u>not</u> an overall enhancement of environment, local character - and certainly not another pub - we have plenty of pubs in Twickenham.	The Site Allocation for Twickenham Riverside seeks a comprehensive redevelopment including to provide high-quality public realm, and improvements to the riverside and open space. The Retail & Leisure Needs Study does identify a need to provide space for the food & beverage sector. See also response to comment 543.
154	Christine Duke	Agree with some, disagree with others. - Do not agree with the plans/strategies to direct major developments into the five town centres of Richmond, Twickenham, Teddington, Whitton and East Sheen. Consider that this would be disproportionate and unfair overdevelopment of the respective townscapes which would lead to further congestion and pollution as well as concrete sprawl in each of the respective areas and could well lead to undesirable discord and division between local residents and business interests. - Do not agree that dispersing the major developments across the borough would/could create unsustainable patterns of development, rather consider that doing so would evenly distribute both the benefits and disbenefits of the same. - Agree with repurposing pre-used sites and buildings. - Do not agree with the need to develop high rise building anywhere in the Borough. - Suggest sites/buildings could be used/purposed for shared use, needing less development overall.	See response to comment 132. The Plan prioritises the use of previously developed land, including the reuse and conversion of existing buildings to minimise embodied carbon with a presumption in favour of refurbishment set out in Policy 2.
155	Hannah Blunstone, CBRE on behalf of Rugby Football Union (RFU)	The RFU support the Local Plan objective to direct new higher density development to places that are well connected to jobs, services, infrastructure and amenities, as well as town centres. The supporting text to Policy 2 references the boroughwide Open Land Review alongside other studies which have been undertaken to form the basis for a holistic understanding of the borough's constraints and capacity for growth. The supporting text states that: 'the majority of the MOL has been assessed as performing strongly, with some areas scoring weakly against the MOL criteria'. Part of the Twickenham Stadium land parcel is within the Kneller Chase Bridge MOL area (no. 36 in the Open Land Review). The Review confirms: 'The eastern edge of the parcel, hard standing associated with Twickenham Stadium, meets none of the MOL criteria and it is recommended that its MOL status is considered further'. This needs to be acknowledged in the Site Allocation 13.	Support noted. See response to comment 935.

		Further commentary on this point and Draft Policy 35 and the MOL Policy Map designation is provided within the attached detailed response letter. [See comment 935 in respect of Policy 35]	
156	Mary Egan	Plans to meet the needs for Housing, Retail and Employment should be taking into account the urgent need for oases of nature, however small, to refresh, educate and make the citizens of Richmond able to exercise healthily and enjoy the spaces available especially in the urban environment.	The Council places great importance on the borough's green spaces and other open spaces, recognising the role of green oases, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. The Plan recognises the importance of providing open spaces on-site as part of new development. The Council will also require developments to provide a Biodiversity Net Gain (BNG) so that any proposed loss will not only be replaced but will result in an enhanced provision. Please see policies 34-39 for more information. Amends to Policy 37 add reference to the importance of active environments.
157	David Abel	I strongly disagree with building intense developments anywhere in the borough, but particularly where the affordable housing provision forces poorer families into spaces a fraction of the size of others. I also do not agree that plonking a massive development or developments in to an area will be beneficial to that area - the new Mortlake Riverside development will have a devastating affect on East Sheen for example.	See response to comment 132 that sets out the need for development and making efficient use of land. Policy 13 states that new homes significantly above the minimum space standard that do not make efficient use of land will be resisted. The supporting text to Policy 11 expects the creation of mixed and balanced communities in new development, with the same standards to be applied to all new developments.
158	Philip Villars, WSP on behalf of Sharpe Refinery Service Limited	We welcome that the Council has recognised that the use of previously developed land can contribute to housing targets which accords with the London Plan.	Support noted.
159	Alice Shackleton, on behalf of The Kew Society	We agree with this but note that this will have to address the challenge of accommodating protection of protected open lands and heritage assets with satisfying perceived strategic needs as highlighted in A to D of Policy 2 and the accompanying paragraphs	The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space both in the public and private realms. There is protection for designated open land and nature conservation sites, in addition to heritage assets. Please see Policies 28 and 34-39 for more information.
160	Hilary Pereira, River Thames Society	Not a matter on which comments from the RTS would be appropriate	Noted.
161	Bridget Fox, on behalf of the Woodland Trust	Support C. "Development in the borough will promote the provision of green infrastructure that creates resilience and helps mitigate the impacts of climate change".	Support noted.
162	Joanna Childs	Strongly disagree with the proliferation of tall buildings. Incidents such as Grenfell have shown that while these can be safe when first constructed it is difficult to control this thereafter. They blight the landscape, cast deep shade over their neighbours, generate wind tunnels and put huge pressure on local infrastructure. Are we planning to incarcerate our children in towers and allow them out now and then for organised sport on astroturf?	Noted. Tall buildings can make a positive contribution to urban design and optimise the use of land, and the Council has responded to the London Plan by undertaking an Urban Design Study to develop an overall strategy for potential development and/or increased height across the borough. Policies 28 and 46 refer to consideration of the local micro-climate. It is recognised that tall buildings have an impact on the microclimate, and the Urban Design Study contains design guidance on factors to consider during the design development. Details on fire safety are added to Policies 44 and 45.
163	Peter Willan and Paul Velluet, Old Deer Park Working Group	We agree broadly with Policy 2, Spatial Strategy: Managing Change in the borough.	Support noted.
-		Note comments on site-specific allocations (including in relation to Site Allocation 9: Teddington Police Station) have generally been collated in Table 6 below.	

Table 5: All responses received (to question 8 on the [response form](#)) in relation to the place-based strategies (sections 6 to 14 of the draft Plan) (as received) and the Council's response
(note general comments in relation to the Place-based strategies and site allocations are also set out in Table 6 below)

Rep No.	Name	Comment	Council's response
164	Caroline Wren	<p>Only a few comments:</p> <ul style="list-style-type: none"> • are we happy that the artificial grass pitch (3G) mentioned for Richmond College is appropriate, given the importance for the environment of good drainage in the areas by the river (set out clearly in the Strategic Flood Risk Assessment doc)? I'm guessing it's for financial reasons but I'm not sure that the extra revenue potential, or the cost savings on maintenance, are sufficient to justify a large artificial grass pitch in an area liable to flood? • relatedly, LBRuT is supposed to be working with the EA, Thames Water Utilities & TfL to create a flood channel running parallel to the Thames, upstream from Richmond - it was recommended in 2010 but still not approved - is this plan the place to address that? • Teddington weir was also mentioned in that SFRA as an asset that needed improving - what's the plan? • Fulwell's strategy was unclear and poorly developed (in Hampton Hill area): it's one of the few places in the plan which is described as having a vague character and not hanging together all that well, but the doc doesn't really go into any details about what might be enacted as a result - can we have more explanation on the vision here? 	<p>See Policy 37 and additional details added on artificial grass pitches including assessing impact on surface water drainage. Drainage tends to be optimised for effective playing conditions, as the key benefit tends to be for reliable intensive sporting use.</p> <p>Policy 8, the Strategic Flood Risk Assessment (SFRA) and the updated Infrastructure Delivery Plan refer to the latest on the River Thames Scheme. The outline business case for funding was agreed in 2021, and a consultation on plans closed in 2022; it will be subject to a Development Consent Order and detailed planning and design work is underway. The scheme includes the improvements to Teddington Weir where five new gates will be built to increase capacity.</p> <p>Fulwell Bus Garage is now addressed in a new Site Allocation, covering the surrounds and expectations for future development opportunities.</p>
165	Jon Rowles	<p>The key diagram - the areas for intensification overshadows areas of MOL and green belt. the shading should not go over these areas to make clear the council is not opening these areas up for development.</p> <p>The division of the borough up into 9 high-level places - rather than the previous 14 villages means that the council is moving away from livable neighbourhoods. Disadvantaged areas such as Heathfield and Hampton North are likely to lose out under this approach.</p> <p>The strategies and other initiative sections, look like they have been put together quickly by reviewing old documentation and that the engagement and empirical research that would normally go into preparing a new plan has not taken place. Many areas of outer London are suffering from relative decline due to the</p>	<p>The policy on incremental intensification encourages development in the broad areas as described in the London Plan; it is considered clear that MOL and Green Belt policies would need to be considered as the Plan should be read as a whole. Update the Key Diagram mapping to reflect other Policies Map designations in the Plan.</p>

		<p>improvements to inner-city living many younger people (20-40) prefer to live in central London and this has skewed the demographics in the borough. I would expect to see more details on how the different areas will be regenerated.</p> <p>Hounslow in comparison to proposing a large number of public transport improvements whilst Richmond is only talking about cycling. The quality of life for people living in areas such as Fulwell and Hampton would be massively improved if Crossrail 2 was built but this local plan is not championing it, and also seems happy for the poor rail services and low PTAL ratings to continue.</p>	<p>See response to comment 644 on the methodology for defining the boundaries of the characters areas set out in the Urban Design Study. This is not moving away from liveable neighbourhoods.</p> <p>As set out at paragraph 5.3 in the Reg 18 Plan, the place-based strategies have been informed by the Ham & Petersham Neighbourhood Plan, Twickenham Area Action Plan and the Village Plan SPDs, updating as necessary, and drawing on details of the Urban Design Study prepared to inform this Local Plan. The level of detail is considered appropriate for the Plan.</p> <p>The Living Locally concept aims to enhance access to public transport. The Council's Local Implementation Plan sets out that the Council will work closely with TfL, Network Rail and South Western Railway to improve public transport across the borough.</p>
166	Melanie Gurney, The Planning Lab, on behalf of the Royal Botanic Gardens	<p>RBGK generally agreed with the placebased strategies. However, have some comments on, and seek clarification on, a number of policies as set out in section C of this form below, in relation to: - Policy 2 (Spatial Strategy), particularly Part (A) and they key diagram on page 28; - Section 12 (Place-based strategy for Kew); - Site allocations 32 and 33; - Policy 4 (Minimising greenhouse gas emissions and promoting energy efficiency), specifically Part (D) and Part (E); - Policy 5 (Energy infrastructure), specifically Part (C); - Policy 26 (Visitor economy); - Policy 29 (Designated heritage assets), specifically Part (A)(3) and Part F; - Policy 31 (Views and vistas); - Policy 32 (Royal Botanic Gardens, Kew World Heritage Site); - Policy 45 (Tall and mid-rise building zones). - Policy 47 Sustainable travel choices), specifically Part I [See comments 617, 633, 637, 677, 691, 853, 875, 892, 898, 1026, 1053].</p>	Noted.
167	Victoria Barrett-Mudhoo, Lichfields on behalf of the West London NHS Trust	<p>West London NHS Trust supports the principle of place based strategy for Ham, Petersham and Richmond Park (Section 10) and the vision to build on the identity of Ham and Petersham as a sustainable mixed community giving greater opportunities to live and work. The Trust particularly supports the continued recognition in the policy of the Cassel Hospital site for development. We note that the text states that "There is also an opportunity if Cassel Hospital is declared surplus to requirements (Site Allocation 23, Neighbourhood Plan Policy Q5) for conversion to community facilities." In line with the adopted Site Allocation wording, this wording should reflect that potential redevelopment for residential uses could be considered. We therefore request that the wording is amended to "...for conversion to community facilities and / or potential redevelopment for residential uses."</p> <p>We comment further on the site allocation in response to Question 9. [See comment 582 in relation to Cassel Hospital]</p>	<p>General support for the Cassel Hospital Site Allocation noted. With regards the amendments to the place-based strategy text, the Site Allocation makes clear that social and community infrastructure uses are the most appropriate land uses for any development proposal (if the site and hospital are declared surplus to requirements). It then also states that conversion or potential redevelopment for residential uses "could be considered if it allows for the protection and restoration of the listed buildings". The supporting bullet points in the Site Allocation clarify that "only if other alternative social or community infrastructure uses have been explored and options discounted in line with other policies in the Plan", would a residential-led scheme be considered as a potential redevelopment option (with policy-compliant affordable housing). The supporting bulleted text also references the application of Local Plan Policy 49, which removes the need for an alternative social infrastructure use (or submission of marketing evidence) where a scheme comes forward for redevelopment or change of use to 100% genuinely affordable housing. A further supporting paragraph acknowledges that conversion or potential redevelopment for residential uses "may be needed to support the protection and restoration of the listed buildings", stating that residential uses should, however, "be limited to the minimum necessary to achieve viability".</p> <p>There is therefore the potential for the principle of a residential use to be appropriate, though this would be subject to certain circumstances, i.e. the provision of 100% genuinely affordable housing or demonstration that the residential uses are required in an enabling capacity for heritage and conservation reasons. However, social and community uses remain the most appropriate land uses. As a general point, the place-based strategies include only brief references to the Site Allocations and a short sentence on their primary aspirations/development opportunity. It is expected that a developer and/or decision-maker would refer to the full text of the Site Allocation itself when developing/assessing a scheme, as well against the Local Plan as a whole. In this case, that the place-based strategy text does not list in full all of the potential appropriate land uses (which would also need to include the circumstances in which they would be considered appropriate), does not preclude a different development from coming forward and considered against the Site Allocation text and policies in the Local Plan. No amendments to the place-based text are therefore necessary.</p>
168	Louise Fluker, The Richmond Society	<p>Place based strategy for Richmond Park: we agree with the strategic objective that Riverside (E2) has a high sensitivity to change, due to openness and visual aesthetic of the area. Richmond Park (E3) is recognised as having high sensitivity to change, with the high value and susceptibility of the areas meaning that significant change is unlikely to be appropriate.</p> <p>Place based strategy for Richmond Hill and Richmond: we agree with the overall strategy but the devil is in the detail and getting the right balance between attracting visitors but not to the detriment of residents is very difficult</p> <p>Piloting a clean air zone is good in principle but again it's the detail that matters. The biggest polluters are the heavy goods vehicles and buses. Reducing their emissions would help significantly.</p>	<p>Noted.</p> <p>The purpose of the Plan is to set out the factors that need to be assessed, for example when considering the benefits of visitors and the impact on existing residents, to enable the planning balance at assessment stage of an application.</p> <p>See response to comment 584 on the progress of the clean air zone pilot.</p>
169	Siriol Davies, Ham and Petersham Neighbourhood Forum	<p>PLACE-BASED STRATEGY FOR HAM, PETERSHAM & RICHMOND PARK</p> <p>The Local Plan character analysis identifies 3-character areas, whilst the Neighbourhood Plan adds a more detailed differentiation of areas. p.91</p> <p>We welcome reference to Neighbourhood Plan and that they should be read together. It notes and the Neighbourhood Plan was prepared in the context of the 2018 Local Plan and previous iteration of the London Plan. It notes where the Neighbourhood Plan diverges from the Local Plan, justified through local evidence. p.92</p>	<p>Noted support, including the reference in the place-based strategy to read the Local Plan along with the Neighbourhood Plan.</p> <p>The Urban Design Study is underpinned by a townscape character assessment of the entire Borough, and it is intended it sits alongside other detailed guidance. Many policies refer to local character as identified in the Urban Design Study and Conservation Area Appraisals/Statements, and the guidance around Conservation Areas is explained in the supporting text to Policy 29.</p>

		<p>We note reference to The Urban Design Study with design guidance for each character area. The Urban Design Study includes listed buildings and conservations areas. What is the status of the Urban Design Study and its relationship to existing conservation area appraisals. Urban Design Study link Executive Summary here Urban Design Study shows capacity for development with Ham Close as high and E1 (Ham and Petersham Residential character area) as medium-medium/low. There are also spots of med-high capacity at Cassell Hospital, the Convent and Latchmere Close. We support the 'vision' which cites and builds on the Neighbourhood Plan vision. P.93 We note reference to Neighbourhood Plan policies and 'community proposals'.</p> <p>[See comment 578 on site allocation for Ham Close and comment 581 on site allocation for Cassel Hospital]</p>	
170	Philip Briggs, Richmond Bat Species Action Plan Steering Group	<p>Biodiversity isn't specifically mentioned in all of these. They all have aims to protect and expand green networks but the specifics mostly relate to the benefit for people. Please could we have protecting and increasing biodiversity and wildlife corridors included as a key part of wording about green networks in each place-based strategy? It is excellent to see explicit requirements to protect and enhance adjacent river wildlife corridors in several of the Site Allocations. However, a number of the Site Allocations which would be major developments do not specify anything relating to the Council's commitment to "...encourage the creation of multi-functional green space wildlife or ecological corridors within new development site layouts..." (from section 21.7). More specific comments are provided in Part C below.</p>	The place-based strategies have been informed by the Ham & Petersham Neighbourhood Plan, Twickenham Area Action Plan and the Village Plan SPDs, updating as necessary, and drawing on details of the Urban Design Study prepared to inform this Local Plan. The Site Allocations are an opportunity for the Council to set out its aspirations for what that development should and could achieve, based on the context of the site and policies within the Local Plan. The Plan should be read as a whole, and therefore the policy requirements to address such issues across the borough and all relevant site proposals are set out in the thematic policies.
171	Peter Willan, Paul Velluet and Laurence Bain on behalf of Prospect of Richmond (and supported by the Friends of Richmond Green)	Our response here on the Place-based Strategy: Richmond Town and Richmond Hill and Policy 28 – Local character and design quality (Strategic Policy) explains where we disagree.	Noted.
172	Eileen Folan	Concerned that the focus seems to be on buildings and office space, rather than resident needs - eg GP surgery, access to police ,	Noted, although the Plan is focused on land uses and new development. Service provision itself would be a matter for the relevant provider such as a health body or the Met Police Service. The section on Delivery & Monitoring has been expanded to address implementation of the Plan, and the updated Infrastructure Delivery Plan looks at the future needs of providers. There is emphasis in the Plan on working with service providers to provide space including where practicable in multi-use, flexible and adaptable buildings.
173	Paul Luton, Cycling UK	Look again at report commissioned to reduce car dominance in Hampton - Hampton Hill. This seems to have been filed away as too brave.	The emphasis in the Plan is contributing to a modal shift away from the car, to minimise residents' trips made by car, recognising the borough has high levels of car ownership. The 20-minute neighbourhood concept is intended to encourage the development of vibrant communities that enable residents to complete everyday tasks such as shopping and accessing essential services by foot, bike, or public transport.
174	Faye Wright, Forward Planning and Development on behalf of BMO Real Estate	<p>In relation to Richmond and Richmond Hill the draft policy states:- "Future Development in this place is expected to: - encourage the provision of office floorspace and new flexible workspaces within the town centre and intensification of existing employment sites to provide for jobs and support local businesses". We are of the view that this needs to recognise that only viable employment sites will be intensified and that in order to secure vibrancy and flexibility, outdated/unviable office accommodation could be converted to other more viable uses.</p>	See response to comment 20. This encouragement of employment floorspace for the place-based strategy for Richmond (and the same for Twickenham) is considered appropriate given they are the most accessible locations in the borough, including the town centres where the London Plan Town Centre Network office guidelines envisage office potential.
175	Jim Brockbank	Overall I strongly agree with the innovative concept of the place based strategies outlined.	Support noted.
176	James Armstrong, Richmond Cycling Campaign	<p>RCC is overall supportive of the place based strategies, and particularly welcomes the policies included that aim to reduce car dominance, encourage mixed use development, improve routes for walking and cycling, encourage pedestrian permeability, high street pedestrianisation, and interchanging with/promoting bus and train use. However we notice that these measures (excluding the mixed use of land) are not consistently included in all the place based strategies, something that will be necessary if the plan is to deliver on the proposed Strategic Vision, the borough's transport modal share targets, and the implementation of the 20 Minute Neighbourhood concept through the Local Plan. Similarly, we notice that within the context sections of the site proposals, cycling, walking and public transport are often not mentioned (or only public transport is). This is particularly concerning when considering the larger and more dense sites proposed to be allocated, as these promise the largest possibility to change and embed more positive transport habits.</p>	The place-based strategies have been informed by the Ham & Petersham Neighbourhood Plan, Twickenham Area Action Plan and the Village Plan SPDs, updating as necessary, and drawing on details of the Urban Design Study prepared to inform this Local Plan. The Site Allocations are an opportunity for the Council to set out its aspirations for what that development should and could achieve, based on the context of the site and policies within the Local Plan. The Plan should be read as a whole, and therefore the policy requirements to address such issues across the borough and all relevant site proposals are set out in the thematic policies.
177	Matthew Bolton	<p>Under place based strategy 6: Hampton, Hanworth Homebase should be added as a potential mixed use residential/ commercial intensification site allocation. This is a retail park site with a large proportion of the site as surface level car parking. As seen elsewhere in the borough (Richmond Homebase) and in neighbouring boroughs (Kingston Homebase and Syon Lane Homebase) there is a clear desire by the landowner of these sites to convert their use to residential. The Local Plan makes no reference to the potential redevelopment of Hanworth Homebase for a residential scheme with affordable housing. Also the Molesey Telephone Exchnage in Hampton is not allocated as a site. Elsewhere across the borough, the place-based strategies often contain telephone exchanges that may be disposed. This site should also be included.</p>	Homebase on the Twickenham Road, Hanworth and Hampton Telephone Exchange have been added as Site Allocations.
178	Andrew Whitehead	<p>I strongly disagree with content in section 6, "Place-based Strategy for Hampton & Hampton Hill" and specifically its sub-section "Allocation 1: Hampton Square, Hampton". The "Site Proposal" contains an implicit intention to develop the only part of the Hampton Square Allocation that is designated as an Other Open Land of Townscape Importance (OOLTI), and which contains a much-used children's playground. [See comment 289 in relation to Site Allocation 1]</p>	It is considered appropriate to remove this area of OOLTI/Public Open Space from the Site Allocation. See also response to comment 289.
179	Mark Lawson	I am commenting specifically on Section 7 of the plan.	Support noted.

		I am specifically on the Teddington Police station site. If you want to build affordable housing next to the Stoop, that is fine as I do not frequent that rugby club or the larger stadium across the road, where I find the tickets too expensive.	
180	Graeme Fraser-Watson, The Teddington Society (Planning Group)	See Question 10 [comments added under Section 7 Place-based Strategy for Teddington & Hampton Wick in Table 6]	See response to comment 300 in relation to the place-based strategy for Teddington & Hampton Wick.
181	Sue Clayton Smith	Twickenham Town Centre and Twickenham Green have a high sensitivity to change and require as much naturalising as possible because of the high density of development in the surrounding streets. Access to green space is vitally important for the health and wellbeing of local residents.	Noted.
182	N Maureen John	The 20 minute neighbourhood plan is an interesting concept	Noted.
183	Alexandra Bamford, Boyer Planning on behalf of Twickenham Film Studios	Agree with '8 Place based strategy for Twickenham, Strawberry Hill & St Margarets' and specific reference to the Studios. We consider that 'Arlington Works' should be designated as a 'Locally Significant Industrial Site'.	Noted. See response to comment 839.
184	Christine Duke	Agree that place based strategies could give the benefit of experience and experience of community in recognised areas however could also lead to division across the Borough where each recognised area seeks to protect its own interests rather than view the overall quality of life experience of the Borough as a whole. - Do not agree with overdevelopment of town centres of Richmond, Twickenham, Teddington, Whitton and East Sheen.	It is not the intention to carve up places for them to protect their own interests. See response to comment 644 on the methodology for defining the boundaries of the character areas set out in the Urban Design Study. Character area boundaries are, in reality, zones of transition and are rarely hard lines on the ground. Any proposal that comes forward would still need to take into consideration the local area and impacts. See response to comment 132 in relation to development in town centres.
185	Hannah Blunstone, CBRE on behalf of Rugby Football Union (RFU)	The Twickenham Stadium is within the Twickenham, Strawberry Hill & St Margarets area, specifically, Twickenham Residential. The supporting text acknowledges that the area includes Twickenham's nationally important rugby venues at Twickenham Stadium, a world famous landmark and the home of Rugby Union. The Urban Design Study (2021) notes that Twickenham Residential has high sensitivity to change. The overall strategy states that for Twickenham Residential (C2) the strategy is to conserve, enhance and improve the character of this area by enhancing its legibility and the consistency of its built environment. We consider inclusion of the Stadium within the Twickenham Residential sub-area conflicts with the following statement within the 'vision' section of the place-based strategy: 'Twickenham's important sporting and cultural attractions will be maximised'. We consider that to properly enhance the role sporting role of Twickenham Stadium (Site Allocation 13), the Stadium and its immediate surrounds should form part of its own character area; or, specific exceptions should be referenced in Place Based Strategy 8. This is further considered within the detailed response letter. [See comment 522 in respect of Site Allocation 13. Twickenham Stadium]	The character profile for C2 Twickenham Residential notes that the stadium forms a "distinct sub area". Under Sensitivity, the Twickenham Stadium is identified as sub area b, with a lower sensitivity and described as one of the two "discrete areas standing in contrast to the mostly low-lying residential setting. In these areas there may be areas more able to accommodate change..." The following wording added to the design guidance in the Urban Design Study: <i>Create a masterplan/vision for the area around Twickenham Stadium (sub area b) to encourage better integration of the stadium alongside opportunity for additional sporting and cultural attractions.</i>
186	Mary Egan	I would suggest that Twickenham town centre and the Green have a high sensitivity to change and require as much naturalising as possible because of the tightly packed roads with terraced houses. Access to Green spaces is of paramount importance to the citizen's mental health.	For Twickenham, Strawberry Hill and St Margarets Area the overall sensitivity to change in the Urban Design Study has been amended from medium to high, as there are more areas of higher sensitivity than lower sensitivity as shown on the map.
187	Chris Toop	I strongly object to the fact that the proposals for key sites such as the Homebase site, The Sainsburys site and Kew Retail Park appear to replicate the aspirations of developers for those sites thereby facilitating approval of their proposals.	The Site Allocations are intended to identify sites across the Borough where development is likely or feasible to come forward, and are an opportunity for the Council to set out its aspirations for what that development should and could achieve, based on the context of the site and policies within the Local Plan. Where there is an extant planning permission, or a live application where the applicant has extensively engaged with planning officers as part of the Council's pre-application service, it is reasonable that the Site Allocation aspirations might align with the development proposal. However, this would not be at the expense of what the Council believes to be appropriate and desirable for the site in general. Indeed, the Council has received a number of comments from potential developers, as part of the Regulation 18 consultation, with suggested amendments to the Site Allocations. In a number of cases, officers have not agreed with the suggested changes, as can be seen in the Council's Schedule of Comments. Ultimately, all applications would need to comply with policies within the Local Plan as a whole, and the Site Allocation aspirations are designed to align with these. Further, the Site Allocations are not prescriptive with regards to specific density or minimum/maximum housing numbers, thus they do or do not reflect developer aspirations where these are already known.
188	David Abel	I vehemently disagree with the decision taken to subdivide the borough into discreet sections as though impact on one area has no impact on another. A holistic approach across the whole of the space should be taken not piecemeal carving up. For example East Sheen has within it the Mortlake Riverside development and Barnes hospital but it would appear that Manor Road and Kew retail will have no impact at all as they exist in two separate pocket universes.	It is not the intention to carve up places. See response to comment 644 on the methodology for defining the boundaries of the character areas set out in the Urban Design Study. Character area boundaries are, in reality, zones of transition and are rarely hard lines on the ground. Any proposal that comes forward would still need to take into consideration the local area and impacts.
189	Clare Snowdon	It's good to see requirements such as habitat corridors included here	Support noted.
190	Philip Villars, WSP on behalf of Sharpe Refinery Service Limited	Place-Based Strategy for Twickenham, Strawberry Hill and St Margarets. The map attached to the area profile is inaccurate as it does not differentiate between St Margarets Local Centre and St Margarets residential. In order to be robust it should differentiate. As an aside, the policy attached to this section does not have a number or title. We therefore assume that the policy is to be known as Policy 8 - Place-Based Strategy for Twickenham, Strawberry Hill and St Margarets. Broadly we support the overall vision for St Margarets which is to maintain an attractive residential character to the area. Having said this, we are of the view that St Margarets Local Centre and its immediate surroundings are mixed use in nature and have the potential to further develop a mixed use nature. This should be recognised within the policy for the area, as the mixed use nature is an important component of the local economy which should be identified and supported. We do not understand or agree with the rationale used to select or discount sites for inclusion within site allocations within the area. Our client's site, Arlington Works could support a mixed use (commercial and residential) regeneration scheme on a key site within the area, however it has been discounted. The Local Plan should provide a place based policy document to support development within the area and as such should consider and support the contribution that sites such as Arlington	The local centre has not been defined as a separate character area in the Urban Design Study due to its scale, however, its distinct character is brought out in the text of the character area profile for C6. Mixed use character is brought out in the strategy text "improve local centre function, encouraging more mixed uses..."

		Works can play in regeneration. The immediate neighbourhood to the Arlington Works site is primarily residential in nature, and going forwards, planned development on the site needs to be mindful of this.	
191	Alice Shackleton, on behalf of The Kew Society	<p>- We would like to see a more concrete strategy for how the Council intends to insure that "Kew World Heritage Site will be protected and enhanced to conserve its outstanding universal value", particularly in light of the blocks under construction, applied for and envisaged in East Hounslow which would undoubtedly impact negatively on the OUV. Could "what you want" mean current important matters (such as shortage of affordable housing) might be used to override designation of protected open lands? These lands should, in our view, be held by the present owners as trustees for future generations. Once gone for current short-term needs and perceived needs, they are gone forever.</p> <p>- Notwithstanding the Urban Design Study 2021 proposals, we would like to see protection against inappropriate height (ie 7 storeys or more) and density of a potential redevelopment of Kew Retail Park, given current maximum heights in the adjacent Kew Riverside development are - with one exception - five storeys or less. Reactions to and changing work patterns as a result of the pandemic bring into question people's wish to live and increasingly work from home in such buildings.</p>	<p>-The design guidance for G1 Kew Gardens and Riverside contains a link to the WHS management plan which contains the detail about how to protect and enhance the site.</p> <p>- The Urban Design Study has identified there is capacity for the site to accommodate buildings up to 7 storeys 'within part of the tall building zone in the centre of the site' (p.257). The UDS has assessed the tall building zone with reference to a scenario, as set out in Appendix A (p.335-337). The assessment concludes that 'the depth of the Kew Retail Park site offers potential for buildings up to 7 storeys within part of the tall building zone in the centre of the site. The existing character and size of the Kew Retail Park site provides opportunity for a development that could positively enhance the character of the area'. (p.337).</p> <p>As illustrated on p.336 of the UDS, the assessment in Appendix A includes a ZTV of a 7 storey building in the centre of the site, and shows that visibility of this is unlikely to extend to Kew WHS.</p> <p>- Added wording to the tall building zone in the UDS: "Views from Kew World Heritage Site,...will need to be assessed as part of any tall building proposal."</p>
192	Jon Burrell	The plan should not support the use of Twickenham Stadium to facilitate arms dealing as has happened in Jan 2022 with the International Armoured Vehicles Conference.	This is a matter outside the scope of the Local Plan; events and conferences are the decision of the owner/operator.
193	Hilary Pereira, River Thames Society	Most of these strategies have much that is sensible and appropriate in relation to the River Thames. However, the River Thames Society has commented adversely during the planning process on the detail of proposals in some areas, like Twickenham Riverside, and will continue to do so.	Noted.
194	Bridget Fox, on behalf of the Woodland Trust	n/a	Noted.
195	Joanna Childs	Although LBRUT is made up of lots of villages they don't exist in isolation and any future plans need to look at the borough as a whole. Or am I banned from Richmond town centre because it takes me more than 20 mins to walk there?	The 20-minute neighbourhood concept is intended to encourage the development of vibrant communities that enable residents to complete everyday tasks such as shopping and accessing essential services by foot, bike, or public transport. This is achieved by ensuring residents are within 20 minutes' walk from a town centre, local centre, neighbourhood centre, or local shopping parade in line with Policies 17 and 18, or other smaller concentrations of local shops and services in line with Policy 20.
196	Max Millington	<p>Speaking only in relation to Site Allocation 34 (Stag Brewery), I strongly disagree with the move from a local primary school to a large secondary school, and sixth form serving a large number of out-of-Borough pupils, that will have a materially negative impact on the local area, particularly when taken in context of other proposed land uses: the cumulative impact will not contribute to the new village heart for Mortlake, will not protect green open space, will not protect residents' lungs and will not reduce the risk presented by the level crossing. Mortlake is severely constrained and cannot house a secondary school of the size proposed. 6FE plus sixth form is not sustainable on this site.</p> <p>Further, there is no requirement for such a school that cannot be met by expansion of other schools.</p> <p>And, even if there were a requirement, this is not the optimal site - Barn Elms represents a better site overall when assessed alongside all potential sites across all relevant criteria - an exercise with LBRuT have not undertaken. There should be due local consultation on this - noting that only 9% of respondents to the LBRuT planning applications supported Application B (secondary school) - there is vehement local opposition, for good reason.</p> <p>In any event, local parents do not wish to see a school of the type proposed by Livingstone Academy (the proposed provider, without local consultation). Section 14A of the Education Act 1996 (parent choice) has been entirely disregarded.</p> <p>Further, the impact of the proposed development - and other local schemes such as Homebase - on primary school provision has not been properly assessed and should be prioritised, including the opportunity to move Thomson House school from its sub-optimal dual site position at present away from the level crossing onto a single site with its own enclosed recreation space.</p> <p>Otherwise, the objectives of the allocation are reasonable, but the application of those principles to recent planning applications falls short and cannot be disregarded in formulating the new Local Plan. For instance, the Local Plan references respecting the 2011 planning brief, but that has not been the case. The Local Plan references protecting natural green space, but that has not been the case (for instance, 2 natural grass playing fields will be replaced by concrete and a single plastic pitch. Please refer to detailed comments. [See comment 646 in relation to the place-based strategy for Mortlake and see comment 655 in relation to Site Allocation 34]</p>	<p>Noted.</p> <p>See responses to comments 646 and 655.</p>
197	Tom Dunbar	I suggest that Twickenham Green currently has very poor access in the surrounding housing areas - with many schools and few amenities. I believe that green space and green infrastructure should be supported before plans to build are in place. The infrastructure isn't there and green spaces are highly sensitive to change.	<p>Noted. Twickenham Green is being upgraded from a Local Shopping Parade to a Neighbourhood Centre. Please see Policies 17 and 18.</p> <p>The Council places great importance on the borough's green spaces and other open spaces, and the Plan contains clear and consistent policies intended to protect, enhance, and provide additional open space.</p>
198	Peter Willan and Paul Velluet, Old Deer Park Working Group	Our response here on the Place-based Strategy: Kew and on Policy 28 – Local character and design quality (Strategic Policy) explains where we disagree. [See comment 620 on the place-based strategy for Kew]	Noted.
-		Note comments on place-based strategies and/or site-specific allocations (including for example in relation to Site Allocation 9: Teddington Police Station) have generally been collated in Table 6 below to group with other similar comments.	

Table 6: All responses received (to questions 9/10/11 on the [response form](#)) in relation to general comments on the Local Plan (detailed policies etc) (as received, in Plan order) and the Council's response

Rep No.	Full Name	Part of plan commenting on	Detailed Comments	Council's response
---------	-----------	----------------------------	-------------------	--------------------

199	Theresa Oddelm, The Royal Parks	General comments (in relation to Royal Parks)	<p>The Royal Parks is grateful for the opportunity to comment on the above proposals at this stage in the process.</p> <p>Planning Overview</p> <p>The Royal Parks acknowledges the inclusion of reference to the importance of Richmond Park and Bushy Park within the London Borough of Richmond upon Thames as set out within the Pre-Publication Draft Local Plan.</p> <p>We note that the Royal Parks are highlighted within the document text in respect of: area context, place-based strategies, promoting jobs and local economy, views and vistas, green and blue infrastructure network, public open space, and biodiversity designations. The importance of the Parks in the context of these topic areas aligns with The Royal Parks' own objectives.</p> <p>In addition to references in the supporting text, the Pre-Publication Draft Local Plan makes specific reference to The Royal Parks within a number of policies. Whilst this is acknowledged, we would like the London Borough of Richmond upon Thames to go further by including a stand-alone Royal Parks policy. We consider that the importance of the Parks - as demonstrated by relevant reference to them throughout the Draft Local Plan - would justify such an inclusion and The Royal Parks would be keen to work with the Council to achieve this.</p> <p>The Royal Parks would also like to work with the Council to capture the value of development around the Parks, and for support in protecting, maintaining and enhancing these sites of key green infrastructure which represent a significant asset to the Borough. Both dense development directly on our Park boundaries and taller developments that impact on the sightline are potentially detrimental to these listed landscapes and intrusive to our visitors. We would therefore like to see the Local Plan tie in with our own developing policy documents.</p> <p>[See other comments in relation to draft policies and comments specific to biodiversity and the Royal Parks' Environmental Designations]</p> <p>Conclusions and Proposals</p> <p>We are pleased to see the quality of the policies put forward which align with many objectives of The Royal Parks. We would however like to work with the Council to achieve more policy support for The Royal Parks, both in terms of its protection from development beyond the Park boundaries, and in terms of The Royal Parks' own activities and objectives to maintain, protect and enhance these important assets and provide for the increasing number of visitors to them.</p> <p>In addition to the policy-by-policy comments provided above, we would like to suggest the following actions in respect of the development of this Local Plan:</p> <p>A stand-alone Royal Parks policy: Bushy and Richmond Parks account for most of the green space in the Borough and deliver significant environmental and amenity benefits for local residents. The Royal Parks are key features and assets in the London Borough of Richmond upon Thames. It would therefore be proportionate for a specific Royal Parks policy to be included within the Local Plan. This could be similar to draft Policy 32 (Royal Botanic Gardens, Kew World Heritage Site). A specific Royal Parks policy in the Local Plan could refer to the Royal Parks Management Plan. It could then be referred to and cross-referenced within other key relevant policies, for example similarly to how draft Policy 45 refers to Policy 32 (note there is a typo which refers to the policy as Policy 29 rather than Policy 32). We believe the objectives of the Council and The Royal Parks are aligned and we are keen to engage with the Council in the drafting a stand-alone policy which would have the benefit of giving the Parks the protection and support which they require over the Plan period.</p> <p>Capturing value of development to support The Royal Parks:</p> <p>The Royal Parks are a key part of green and open space infrastructure in the Borough, in terms of both the quality they provide and the sheer scale of space they provide. Development in the Borough, particularly new residential development, benefits significantly from what the Royal Parks provide but also significantly increases the pressure upon them, through increase and intensification of visitor numbers. The Royal Parks would therefore like to work with the Council to capture the value of relevant development to support The Royal Parks in our work to protect, maintain and enhance the Parks, potentially through S106/CIL contributions over the next Plan period.</p> <p>As we review and refresh existing policies and develop new initiatives in respect of development within the Parks, we will engage with the Council and other key stakeholders at appropriate times and take into account the new Local Plan for the Borough.</p>	<p>The importance of the Royal Parks is recognised in the Plan, along with the recreational pressures faced. There are a number of policies that would apply to their protection. They are referenced in the relevant place-based strategies, by a number of policies in terms of those protecting MOL, biodiversity and nature conservation, views and vistas (Policies 34, 35, 39, 31), and that allow the impacts of development to be assessed (including Policies 53, 37, and 49).</p> <p>These are considered to adequately address the Royal Parks across the Plan as a whole, and a stand-alone Royal Parks policy is not considered necessary.</p> <p>Assessing impacts of major applications on certain types of existing infrastructure, including public open space is set out in Policy 37 and social infrastructure in Policy 49. Planning obligations are a mechanism to make a development acceptable in planning terms that would not otherwise be acceptable, as set out in the Implementation, Delivery and Monitoring section of the Plan, however they must meet the tests set out in the regulations, and so also must be directly related to the development, and fairly and reasonably related in scale and kind to the development. Alongside planning obligations, the Community Infrastructure Levy (CIL) is collected (on CIL-liable floorspace) and can be spent on a wide range of potential infrastructure to support development in the borough.</p>
200	Katie Parsons, Historic England	General comments (in relation to historic environment)	<p>As the Government's adviser on the historic environment Historic England is keen to ensure that the protection of the historic environment is fully taken into account at all stages and levels of the planning process. Therefore, we welcome the opportunity to comment on the draft document.</p> <p>We have provided some more detailed comments in appendix 1 below [see comments in this schedule], but in summary the plan represents the historic environment well and considers it consistently and appropriately throughout. Our main concerns relate to the detail associated with site allocations. There are some areas however where the plan can be improved to ensure the historic environment is conserved and managed sustainably.</p> <ul style="list-style-type: none"> • We note that the plan allocations do not assign densities, quantum of development etc. This may be due to the early stage of the plan, but it would be helpful to have clarification on this point. It is important that sites with heritage sensitivities are carefully considered to ensure the extent of development anticipated can be accommodated sustainably. We have focused our comments on key sites being put forward for allocation. • In general, the findings from the Urban Design Study (2021) could be better transposed into policy objectives, particularly within the site allocation policies. It is appreciated that further design work will be carried out e.g. masterplans, SPDs etc. for some of the sites, but where specific findings have already been drawn in the evidence there is scope to reflect key points within the plan policies at this stage. The future development of guidance leaves a gap between adoption of the plan and its production, the risks posed by this would be minimised by providing further detail and development requirements within the policies. This is an important part of demonstrating a positive strategy for the conservation of the historic environment as set out in the NPPF. 	<p>Noted, and welcome comment that the Plan represents the historic environment well.</p> <p>The Site Allocations are intended to identify sites across the Borough where development is likely or feasible to come forward, and are an opportunity for the Council to set out its aspirations for what that development should and could achieve, based on the context of the site and policies within the Local Plan. See also response to comment 284.</p> <p>The Site Allocations in the Local Plan are not prescriptive with regards to specific density or minimum/maximum housing numbers. The detailed completions and five year housing supply are set out by ward in the annual Housing AMR, including Site Allocations where relevant in any particular year.</p> <p>The boroughwide Urban Design Study has informed the place-based strategies, Site Allocations and policies, and it is considered an appropriate level of detail is set out in the Plan. A number of the Site Allocations reference where a masterplan</p>

			<p>Finally, we should like to stress that this opinion is based on the information provided by the Council in its consultation. To avoid any doubt, this does not affect our obligation to provide further advice and, potentially, object to specific proposals, which may subsequently arise where we consider that these would have an adverse effect upon the historic environment.</p> <p>Detailed comments The plan provides a strong basis for the conservation and enhancement of the historic environment. We welcome the attention paid to climate change, the focus on a design-led approach to site capacity, as well as standalone policies on non-designated assets, views, shopfronts, and regular reference to the Urban Design Study. Generally, please take the absence of comments on policies as them being acceptable. We have some comments on the following aspects of the plan however. [see comments in this schedule]</p>	<p>or site development brief could be developed in the future, although this may be linked to these sites being brought forward.</p>
201	Tim Catchpole, Mortlake with East Sheen Society	General comments (in relation to structure of plan)	<p>We note that this draft update of the Local Plan (referred to hereafter as the Update Plan) launches almost immediately into the spatial strategy for the nine distinct areas of the Borough and then covers the Borough-wide policies, whereas the current Local Plan adopted in 2018 sets out the Borough-wide policies first leading to the spatial strategy at the end. We wonder why there has been this change of approach?</p> <p>The ‘batting order’ of the Borough-wide policies rightly starts with policies on climate change, energy, flood-risk and water infrastructure and then follows with housing, town centres, local character and design quality, green and blue infrastructure, sustainable travel and the social and community infrastructure. This is a sensible batting order but we fail to understand why the document then concludes with the design process, tall buildings, local environmental impacts and basements – they seem to have been tagged on at the last minute like after-thoughts whereas they should surely belong to the section on local character and design quality, as indeed they do in the current Local Plan.</p> <p>The plans in the spatial strategy sections need to be clearer and the ‘ratings polygon diagrams’ from the Urban Design Study consultation of 2021 are poorly presented in an almost illegible series of images. The data would be better presented as tables as the polygons are virtually meaningless to most people who are not academic specialists.</p> <p>In our comments we have found the text in your supporting document – A Summary of the place-based strategies with site allocations and policies (Dec 2021) – very useful as “it sets out some of the main changes when compared with the adopted Local Plan.”.</p>	<p>The adopted and draft Plans have different structures. However, the spatial strategy (section 3.1) did follow the vision and objectives in a similar way. There were no place-based strategies in the adopted Plan.</p> <p>It is considered that it is logical for the overarching Living Locally and Spatial Strategy policies to be followed by the place-based strategies interspersed with the relevant site allocations. The themes have then been ordered to start with climate change and affordable housing.</p> <p>In any plan order there will always be policies that have to be at the end; it is more important that the structure flows and it is easy for a user to navigate around the document.</p> <p>The spider charts on what people valued in their area, taken from the Urban Design Study, have now been removed as the text is considered sufficient.</p> <p>Noted the summary has been useful, and this has been updated to accompany the Regulation 19 Plan.</p>
202	Hannah Bridges, Spelthorne Borough Council	General comments (in relation to Site Allocations and Spelthorne Local Plan)	<p><u>Allocations</u> We note there are no sites proposed in the Site Allocations document in close proximity to the boundary of the two authorities.</p> <p><u>Spelthorne Local Plan</u> Spelthorne BC plans to consult on its Draft Local Plan (Regulation 19) in late Spring 2022 therefore we welcome further engagement on this and strategic matters moving forward.</p> <p>Spelthorne Borough Council looks forward to continuing its engagement with LB Richmond upon Thames through the Local Plan process. Officers in the Strategic Planning team are available to discuss any of the comments above should this be useful.</p> <p>Please note that this response is at officer level and as such, Spelthorne Borough Council reserves the right to raise any further issues during the preparation of the LB Richmond Local Plan if Members of the Council wish to do so.</p> <p>[See comment 742 on housing].</p>	<p>Noted.</p>
203	Shahina Inayathusein, TfL Location Enquiries	General comments (in relation to London Underground Infrastructure Protection)	<p>We have no comments to make at this stage except that London Underground Infrastructure Protection needs to be consulted as Statutory Consultees on any planning application within London Underground zone of interest as per TOWN AND COUNTRY PLANNING, ENGLAND-The Town and Country Planning (Development Management Procedure) (England) Order 2015 issued on 16th April 2015.</p> <p>Also, where there are intended works in the Highway we would need to be notified of these so that we can ensure there is no damage to them.</p> <p><i>This response is made as Railway Infrastructure Manager under the “Town and Country Planning (Development Management Procedure) Order 2015”. It therefore relates only to railway engineering and safety matters. Other parts of TfL may have other comments in line with their own statutory responsibilities.</i></p>	<p>Noted.</p>
204	George Goodby, Environment Agency	General comments (in relation to EA position and Duty to Cooperate)	<p>Environment Agency Position Our aim is to assist you prepare and implement a sound, robust, and effective plan that is reflective of national policy and your local evidence base. We hope that this collaborative process leads to a plan that delivers sustainable development, contributes to a stronger economy, and safeguards the environment for future generations.</p> <p>Our detailed comments are provided below, following the general order of the topics presented in the draft local plan document. Where we wish to see policies strengthened we have outlined the additional content we would like included. We have also referenced the relevant sections and policy numbers for ease of navigating our response.</p> <p>We support your strategic objectives to ensure London Borough of Richmond has a sustainable future:</p> <ul style="list-style-type: none"> • Responding to the climate emergency and taking action • Increasing biodiversity and the quality of our green and blue spaces, and greening the borough • Reducing the need to travel and improving the choices for more sustainable travel <p>We have provided detailed comments in Section 1 on the key environmental issues and opportunities within the Local Plan. Section 2 contains our comments on the individual proposed site allocations for development. Within Section 3 we have provided comments on our review of the Sustainability Appraisal and Sequential Test report. [See other comments in this schedule]</p> <p>Duty to Co-operate</p>	<p>Noted.</p>

			<p>Most natural resources extend across multiple Local Authority areas. We encourage the Council to make full use of the Duty to Co-operate when revising this draft local plan. Cross-boundary, collaborative working will ensure that strategic priorities across local boundaries are properly co-ordinated. Please consider this when addressing climate change, flood risk, waste management, habitat and biodiversity enhancement, watercourse protection and improvement, water and waste resources.</p> <p>Final comments Once again, thank you for contacting us, we hope that our comments are useful. We would welcome the opportunity to work with you to address our concerns so that prior to the Regulation 19 consultation, you may produce a robust, effective and justified plan that is reflective of national planning policy and your local evidence base.</p>	
205	Nina Miles, GLA on behalf of Mayor of London	General comments	<p>As you are aware, all Development Plan Documents in London must be in general conformity with the London Plan under section 24 (1)(b) of the Planning and Compulsory Purchase Act 2004. The Mayor has afforded me delegated authority to make detailed comments which are set out below. Transport for London (TfL) has provided comments, which I endorse, and are attached at Annex 1. [See comments under Richard Carr, Transport for London (TfL) in this schedule]</p> <p>The London Plan This letter provides advice and sets out issues or approaches you should consider as the new London Borough of Richmond upon Thames Local Plan develops so that the final draft Local Plan is consistent with the London Plan 2021 (LP2021). The London Plan 2021 was formally published on the 2 March 2021, and now forms part of LB Richmond upon Thames' Development Plan.</p> <p>General The Mayor recognises that Richmond's Local Plan consultation is now at the pre-publication stage of the borough's Local Plan preparation and that it has been informed by a Direction of Travel public consultation which was undertaken in Spring 2020. It sets out the strategic vision, objectives and spatial strategy, with place-based strategies and thematic policies and guidance to manage growth and guide development across the borough. This letter provides an opportunity also to draw your attention to the Mayor's pandemic recovery missions. There are nine missions in total, including high streets for all, enabling resilient communities and digital access for all, which may be useful in helping to develop the spatial strategy for Richmond further. The Regulation 18 Local Plan sets a clear plan for growth and addresses many important policy areas such as responding to climate change and delivering new homes through incremental intensification in well-connected locations. However, the current approach to affordable housing in Policy 11 is likely to be an issue of general conformity and further detail on this is provided below.</p>	Noted.
206	Natural England	General comments	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development. Natural England have no comments to make on this consultation. [See comment 221 following Duty to Cooperate email]</p>	Noted.
207	K Peachey	Whole plan	<p>I congratulate you on what looks like a very progressive plan at first glance. I would have liked more time to read and comment before the deadline but must focus on a couple of areas for the time I have.</p>	Noted.
208	Wendy Micklewright	General comment	<p>Hope you are good + thank you for all you do Mental illness is a lie - which causes untold suffering + distress Please see our website + UTUBE detailed below ... Please include this in your work Emotional CPR: Heart-Centered Peer Support Website – Emotional CPR I do not attend online meetings generally - in solidarity - with many people I know who are digitally excluded for many reasons ... I am not a big fan of surveys - ask certain questions get certain answers When are people going to listen to us - not paid researchers ? The problem is poverty - not individuals being "gaslighted" into thinking they are mentally ill .. I think it is important to stress hearing voices is not an illness ... I understand the conflict between working in the system + challenging the system - it is however important to stress if people do not want the drugs they should be supported to come off the drugs ... 209	John Waxman, Crane Valley Partnership	General and in relation to river corridors	<p>I am submitting this consultation response in my capacity as the Crane Valley Partnership's Development Manager. The Crane Valley Partnership (CVP) is an unincorporated association of public, private and third sector organisations that aims to:</p> <ul style="list-style-type: none"> • raise awareness and support action for conservation, restoration and new approaches to design and management of the river valley • help communities take a sustainable approach to managing and improving the River Crane and its tributaries • improve and protect the biodiversity of the area • maximise the use of the river corridor as a resource for healthier living and educational activities for local people • promote connectivity along the river corridor <p>CVP is hosted by the Crane Valley Community Interest Company and is the formally recognised Catchment Based Approach (CaBA) partnership for the Crane catchment. CVP is also a member of the GLA's 'Catchment Partnerships in London' Forum. For more information on CVP please see: www.cranevalley.org.uk</p> <p>Please note that LB of Richmond upon Thames is itself a member of CVP. I should also highlight that my response does not present the collective view of the various partner organisations within CVP. Members of CVP will have their own perspectives on the draft Local Plan and will submit their own responses accordingly if they wish to engage in the consultation process.</p> <p>I have read the detailed formal response to this consultation produced by Friends Of the River Crane Environment (FORCE). FORCE is a member of CVP and as you are no doubt aware, this community-based organisation has considerable local knowledge and an impressive track record in terms of environmental stewardship activity. There is nothing in FORCE's response that I disagree with - indeed it provides an excellent commentary and I fully endorse all the comments therein. I would urge the Local Authority to take note of FORCE's response and act on the specific issues raised to assist the process of refining the Local Plan in relation to the protection and enhancement of the Borough's river corridors and associated open spaces. Given FORCE's credentials I would suggest that this organisation's views should carry considerable weight within this consultation.</p> <p>I would like to take this opportunity to reinforce FORCE's comment that the Local Plan should be informed by the <i>Colne and Crane Valleys Green Infrastructure Strategy</i>, produced in 2019, which identifies a range of river corridor enhancement and active travel opportunities in the Borough. This document can be found at: https:// www.colnevalleypark.org.uk/project/green-infrastructure-strategy-colne-and-crane-valleys/ . River Corridors - and indeed the many people who utilise them for travel and</p>	<p>Noted. The protection and enhancement of river corridors and associated open spaces is covered when the Plan is read as a whole. The Council has added a reference to the Colne and Crane Valleys Green Infrastructure Strategy in the supporting text to Policy 34. See also responses to comments 986 and 1052. The updated Infrastructure Delivery Plan also sets out details on green infrastructure, and future projects and opportunities for improvements.</p>																									

			<p>recreation - cross borough boundaries, so a coordinated pan-borough approach to green infrastructure provision is required. LBRuT's Local Plan should clearly acknowledge this.</p> <p>I would highlight that CVP has (through the Smarter Water Catchments initiative) commissioned Sustrans to undertake a footpath and cycleway audit along the river corridors of the Crane Valley. This report will be ready soon and it would be beneficial to feed the findings into the Local Plan consultation process.</p>			
210	Hannah Gray, Avison Young on behalf of National Grid	General in relation to National Grid and energy infrastructure assets	<p>National Grid has appointed Avison Young to review and respond to local planning authority Development Plan Document consultations on its behalf. We are instructed by our client to submit the following representation with regard to the current consultation on the above document.</p> <p>About National Grid National Grid Electricity Transmission plc (NGET) owns and maintains the electricity transmission system in England and Wales. The energy is then distributed to the electricity distribution network operators, so it can reach homes and businesses. National Grid Gas plc (NGG) owns and operates the high-pressure gas transmission system across the UK. In the UK, gas leaves the transmission system and enters the UK's four gas distribution networks where pressure is reduced for public use. National Grid Ventures (NGV) is separate from National Grid's core regulated businesses. NGV develop, operate and invest in energy projects, technologies, and partnerships to help accelerate the development of a clean energy future for consumers across the UK, Europe and the United States.</p> <p>National Grid assets within the Plan area Following a review of the above Development Plan Document, we have identified one or more National Grid assets within the Plan area. Details of National Grid assets are provided below.</p> <p>Electricity Transmission</p> <table border="1"> <thead> <tr> <th>Asset Description</th> </tr> </thead> <tbody> <tr> <td>275Kv Underground Cable route: EALING - LALEHAM 1</td> </tr> </tbody> </table> <p>A plan showing details and locations of National Grid's assets is attached to this letter. Please note that this plan is illustrative only. Please also see attached information outlining further guidance on development close to National Grid assets.</p> <p>Further Advice National Grid is happy to provide advice and guidance to the Council concerning their networks. If we can be of any assistance to you in providing informal comments in confidence during your policy development, please do not hesitate to contact us. To help ensure the continued safe operation of existing sites and equipment and to facilitate future infrastructure investment, National Grid wishes to be involved in the preparation, alteration and review of plans and strategies which may affect their assets. [See Appendix 1 for further guidance and plan]</p>	Asset Description	275Kv Underground Cable route: EALING - LALEHAM 1	<p>Noted. The underground cable, which runs towards the western edge of the borough, has been noted in the update to the Infrastructure Delivery Plan, along with the high-pressure gas pipeline running through part of the east of the borough. The relevant statutory consultees would be informed if any site-specific development is near these assets as part of the development management process.</p>
Asset Description						
275Kv Underground Cable route: EALING - LALEHAM 1						
211	Lucinda Robinson, Marine Management Organisation (MMO)	General in relation to marine planning and marine licensing	<p>MMO Marine Planning and Marine Licensing response to Richmond Local plan Thank you for giving us the opportunity to comment on the local Plan. The comments provided within this letter refer to the document entitled Richmond local plan As the marine planning authority for England, the MMO is responsible for preparing marine plans for English inshore and offshore waters. At its landward extent the Marine Plan boundaries extend up to the level of the mean high water spring tides mark (which includes the tidal extent of any rivers), there will be an overlap with terrestrial plans which generally extend to the mean low water springs mark.</p> <p>Marine plans will inform and guide decision makers on development in marine and coastal areas. Planning documents for areas with a coastal influence may wish to make reference to the MMO's licensing requirements and any relevant marine plans to ensure the necessary considerations are included. In the case of the document stated above, the South East Marine Plan is of relevance. The plan was published for public consultation on 14th January 2020, at which point it became material for consideration. The South East Marine Plan was adopted June 2021, alongside the North East, North West, and South West. The South East Marine Plans cover the area from Landguard Point in Felixstowe to Samphire Hoe near Dover, including the tidal extent of any rivers within this area.</p> <p>All public authorities taking authorisation or enforcement decisions that affect or might affect the UK marine area must do so in accordance with the Marine and Coastal Access Act 2009 and any relevant adopted Marine Plan, in this case the South East Marine Plan, or the UK Marine Policy Statement (MPS) unless relevant considerations indicate otherwise. Local authorities may also wish to refer to our online guidance, Explore Marine Plans and the Planning Advisory Service soundness self-assessment checklist.</p> <p>Marine Licensing The Marine and Coastal Access Act 2009 states that a marine licence is required for certain activities carried out within the UK marine area. The MMO is responsible for marine licensing in English waters and for Northern Ireland offshore waters. The marine licensing team are responsible for consenting and regulating any activity that occurs "below mean high water springs" level that would require a marine licence. These activities can range from mooring private jetties to nuclear power plants and offshore windfarms.</p> <p>Summary notes</p>	<p>Noted. The Council considers that paragraph 21.88 already addresses the points raised. Add further details to paragraph 21.88 to clarify the remit of the Marine Plan and the Marine Management Organisation (MMO).</p>		

		<p>Please see below suggested policies from the South East Inshore Marine Plans that we feel are most relevant to your neighbourhood plan. These suggested policies have been identified based on the activities and content within the document entitled above. They are provided only as a recommendation and we would suggest your own interpretation of the South East Marine Plans is completed:</p> <p>-SE-INF-1: Proposals for appropriate marine infrastructure which facilitates land-based activities, or land-based infrastructure which facilitates marine activities (including the diversification or regeneration of sustainable marine industries), should be supported.</p> <p>-SE-INF-2: (1) Proposals for alternative development at existing safeguarded landing facilities will not be supported. (2) Proposals adjacent and opposite existing safeguarded landing facilities must demonstrate that they avoid significant adverse impacts on existing safeguarded landing facilities. (3) Proposals for alternative development at existing landing facilities (excluding safeguarded sites) should not be supported unless that facility is no longer viable or capable of being made viable for waterborne transport. (4) Proposals adjacent and opposite existing landing facilities (excluding safeguarded sites) that may have significant adverse impacts on the landing facilities should demonstrate that they will, in order of preference: a) avoid b) minimise c) mitigate - adverse impacts so they are no longer significant.</p> <p>-SE-HER-1: Proposals that demonstrate they will conserve and enhance the significance of heritage assets will be supported. Where proposals may cause harm to the significance of heritage assets, proponents must demonstrate that they will, in order of preference: a) avoid b) minimise c) mitigate - any harm to the significance of heritage assets. If it is not possible to mitigate, then public benefits for proceeding with the proposal must outweigh the harm to the significance of heritage assets.</p> <p>-SE-SCP-1: Proposals should ensure they are compatible with their surroundings and should not have a significant adverse impact on the character and visual resource of the seascape and landscape of the area. The location, scale and design of proposals should take account of the character, quality and distinctiveness of the seascape and landscape. Proposals that may have significant adverse impacts on the seascape and landscape of the area should demonstrate that they will, in order of preference: a) avoid b) minimise c) mitigate - adverse impacts so they are no longer significant. If it is not possible to mitigate, the public benefits for proceeding with the proposal must outweigh significant adverse impacts to the seascape and landscape of the area. Proposals within or relatively close to nationally designated areas should have regard to the specific statutory purposes of the designated area. Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks and Areas of Outstanding Natural Beauty.</p> <p>-SE-EMP-1: Proposals that result in a net increase in marine-related employment will be supported, particularly where they meet one or more of the following: 1) are aligned with local skills strategies and support the skills available 2) create a diversity of opportunities 3) create employment in locations identified as the most deprived 4) implement new technologies - in, and adjacent to, the south east marine plan area.</p> <p>-SE-CC-1: Proposals that conserve, restore or enhance habitats that provide flood defence or carbon sequestration will be supported. Proposals that may have significant adverse impacts on habitats that provide a flood defence or carbon sequestration ecosystem service must demonstrate that they will, in order of preference: a) avoid b) minimise c) mitigate - adverse impacts so they are no longer significant d) compensate for significant adverse impacts that cannot be mitigated</p> <p>-SE-CC-2: Proposals in the south east marine plan area should demonstrate for the lifetime of the project that they are resilient to the impacts of climate change and coastal change.</p>	
--	--	--	--

			<p>-SE-CC-3: Proposals in the south east marine plan area, and adjacent marine plan areas, that are likely to have significant adverse impacts on coastal change, or on climate change adaptation measures inside and outside of the proposed project areas, should only be supported if they can demonstrate that they will, in order of preference:</p> <ul style="list-style-type: none"> a) avoid b) minimise c) mitigate <p>- adverse impacts so they are no longer significant.</p> <p>-SE-AIR-1: Proposals must assess their direct and indirect impacts upon local air quality and emissions of greenhouse gases. Proposals that are likely to result in increased air pollution or increased emissions of greenhouse gases must demonstrate that they will, in order of preference:</p> <ul style="list-style-type: none"> a) avoid b) minimise c) mitigate <p>- air pollution and/or greenhouse gas emissions in line with current national and local air quality objectives and legal requirements.</p> <p>-SE-ACC-1: Proposals demonstrating appropriate enhanced and inclusive public access to and within the marine area, including the provision of services for tourism and recreation activities, will be supported. Proposals that may have significant adverse impacts on public access should demonstrate that they will, in order of preference:</p> <ul style="list-style-type: none"> a) avoid b) minimise c) mitigate <p>- adverse impacts so they are no longer significant.</p> <p>-SE-TR-1: Proposals that promote or facilitate sustainable tourism and recreation activities, or that create appropriate opportunities to expand or diversify the current use of facilities, should be supported. Proposals that may have significant adverse impacts on tourism and recreation activities must demonstrate that they will, in order of preference:</p> <ul style="list-style-type: none"> a) avoid b) minimise c) mitigate <p>- adverse impacts so they are no longer significant.</p> <p>-SE-BIO-1: Proposals that enhance the distribution of priority habitats and priority species will be supported. Proposals that may have significant adverse impacts on the distribution of priority habitats and priority species must demonstrate that they will, in order of preference:</p> <ul style="list-style-type: none"> a) avoid b) minimise c) mitigate - adverse impacts so they are no longer significant d) compensate for significant adverse impacts that cannot be mitigated. <p>-SE-BIO-2: Proposals that enhance or facilitate native species or habitat adaptation or connectivity, or native species migration, will be supported. Proposals that may cause significant adverse impacts on native species or habitat adaptation or connectivity, or native species migration, must demonstrate that they will, in order of preference:</p> <ul style="list-style-type: none"> a) avoid b) minimise c) mitigate - adverse impacts so they are no longer significant d) compensate for significant adverse impacts that cannot be mitigated <p>-SE-BIO-3: Proposals that conserve, restore or enhance coastal habitats, where important in their own right and/or for ecosystem functioning and provision of ecosystem services, will be supported. Proposals must take account of the space required for coastal habitats, where important in their own right and/or for ecosystem functioning and provision of ecosystem services, and demonstrate that they will, in order of preference:</p> <ul style="list-style-type: none"> a) avoid b) minimise c) mitigate d) compensate for - net habitat loss. <p>[See also comment 993 in relation to paragraph 21.88]</p>	
212	Peter Willan and Paul Velluet, Old Deer Park Working Group	General (in relation to title of the Plan, page numbers)	Local Plan covers the entire Borough so the Title should be Richmond-upon-Thames Local Plan and not simple Richmond Local Plan. Needs remedying.	The shortened reference to the Richmond Local Plan is considered acceptable as it is clear it is a boroughwide plan.

			Despite the page-numbers given in what appears to be the list of contents – but is not headed as such – there is no pagination in the entire document. Needs remedying. The lists of page-numbers in the un-headed list of contents and the headed list of policies should be headed as such. Needs remedying.	The main audience is expected to view the Plan online (either as a pdf where the hyperlinks aid navigation and page numbers appear, or using a web-based html version which has a navigation pane), but it is intended that page numbers will be added to the final version.
